A beautiful wreath can be made of autumn leaves and flowers that can be pressed flat. Take a white sheet of Bristol board, draw upon it a circle the size you want your wreath—the prettiest size is about twelve inches in diameter—and make with a lead

pencil the letters you wish to put in the centre. Now take an ounce of gum-arabic and dissolve it in about half a pint of water; have your leaves ready, and dip them in the gummed water, taking care that every part is wet; then let them drain until the water ceases to drip, laying them upon the circle, following it carefully. If the maker has a delicate touch, the tendrils can be made of the real tendrils of flowers; if not, they can be drawn and carefully colored.

The letters are to be made in the same way; you can place a butterfly on the wreath; of course, any such addition as this is according to the maker. In making mine, I introduced a small varnished, painted bird, and roses with their leaves, and thought it an improvement, enhancing its beauty. Every one admired it. When the leaves are dry, place it where it will harden, letting no dust settle on it; then carefully washing it over with a brush, dip in the gum to keep the edges from the air.

M. A. H.

**Pretty Spatter-Work.**—A pretty picture can be made, at a trifling expense, and with little trouble, in the following way: Take a pane of common window glass, of any size preferred, and fit to it a sheet of white paper, and piece of stiff pasteboard. Cut an oblong piece of paper, and lay on the centre of the white sheet; now arrange in the centre of the margin that is left some pretty shaped leaves in the form of a vine, and pin them down closely so that no ink can get under them; now dip a fine-tooth comb in black ink, and scrape it over the paper so that the spatters will fall evenly and not too thickly over the whole picture. But little ink at a time must be taken up on the teeth of the comb, as too much will cause large drops to fall, which will spoil the picture. When the ink has become dry, remove the leaves and paper, and you have a pretty "spatter" margin for the centre-piece. In this arrange prettily some bright-tinted autumn leaves, ferns, pressed Pansies, and other flowers, gluing slightly the backs to keep them in place. Lay this upon the pasteboard, place the glass over it, and bind the edges together with gilt paper, using glue for the purpose. Before fastening together, loops of strong kid or small rings must be sewed to the back of the pasteboard to fasten the hanging cord by.

S. A. D.

**Shoe Box.**—A nice stool can be made by taking a soap box or any small sized box from a grocery store; fix a lid by nailing pieces of leather on for hinges; fasten a piece in front to lift it up, then cover it with pieces of carpet tacked on with brass-headed nails; cut some pieces of old quilts to pad the top, then cover with carpet and trim around the lid with any old cast-off fringe. This makes a convenient piece of furniture, useful for keeping shoes in, out of sight.

**Old Felt Hats.**—Take all the old felt hats, such as boys have laying around under foot, of different colors. Put them into a tub of water; when done washing, soak them; then wash them on the board with soap till clean; then stretch them on boards or tack them on the side of the house to dry, smooth them out as flat as possible; when dry you may cut mats for the table and bind them with scarlet braid; you may form the words potato, meat, etc., on them with spatter work. You can also make mottoes for the dining-room and kitchen by cutting letters out of the felt and pasting on old cloth torn from old pants; bind them with plaid braid, and form the letters to read thus: "Coffee and hot cakes at four." Make loops on the back and hang it up.

## Household Elegancies.

## HOUSEHOLD ELEGANCIES OF HOME MANUFACTURE.

## A BASKET TO HOLD ORNAMENTS.

A basket to hold ornaments, sewing materials, etc., with cushion in the bottom for pins and needles, may be made as follows: Cut for the bottom a round piece of pasteboard two inches in diameter; cover this on one side with pink glazed cambric, and fasten to the edge of the covered side the wire loops, which are wound with beads and form the edge of the basket, as shown by illustration. For each loop take a piece of covered wire, six inches and a half long, and wind it closely, first with pink zephyr wool and then with crystal beads, which are strung on pink silk; leave two-fifths of an inch of the end of each wire without beads. Bend each wire into a loop of the form shown and sew the ends to the bottom so that the loops lie over each other about half their width. The two loops coming together in the middle of each bead-loop are fastened with pink silk thread. Cover the inside of the bottom with a cushion of suitable shape, made of pink satin and edged with box-pleated ruffle of pink ribbon three-fifths of an inch wide. Cover the outside bottom with pink cambric and ornament the basket with pink bows.

## FOOT-STOOL WITH CROCHET COVER.

This is fifty-two inches in diameter and four and a half in depth. It is made of gray linen stuffed with curled hair, and the bottom is covered with gray enameled cloth. For the covering of the top, crochet

## A BASKET TO HOLD ORNAMENTS.

eight triangular pieces in single crochet. Begin these parts at the point with a foundation of six stitches, and on this work one single crochet on every foundation stitch, two single crochet on the last stitch of the round. Work one chain, turn the work and work one single crochet on every stitch of preceding round; but in this, as in all the following rounds, insert the needle under the two upper veins of every stitch, and work two single crochet on the last stitch of every round. Besides this, in every second following round, work in a strand of red zephyr worsted containing twelve threads in such a manner that after every stitch this strand shall lie in a loop three-fifths of an inch on one side of the work. The part consists of forty-five backward and forward rounds. After it is completed, cut the loops open and trim them off. After working eight parts in this manner, sew them together on the under side, at the sloped edges, fasten the cover on the foot-stool, and in the middle of the cushion, where it must be sewed through so as to form a hollow, place a large red ball made of worsted. A row of such balls trims the edge of the foot-stool. It is easily made, and the colors can be varied to suit that of the furniture of the room.

## A TRAVELLING CASE.

This travelling case is intended to hold combs, brushes, and small toilet articles. It is made of brown enameled cloth, with lining and pockets of oiled

## WATCH AND JEWEL CASE.

silk. Cut of the cloth and silk a strip twenty-three inches long and five and a half inches wide, slightly rounding the ends. An inch and a half from the end sew on the round pocket for holding the sponge. To make the pocket take a round (that is, a piece of the oiled silk nine inches long and ten wide and unite it in a round), bind the edge of this round with narrow ribbon, and half an inch from the edge of this pocket work eyelet holes, through which pass a silk cord to draw the pocket together. Now join this pocket to the lining. For the pocket at the other end of the case, cut a straight piece fourteen inches long and five wide. Out of each end of one side of the strip, cut a piece an inch and half square, and sew together the edges. Sew the side thus shortened, and the ends of the pocket, to the lining of the case; at the sides the pocket forms a fold. The edge of the pocket left free must be bound. For the flap of the pocket take a strip of silk eleven inches long and two wide, bind it and sew to the lining. Make the remaining pockets and the bands to hold scissors by illustration. In order that the pockets may have the requisite width allow extra material to form a fold at the ends of the pockets. Bind the edges

## A TRAVELLING CASE.

## WATCH AND JEWEL CASE.

The frame is of black polished reeds. Take two fine reeds, each twelve inches long, bend them in the

manner of illustration; lay the reeds for a while in hot water to make them flexible; fasten them together in the middle of the upper part with small pegs, and set a reed ring four inches in diameter an inch from the under edge of the reeds in the same way. Cover this ring with a piece of gray canvas four inches and a half square, which forms the bottom of the case. Ornament it in embroidery with blue and black twist, and trim the edges with blue silk fringe three-quarters of an inch in width; fasten it to the reeds with black silk. Place a brass hook and bows of blue ribbon on the upper part. Instead of reeds the frame may be made of several layers of wire wound with cotton and afterwards with beads.

## A SHOE BAG.

Last, but not least, in convenience is a shoe-bag, which is easily made in this way: It is of calico and bound with the same material; a pretty contrast is red and green. One yard and a quarter of green and half a yard of red is required. Cut two rounds of green each seven inches in diameter, cord one of them with red for the outside, then take one width of green half a yard in length, and bind the top with red about one inch wide. Join together to form the bag. Take two widths more of the green, each about eleven inches long, sew together and bind the top with red to match the other piece; this piece is for the pockets, which sew around the bag at equal distances. Gather both pieces together at the bottom and sew round the corded piece for the bottom; then turn the bag and sew on the plain round, so that the gathers come between the rounds. Run a ribbon in the top for a string to hang

## FOOT-STOOL WITH CROCHET COVER.

it by. The small pockets are for shoes and the large one, or bag, for stockings.

MRS. JAMES A. MAGAN.

## A LOVELY LITTLE BASKET.

Take a strip of white perforated cardboard nine inches wide, and the length of the sheet. Cut a strip four inches long, and ten holes wide; then cut out a strip exactly like it; continue thus the entire length of the cardboard. Take blue split zephyr, and with a fine needle crochet all round the edge of the strips, joining the basket by lapping the last two; work a delicate little pattern on each strip, a different one round the basket; now fasten each strip down on the outside of the basket, so that it will puff a little, by two large silver or wax beads; sew in a bottom of Bristol board; make a handle in the same manner as the strips, fasten it on with beads, and tie bows of blue ribbon where it is joined. Fill the basket with gray moss, lichens, and tiny shells.

## Fireside Reading.

### HE WANTED TO JINE.

"You want to jine the ban', do you?" said an old negro preacher to a young convert.

"Yes, sar, I want to jine."

"Well, sar, do you believe Geriah, a pickaninny little shaver, slewed a great big man called David, that was longer dan de Centre market, wid a pebble dat was no bigger dan a huckleberry? Eh?"

"No! I don't believe nothin' like dat," was the reply.

"Den you can't jine."

"Well, den, I be'leves it. On wid de katekise."

"Do you be'leves," continued the deacon, "dat dar war a man called Joner who swallowed a whale and kept it down a awful long time before he spitted it out?"

"No, sar; can't make me b'leve dat," was the response.

"Den you can't jine."

"Well, now, by jingo, I b'leve dat, too. Go on wid de katekise."

"Do you b'leve dat dar was a man named Delilia, and dat a woman called Samson got down in de cellar of a big house what weighed more'n de Centennial, and lifted it kerslap clean out ob de world?"

"Don't b'leve nothin' ob de kind," was the indignant reply.

"Den you can't jine."

"Don't want to jine. I don't b'leve dat fish story you just told me, either."

There was no further "katekise."

An old lady living in Springfield has a very high-tempered boy. A day or two since he came in and asked permission to go down street to see the array of

presents in the shop windows. The mother refused, and the boy went through the house slamming the doors after him with terrific force. The old lady calmly remarked, "'Pears to me Jimmy's doin' a heap o' wooden swearin' this mornin'."

Spurgeon says he has often thought, when hearing certain preachers of a high order speaking to the young, that they must have understood the Lord to

A new definition of politeness: "Politeness is like an air-cushion—there may be nothing solid in it, but it eases the jolts of the world wonderfully."

A gentleman travelling through one of the most picturesque portions of the White Mountain region saw a farmer at work, and, being of a sociable disposition, approached the man and expatiated on the beauty and majesty of the surrounding scenery, concluding with the remark:

"I suppose, my friend, you enjoy this glorious view that people come so far to look at?"

"Why, yes," was the response; "but if I'd had the sortin' of these hills, I'd made 'em a little peak-eder."

A lady that would please herself in marrying, was warned that her intended, although a good sort of a man, was very singular.

"Well," replied the lady, "if he is very much more unlike other men, he is much more likely to be a good husband."

The color of a girl's hair is regulated by the size of her father's pocket-book. If the latter be plethoric, the girl's tresses are golden or auburn; if the old man's wallet is lean, we hear the daughter spoken of as only "that red-headed gal." You never saw a rich girl with red hair.

"So there's another rupture on Mount Voci-ferous," said Mrs. Partington, as she put down the paper and put up her specs; "the papers tell about the mountain, but it don't tell how it got fire."

A Montana justice of the peace doesn't splurge any when he marries a couple. He says: "Arise! Grab hands! Hitched! Six dollars." And that is all there is to it.

IN THE LIBRARY.

say: "Feed my camelopards," instead of "feed my lambs," for nothing but giraffes could reach any spiritual food from the lofty rack on which they place it.

Inscription, copied verbatim et literatim from the handsome trade-wagon of a Lake street grocer, of Chicago: "H. Wichert, Dealer in Mustards, Spices and Hoarse Radish."

## House Amusing.

## A TASTEFUL HOME-MADE TOILET-TABLE, ETC.

With an ardent love for pretty furniture and belongings of all kinds, I unfortunately possess but limited means of satisfying them, and therefore feel thankful for such an opportunity of learning to make tasteful articles at home and cheaply, by using our own exertions and ingenuity.

Now, can you tell me how to make some kind of a washstand and dressing-table, with other furniture, for a bedroom, for which I haven't one single article excepting a cottage bedstead, which has a head and foot-board, but being only of pine wood stained, has become very shabby. By the way, can I renovate it to look a little less forlorn.

TOPAZ.

*Answer*—I would advise the repainting and ornamenting of the bedstead, and the making of the entire set to correspond. For instance, taking the bedstead, rub it all off, first with fine emery paper, using care to rub the grain of the wood, then give a coat of enamel paint, made by mixing zinc-lead with Damar varnish, and making it of any tint desired, a lavender gray, or sage gray, for instance. When dry, if not quite smooth, give a second coat; when dry, embellish with simple lines of color, or obtain a set of transfer designs, Decalcomanie. On the grounds just mentioned, moss rose-buds are beautiful. The best method for putting light lines on such a surface is by means of stencil-plates, cutting narrow lines from a sheet of tin, and placing them flatly against the wood, paint in the line, moving the plate onward, and using care to let the lines unite each time. I have painted wide and high walls in this manner, and always found it an easy mode. The floor I would cover with wood-paper, then give a coat of shellac varnish, and finish with one of copal. Make a bright rug for the centre, and one for the bureau, bedstead, washstand, chairs, etc. Now as regards the furniture, several pretty home-made pieces have been offered in the CABINET during the past few months, and such a washstand and drapery for the bedstead, with two or three cosy chairs and an ottoman to stand in front of the dressing-table would prove exceedingly attractive, I think, draped with some pretty chintz, or even calico.

I am reminded of a charming room that I visit very frequently in summer, the pretty furniture and drapery of which is the handiwork of a young girl of sixteen, and the latter consisting of five cent calico! Yet what a dainty bower it is, made by her deft fingers and artistic taste. There is a grain of comfort for you! Well, this room of ours, let me advise that in any case a certain amount is invested in an entire piece of material for draping, as expensive as you choose, or perhaps of coarse Swiss, for summer, and calico or Tycoon reps; for nothing imparts such an air of cosy comfort, or airy daintiness as drapery, overhanging the head of the bed, shading dressing-table and washstand, covering chairs and ottomans, and hanging as lambrequins from mantel and bracket. Follow a certain plan throughout; for instance, high above the bedstead head-board nail a plain wooden bracket, made, perhaps, in each case, of only a triangular piece of wood with a half circular shelf nailed on it, cover with your material, and from it allow long full curtains to fall about the head of the bed; then hem a long strip and twine it around the bracket like a scarf, or cut a lambrequin

and tack round it over the hangings, with gilt headed nails. Place similar brackets over washstand, as

FIG. 1.—FRAME OF DRESSING-TABLE.

FIG. 2.—DRESSING-TABLE COVERED AND DRAPED.

shown in a previous number, and sawing out barrel-chairs, pad and cover them, and arrange also a tasteful

dressing-table. Fig. 2 is easily made; the lower part may be framed as shown in Fig. 1, or you may utilize some old washstand or even a packing-box, turning it, with the bottom for the back; then putting shelves within and curtains in front, you have a place for clothes, brushes, shoes, or various appliances of the toilet. With a very little aid, I once made such a table; nailed end pieces against the sides of the box, then two laths across the back with two strips eight feet long, extending upward with another lath above, as a brace, and also to support a long mirror, dismounted from the garret; from these two uprights I fastened horizontal pieces, the length of half the depth of the box; with another strip, uniting them along the front, this hood, projecting over the glass and tastefully draped, as shown in the illustration, triangular pieces of board, rounded across the front, were nailed in each of the back corners of the lower part, and not only served as brackets for the toilet set, but when prettily covered and dressed with narrow ruffles of the material used for the hangings, proved a beautiful addition.

AUNT CARRIE.

## POMPADOUR DRESSING-TABLE.

I once saw in a furniture warehouse an elegant Pompadour or dressing-table of leather-colored wood and gilt, blue satin curtains, etc., the price \$150, all of which was out of the question so far as my purse was concerned, also out of the question to one who has a "sense of the eternal fitness of things." I set my wits to work to have one that would correspond with the surroundings, be pretty and very inexpensive. I succeeded. It is simple, elegant-looking, and cost but \$1.

The frame is of wood, with a mirror in centre, two shelves on either side; the covering is a worn-out dress of white organdie, with pink rose-buds scattered over it. The dimensions are as follows: Height of table, twenty-six inches; width, eighteen inches; length, thirty-six inches; height of frame, seventy-eight inches; width of glass, twenty-one inches.

Cover the wooden frame completely with white cotton cloth, then put on the outside covering smoothly and nicely, and you will have as pretty and fresh a dressing-table as any one in the land.

I also want to tell how to make a dainty "Hair Receiver," made of perforated paper, blue silk, and blue sewing silk. Take a piece of the perforated paper, ten inches long, round it at the top, and five inches wide; work in cross stitch a Grecian wreath with light blue sewing silk an inch from the edge, and all around this piece of paper. Take another piece, four inches across or deep, and five and a half inches in width; work the wreath as before, and one inch from the edge; put this over the large piece of paper, to form a pocket, at the bottom of both, large and small pieces of paper; gather a piece of blue silk to form a bag, then box pleat narrow blue ribbon with corded edge. Surround both bag and pieces of perforated paper; leave a slight space between Grecian wreath and the box-pleated ribbon. Put loops of ribbon to hang up by, and you have a dainty, pretty, useful article, and do not put it in the "spare chamber," keep it in your own, and admire it. Company is of secondary importance.

Young ladies' bedrooms are too often mere stopping places, sometimes utterly devoid of home-made "elegancies." In this we can reform without the "lords of creation" giving permission.

A. L. DARRAH.

**Richardson's New Method**

FOR THE PIANOFORTE.

Price \$3.25. By NATHAN RICHARDSON.

250,000 copies sold. Sales have surpassed those of all other books combined. Be sure to order by the above full title, and do not accept instead of this, THE MODERN SCHOOL, which is an older book, by the same author. Mr. Richardson's opinion of the merits of this first effort may be gathered from the following, taken from the Preface to the NEW METHOD:

"Becoming at length satisfied of the truth of these criticisms (by many eminent composers and professors), and convinced that great improvements were obviously needed, I determined, if possible, to remedy the defects. Profiting by the experience and advice of the best practical teachers, I commenced a thorough and critical examination of my first method, and concluded that the only remedy would be to bring out a new work on an improved plan."

This new work, substituted for the defective MODERN SCHOOL, was Richardson's

**New Method for the Pianoforte,**

which has been revised and re-revised, until it is the most perfect of music books, is a great favorite with the profession, and is the only true "Richardson."

## Floral Decorations

BY HENRY T. WILLIAMS.

NEW YORK, APRIL, 1878.

No. 76. PRICE 12 CENTS.

### WINDOW GARDEN.

[This sketch and article received first prize Floral Decorations]

This garden represents two large sunny windows. In front of each are placed ornamental window boxes made to stand upon feet. The size of these boxes is forty-eight by eighteen inches; their height is twenty-two inches. Each box is provided with a zinc pan six inches deep, this being filled about half full of lumps of charcoal and broken bits of plaster, the remaining space then filled with rich soil. At our right hand window an automatic fountain forms the centre piece, whose trickling waters keep time with the merry songster swinging near. The ever-faithful Calla, with its white eup, so pure and chaste, stands stately by. Graceful ferns, variegated Agave, a modest trailing Fuchsia and waving Palms, all live here in sunshine together.

Upon the brackets are a double Scarlet Geranium and a white Hyacinth. The hanging-basket contains German Ivy, Smilax, Moneywort, Centaurea, and grasses.

At our left hand window a small fernery occupies the centre, this being supported by an iron frame, while upon either side of this a Dracæna and Calla form a background. An ornamental leaved Begonia, a charming mat of Smilax, some ambitious sprays of which have crept up the iron bracket supporting the fern case, forming a lovely green pyramid. A Cyclamen perfumes the air with its exquisite odor, and Tradescantia Zebrina reaches out its tender vines in

every direction. Upon the lower bracket is a Mad. Lemoine Geranium, while a pure white Carnation blooms just above it. Basket filled with German Ivy, Smilax, Linaria, Coleus, and Centaurea.

At each corner of boxes next the windows, English Ivies are planted, which are allowed to run to the ceiling; the ends are here pinched off, while branches shoot out in all directions, forming a pretty decoration to windows and mirror.

A fancy stand, holding an aquarium, rests between the windows in front of mirror. Oil-cloth mats are

in summer. Pot it in October, and grow in full light. When late the next spring the shoots dry up, let the root rest, but not so dry as to shrivel, till the autumn. Plant in rich sandy loam with good drainage.

**Begonia Unhealthy.**—Please tell me what to do with my leaf Begonia. It is in the same soil and temperature as my others, and still as fast as one leaf attains a respectable size and another starts, the first gradually dies. It seems as if it could not entertain more than one idea at a time. I have a small Zonale that does the same.

MARIE.

**Answer.**—Repot your plants in light, rich soil and give them an airy sunny place. The ornamental leaved Begonias usually do well in the parlor if the air is not too dry, but the markings are never so good as when grown in the greenhouse.

**Moles in Flower Beds.**—In the Nov. number, M. S. Sayers asks: "What will prevent moles from destroying bulbs and roots in gardens?" I know of two beds for bulbs which are mole proof. A

description may be of use to some lover of bulbs. One was once a barren spot where lime had been burned, but a border was made and filled with good soil, and moles or mice cannot penetrate it. The other, a trench was dug eighteen inches in depth, and bricks were placed against one side of the trench, extending around the bed, standing on end three bricks deep, the last layer projecting above ground and forming the border. The trench was then filled with earth.

**Smilax Culture.**—Please give me some hints on Smilax culture. I have some which came from seed last spring; it grew only a few inches, but has started finely.

A. E. H.

**Answer.**—The Smilax will grow in winter and rest

WINDOW GARDEN OF MRS. T. C. HAYDEN, SUN PRAIRIE, WIS.

## Floral Contributions.

## MY GARDEN.

Perhaps my experience in gardening may be a little help to some of the sisterhood of the FLORAL CABINET. Having little of either money or time, but, being very fond of flowers, I tried my best to make a pretty garden even in a smoky city, having quite a large lot beside the house.

That you may understand me more readily, I will give the shape, with my plans, my successes, and, I am sorry to say, numerous failures. The space is about twenty-two feet wide by forty long, that I used as our flower garden, fronting northeast with a picket fence, an ugly black frame house and high board fence on one side. The place was sodded some time ago, but last year was used as a croquet ground, and the grass nearly all worn off. I marked off a long narrow bed about two feet wide, the whole length on each side, two oval beds running across, a large diamond, with four three-cornered beds to fill out the square, and two more ovals. I had them dug up, and left the sod between for the paths, which I made at least three feet wide. Along the ugly fence I planted the dainty, graceful Balloon vine, and the whole summer it was a mass of bright green, with its dainty sprays and airy balloons; it is beautiful as a single plant, or grown thickly. Along the house I put a row of Morning Glories, the common pink, white, and blue, and the large, blue velvet ones with white margin and crimson throat; in front of them a row of Four O'clocks, the old-fashioned name "Pretty-by-night," will remind you at once that here were ornaments provided for both morning and evening. The narrow bed on the other side was devoted to Portulacca, of which I had a nice collection of seeds, all single, but so many colors or shades, making a brilliant show in the bright sunshine. One end of the bed was so much shaded they did not bloom well.

In the oval bed nearest the front fence, there was a stone, too large to remove, which suggested the idea of a few more to make a very modest rockery. From a building opposite I got some pieces of stone which I put together as carelessly as possible to have them keep together, and planted in the crevices some Ground Ivy and Moneywort, and a few little Ferns, and between some stones, where it was much shaded, a little plant of Trailing Arbutus, but city air probably did not suit it, for it died. This was one end of the bed; at the other I piled the stones rather higher, around a white lead keg, in which I have had an English Ivy for two years; it grew very nicely and the stones were soon covered with its Yankee cousin, Ground Ivy, and a Balloon vine in the middle of the bed; put a few Cypress vine seed, which grew around a stick, to give some color to my bed.

In the next bed I had a row of Sweet Peas, (such beautiful flowers, I think), in the centre; made some little frames to support them; they bloomed very well; I had a Wall-flower at one end; it looked very green and flourishing all summer, but had very few flowers; also a Lemon Verbena, quite a large one, is three or four years old.

In my diamond bed was, for a centre-piece, a box partly filled with earth (a soap-box, I believe), with a Madeira Vine Tuber in each end; on this box, a square about eighteen inches, on each corner a tin fruit can, put on with nails; in two of them had Moneywort, and in the other two Lobelia, the best

blooming plant I ever saw. The box was filled with earth, and had on top an old china pitcher that had lost a handle, with a basket plant in it. Do not laugh at my centre-piece; for I can assure you it was very pretty when my vines got well started. Had one on each side on the ground, and some Ground Ivy in the boxes to help cover the sides. Planted Madeira Vine, for bordering the bed, but had not time to train it, or it would be very pretty, it grows so fast and embraces everything; put a large Rose Geranium in one point, a Red Rose, monthly, in another, and a Hermosa in a third, a Salvia making the other corner. The corner beds were filled, one with Petunia, which was pretty the whole summer, and kept green until late in November; Mignonette in another, which did not give me one blossom; Zinnias, which were gay all summer; and Asters in the fourth; some of them bloomed very well, and others the grasshoppers spoiled every blossom. Do not know why they singled out some plants, but it was so.

My next oval bed had a row of Gladioli in the middle, but they did not bloom at all; had a Bleeding Heart at one end, and Sweet William at the other; in my last bed filled the centre with sweet peas. During the spring and early summer got plants in market every few days, and planted wherever there was room. Had two plants of Joseph's Coat, which were very pretty, but no seed ripened; had, also, a dark, ugly-looking plant, which before the summer was over became the ornament of the garden—having the whole top carmine, it was very much admired. Had a few Pinks, some beautiful Pansies, two Chrysanthemums, two Fish Geraniums, which didn't bloom; some very beautiful Balsams, red, speckled, pink, and one in particular, the faintest shade of pink and very double, but did not have one seed on it. Some Verbenas that bloomed moderately.

The ground is poor and stony, and the spring was late and cold; but, with all our drawbacks, we always had flowers in the house and some for our friends. Am afraid that I am transgressing the limit allowed me, so will not write any more. Will be very glad if I can give any pleasure or help to any one in their pursuit of a flower garden. MRS. E. H. E.

## PLANTS BY MAIL—HOW TO TAKE CARE OF THEM.

The safe transportation of rare plants is a subject of interest to both florist and amateur. Thanks to the floral establishments for the many ingenious modes of packing plants for the perilous journey, thereby manifesting an interest in the safe arrival of plants at their final destination.

Thanks for the facilities of the transportation of plants afforded by the United States Mail. For a few cents the choicest exotic—bulb, evergreen, shrub, plant, and seeds may be transported in safety through the United States Mail to ornate the homes of the million.

The distribution of plants, seeds, bulbs, etc., by dealers through the mail, has diffused a zeal in the cultivation of plants, by amateurs, hitherto unknown. The home is rendered more Eden-like by the introduction of rare and beautiful plants.

Thanks for the FLORAL CABINET to teach us how we may cultivate and adorn our homes with flowers, and where we may interchange our ideas of culture. Isolated from society on the edge of the green wood, with the wide prairie before us, we think the CABINET a welcome visitor each month; and think there are

many more like circumstanced and like interested. When received, it is never laid aside until the last line is perused.

First—Plants should be obtained as near home as possible. Seeds and bulbs are able to travel long distances; also deciduous trees and shrubs, if transplanted during their term of rest, can make long journeys in safety, with very little moisture, bound up in packages of moss excluded from the air. Avoid washing the roots as this is very injurious. A better plan is, to take some good soil in a bucket, add water, and stir until the consistency of batter, dip the roots in the mortar, and then wrap them securely in a sufficiency of dry moss to retain the moisture; around the moss use parchment paper, oiled paper, or any material that is both air and water proof. The plants thus prepared may be carefully packed, with several companions for the journey, in a strong box—aye, it needs a strong box, or else no box at all. A package with a sufficiency of wrapping is better than a paper box. Many a choice plant has come to grief by being carefully laid in such a nice, frail paper box to go a long journey in the United States Mail.

Who knows, or who cares for what is contained in those huge canvas bags! A tender message for the absent. News of those gone on before to the other side the river. The coveted plant on its perilous voyage, it is all one. Hurry with the mail; pell-mell the mail bags are thrown into the car and off with express speed to the distant station.

But, to return to the plants—succulent plants do not stand long journeys; particularly if the temperature is above what is known as growing temperature. They become water clogged; and, although the leaves may look fresh when received, in a few hours they will all drop off; mildew sets in, and the vital spark of plant life is too feeble to recover, or may perhaps linger, an invalid plant, for a little while.

Evergreens should be carefully handled—under no consideration allowed to droop. Exposure of the roots to the air, or, when transplanted, to suffer sunshine to wither the foliage, is very fatal. But limited space forbids my saying much more.

After an experience of many years in receiving plants from both florists and amateurs, transported through the mail, we consider the safest plan, and most satisfactory, to allow as short a time as possible to elapse between the time the plant is taken up and transplanted.

If the few facts mentioned is of any service in assisting the lovers of Flora to send a friend a plant, my end is accomplished. Loose packing, and in frail boxes, liable to be smashed up, will surely bring disappointment. Oil paper or silk should always be placed around the plant, or the wrapping will absorb all the moisture. We have received packages done up in moss and newspaper, as destitute of moisture as the linen on the white wire line under a tropical sun.

Says one, "Drown them in the tepid bath." Says another, "Bury them in damp soil." We did both. Poor plants! they were gone before they came. But enough to be thankful for bloom all the year round, souvenirs from the old home, contributions of friends.

The last novelty in the way of Aline Sisley—Stephanotis Florabunda, from England. A splendid Hybiscus seed from China. Roses, Roses, and a score of others, from professional culturists, have come along with the United States Mail, and are dwellers in my garden.

FLORA Z.

# The Ladies' Floral Cabinet and Pictorial Home Companion.

## Answers to Correspondents.

**Rooting Camellias.**—Ferns.—How are Japonicas rooted from cuttings? I have tried and failed. Where can I get a good selection of Ferns?  
Quincy Fla. Mrs. T. R. LOVE.

*Answer.*—Camellias may be propagated from leaves taken off with the dormant bud and rooted in sand. Any florist can send you a catalogue of Ferns.

**Geraniums, etc.**—I have several Geraniums grown from slips. They began to bloom as soon as they were well rooted, but I pulled off the buds and now they are between eight and fifteen months old and will not bloom. Should I shake or change the water in which German Ivy is growing?  
Summerville, Tenn. UNA.

*Answer.*—Your Geraniums are probably growing freely and all run to growth. Check them by giving less water and more air and sun, and towards spring they will bloom. Do not shake the water. A bit of charcoal will keep it sweet, and as it evaporates fill in fresh.

**Name of Plant.**—Enclosed find flower and leaf of a plant blooming in winter; the root is a bulb.  
Pittsburg, Ind. MAY MCBETH.

*Answer.*—The leaf was lost, but the flower is Oxalis cernua.

**Name of Plant.**—Please tell me the name of enclosed plant. When I bought it the leaves were mottled and it had a flower like a Fuchsia. I put it on the east side of my house; the leaves dropped and then come green, and it does not bloom. E. A. C  
Amesbury.

*Answer.*—Your plant is Abutilon vexillarium pictum, which has reverted to the normal form from being kept in too cool or dark a place. Give light and heat and it will give variegated foliage and flowers.

**Names of Plants.**—Please give me name of woody vine of rapid growth with beautifully variegated leaves. Does it bloom? I enclose a leaf of something like a Wax Plant. What is it? Where can I get Spanish Moss for baskets?  
L. T. HALL.  
Harrisonville, Mo.

*Answer.*—Your vine is Lonicera aurea reticulata, or variegated Japan Honeysuckle. It has a white fragrant flower. The leaf was so crushed as to be unrecognizable. Mrs. D. Tuttle, Canto, California, offers to send Spanish Moss.

**Musk Plant.**—What soil does Musk Plant require? Does it need much water, and should it be in sun or shade? When should it be watered?  
Deandale, Del. FLOWER LOVER.

*Answer.*—It is very easily grown and needs no special culture although apt to rot off if kept too wet. A common sandy loam suits it, and it likes full sun; there is no special time for watering.

**Roses Unhealthy.**—The leaves of my Roses curl up and seem to have mildew. How can I cure it?  
Burnt Corn, Ala. A. B. BETTS.

*Answer.*—You are right in thinking it mildew; the remedy is to dust flower of sulphur over the foliage; it is caused by damp, close atmosphere or sudden changes of temperature. It is a fungus.

**English Ivy.**—What will make the English Ivy grow fast? Mine has not grown an inch all winter.  
Mrs. A. Quincy, Cal.

*Answer.*—A good sweet soil, plenty of light and air and not too dry an atmosphere. The Ivy is very hard to kill and will live anywhere, but to start it must have attention.

**Name of Plant.**—Please find enclosed a leaf of what we call "Sweet Fern" here. It is very fragrant—will perfume a whole garden, grows in the sun, or anywhere, very rank, and three or four feet high. Please tell me what you know about it.  
Stewartville, Mo. CLARA P. SHELTON.

*Answer.*—We cannot promise to name plants from a single leaf. What you send is certainly not a Fern, nor is it the "Sweet Fern" (Comptonia) of the Eastern States. Your plant resembles the Chamomile.

**Azaleas, etc.**—Can I raise Azalea indica from seed, and when will it bloom? Please give some information as to Acacias and Rhododendrons.  
De Graff, O. A. M. S.

*Answer.*—It is very tedious raising Azaleas and Rhododendrons from seed, and is only done to procure new varieties. If ungrafted, seedlings do not bloom until very large, say seven to ten years. The plants are so cheap now, seedlings are only raised by large growers. Acacias are best raised from seed; they grow rapidly and bloom as soon as they attain good size; the time depends wholly upon how well they are grown.

**Seedling Greenhouse Plants, etc.**—Can Abutilon, Agapanthus, Begonia, Auricula, and Cyclamen, be grown from seed, and how soon will they blossom? I have a Cactus ten years old which has never blossomed.  
Mrs. H. GILMAN.  
Plymouth, Wis.

*Answer.*—Abutilon from seed blossoms in about a year; Begonias in nine months, Auricula in nine months, Cyclamen in about eighteen months. Agapanthus would take several years. The time of a plant's blooming from seed depends so much on cultivation that no fixed time can be given; for instance, Cyclamen seed sown in April will bloom the next winter if well grown, though often it takes three years to make a blooming tuber. Give your Cactus a good roasting in the summer's sun.

**Hardy Yucca.**—What treatment must I give the Spanish Dagger (Yucca, I believe)? Will it stand the winter out of doors?  
M. E.

*Answer.*—The true Spanish Dagger, Yucca aloefolia, is not hardy and must be kept in a cellar or greenhouse in winter. Yucca filamentosa is perfectly hardy as is also Y. angustifolia. Y. recurva, one of the finest species, is hardy south of New York. There are many species; all are very ornamental. They look well in vases on rockeries, on the lawn in masses, or as single plants.

**Mountain Ash.**—Oxalis.—What can be done to increase the growth of my Mountain Ash and make it bear berries? The soil is sandy. Should Oxalis be dried and rest awhile?

*Answer.*—Dig well rotted manure around your Mountain Ash and make the soil rich. This will encourage growth and the tree will bear berries when large. Oxalis should rest all summer. Pot them about October; they bloom in autumn and winter, going to rest in April.

**Tacsonia Van Volxemi.**—I have a plant from seed called Tacsonia Van Volxemi; it is about fourteen inches high, but grows slowly. Please tell me how to treat it, and if I have a Tacsonia at all.  
Andover, N. Y. SARAH M. BOND.

*Answer.*—Tacsonia Van Volxemi is a greenhouse climber of very rapid growth, producing very handsome red flowers on long drooping stalks. It requires good sandy loam and moderate heat. We doubt your being successful with it as a window plant, as it does not bloom until large, and in a dry atmosphere the buds are apt to drop; the plant, however, is very pretty in foliage; give it plenty of sun.

**Day Lily Culture, etc.**—Please tell me how to grow Day Lilies. Why do not Oleanders, when fully headed, mature their blossoms? Please name enclosed leaves.  
Mrs. S. C. BURNHAM.  
Bear Valley, Wis.

*Answer.*—The Day Lilies (Funkia and Herero-callis) are hardy garden plants. All they need is to be planted in good soil; they come up every spring and bloom freely during the summer. Your Oleander probably has received some chill when in bud, or the air of the room is too dry; either cause would make the outer petals shrivel and the buds drop. We cannot name plants from leaves; those sent were almost microscopic.

**Growth of Oxalis Roots.**—This summer I had a Yellow Oxalis bulb, about as large as a pea, which I put in a three-inch thumb pot. Some time ago it commenced growing and grew so fast that to-day, Oct. 29, I thought best to remove it. On taking it out of the pot, I found a root at the bottom of the earth, of a transparent white, seven-eighths of an inch in circumference in the largest part, coiled up, and in the shape of a snake. A perfect little snake, head, tail and all, and connected with the bulb on the top by only one very small root, and at what appeared to be the head, was two buds. Did any of the readers of the CABINET ever hear of such a thing?  
E. M.

*Answer.*—This is not peculiar; Oxalis grow in this way, but it is very curious and interesting.

**Plants in Rooms.**—Do you consider plants in a living room unhealthy to persons living in the room and sleeping in an adjoining room?  
New Lebanon, N. Y. H. A. ASHBY.

*Answer.*—Unless there are so many plants as to make the air damp, no possible injury can result from growing plants in a living or a sleeping room. The writer last winter slept in a room with twenty-five very large plants in the windows and an immense banana stretched its leaves almost over the head of the bed.

**Names of Plants, etc.**—Can you tell me the name of the enclosed plant? The leaves are of many colors; it roots from slips. Also the wild flower which looks like a Snap-Dragon? What soil should I plant Silver Geraniums in to keep the leaves from curling and turning green?  
Mrs. S. E. CHILDS.  
Santa Barbara, Cal.

*Answer.*—The plant is Alternanthera versicolor, a very good and brilliant bedding plant. The wild flower is a species of mimulus. You are probably growing your Geraniums in too rich a soil, and perhaps they are too wet. All variegated plants have a tendency to revert to the green state.

## Floral Hints.

## GLOXINIA, GESNERIA, ACHIMENES.

These three varieties of plants I met with first about two years ago, and was so delighted with them, that I concluded to try my skill, and the result has been so gratifying, I hope to tempt others to try. They seem comparatively but little known outside of the greenhouse, and many think such necessary for their well-doing, but with care and some patience any one may enjoy them.

The Gloxinia is a bulbous root; there are two varieties, many colors of each kind, the erect and drooping; the shape of the blossom of the latter is quite similar to that of the Maurandya Vine, only much larger. They can be raised from seed, or leaf; if by the latter, insert the base of it into a small pot filled with sand; keep moist and in a warm shaded place, in about two weeks little roots make their appearance.

Into a small pot put broken crock and dry moss, then the earth with a good proportion of sand; in this plant the rooted leaf to form the bulb; keep in same temperature; when the bulb has made some size, it will throw up tiny leaves; now place in a sunny window; water sparingly, but be careful to keep the water off the leaves.

When the flower-buds make their appearance they will be very close to the root and bent as if intending to bury themselves out of sight; but as they grow raise up, and when in bloom, borne on a long stem far above the leaves, are stately, rich and beautiful; will remain in bloom from May to September. If some are retarded by keeping in a cool place after blooming should be gradually dried off; leave in the earth and keep in a cool dry place; give them two or three months rest, then repot in fresh earth, giving but little water until vigorous growth has commenced.

The seed should be sown in soil prepared as for the leaf; water the earth, sprinkle on the seed, but being very fine, do not cover; put a piece of glass over it, and place in a moist heat; when they sprout, they will be lying on top, and are very difficult to handle. One would find a quill a good thing to lift them with, and set them into the earth; keep shaded for a few days, then put as near the glass as possible. When they have made some growth, pot off singly; it will be quite a year before they come into bloom, but such a great variety of colors are thus obtained, one feels quite well repaid.

The Gesneria is a tuber composed of tiny scales. There are many kinds; a well-grown plant is a beautiful sight, with its soft velvety leaves, the red or ruby color is gorgeous, the bloom of scarlet, is very rich, but insignificant in comparison to the foliage; another is of green and brown mottled, looking like the old-fashioned embossed velvet; are grown in perfection and much used in wardian cases; can be propagated from the little scales and from the leaf, treating in like manner as the Gloxinia; but be very careful and not let the water fall on its leaves; it will soon cause ugly brown spots to appear which gradually destroy the leaf.

The Achimenes is a tuber similar to the Gesneria, increased by scales or by cuttings; in appearance is very like the old variety of pink summer-blooming Begonia, growing so freely from seed, the leaf a pale green, with ribs red; it should be grown in a warm, moist place, and would thrive in the first stages of

growth in the kitchen, if no other place had the proper heat.

As they grow, tie to little stakes, as they are easily broken; pinch them often, as they are inclined to grow spindling. The flowers are of all shades and are very lovely, making a fine show used as a basket plant; put several into a wire moss-lined basket, give plenty of water, and syringe it daily. They thrive well with the great heat, which is death to many plants used for that purpose, and a very pretty sight it is, as it hangs, to see the rich effect of the sun through its leaves.

So few of our basket plants bloom, the Achimenes is quite an acquisition. This, like the two former, needs a season of rest, but a month would be sufficiently long for this. By following these few rules, the most inexperienced will rejoice in the creation of much loveliness.

For whose careth for the flowers,  
Will much more care for Him."

IRENE H. WILLIAMS.

## DISEASED BULBS.

It is a grievous annoyance to find one's rarest Lily dying, when symptoms of decay were unsuspected. But whence originates bulb disease? Is it from excess or lack of moisture? Too great or too little depth of soil? Is it from excess of heat, or excess of cold? Or are there elements in the soil deleterious to the imported bulb? If we could confidently determine any of these the cause of disease, we might still be puzzled to say why some of our choicest Lilies thrive and bloom a few years after being brought to this country, and then suddenly decay.

The disease of bulbs bears some analogy to the potato rot. In some cases the substance changing to a soft, dark, pulpy mass, of most disagreeable odor, not unlike ordinary vegetable putrefaction. In others, and perhaps the greater number, we find something analogous to the dry rot of the potato, with no perceptible odor.

I do not mean to say the diseased spots have that pithy appearance noticeable in the potato. On the contrary, the structure often appears unchanged, except in color. Taking a Lily, for example, you will find red spots more frequently a dull copper color on the scales.

Some of these are very minute, others covering the width of a scale, especially near the base. This seems to indicate a layer of sand beneath the bulb, as often recommended for Hyacinths, might be a preventive. And yet, freely as I use sand in preparing a Hyacinth bed, I doubt its utility with some varieties of Lilies. I think, for two or three years, my Candidum Lilies had too much sand and sunshine. I think my Japan Lilies were nearly ruined by the same. Yet in neither case did I discover signs of disease in the bulbs. They grew puny, dwindled, had few blossoms, and the foliage died early. But just as I had decided sand was ruinous, a friend, who had grown luxuriant Japan Lilies ten or twelve years in a very rich soil having a yearly dressing of stable manure and no sand, informed me her spotted Lilies were all dead.

My Excelsum Lilies were planted in a loose, sandy, well-drained soil. They bloomed so well, I had no suspicion of disease until wishing to remove them one autumn, I found the bulbs three-fourths consumed, and the remainder spotted nearly to the centre. My Washingtonianum was planted in the same soil. It came up and wore a healthy look, so far as I could

judge, for one month. Then it disappeared. I found no trace of it in the fall.

My first Chalcedonicum was planted in the centre of my Hyacinth bed. I wasted a few regrets that I did not plant Washingtonianum there, as I knew it was not possible for a bulb to rot in that bed where nothing ever failed. The next spring I waited till the middle of April, then dug it up to find the lower part of the bulb a dark, pulpy mass. Then, as I had previously done with Excelsum, I cut off all the discolored portions, washed the mutilated scales and the little central core, which, if I remember rightly, had its base also removed by the knife, and planted them with pulverized charcoal under and around each fragment.

Not wishing to wait for my dismembered patients, the following autumn I ordered another from Hovey, of Boston. While preparing to plant this in the same place, I laid bare a small but healthy-looking bulb, well supplied with rootlets, the result of my spring treatment.

I have often been amused reading directions for taking up Longiflorum Lilies and keeping them in sand in the cellar during winter. I considered my Longiflorums as hardy and self-reliant as any bulbs. They never failed to come up green in February. I would almost as soon have thought of bringing in a maple tree to keep it alive during winter. But one warm, windy day, last spring—they had been green six weeks or more—I discovered tufts of leaves blowing from them, and, upon examination, found them rotted off close to the ground. Upon digging, I found the bulbs so spotted and speckled that it became necessary to cut them nearly all to pieces. They had bloomed four or five years in the same place.

I do not understand the causes of bulb disease. In the cases mentioned, it was not caused by excess of moisture or by excessive cold.

Some suppose they are injured by the heat of summer, and advise planting all the choice Lilies in pots. Heat could hardly affect Washingtonianum and Chalcedonicum above-mentioned, as both died before their first summer.

In regard to the efficiency of charcoal and surgery, I am not prepared to say all I could wish. I have never lost a Lily entirely when I have used it; yet in the cases of Excelsum and Chalcedonicum, where but one came up the following spring, I suspected that one was from the central core or heart of the bulb. When bulbs grow from scales, they are always formed at the lowest corner. Sometimes a tiny bulb at each corner of the base of a scale. It hardly seems reasonable to expect bulblets after the base has been cut away; and yet, as I dig up three or four scales of the diseased Longiflorums, planted last spring, I find little bulbs growing on them; one scale scarcely an inch in length and less in breadth, having a tiny bulb in each corner of its lowest side. I cannot help thinking that these very scales passed under the pruning knife. The largest number, of course, perished, but if only one were saved, it would be worth the trial.

MRS. L. M. MCFARLAND.

The best time to sprinkle plants is in the morning, and before the gas is lighted at night.

The leaves of large foliage plants, if standing in rooms that are occupied, should be daily dusted.

The leaves of Ivy plants should be sponged and carefully wiped weekly.

## Rustic Work.

## RUSTIC WORK, BRONZE WORK, Etc.

It is a fact well known to ladies who love flowers, that nothing is so hard to obtain as suitable receptacles for them. Although fancy baskets, etc., are not very expensive, the money paid for them is spent grudgingly, also the time when masculine muscle is pressed into service. That "necessity is the mother of invention" I have found to be a fact. Last summer, while on a prairie farm, I made the discovery that fence willow was "just splendid" for rustic work; and I "give in my experience" for the benefit of those who ruefully say: "What can we have pretty away out here on the prairie!" The willow is easily worked, when taken in the spring peels readily, and is so pliable and soft that it can be made into any shape. My first attempt was a seat for croquet ground, which I made between two trees. I nailed willow poles on each side of the trees, from one to the other, and upon them, at each end, placed a short cross piece, and up on the cross pieces laid lengths of willow long enough to fill up the space between the trees. Two pieces twisted together and curved in proper shape, and braced with cross pieces, formed the back. An apple tree, which was blown down and demolished, formed the end piece of another and very pretty rustic seat, made on the same principle as the above. Also, rustic chairs and trellis for portico. It is the very best material I have ever tried for rustic work, out of doors or in. To make a plant stand, saw off the bottom of a barrel, leaving a tub five inches deep; also, two kegs of different sizes; with these form three baskets. For the first, peel the willows and cut into lengths a foot long; bend and nail the ends at the bottom six inches apart; the curve extends above, forming a scallop. Allow each piece to lap half way over the other; then twist three slender pieces together and place around the bottom, which finishes quite a nice basket.

Form the other two in like manner; nail legs braced with cross pieces to the largest, and inside the centre nail firmly a section of wood upon which to place the next in size, which forms a pyramid. Barrel heads can be used for a foundation of the frame work; and old tin pans of graduated size placed inside, and the whole painted brown.

A nice basket-stand can be made by only using the bottom part of the above, with the addition of a handle formed of willows twisted together. Paint and small nail kegs, finished in the same way, make pretty hanging baskets.

To make a window-garden, procure a box as long as the width of the window, one made with semicircular front would look best; make in the same way as the baskets. Support each end with a framework of fancy curves made in the willow; nail to each corner long willows; twist those at the ends together and form an arch above. One made the same way, with a very shallow box, and filled with pretty stones around the pots, makes a nice house rockery. Or one can be made by simply nailing a narrow strip on the edge of a board, placing the board on a stand, and pile rocks and shells around your pots, covering them. Place the tallest pot in the centre, having small pots of vines, the pots entirely hid. The Dewplant looks beautiful near the lower edge, and Cactus looks much better arranged this way than in any other. Miniature rockeries can be built around a pot or box, and

cemented with plaster of Paris, or stuck on with putty.

A corner what-not, made of three-cornered boards, suspended by cords, can be ornamented on the rounded front with a shallow basket-work of willow, and painted brown. Brackets made in this way are nice for holding pots of plants.

Twigs of soft maple, cut in the spring, in a few days become very pliable and tough, and are good for rustic work.

I must digress, and tell of a cute little play-house, which would delight the heart of any little girl; besides, it is quite ornamental to a yard. It is a neat little log cabin. I saw nothing new in the Centennial, in rustic work, but a hanging-basket in form of a boat, made of sticks of uniform size, bent in shape, with three perpendicular ones in front, the centre one the longest. I saw there an oval table made of pine, with wreath of leaves and ferns, in brown spatter work.

I have had a large frame made with flat surface and moulding on each edge. The moulding I stained dark brown. On the flat surface I placed leaves and ferns, and spattered with the same dye until a light brown; then removed the ferns and spattered lightly. Spatter work is so well understood, I need only say that on wood the spatters should be large to give a mottled appearance; and, after going over lightly, should be allowed to dry, in order to keep the speckles from running together. But if too dry the leaves will curl.

Among the novelties at the Centennial I saw a muff and cape, made from the cotton of the milk weed. I had often wondered if something nice could not be made of it. It can be taken in bunches and woven with fine wire, like hair or worsted flowers, then made into mats, fairy baskets, etc. I took down an item in hair flowers, which is, to put a gem picture, of the person of whose hair the flower is made, in the centre of it.

Another idea was stones for holding doors open, painted scarlet, with a small picture upon them, for which the modest sum of five dollars was asked. These could be made with decalcomanic pictures, as could shells in imitation of hand painting.

No ornaments are at present so popular and tasteful as those of bronze. Elaborate instructions have been given for imitating these with plaster figures. I have found that aniline, dissolved in alcohol, makes a beautiful greenish bronze, but requires some experience to mix and apply: first, dissolve aniline in hot water, in which dip the plaster figure, and see that every part becomes colored; and when perfectly dry put a small quantity of aniline powder in a dish, and moisten with a few drops of alcohol, and apply with a small brush immediately. Where a smooth surface is not desired, articles can be painted brown and dusted with aniline powder before dyeing. The bronze used for dyeing shoes produces a bronze of a different hue, is easily applied, and will cover a multitude of deceptions, and with a supply of putty will produce a variety of hybrid articles, such as vases made of a lamp and bowl of a goblet—or a card receiver made of a cracked preserve dish on a stem of goblet.

Covers of glass dishes often accumulate. These can be made into handsome card receivers by placing them on a stand made of three short pieces of knotty wood, fastened together in the middle to form a rack (old parasol handles are good for the purpose), bronze both rack and dish; a saucer can be used in place of the glass dish.

Flat receivers for holding stereoscopic views are

made of plates or soap dishes. Either bronze all over, or leave ovals by pasting on pieces of cloth, which are to be removed and fancy pictures stuck in their places. Lamp chimneys of vase-like form, fastened upon a wooden base and bronzed, make respectable vases. The base of these may be ornamented with acorns, nuts and shells, put on with putty, or with figures made with putty alone.

To make crystal baskets, have pieces of window-glass cut into suitable shape; paste a binding of muslin on each piece and sew together; then cover the muslin with ribbon.

Something new in the way of wreaths of grasses and mosses is to make them up with flowers made of the different colored fungus which grow upon logs and stumps. These flowers, with the lichen which grows on hickory trees, make beautiful baskets, and can be made into frames, brackets, and cornucopias. Pretty little frames and card receivers are made by soaking in hot water rough-looking twigs of an evergreen (I cannot give the name), and braiding in a wide flat braid.

Being a woman, I cannot help concluding with a tidy, and crochet rock. For the tidy, cut circular pieces of muslin, turn the edges and run a thread around and draw up, leaving a circular opening. Sew these wheels together into whatever shape desired. This tidy is not new, but there has been improvements made; one is to sew tufts of zephyr in the circles. They are pretty, made in this way, of white paper muslin. Toilet mats can be made in the same way of colored cambric. I have seen a basket crocheted, of coarse brown cotton, the top crocheted in a shell pattern and stiffened with gum-arabic. A basket could be crocheted of any cord, stretched stiffly, painted and varnished.

Little pitchers, knitted or crocheted, of fancy wools, and filled with candies, are nice for the children, and suitable for fancy fairs. Also, miniature boots made of coarse net cut in shape, laid together and "button-holed" around, and filled with candies. A pretty tidy is made by crocheting strips of white cotton and sewing scarlet dress braid between, crocheting a border all around.

A beautiful lamp mat is made of an ounce of shaded green and half an ounce of white zephyr. Wind a thread of zephyr around your hand three times; hold between thumb and finger, and proceed as in batting, making the stitches half an inch apart; then cut half way between, all except the strand which forms the stitch, and which leaves it tufted; sew these on a foundation leaving five spaces for the white, which is put on in bunches. LEE ELLIS.

## How to Take Care of the Yellow Oxalis.—

This is one of the most desirable of the Oxalis family, as the blossoms are large and in large clusters, and very enlivening and showy, and as abundant as the small pink and white. But it cannot be treated the same way as the others, and therefore many bulbs are lost in the time of summer rest. When the plants have done blooming take the little bulbs from the ground and put them into dry earth and store them away safely in a dry atmosphere until about September, when they may be potted, in rather deep pots, and set to growing for winter bloom. They will begin to throw out their robust looking flower stalks about the middle of January, and will continue blooming for four months or more. Do not mix them in a pot with other plants, but give them plenty of room, air and light and they will not fail.—*Laws of Life.*

## The Home Circle.

ANSWERS TO QUESTIONS, AND GOSSIP  
WITH CORRESPONDENTS.

**Curtains.**—We shall be very glad to hear Miss Larned's description of the curtains to which she alluded. We have used both unbleached muslin and Canton flannel for hangings, embellishing them in many different ways. An elegant set, that has been greatly admired, we made by cutting a border of foolscap paper, consisting of a serpentine vine, made by reversing a half circle six inches in diameter, then marking a line within it, half an inch from this first one, we arrange sprays of Ivy leaves and berries along this main branch.

In order to facilitate matters, we transferred this one section of the design to a long strip of cheap wall-paper, on the wrong side, then cut it carefully out, and there was a pattern for all our different large pieces; piano-cover, curtains, lounge-covers and portieres—for we hold to using drapery rather than doors between certain apartments, it gives such a cosy appearance compared to those folding or sliding doors in their hard woodiness.

But about our unbleached muslin arrangements: besides this Ivy vine we used for corner-pieces groups of light feathery ferns, etc. Now, having purchased a bolt of the unbleached sheeting muslin, double fold, we proceeded to cut out our various covers, etc., and then fastening the patterns in place began our work of casting the spray, and how do you suppose we did it, and what did we use? Neither more nor less than Leamon's brown dye, and an atomizer. We have tried with excellent success the brush and comb, sieve, wire-cloth, etc., but can assure you an atomizer is by far the best article. This work requires care, but once done, you have the most superb set of covers and drapes that can be imagined.

Any color preferred may be used; crimson, blue, and green are charming, especially for chambers. As we desired the lovely, creamy tint of the material only to appear blank in certain parts, and thus to effect a positive delusion, we cut single clusters of two leaves and a tiny delicate spray which we dotted over the entire surface, covering with spray, put on with infinite care and delicacy around them for a distance of some three or four inches, heavy, of course, near the figure, then gradually fading into mere mistiness. The spray or spatter-work has been so often described that it is useless to repeat the *modus operandi* here.

A set of Canton flannel can be made to appear like the richest oriental fabric, for these unbleached cottons of our American looms possess the true oriental tint, that soft, creamy white, so long desired, and which foreign manufacturers have made fruitless efforts to imitate; and, lo! here we have it, without an effort, and among our cheapest fabrics.

Now, we all know that in this day for a fashion to assume the appearance of antiquity, is to be stamped *au fait* by Mrs. Grundy, so how fortunate it is for us middlingers, or middle people, to be able to arrange our belongings, so that they not only appear, but truly are old-fashioned, so we may, in case of our hangings, just turn to some engraving or picture of "ye olden time" and then we shall see across the upper part of all window-hangings and portiere curtains, one or more figured stripes or bands running horizontally across the curtains. These are from eight to fourteen inches wide, and in some cases we will find three of

them about four to eight inches apart, but in many there will be only one twelve inches deep, and above it a diaper design. These are richly embroidered in the costly Indienne fabrics, but in others velvet or woolen bands take their place, and right here, let us mention that no one article of embellishment is so admirably adapted to carry out this ancient impression than common horse-girthing, which retains in a singular and special manner its ancient individuality as regards fabrication and embellishment. To carry out this assertion let us quote from Sir Chas. Eastlake's "Household Taste":

"\* \* \* Another French material called "Algerine" appeared for a while in our London shops. It was made of cotton and was designed with horizontal stripes of color on an unbleached ground. \* \* \* Some very beautiful specimens of portiere curtains have recently been made from the respective designs of Mr. A. W. Blomfield, architect, and of Mr. C. Heaton; they are composed of velvet and other stuffs, embroidered by hand, and decorated with deep stripes of alternate stripes of velvet and common horse-girths. It is a remarkable fact that horse-girths, as well as certain kinds of coach-trimming, traditionally preserve the spirit of some very excellent designs, which have probably varied very little in pattern and general distribution of color during the past century."

Two specimens of the curtains are given, the one is decorated in applique embroidery, with representations of *Æsop's* fable, "the Fox and the Stork." The other the "horse-girth" stripes.

Now, instead of the *Æsop's* fable illustration, we obtained some large figured curtain chintz, which was covered with curious Japanese and Chinese figures. We cut these out carefully, and gummed the wrong side, then arranged them in square blocks forming one of the stripes; above and below we used bright colored horse-girthing. The applique embroidery we fastened by means of buttonhole stitching along the edges, using scarlet and other colored linen-floss.

You can form no adequate idea of the elegance of such a set of curtains, which will not cost one-tenth the sum of an imported set not any handsomer in appearance, and which none but a connoisseur could distinguish from the genuine article.

In making your curtains, we would advise your covering sofas, etc., with similar material, making stripes to extend perpendicularly across the back one in the centre, and one on each side of it, also the seat with narrower ones, extending from the front edge to the back. The new work Mr. Williams has just published, "Beautiful Homes," will give you full instructions regarding the furnishing and arrangement of every room in the house.

**To Renovate an Old Sofa.**—Please tell me, through the CABINET, how to renovate an old sofa which needs it very much. I can cushion it, but that is not the work that troubles me; I do not know how to go about varnishing, etc. Also, tell me *all* about finishing a bedstead when purchased new, without paint, varnish, etc. By answering these questions you will greatly oblige your friend,

MRS. MARY M. MEDLOCK.

**Answer.**—If the sofa has a coat of old varnish on the work-work, remove every vestige of it, first rubbing it very carefully, with the grain of the wood, first with finest emery paper, then with a flannel cloth made wet with clean cold water and covered with pulverized pumice stone. It must feel quite smooth

under the hand; then rinse perfectly clean and wipe dry, rubbing hard with an old cloth of some kind. Next have some copal varnish and a soft varnish-brush, and in a warm room, free from dust, give the work a smooth, even coat of varnish. If it appears to "drag" under the brush, thin it with a little turpentine. Allow this to dry, and if you wish the polish very fine, rub it down again with pumice, and rinse, then re-varnish; the oftener this is done the higher the polish; we have in some cases rubbed down or pumiced and re-varnished a piece until it assumed a hard, solid, uniform surface as fine as papier mache or polished marble. We would advise the use of gilt-headed tacks and such covering as suggested to. A covering of stone-colored drilling, spattered with bright green, is one of the most chaste and elegant pieces of upholstery imaginable. We will suppose your new bedstead is of plain pine, with head and foot-board, simple and quaint in form, *a la* Eastlake. See that it is perfectly smooth. Now decide upon some color for the grounding. It may be black or of any intermediate tint or color between that and white; brown, stone, lavender, buff blossom, straw, drab, pearl, cream, pale green, or blue, will any one of them be satisfactory. Obtain the powder color, unless some house painter can be relied on to mix your color for you; rub it up with a little pure zinc-lead, and then add Damar varnish until of proper consistency, about like cream. Lay on a smooth coat of this over every part of your wood-work; dry well and apply a second; dry and varnish with Damar; then polish. Now you are ready for any embellishment you may desire. We would advise bands of color around all the margins; for instance, a fine illuminated effect is produced by painting a ground of sage-gray and making bands of vivid scarlet, blue, and green, with thread-lines of black separating them. The best method of applying such lines of paint is by forming impromptu stencil-plates. Go to your tinner and get a strip of tin two inches wide and a foot long, having him cut you three open spaces in it a half or fourth of an inch wide, and then you have it; place this on your foot, side, or head-board, and with your red, blue and green brushes paint directly across each slit, then raise it, pass it to the space below, and thus proceed; have the one end of your tin cut entirely out, so that you will have no trouble in placing it on the extreme end of each space just finished, as you continue the lines. After these lines are dry, the black, white or yellow division lines may be easily made by means of a stiff bristle brush of small size and a ruler. An inch below such lines put on some pretty border of decalcomanie. We have used vines, geometrical designs, Grecian Key, etc., in gold and colors, with charming effect, only use care in selecting the designs not to mingle incongruous objects; if flowers, birds in the light French style are used, then do not apply a Grecian goddess in some panel medallion, or if the goddess, with illuminated borderings; do not have an Egyptian or Assyrian mythological group, a Japanese temple or Chinese mandarin. Each style of embellishment is perfect of its kind, but do not confuse them; it is like putting on colors that are antagonistic—red with green, yellow with pink, etc. They absolutely swear at each other. On black or dark grounds gilded decalcomanie designs in imitation of illumination will be found very effective, and is a favorite style with us. An entire suite thus embellished will give you a room so entirely lovely as regards furniture, that you will find nothing wanting. Imagine a floor covered with matting, and such a suite in cottage style, ground, a pale turquoise blue, with bright rosebuds in pink with miniature roses for a border, within a band of gold and scarlet, a medallion in the centre of each panel, on head and foot-board of bedstead, centre of all drawers and doors, with large floral design, a basket of roses, etc., blue walls with a rambling vine of pink roses and convolvuli, curtains of Swiss, with blue spray-work, lined with rose-colored cambrie, mantel draped with a lambrequin of same, water-color chromos, if not painted, in white-wood frames—and—but we dare not proceed or our other questions will be crowded out. AUNT CARRIE.

## A REMARKABLE BOOK.

# THE WONDERS OF PRAYER

A Book of Well Authenticated and Wonderful Answers to Prayer.

## THE MOST WONDERFUL BOOK OF MODERN TIMES

To a greater extent than any other book, and in an extraordinary recital of facts, with over five hundred interesting incidents, it fully answers that all-important question, "DOES GOD ANSWER PRAYER?"

It also shows that the promises of the Bible are absolutely true, and faithfully fulfilled in the daily lives of those who are constantly trusting in the Lord, and ask His help in their daily anxieties and experiences. It is a book of great comfort and encouragement to Christians, in their doubt, fear, sorrow, or trouble, to trust Him more fully in faith, and shows how He who delivered others in times of distress, peril, or solicitude, can hear and deliver them also.

To those who are not Christians, it is a record of undoubted facts from the experiences of individuals now living, proving the real existence and power of God, in controlling circumstances, directing human wills, and all things of earth, showing His nearness and power in daily events of life, and demonstrating that He is not a distant Creator, but ever near at hand.

### CONTENTS.

This volume contains several hundred instances where Prayer has been heard and answered in the following circumstances of life: *Healing; Recovery from severe Sickness; Delivery from Death; Delivery in Perilous Situations; Miraculous Cures of Diseases and Deformed Persons; Help in Poverty; Relief from Starvation; Insanity Cured; All Appetite for Sensuality Removed; Evil Habits Overcome; Drunkenness Cured; Appetite for Tobacco and Liquors taken wholly away; Souls Converted and Saved; Bad Men Confronted; Oppressors and Wrongdoers Punished; Wonderful Revivals; Proofs of the Existence of the Holy Spirit; Timely Help in Financial Danger and Need; How Liberal Gifts to the Lord and the Poor have been Blessed; How the Sick, Poor, Afflicted, and Helpless, have been cared for constantly; How Work and Employment have been Obtained; How Lives have been Saved from Accidents and Death; How Plans in Life have been wholly Frustrated and Changed for the Better; How the Schemes of Bad Men have been Spoiled; How the Lord has Controlled the Natural Elements of Earth, the Winds, the Waves, the Lightning, the Rain, Tempests, Snow and Hail, stopped their work of destruction, to Aid, Benefit, Relieve, Help, or Deliver some poor Christian who has cried to Him in Prayer.*

A multitude of such instances are given, all from experiences of individuals of the present day, still living, which fully satisfy any one that the same God who did wonders in the days of Abraham, Joseph, Jacob, Joshua, David, Elijah, and Hezekiah; the same Lord who walked in Palestine, healing the sick, curing the blind, lame, and halt, raising the dead, performing miracles, is still, though unseen, with us this very day, performing as many wonders and miracles as in the days of old. By strong faith, Christians who have laid hold of the promises, and trusted in their unseen Lord, pleading to Him in their extremities of life, here give their testimonies that they have found their God faithful.

Being a book of facts only, of most positive authenticity, it most practically sets at naught all the modern books of *Science, Speculation, Philosophy, and Human Reason*, which would try to build the world without a Creator. Neither does this book depend upon history, but is a record of occurrences of the present day, and from facts of *Answered Prayer* proves that there is a Superior Power, a living God, and that all contained in the Bible is true, because its promises have been actually fulfilled.

This book should be in every Christian home, it is invaluable to all Sabbath-school teachers and scholars. It should be given to every child, for it contains pure and healthful instruction to encourage the faith of every one, and aims to lead all to come with more willing minds to learn of the *Great Comforter*.

It contains no philosophies, no denominational discussions, tenets, or principles; is not issued in connection with any religious society; is not an advocate of any *isms*, nor a record of *peculiar superstitions, nor fanatical thoughts, theories, or imaginations*. It is a simple, humble, candid book of honest facts and experiences connected with daily practical Christian life, and answers those important questions: "Will God even now answer Prayer?" "Whose Prayers will He answer?"

400 Pages. Price \$1.50, Postpaid by Mail.

NEW YORK, APRIL, 1878.

**A LADY'S FLORAL CABINET.**

A MEMORIAL OF THE LADIES' FLORAL CABINET.

"A wreath that cannot fade, of flowers that blow  
With most success when all beside decay."

It is a crystal cabinet of never fading flowers, which we are about to describe; a beautiful memorial of THE LADIES' FLORAL CABINET. We will begin with

**THE CENTENNIAL "FLORAL CABINET."**

"Studious of ornament, yet unresolved  
Which hue the most approved, she chose them all."

The materials used in making the Centennial "Floral Cabinet" are pasteboard, glass, strong silk binding, chenille, very fine or small sized silk thread, and satin of red, white and blue colors, and any other color to cushion the inside, everlasting flowers, fine grasses, and green French moss, and strong paste and gum. Cut a pasteboard bottom, round, and eight inches across, and a paper of the same size, which makes the measuring easier; fold the paper in middle three times, which forms a cone shape; cut the cone across the large end; unfold the paper, lay it on the pasteboard, and mark it around with a pencil, and cut it the same size as the paper; rule the paper and pasteboard both alike, with lines across marking the eight divisions, and a line three-quarters of an inch from the edge all around. There is to be an eight-sided hoop of pasteboard, three inches wide, and nineteen and a half long, fastened edgewise on this line; the flowers are to be sewed on the outside of it before it is fastened in; rule lines two and a half inches apart, and bend it on each line, making eight divisions; cover each division with alternate red, white, blue, white, then red, and so on. The bottom of the box outside of the strip must be of the same colors.

Cut eight glasses three inches square; bind them by pasting the ribbon around the edges with strong paste, and let them dry perfectly before you sew them together; then sew them around the eight-sided pasteboard bottom; sew on for feet four large round but-

tons; arrange in the centre of each division of the red, white, and blue strip a little bouquet of everlasting flowers, green moss and small grasses; and sew it in its place. Put dark flowers on the white, and yellow and light on the red and blue. You must have eight red and white and blue pieces, to cover the top, between the glass and flower strips; they measure three inches on one side, two and a half on the other, and three-quarters of an inch on each end.

You will want eight more just like them to hold the same situation on the cover, when that is made to rest on these when the cover is shut. There must be another strip of pasteboard to fit closely inside of the flower strip to sew the cushion on to, and then paste it in, finishing the edge with fine chenille gummed on; paste the bottom cushion in first; an eight-sided pasteboard, cushioned. Highly perfume the cushion, as this being a "Floral Cabinet," of course there must be a cloud of fragrance whenever the cover is raised.

"A box where sweets compacted lie,"

as when you turn the leaves of THE LADIES' FLORAL CABINET, of which this is a memorial.

"Another Flora there, of bolder hues  
And richer sweets, beyond our garden's pride."

The eight glasses composing the cover, are four inches long, three inches wide at one end, tapering to one inch at the other; the small ends are to be sewed around the flat top piece; each side of the top piece measures one inch; it is two and a half inches across from one point to the opposite point. The inside pasteboard cover is made of pieces two and three-quarter inches long, two and a half wide at one end, tapering to one inch, to be sewed on to an eight-sided flat piece like the glass one, covered outside, to match the rest, with red, white, and blue, the colors to be in stripes from the bottom of the box to the top. Perhaps it would be easier to cushion each piece before they are sewed together, or make the cushions on other pieces and sew them or paste them in afterwards; sew the flowers on the side next the glass first. There must be a strip, three-quarters of an inch wide, between the flat top glass and the pasteboard under it where flowers are sewed on, the strip goes all around the glass, bent in eight divisions, each measure an inch, and colored red, white and blue.

Where the cover rests on the box, sew eight pieces in a circle, from the glass to the pasteboard, each piece measuring three inches on one side, two and a half on the other, and three-quarters of an inch on each end, exactly like those around the top of the box. The cover is sewed, where hinges ought to be, not too tightly, and sew ribbon inside to keep it from falling back, and a loop to open it by, or anything handsomer. The right kind of old odd ear-drops would do. Then, the inside being finished, you must cover the joinings outside.

A very pretty thing for that purpose made of knit zephyr worsted, is

**IMITATION MOSS**

of different shades of green; yellowish colors, and a little brown. Cut the knitting in strips, sew it on, and then ravel it out; it looks very like moss.

Pin or sew a bouquet inside the cover of the Centennial "Floral Cabinet," and it is finished. It is a very pretty thing when done; but a greater sensation would be

**"THE LADIES' FLORAL CABINET" ENLARGED.**

Make the frame of wood, any size you please, the panels where the flowers are to be, like a window-sash, so you can have pasteboard on the back of the door, and glass on the front; an inch is space enough,

unless you would like to introduce a stuffed bird or so; then it ought to be an inch and a half at least. Cover the frame of the "Cabinet" with muslin, and paint it to look like wood, or cover it with handsome cloth, and trim with fringe; you can make it all yourself. Putty the glass in on the outside, and paint putty and sash all one color; the inside rim of the glass frames color, suppose, brown; cover the pasteboards with brown cloth, sew on the flowers, in a wreath or bouquet or clump, and fasten it in and paste paper over the whole door or doors inside, or cloth of one color, and line all the conspicuous parts with the same. Set a showy bouquet of everlasting flowers or grass on top of the "Cabinet."

It is a thing that can be made very ornamental, and with little expense. Saw out of thin boards or cut out of cardboard, a border to go around the top of the "Cabinet," and ornamental pieces for the corners of the flower panels. You can make the panel appear any shape you please.

Color the scroll work to correspond with the rest, and if you place gold paper behind it, it will look like walnut and gold, if you paint the "Cabinet" with Vandyck brown.

**THE GOTHIC "FLORAL CABINET"**

might be made like a bow-window in front, with three panels, or five, if you want it large. Cut it all out with the scroll saw; tack the glass inside, and make a frame of lath that will just fit around it, or glue a strip of pasteboard in the lath frame to rest on the glass to keep it in its place; cut a pasteboard to tack on the back of the frame to sew the flowers on. It would be better to bore the tack holes when you fasten the lath frame in its place behind the glass; therefore procure a good bore-ax. Line the whole "Cabinet" with crimson cloth or paper; paste gold paper on the lath frame between the glass and flowers. The background of the flowers would look well a light blue, like the sky, and when it is done, it will be a handsome thing for an exhibition. Put a plaited piece of cloth the color of the lining around the lath frame inside to look nice when the door is open.

**THE RUSTIC "FLORAL CABINET"**

made of a packing box, covered with roots and branches, is a novelty; but don't put them on so the door won't open. Saw large oval holes for the glasses on three sides. Arrange the flowers to look as if they grew up from the bottom of the opening, and let wheat seem to be growing behind, and don't forget the birds and butterflies; the background should be sky blue; nail the roots around the glass, to look as if you were looking through a vista, in the woods, to a flowery plain beyond. Line the "Cabinet" with sky blue, and stand stuffed birds on the top.

The largest roots should be nearest the glasses, and small ones around the outside. If legs are put to it, and ornamented with roots and grape branches in gothic style, it will be handsomer still. If everlasting flowers are scarce, or there is a "corner" in the market, you can fill up with artificial flowers. There is no end to the things that might be made on this plan. It is almost worth while to raise everlasting flowers on purpose. We hope our readers can gather an idea of what the capabilities are of THE LADIES' FLORAL CABINET.

ZIVORE.

### WHO SHOULD BOW FIRST.

Who has not heard ladies express mild surprise because some man who had been presented to them had not bowed to them on meeting them on the street, at the theatre, or in the drawing-room? If you ask them, "Did you recognize him?" they will be apt to reply, "Oh, no; of course not. He should have spoken first." Being reminded of the well defined etiquette bearing on the subject, they are likely to add: "I know that very well; but no woman wants to take the initiative. Men should do that; it's their business; it doesn't belong to us. No one expects us to make ourselves so bold."

The truth is, the majority of women are naturally so accustomed to man paying court to them, to his making the first advance in everything, that they can't find it in their womanly sensitiveness, in their severely conventional selves, to obey a mandate they originally issued, and still insist on perpetuating. Not one woman in ten thousand has any fault to find with the rule; in fact, we have never known a woman to object to it. Nevertheless, she seldom follows it in her own case. Sometimes a woman says, as a sort of self-justification, "Supposing I should speak to a man, on meeting him after an introduction, and he should not remember me! How awkward I should appear; how overwhelm-

ed I should be with shame to observe that he did not recognize me. I can't afford to place myself in a position to seem to be cut by any man."

If any number of women feel thus, the point of etiquette should be changed in order to save their sensibilities. In truth, however, the objection is not well made. There is not the smallest danger that any man, presuming him, of necessity, to be a gentleman, at

least in respect to his observing the ordinary forms of courtesy, would refuse or hesitate to return the acknowledgment of a woman, even though he might not have the remotest recollection of ever having seen her before, or though he were convinced she had confounded him with somebody else. And the fact that he had been recognized by a woman would be the strongest presumptive evidence that he had been presented to her. Men are not likely either to forget their femi-

An assistant soon brought up the bonnet, and while the customer was duly inspecting it, the store proprietress ventured to inquire:

"How do you like it, ma'am?"

"It is simply horrid!" was the reply.

"But it is just as you ordered it," was the short and sneering answer. "I am really sorry, but—"

"Well, never mind," broke in the buyer with set lips, "what's the expense?"

"About \$7, I guess," said the shopwoman, timidly.

The money was paid over and the bonnet ordered up to the house, when the purchaser pranced out upon the street, and immediately exclaimed to an accompanying lady friend:

"Isn't it perfectly lovely?"

"Yes," replied the friend, "it's ravishing; but how could you talk so to that woman?"

"Talk so?" exclaimed she of the new bonnet; "why, if I had let her know how much I liked the hat, that woman would certainly have charged me \$15; but now, you see, I've got it for \$7."

The other woman said she had never thought of that, but would profit by her friend's ripe experience, and never like an article again until after she had bought it.

A handsome wrapper is made of very light pearl-colored merino; the front is made of blue silk; the back

AN INTERESTING LETTER.

nine acquaintances, or to mistake Mrs. Thompson for Mrs. Robinson, or Miss Blank for Miss Dash.

**How She Manages It.**—"Is my hat done?" inquired a cold-looking lady at a Chicago millinery establishment, one pleasant day last week.

"Yes, ma'am," politely responded the shopkeeper, "it will be here in a moment."

has a wateau pleat, beginning at the neck, where is placed a long narrow ribbon bow; the sleeves are of silk with merino cuffs having at the outer seam a double box pleat of blue silk, fastened with a band of merino. The bottom of the wrapper has a flounce of the merino gathered on to the skirt so as to form a heading; the edge of the flounces has two rows of knife-pleated silk sewed on so as to give the appearance of a double ruffle.

## House Furnishing.

## A SCARLET ROOM.

"Blessed be scarlet flannel," said Laura Gay, "and blessed be the man who invented it."

She had certainly done wonderful things with it, and viewed her work with pardonable pride. Such a lovely scarlet room as she had gotten up for poor Cousin Annie, who was well-nigh crazed with a decade of "plain living and high thinking," never being able, as she said, to have her surroundings represent her in the least, until this left-handed maiden appeared upon the scene, and, waving her magical wand of red flannel, made

—— the low, rude-furnished room  
Burst flower-like into rosy bloom."

Mrs. Mathers had scarcely been delighted, at first, with the advent of her city visitor, three small children, and doing her own work, left little time for extras, and she had no idea that Laura would prove so helpful and gifted. No airs, either, but just took right hold and worked as though she had always been used to it. So charmingly frank, too; her most admired dresses, she confessed, had been made out of old ones, her bonnets were fashioned by her own hands, until her cousin declared, half enviously, that she believed there was nothing those hands could not do.

But that scarlet room was her crowning triumph.

"What is the use of your telling me," said Mrs. Matthews, one day, "of the wonderful things that can be done in the city with a little money and a great deal of genius? I am not in the city, I haven't the 'little money,' and I certainly am not gifted with genius. It is like saying that things can be bought for a mere song, but if you can't sing the song, what then?"

She was rocking in an irritated frame of mind in a most ungainly rocking-chair, one of those hideous sprawlers that are always entangling themselves with people's feet; she was fresh, too, from the kitchen fire and "baking day," and altogether a sense of injury was strong upon her.

"I have never had anything I wanted in the way of furniture," she continued, "and I never expect to. I like pretty things, as well as any one, and know them, too, when I see them; but just look at this parlor! It makes me mad every time I come into it. I've got about twenty dollars saved from the chicken money—I have the sale of the eggs, you know—but what would that buy, even if they kept anything at the stores here that one wanted?"

Laura glanced around the bare, unattractive room, and said very quietly:

"Curtains would be a great improvement."

"Undoubtedly they would," was the reply, "but where am I to get them?"

"Will you let me spend your twenty dollars for you," was the smiling question, "if I will engage to refurnish the parlor so that you would scarcely know it?"

"Spend it and welcome: I am sure that you will get at least a hundred dollars' worth of goods with it. Only, you will find nothing in B——, my dear."

"They keep red flannel at the stores, I suppose?" asked Laura, demurely.

"I suppose they do," replied her cousin.

"And unbleached muslin?"

"And unbleached muslin, to the best of my belief.

But what, in the name of common sense, has that to do with civilizing the parlor?"

"A great deal, ma'am, as you will speedily see; but first, as you are not a mad bull, I take it for granted that you have no objection to scarlet?"

"None in the least; indeed, I think it a beautiful color, and it wears admirably."

"Precisely my own sentiments; we will go out this afternoon and do our shopping."

But first, Laura, who was a very exact little body, did a great deal of measuring; she measured windows, sofa, rocking-chair, mantel-piece; eyed a great, awkward table very severely; and, finally, appeared to be satisfied.

The salesman at the dry-goods and grocery store evidently considered Miss Gay a lunatic on the subject of unbleached muslin, and had his own views in regard to her passion for red flannel; but the young lady pursued the even tenor of her way, and returned triumphant.

What she did with her purchases was this: Curtains were made of the unbleached muslin, which hangs in the softest and most graceful of folds, and trimmed about half way down with cross bands of red flannel, one-half a quarter wide, and on either side of it, at a little distance, another just half that width; there was the same trimming at the bottom; and the cornices were plaited flannel. They were looped back, quite low, with bands and rosettes of the same.

The sofa was covered with oriental-looking stripes of unbleached muslin and flannel alternately; and a delightfully comfortable pillow to match at each end, with a scarlet worsted tassel on every corner. The rocking-chair was treated in the same way, after being sawed low and a few yards of rockers sawed off, and a moss cushion fitted to the uncomfortable back and seat. This, and the front of the sofa, were ornamented with scarlet worsted fringe; for Laura never believed in doing things by halves. The fringe was knotted with a crochet needle on a piece of scarlet braid, and then tacked on the furniture.

The table-cover, a round one, was fitted closely to the table, of unbleached muslin; then a lambrequin, or hanging border, of the same, attached, and trimmed with graduated rows of flannel, the whole finished with scarlet worsted fringe.

The mantel-shelf was a high, narrow abomination of wood, painted white; this was covered with scarlet flannel, and finished with a prettily-shaped, pointed lambrequin trimmed with the fringe. On the shelf Laura placed two plain white vases of graceful shape, a present from herself, and filled them with drooping sprays of *Tradescantia*. The effect of the scarlet, green, and white, to a color-loving eye, was simply charming.

Two chairs had their seats covered in stripes to match sofa and rocker; but to Mrs. Mathers' intense astonishment, two or three cane-bottomed chairs were banished and their places supplied with some respectable-looking wooden ones from the kitchen. But these wooden ones were first painted vermilion, and emerged from the process things of beauty. Some common little pine picture frames were treated in the same way; and as they enclosed passably good engravings of pleasant subjects, they proved very ornamental.

Brackets were not forgotten; small wooden shelves of circular shape were covered with the inevitable flannel and finished with the inevitable fringe; plaster busts, not particularly strong as works of art, were nearly concealed by vines growing in bottles behind them, and produced a very pretty effect.

"You must certainly have a couple of footstools," said Miss Gay, when she had arrived at this point; "but woe be unto the presumptuous he or she that shall place desecrating feet upon them!"

The footstools were made of round salt or sugar boxes for a foundation, covered with unbleached muslin that was ornamented with scarlet braid, an applique figure cut out of flannel for the centre, and fringe around the edge. They were really beautiful, the tops having first been nicely raised with moss and covered with old calico.

Laura's busy fingers worked swiftly to accomplish all this; for she disdained help from her cousin, who certainly had enough to do without adding any fancy touches to her pile of duties. But Mrs. Mathers looked and wondered as the parlor steadily grew in beauty; and frankly acknowledged that she would not have known it.

"Now for a wall-pocket," said the indefatigable workwoman; and after adding some pasteboard to her stores, and producing a lovely chromo-lithograph of Little Red Ridinghood from her own portfolio, she began operations in this way:

A piece of pasteboard, fourteen inches in length by about eleven in breadth, was cut in the shape of a shield, covered on one side with gray paper of a very delicate shade, and on the other with scarlet flannel. It is better, however, to have two pieces of pasteboard, as they can be covered more neatly and the back is firmer. Sew on the edge of the gray paper piece, with tiny stitches on the right side, a binding of scarlet worsted braid; baste the scarlet flannel on the other piece, making the edges very neat; but the two are not to be joined until the entire front of the pocket is completed. Sew neatly on the flannel piece a loop of braid to hang the pocket up by.

Cut out two more pieces of pasteboard, with straight edges, measuring seven by nine inches; cover one piece with scarlet flannel, the other with gray paper bound with braid like the back piece; on the gray paper side carefully paste the picture, which should be of a size to leave a margin of gray all around; edge the picture with a narrow strip of gilt bordering of the kind used with scrap-book pictures; put the same bordering on the inner edge of the braid binding. Then unite these two smaller pieces by a neat overhand or slip stitch done with scarlet silk. Next cut two gores of scarlet flannel to attach the pocket to the back; sew neatly, placing the pocket on the gray paper side of the back in the middle of the shield.

Now join the flannel side of the back to all this in the same way as the pocket sides were joined; crochet a deep fringe of scarlet worsted fringe on the lower and pointed end of the shield, and the article is finished. This is Miss Gay's receipt for a wall-pocket, and it is as beautiful a one as can be manufactured with the needle.

The days went on, and the parlor was finished. It was unique, and the whole family were in a state of admiring ecstasy over it.

"Now," said Mrs. Mathers, decisively, "how much have you spent, Laura, over and above the twenty dollars? This is worth paying for, and I shall soon have some more egg money."

"You wish me to give you an account, then, of 'moneys expended?'" replied her cousin. Here it is: unbleached muslin, two dollars; scarlet flannel, five dollars; worsted braid, paint, silk, and sundries, two dollars; total, nine dollars; sum remaining in the exchequer, eleven dollars, which I herewith deliver to the rightful owner.

"And do you mean to say," gasped her hostess, "that my parlor has actually been refurnished in this exquisite manner for nine dollars?"

"Yes," replied Miss Gay, modestly, "wonderful are the capabilities of scarlet flannel."

But, she might have added, scarlet flannel, like paint, has to be mixed "with brains, sir," to produce the desired effect.

ELLA RODMAN CHURCH.

## Household Hints.

### COUNTRY HOUSEKEEPING TOPICS.

As I have received both pleasure and profit from reading in your pages the experiences of other housekeepers, I think it will be only fair for me to show my "little rnsbight" and see if I can do to others what they have done to me.

I never had any experience in country life until the famous 19th of April, 1861. My husband had the fall before bought a farm on the river S., and as the excitement in Baltimore was fearful, we left the city, as did thousands of others. Then began my experience of country housekeeping. The house was very small and the place rough and unimproved, though in the midst of the most charming scenery.

Our arrangements we were obliged to make on the principle of those in "The Deserted Village" where Goldsmith speaks of "the chest contrived a double debt to pay," etc. There was no stove in the house, and only the old-fashioned fireplace to cook by.

One of our contrivances was to roast a piece of beef by tying a strong string to it, and hanging it before the fire from the mantel-piece, putting a pan on the hearth under it to catch the gravy. It was a great amusement to us to twist the string, which would set the meat to turning so as to cook it equally on all sides. You may be assured that was a prime piece of roast beef.

We were so much pleased with the country, that we built a pleasant house and had the grounds laid out and terraced down to the river, and have since spent our summers here, until within the last two or three years we have sold our house in the city and lived here altogether.

I try to learn the lessons both of beauty and economy in housekeeping, the latter not only in money, but time also. The most important economy in time that I have learned is in preparing the various parts of pork at killing time. We always raise and kill, on an average, about twenty hogs in the early winter, so that we shall have the meat to feed our "hands" on during the year. The manure we consider pays for the feed in raising them. The hams, lard, sausage meat, etc., we put up for ourselves. The people around me were in the habit of boiling each kettleful of lard a whole day, for fear it would not keep. It would take me a week to try out all I put up in that way.

The way I go to work is, to have the "gut fat," as it is called, taken off the day the hogs are killed, and put into salt and water over night. The next day is a busy time, I assure you. I hire some of the colored women on the farm, and with my cook and dairy-woman, we go to work. As fast as the men cut up the pork, the parts I want are sent down to me, and I divide my force, some of us cutting up the lard for trying out, some cutting out the pieces for sausage-meat, some grinding the same, and between times, some of them cutting up the thick fat pieces and packing them in salt for baked beans. We fill all the preserving bottles we can put on the stove, with the pieces cut for lard, adding enough water to prevent it from burning. As fast as enough boils to be perfectly clean and transparent, we dip it out and strain it in jars, putting fresh pieces into the kettle as fast as we have some for them.

By eight o'clock in the evening the dreaded job is over, several jars of sausage-meat and about a dozen

gallons of lard made and half a keg of pork salted down. As I fill each jar of lard, I drop a handful of salt into it while hot, and the lard is as sweet at the end of the year as at the beginning.

Now for my hams, of which we are all proud, and we never buy any that we think equal to them. The recipe for the pickle I took from the *Germantown Telegraph*. One gallon of water, one and a half lbs. salt, half a pound of sugar, half an ounce saltpetre, half an ounce potash. Instead of the potash, I double the quantity of saltpetre. Increase in that ratio. Sprinkle the hams with a little saltpetre and rub in salt and leave for a day or two. Then boil and skim the pickle, and when cold pour it over the hams. In four or five weeks take them out and let them drain for a day or two. Then take old barrels, without tops or bottoms, and make little shallow places in the earth to set them in, and in the centre pile corn cobs, chips, etc., wet, to make a fire. Put old broomsticks across the tops of the barrels and hang your hams on them inside the barrels, but not touching each other, not more than three to a barrel. Put a thick covering over all to retain the smoke. Now light your wet chips and cobs, so that you have no blaze, but a thick heavy smoke. Watch constantly and keep it up the entire day. Keep the fire smothered and do not let the hams scorch, or the barrels catch fire. Now hang them up and keep them in the usual way, and I think that in the course of a few weeks you will acknowledge that you have never eaten finer hams. You have saved a great deal of time and wood in the smoking and your hams are more juicy and of a finer flavor than if they had been hanging in the smoke-house for several weeks.

We have been arranging our house for the winter, and think it looks very pretty. We have newly papered the library, which is our favorite sitting-room. The paper is lovely, and just suited to the country. It is a light stone color, with sprays of grass of a darker shade, and white Marguerites, and little birds, about an inch and a half long, gray with light scarlet heads and breasts. The grass and Marguerites are scattered all over the paper, without any stiffness, but look as though they had been thrown on, and the birds are some standing on the sprays of grass and some flying. To follow out the effect of just a touch of scarlet here and there, I took about five yards of turkey red, and with part of it I made a narrow frill on some cornices of plain wood. Then I divided the rest of the material, and threw half of it over each cornice in the middle, pleating it carelessly. That left it hanging half on one side and half on the other. Then I threw the ends the reverse way over the ends of the cornice, letting them hang down a foot or so, drawing one edge tighter than the other, to form festoons, pinning the upper or tighter edge to the cornices to prevent leaving a space. They made, with very little trouble, two pretty, graceful lambrequins.

Then we have scarlet cord on the pictures, bitter-sweet berries among the grasses in the vases, and the centre-table cover of a corresponding color. We happened to have a set of books bound in scarlet, which we put on a book-rack independently of the book-case. Now, with our bright wood fire in a good sized fireplace, and our greenery, about which I will tell you, and at night a porcelain shade on the lamp to soften the light, I think no one can help saying that we have a charming room.

Now about the greenery. I have had, for years, a reel that was used to wind the pavement hose on in the city. I did not allow it to be destroyed, as I al-

ways thought I could make something pretty out of it, and sure enough I have. It is about three feet high, and my son split some small round sticks with the bark on, pointed the ends and nailed them around the top and bottom, *a la florist*. I had a large galvanized iron pan, with a rim two inches deep, made to set the whole thing in, making it broader at the bottom than at the top, and set the pan inside the upper pointed sticks. Then I filled top and bottom with earth and moss, and planted in it Ferns, Tradescantia, Ivies, etc., and put a hanging-basket over it filled with the same, and set them in front of my double window, and the vines now completely cover the whole and form a beautiful pillar of green six or seven feet high. There are window shelves on each side holding Callas, Geraniums, etc. At the other window we have a rustic stand with a box on it filled with Geraniums, Begonias, etc., and Tradescantia festooned around the sides, and Madeira vines trained up from it to festoon over the pictures. A little distance above we have a window shelf with different plants on it, and a beautiful shell suspended from the centre of it filled with moss and a Begonia, and still higher, a basket each side of the window holding baskets hanging from them.

MRS. MILTON WHITING.

### A Home-Made Washstand and Lounge.—

A board nearly four feet long, nearly two feet wide for the top; two more for ends, thirty-two and a half inches long and twenty-two inches wide. Before nailing the top on, at one end, a foot from the outer end, put in another board thirty-two and a half inches long but only twenty-one inches wide, and on the back a board to close this part; then fit in a bottom to it and put in a shelf a foot or little more from the top; between this part and the other ends, six and a half or seven inches from the top, fit a shelf; it will be about thirty inches long and twenty-one inches wide, and at the back have it all closed, and a little below the shelf, or the whole back may be closed, only that would make the article heavier. Now nail on the top. Cover with chintz or any material on hand. The covering is fastened firmly on the ends, being large enough to come round in front where it meets in the centre. Fasten a wire at each side close to the top, which projects a little, letting the pieces run by each other a little in the middle, and run the wire, either through rings screwed on the chintz, or through a hem across the front. A ruffle can be sewed on one edge of the front, where it meets. The top covering can be of the same material, loose, so as to throw back, or covered with the oil-cloth they have to imitate marble. In this article there is plenty of room for wash-bowl and pitcher, pails, and boxes, and in the wider open part a trunk can be kept. It was to get a trunk, which was very necessary to have round, out of the way, as well as the washstand, that these were combined. Covered with a piano or table cover, it resembles a small organ. I think the floor is papered with wall-paper, same as the walls, and then varnished, would not do for a room used much. I have a cage made for stuffed birds, and a design for a mat made of strips of cloth, which may be of use to any one else, if so, I can send to the CABINET.

S. M. BARBER.

**Color for Kitchen Floors.**—Oak is the best color for the kitchen, pantry, and like floors.

## Household Elegancies.

## BRAIDED RUG.

We show on this page a braided rug, which is not only neat and even tasteful, but economical withal, as it may be made of old garments, or pieces of carpet. It may consist of any number of colors or of blocks, light and dark pieces mixed promiscuously. Strips are cut about two inches wide, until a quantity of each color is accumulated. As regards material, any pieces will answer, whether woolen or cotton, and carpeting cut into pieces an inch wide will make an article both strong and durable. The pieces are sewed together, as for carpet rags, then folded lengthwise, and three strands (black, lighter shade, or some bright color, and white) are braided together; then commencing in the centre, a piece a few inches in length is taken, and, placing it flat, the braid is turned round and sewed down one side of it, coiled round the other end, and so on, until the entire mat is sewed, coil after coil, around the centre; this gives an oval shape. If the rug is desired round it will require the central coil to be worked round only an inch of braid, instead of a strip of central braid. The fringe is made of ravelled carpeting.

The other illustrations in this page consist of another design for a sewed rug made nearly the same as the first described, and with rosettes around the edge. A large design is given for colored silk or worsted embroidery which is intended mainly for hanging in a rich frame.

**Shaving Paper Case.**—Take a collar box and on the lid paste a picture so as to cover the reading, etc.; around the rim of the lid paste gilt paper; cover the box part with gilt paper and all around it paste small chromos. Take sheets of thin tissue paper and cut

BRAIDED RUG.

it into circles so they will lay in the box smoothly. Fill the box with these; bows of ribbon may be added to the lid to look like handles, if wished.

**Rustic Basket.**—Again get a collar box and cover the outside with moss, lichens, etc., leaving the lid off. Now take a narrow strip of cardboard and form a handle to the basket you have just made; cover this

with moss also; line the basket with colored paper or silk; fill with autumn leaves, ferns, etc.

**Horn Basket.**—Get a nice white horn and scrape it clean with a piece of glass until you have a quantity of shavings from it. Then make the foundation of

DESIGN FOR SILK EMBROIDERY OR WORSTED WORK. your basket with pasteboard, and sew the shavings on the pasteboard in small clumps. Cover both inside and out. These baskets are beautiful.

**A Match Lighter.**—Take a stiff piece of cardboard and cut it into a circle about the size of a saucer. Next take a piece of sand paper, and, laying the cardboard circle on it, cut a circle the same size; paste the piece of cardboard to the circle of sand paper, leaving the rough side uncovered; around the edges paste a narrow strip of gilt paper, and near the edge of some part of the circle paste a little chromo. Above the chromo fasten a little ring with which to hang it by.

**Card Basket in Photophamie.**—First take cardboard and cut it and form into some kind of a basket; you can do it better than I can tell you. Around the edge put little bows of ribbon. Now for the photophamie: Take a small picture, say the picture of a dog or cat, and in some part of the basket fasten it; all around the edge of the dog or cat prick pin holes; then remove the picture and you will still

have the form. Make these little pictures all over your basket. This is odd and pretty.

**A Needle Book.**—Take two little advertising circulars, and on the side with the reading put a chromo so it will cover it. Bind the edges of both with ribbon. Then cut a pretty piece of flannel like leaves of a book, and sew them to the ribbon edge of

the back of the corner, which you must overhand together, and put a ribbon string on each side to tie it together.

**A Comb and Brush Box.**—From a fancy store procure a pasteboard box a little longer than a hair brush, and about five inches high. Cover it all over with blue or red cambric. Then take a piece of book muslin and cover the cambric with that. Next take quilled ribbon and put it all around the sides and top and around the bottom. Cover a button mould to match for a knob to lift the cover off by.

## Pocket Pincushion.—

Draw two circles on card by a wine glass, and cut them out. Cover them with bright bits of silk or velvet; settle it neatly, so there are no wrinkles; baste with thread on the wrong side; drawing all the edges together in neat plaits, and then overhand them together. This is a pretty little present for a little girl to give to a gentleman.

## Coral Ornaments.—

The first thing to do is to twist common bonnet wire into the shape you wish it, a bracket, picture frame, etc. Next tie all over the wire little pieces of corn. Now take some white wax and melt it in a clean pan; then put into your wax some vermilion, mixing them together until they form a red paste. Then dip your wire frame into the paste two or three times and hang it in a cool place to dry. These articles are really beautiful, and I hope the reader will try and make some. I know they will succeed. I would like to tell you how to make a great many more things, but I fear I have already taken up too much room in your valuable magazine. E. L. E.

**Clean cashmere lace** by dipping or rinsing it in the gasoline, being careful not to rub it so as to get the meshes and figures out of place. Dry it out of

RUG WITH ROSETTES.

doors, then lay it on a cloth in good form, and place between the leaves of a book to press.

**To Make an Alum Basket.**—First twist the wire into the shape you wish it and then dip it into hot alum water until a thick coating of that substance is formed; hang in a cool place for twenty-four hours to cool.

## Hireside Reading.

In an assize court the crier was old and deaf. "Call Arabella Hanks," said the Judge. Entertaining much doubt of the name, the crier arose from his seat and said with a much puzzled look, "What, your lordship?" "Call Arabella Hanks, crier," repeated the Judge, much provoked. The old crier thereupon, with a countenance indicating both doubt and desperation, in his loudest voice called out, "Yaller Belly Shanks! Yaller Belly Shanks!! Yaller Belly Shanks!!! come in to the Court!" It is needless to say that the seriousness of the Court was compromised; and quiet was restored only to be again disturbed by the laughter caused by the crier, who, in answer to the Court as to whether or not the witness replied, said, "No, my lord; and I don't believe there is such a person in the town, for I have lived here forty years, and I never heard of him before!"

An inquisitive traveller, noticing that the man who sat beside him in the railway carriage had a band on his hat, said, "I see you are in mourning. Was it a near or distant relative that you lost?"

The bereaved one replied,

"Wal, he was pooty distant—'bout thirty miles or so, by the turnpike."

The intention of the old deacon was good, but the way in which he worded his notice was infelicitous. He said: "Any members of this congregation who have left off wearing apparel will please contribute the same to the poor." A quiet smile pervaded the house.

The coldest storm wave of the season was experi-

enced by a young man from Syracuse, who escorted an East Rome girl home Sunday night, and was detected by her father just as he was putting his mustache where it would do her the most good.

Patron.—"Oh, the hanimal be all right; but, I

"Yes, my son," said a fond parent to his attentive son, "the very hairs of our heads are numbered." "Hub!" exclaimed the youth, gazing inquiringly upon the baldness of the aged parent's head, "that's nothing."

Why, Indeed?—Aunt Towser supposes that the Lord Chambermaid must have been interfering with the theatres again, as she reads at the St. George's Hall they are performing, "Once in a Century." Why don't he shut up the place altogether?

"Have you a copy of the Koran?" asked a young man in one of the city book stores a few days ago.

"A book about corn?" inquired the clerk, evidently somewhat puzzled.

"No, the Koran—al Koran Mahomet."

"What is it, a novel?" asked clerk No. 2, coming to the rescue.

"Must be something just out," suggested another.

"No, no," said the customer, "the Koran, the Mohammedan Bible."

"Well, who is the author of it?" Exit customer in great haste. Fact!

The recent discussion of the question of future punishment recalls an anecdote of Elder Shaler, some years since a well-known Baptist minister at Haddam. He was to preach in Clinton, and upon going into the house was told that the Universalists were making head in the parish. "Ah!" said he. "Well, I'll give them a touch," and he did. "My brethren," said he, in beginning his discourse, "some say that all men will be

saved, but we, my beloved, hope for better things."

"Mariah! Mariah! please slet me in!" said a man to his wife, who was looking out of the window watching him trying to open the door with a toothpick. "Ish tread on my key, and it'sh all flattened out."

PREPARING FOR THE PARTY.

say, can't ye put me a-'oldin' of 'is 'ed, an' the missis a-feedin' 'im? an' our Billy moight be on 'is back, an' Hiserbeller an' Mary Hann a-lookin' on; an' while yer 'and's in, ye moight chuck in the twins. What's a dab o' paint more or less?"

## Household Hints.

## HOUSE-CLEANING.

House-cleaning is one of those domestic episodes to which one looks forward with dread, and backward upon with a sigh of complacent relief. I have heard of housekeepers of very methodical turn of mind, who, by a regular daily supervision of every part of their domain, and a certain moral force exerted upon their domestics, by which they contrive to secure a faithful performance of all duties, know nothing of this much-dreaded infliction; but such paragon housekeepers are, it must be confessed, seldom seen.

It has been the custom from time immemorial to overturn, scrub, scour, and reconstruct, when spring, with balmy breezes, comes; which, by the way, could never have been intended to apply to our variable climate, in which, as Gail Hamilton beautifully remarks, "Winter lasts until the Fourth of July and breaks out in spots all summer."

Do not let the first mild day beguile you into taking down your stoves and commencing operations, or a raw nor'easter on the following one may fill you with regret, to say nothing of colds and neuralgic reminders. Wait until you can open your windows without a shiver, and the sun is powerful enough to dry your floors quickly and thoroughly.

By a little system and forethought this dreaded season may be robbed of half its terrors. It is an absurd custom to clean every room at once, and thus make the whole house a scene of discomfort. House-cleaning, like large payments, should be done by instalments, so as not to drain the treasury and exhaust the strength.

Decide before you commence just what it is necessary to do, and if there is an easy and a hard way to do things, choose the easy one, even though the result may not be quite the same. Life is too short to be spent in everlasting cleaning, and an immaculate house is not the end and aim of life. It is not to be denied that daintily clean surroundings are a desirable thing; but if this cannot be had without perpetual work and worry, let it go; content yourself with doing the best you can.

In some households there is such a mania for cleanliness, that everything else is subservient to it. Comfort is entirely disregarded. A speck on the wall, or a scrap of paper or thread on the floor is sufficient to disturb the whole family, and an overturned inkstand or spotted carpet makes more commotion than the direst national calamity. This effectually prevents home from being what it should be, a place where peace and comfort reign supreme. Our space is too limited, however, for further moralizing, so we will return to more practical matters.

It makes no difference whether you begin at the cellar and go up, or at the garret and come down, though the latter is, for some reasons, to be preferred. If your attic is like that of most people, filled with superannuated furniture, things that are "too bad to use, and too good to give away," it will not be necessary to do more than remove the articles from one part of the room to another until all is cleaned; brushing down the cobwebs and cleaning the windows will be all else that is needed.

Secure every convenience that modern inventive genius has supplied to lighten and facilitate your labor. Among these a good step-ladder is indispensable; by having one with castors upon three legs, you can by lifting the remaining one push it anywhere

about the room with ease. Beside the necessary brushes for cleaning, scrubbing, etc., have a small soft brush, a paint brush will answer, for cleaning the corners of window-sashes, and edges of mouldings. A small pair of bellows, which can be procured at almost any furnishing store, will be useful to blow the dust from carved frames and from bronze or other ornaments.

Gilt frames may be improved by applying with a soft brush a mixture made of two parts white of egg to one of potash or soda. If your Parian or alabaster ornaments are discolored, lay them in a washtub filled with clear water in the sun for several hours, then dry in the sun. This will make them like new. Ivory ornaments can be whitened by carefully brushing with soap and water, rinsing in plain water and bleaching in the sun.

Before you rehang your pictures, examine the cords unless they are hung with wire, which is much better, to see that they are not moth-eaten. Sometimes it is desirable to insert screws or hooks in plaster; to do so, make a hole about twice the size you need; fill it with plaster of Paris, such as is used for fastening the tops of lamps and put the screw in the centre; when dry, it will be firmly fixed, it will be impossible to move it.

Instead of using soap for cleaning paint, rub with flannel dipped first in warm water, then in whiting.

Clean silver-plated door-knobs and hinges with a soft cloth slightly moistened with oil, then dipped in whiting. Ink stains on wood can be removed by covering the spots with bits of oxalic acid, pour on a spoonful of water, and lay a heated flat-iron on it. Spots can be taken out of marble with finely powdered pumice stone mixed with verjuice; let it remain on for several hours, then wash off and wipe dry; or you may rub the whole slab with a flat piece of pumice stone, kept wet while using. Gray marble hearths, if spotted, can be cleaned by rubbing with linseed oil. White stains can be taken from dark wood by rubbing with a mixture in equal parts of vinegar, sweet oil, and turpentine. Grease spots can be taken from carpets by spreading on them a thick paste of potter's clay. Over this tack brown paper and let it remain for several days, and if one application is not sufficient, repeat as before. A freshly made spot may sometimes be removed by scrubbing with boiling water and soap. Grease can be extracted from floor by applying a paste of wood ashes; leave on if possible two or three days, then wash off.

If your wall has been whitewashed, and is to be papered, it must be first washed with vinegar to neutralize the alkali in the lime. If the wall has been papered before, by all means remove the old paper before applying the new. Many layers of paper with their accumulated masses of paste, make a room unhealthy. Dampen the wall with a cloth saturated in saleratus water, and it will come off with ease. If you are troubled with roaches, sprinkle their haunts with powdered borax; some use Paris green, but it is a dangerous article, being poisonous. Ants may be exterminated by red pepper sprinkled upon shelves of closets, etc., first scrubbing them with carbolic soap. Powdered quick-lime will answer the same purpose. If you do not take up your carpets, loosen them at the edges, sweep up what dust you can, then moisten the carpet and floor with turpentine before replacing. Some sprinkle with benzine from a small watering pot, others apply a hot iron to destroy what eggs may be concealed.

If you take up your carpets, after shaking spread them on clean grass in the sun, sprinkle thickly with

salt, and sweep; this will brighten the colors astonishingly. Matting can be cleaned with a damp cloth dipped in salt and water; it should not be made very wet or it will be apt to rot it.

To clean furniture, mix one-half pint olive oil with one pound soft soap, boil and apply with woolen cloth, afterward polish with dry cloth. Another excellent preparation for cleaning furniture, walnut, and rose-wood particularly, is made by mixing white wax and oil of turpentine in about equal quantities, together with one-quarter as much rosin, all melted together. After standing for twenty-four hours, it will be about the consistency of butter, when it is ready to use. The furniture should of course be perfectly clean and dry first.

If you have lace curtains to wash soak them two or three days previous in warm water, changing it every day. The greater part of the dirt and yellow will be removed in this way, therefore much rubbing at the final washing will be avoided. Boil and blue as usual, and they will be beautifully clean and white. Wring with a wringer, which will not break or stain the lace as with the hands. Spread sheets upon the floor of an unused room, spread the curtains on evenly and smoothly, pinning down the edges, and let them remain until dry. They should be starched with thin starch and not ironed.

If pieces of furniture or any other articles want gluing, attend to it now. The best way of making glue is to crack it in small pieces, put it in a bottle; add common whiskey, shake up, cork tight, and in a few days it will be ready for use. Made in this way, it will keep any length of time, and is at all times ready for use, no heating being required except perhaps in the very coldest weather when it might be the better for warming.

**Hot Cross Buns.**—Three cups of sweet milk, one cup of yeast, flour to make a stiff batter. Set the sponge over night; in the morning add one cup of sugar, half a cup of melted butter, half of a grated nutmeg, a little salt and flour to roll out like biscuit. Knead well and set to rise five hours. Roll out half an inch thick, cut in round cakes and lay on a buttered pan; let them stand half an hour, then bake a light brown; brush over with the white of an egg, beaten up with a little sugar. I always seal the milk I use for raising bread or cakes, unless I do, it very often sours in the sponge.

**Delicate Cake.**—Beat to a thick cream one cup of butter, and two of white sugar, mix one cup of Duryeas' Improved Corn Starch with one of sweet milk, add it to the butter and sugar; then add two cups of flour, and the whites of four eggs beaten to a stiff froth. Before adding the flour sift and mix thoroughly into it two teaspoonfuls of cream tartar, and dissolve one teaspoonful of soda in the milk before mixing it with the corn starch. Flavor the icing with lemon.

**Mrs. Webb's Salad.**—Take equal parts of nice firm white cabbage and celery stalks, with a few of the blanched leaves; chop them fine, and pour over a dressing made as follows: One well beaten egg, a tablespoonful of butter, a level teaspoonful of salt, a little pepper, one tablespoonful of white sugar, and one cup of good vinegar. Mix all together and set on the stove; stir it constantly until it is the thickness of cream, but do not let it boil. When cold pour over the salad. This dressing is very nice for chicken or any other salad, and will keep good several days in a cool place.

## School Music Books

**High School Choir.** EMERSON & TILDEN. \$9 per dozen.  
A standard, useful and favorite Book.

**School Song Book.** C. EVEREST. \$6 per dozen.  
Fine Book for Girls' High and Normal Schools.

**Choice Trios.** W. S. TILDEN. \$9 per dozen.  
Three part Songs for Female Colleges, Seminaries, etc.

**Grammar School Choir.** W. S. TILDEN. \$6 per doz.  
Excellent collection for High or Grammar Schools.

**American School Music Readers.**  
In 3 Books, each 35 cents, 50 cents and 50 cents.  
Carefully prepared for Graded Schools.

The following are favorite general collections of genial Songs for Common Schools:

**SONG ECHO.** H. S. PERKINS. .75  
**MOCKING BIRD.** W. O. PERKINS. .50  
**MUSIC TEACHER.** C. EVEREST. .50  
**OUR FAVORITE.** H. P. DANKS. .60

**MUSIC CHARTS.** By DR. LOWELL MASON.

Large Charts, containing 120 Blackboard Lessons, plainly visible to all, saving much trouble, easily set up and used, and furnishing a complete course of practice. Sent by express. In two rolls or sets. Each \$8.

**OLIVER DITSON & CO., Boston.**  
C. H. DITSON & CO., 843 Broadway, N. Y.

## CHOICE EVER-BLOOMING ROSES

10 Beautiful Roses for \$1.00, 10 Choice Fuchsias for \$1.00, 10 Double or Single Geraniums for \$1.00, 16 Verbenas, choice colors, for \$1.00, 10 Carnations for \$1.00, sent by mail postage paid. Our illustrated catalogue free on application.

SKED, PADDOCK & CO., Cleveland, Ohio.

## 10 FLOWERING PLANTS FOR 50 CTS.

BY MAIL, POSTAGE PAID.

Your selection from the following: Ageratums, Bouvardias, Begonias, Callas, Cupheas, Coleus, Daisies, Fuchsias, Feverfew, Fragaria, Geraniums, Gladiolus, Heliotropes, Ivies, Lantanas, Pansies, Pomegranates, Pilea, Pinks, Smilax, Stevia, Tuberoses, Tigridias, or Violets. Send for our new catalogue, (free to all), containing a description of all the leading varieties of plants and how to treat them. We claim it to be the cheapest list ever offered to the public.

## DESCRIPTION OF TABLE DESIGN.

I had long wished that I could afford to have one of the beautiful glass stands which are made expressly for flowers, but finding that wishing didn't do any good, I set my wits to work to contrive something.

Amongst other things, I thought one of our bronze candlesticks might possibly be made to do duty, and it seems that my husband had been thinking the same thing, for, one day he brought one of the candlesticks to me, saying:

"Here's the very thing you want for your table design; you can use it I am sure."

A TABLE DESIGN.

So I decided to try it. At the end of each of the three branches there is a lily-shaped cup for holding a candle. The standard from which the branches spring supports another cup. Those on the ends of the branches I unscrewed and hung in their places baskets made of saucer plates filled with moss. I had to make a netting of fine wire over the plate and moss, in order to suspend it. I found that the top of a "March Stand" could be fitted to the central cup. Into this I fastened with wire a glass trumpet vase; then by filling in moss, I formed a sort of ball at the foot of the vase.

The next thing to be done was to fix the bottom. To do this I had a shallow tin pan made, then putting the candlesticks into it, bound pan and candlestick firmly together by means of strong annealed wire. I should say here that I had holes punched—two inches apart—around the edge of the pan in order to let the vines through. The pan was then filled with moss, nearly covering the base of the candlestick. My stand was now ready for the flowers.

I have made no attempt to represent in my sketch the flowers that I used in filling my stand, but I will give a list of those used in the different parts.

### FLOWERS USED IN VASE AT TOP.

Pink and white Asters, medium sized, and small; buff and pink rosebuds; *Polygonum maritimum* (a lovely little wild flower, found on the marshes in September), wild ferns and leaves of carrot.

### AT THE FOOT OF THE VASE.

Tuberose, Carnations, Asters, pink and white, rosebuds, *Phlox Drummondii*, in shades of pink and crimson, *Polygonum maritimum*, *Lygodium scandens* and wild ferns.

### BRANCHES.

Buff rosebuds, blue *Browallia*, white *Phlox Drummondii*, white *Eupatorium*, fragrant Myrtle and ferns. Edging of leaves, and scarlet berries of *Rivina humilis*.

### BASE.

Rosebuds, pink and buff, Asters, pink and white, *Phlox Drummondii*, in white and shades of crimson and pink, white Carnations, pink *Gloxinias*, *Polygonum maritimum*, Sweet Alyssum and *Viscaria*. Edging of wild ferns, (*Aspidium Spinulosum*, a variety which, besides being very beautiful, keeps well), and sprays of *Selaginella Wildenovii*.

If I had had a greenhouse at my command, I should have made a different arrangement of flowers; as it was, I had to depend on my own garden for all my flowers excepting rosebuds.

M. P. G.

## DESCRIPTION OF FLOWER-STAND.

This is a circular revolving stand, finished with bark and placed upon feet of black walnut. In the centre, which is somewhat raised, stands a cast of the "Fisher Boy," and near his right arm rises a tall *Abutilon*, the top of which is more than eight feet from the floor. There are four *Ivies* twining around the statue, the gold-

en, silver edged, palmata, and paniculata. A very fine *Aspidistra*, a variegated *Hydrangea*, *Aucuba Japouica*, *Ophiopogon*, and *Tradescantia Discolor* occupy appropriate places, and among them all the lowly ferns in graceful profusion and variety. A remarkably large and free-growing *Hypolepis repens* throws up its tall fronds, rivalling the "Fisher Boy" in height, *Asplenium viviparum*, *Adiantum cuneatum*, *Pteris Tremula*, and falcata, tape fern, and the charming Maiden-hair. Near the edge are placed two rows of *Tradescantia*, the green and white striped, and crimson-shaded *Zebrina*. Outside of all the green *Tradescantia*, which

A FLOWER-STAND.

is now quite profuse, and in the spring will be a mass of foliage reaching to the floor. The diameter, including foliage, is about four feet.

MRS. CLARA R. SWEETZER.

The best soil for house plants is two-fifths of new loam, one-fifth of leaf mould, one-fifth of well decayed and decomposed manure, and one-fifth of sharp and clean sand.

*Hare's* foot fern is one of the prettiest of the Fern family. The fronds are tall and waving—a singular hairy foot-shaped piece grows out from its roots.

## Floral Contributions.

### A SMALL GARDEN.

I am going to write this for the benefit of those who have but a few hours during the week to devote to flowers, but who would like to have a small garden of their own. To such I will give the benefit of my experience; it has not been a very long one as yet, but has been very satisfactory so far.

I am a farmer's wife, and have very little time to spare for out-door work; but I like flowers, and so I made time to have a few. I had a small garden made and commenced to experiment. I began with flowers that were easily grown, and the result was very satisfactory. How well I remember that first garden. There were Asters and Balsams, Stocks and Pansies, with a Verbena, and two or three other varieties of flowers. And here I must stop and tell about my Balsams. I had twelve different colors, and they were as double as some varieties of Roses. And such Pansies! I have never been able to raise any such since. They will give any one who begins to raise them as much if not more pleasure than greenhouse plants, and you have this assurance, if you save seeds from Pansies and plant them year after year, you can get almost unlimited colors, for they very seldom come up the same color of blossom twice.

The best time to plant the seed is early in the fall so they can get an early start before freezing weather comes; then when frost begins to come, cover with evergreen boughs or straw, then in the spring after danger from severe frost is over, uncover your Pansies. Prepare your bed where you wish to transplant them set them a foot apart, and if you can have a bed made where it is partially shaded from the sun, your Pansies will like it all the better. You can hardly get the ground too rich for them.

Balsams, Stocks, and Asters will find no fault if you give them rich ground, but will bloom all the better for it. Perhaps the reader will think I have given too much space to the description of Pansies. If I have, this must be my excuse, for next to Roses there is no flower that I admire and love so much as the cheerful little Heart's-ease.

After you have tried once and succeeded, you will want to venture farther, and will begin to study the catalogues to find varieties that you can plant; you will be tempted by many choice varieties, but my advice is to take the common ones at first; you will find many beautiful kinds among them.

It is a very common mistake with beginners to look at their catalogues and read the description of choice varieties and make their selections of such as the most experienced gardeners have to take great pains with to be successful. The result is disappointment to the amateur gardener, and this verdict passed on the unfortunate seedsman that furnished the seed, "He is a regular fraud, and I will never buy of him again," when in nine cases out of ten it was the beginner's inexperience that caused the failure, for it is very much like beginning to read: you must first learn your letters, then to put them together to form words, and then you will keep on learning. So with flowers—there is something new to learn about them all the time. And you will be surprised how much time you will find for their culture, for the work in the open air will give you renewed strength and health, and consequently the work in-doors will go off all the more quickly, and there will be less doctor's bills to pay,

and the overtaxed nerves will get a better rest than any medicine can give.

Perhaps some will say, "I would like flowers, but I can't take the trouble to plant seeds every year." If you don't wish to plant seeds, send for ever-blooming Roses, and you will have flowers from year to year without planting seeds.

But you say, "I have no place to keep them in winter." To such I say, keep them out of doors in the beds where they have grown through the summer. You may think the winter will kill them, but it will not if you cover them properly. In the first place, before it becomes too cold, cut off half of their branches, then have some boards fixed to keep the covering in place. The way my boards are fixed is on all four sides of the bed, making a kind of box; then put branches over your Roses; then leaves and something to keep the leaves from blowing away. The branches will keep the leaves from settling too close to the Rose bushes, and so rotting the stalk if there should come a heavy rain.

I have nineteen varieties out this winter; among them a Marchal Neil, and I would say here that it is as easy as any Rose to grow and blossom, for this summer I had some of the most magnificent blossoms and buds on it; it fully sustained its reputation of being the most magnificent Rose grown.

My Roses blossomed so well that I ventured to send a basket of them to the Horticultural Fair in the fall, and they received a premium.

Among the varieties that I have is a green Rose. I sent for it out of curiosity; it is very sweet-scented and a strong-growing Rose, and blossoms true to name every time. I had blossoms on my Rose bushes until frosty nights came and killed them. They require rich ground and frequent stirring of the soil, and plenty of moisture.

If you have not money to spend after the first that you buy, and do not object to having two or three of the same kind, they are easily raised from cuttings, and in this way you can have as many bushes as you wish. The easiest and surest way is to take a glass dish of any kind, fill it with sand, put your slips in the sand, after taking off the large leaves, and keep the sand wet enough so that water will stand on top; put it in the sun or anywhere that it will get plenty of heat, and you will find that you can root Roses as easily as any other plant.

I have a friend who has rooted eighteen this winter, so I do not write this without proof of its being a successful way to root them. I have rooted some in chip dirt, but I like the sand method better, as it is quicker and a more certain way.

To the flower gardener, that prefers raising flowers from seed instead of roots, I would say, don't forget to include Sweet Alyssum, Phlox, and Petunias in your list of seeds.

S. E. P.

### HOW TO START FLOWERS AND PLANTS.

A correspondent of *The Journal of Health*, after seeking for many years to find some simple way of starting slips, plants, etc., with bottom heat, without the aid of experience, greenhouses, or outdoor hot beds, at last hit on a plan which works like a charm, and thus writes about it:

"It is just a delight at this season of the year, when every growing thing responds to the influences of the season and only wants, while waiting for May, a little boosting to send it climbing skyward, to watch the

cuttings grow and the seeds spring up. Many arrangements to suit place and means could be suggested. Having a large spare wash boiler, we placed it in the south kitchen window, so that its top comes to the window sill, resting it on two inverted flower pots. Three good sized, old sheet iron baking pans well filled with clean creek sand were put across the boiler, which had been filled with water at about 90°. The sand was duly moistened and in it set all sorts of cuttings of plants for the flower border, and on it were sowed seeds of those plants and vegetables which we wish to start early. Sometimes we set the cuttings in thumb-pots of light soil and plunge these in the sand. When all was arranged, we just lighted a safe brass kerosene lamp and placed it on the floor under the boiler, and we keep it burning night and day, and nothing can be jollier.

The water is kept at about even temperature, the evaporation from the sand and the warmth and moisture from the kitchen range and the abundant light from the broad window supply all needed conditions of growth. The seedlings that start in the sand we prick out as soon after germination as we please, into boxes of earth, setting them into other windows when there is not room for them over the tank. Sometimes we start our Tuberoses here and some on a sheet iron shelf suspended over the range, which is kept burning night and day to supply hot water for the chambers.

We thus get a few Pansies, Phloxes, Nasturtiums and even Sweet Peas to put out in vases, balcony boxes and other sheltered places, very early, and make very much longer the blossoming season, which is quite an object in our climate. We have found it a great luxury to gather the brightest and sweetest of Painted-lady Peas in April and May, and mingle with Geraniums and Heliotropes from the windows, to send to our friends as a delightful surprise. With us Peas will not do well unless started early in the house or planted in a trench in late autumn, and heavily covered over with litter until growing time in the spring. We grow four or five tomatoes, pricking them from the seed-pan into tin cans and have them in blossom when it is time to set them in the garden, and thus get ripe fruit very early. Ornamental window boxes for sitting-room and parlor can be arranged to hold water in the bottom, and this kept warm by concealed lamps."

**A Giant Geranium.**—A gentleman in our town, (says *The Journal of Health*, Danville, N. Y.), had, standing on his piazza last summer, a Geranium immense in its size, and prolific of its great trusses of double scarlet flowers. It had been grown the winter before in the south bay window of his sitting-room and tended by himself. The young plant was set in a rustic basket, the bowl of which holds nearly a bushel of dirt. This was a mixture of cultivated black muck taken from a corn-field, garden earth and thoroughly decomposed manure, in about equal proportions. It grew rapidly, taking a gallon of water day by day. As soon as danger from freezing was past it was set out, and during the summer averaged near a hundred trusses of brilliant flowers, often twenty five spent trusses would be cut from it of a morning, and it made such growth that when taken into the house in autumn, branches six feet in length had to be cut from it. This is almost equal to California growth.

## Answers to Correspondents.

**Camelia or Japonica?**—I have a fine double white Camelia just in full bud; every winter it gives me many splendid flowers. Now, one of my Boston friends says I must not call them Camelias, but Japonicas. Now, I see in some books "Camelia Japonica alba pleno var. fimbriata." Can you tell me whether that is the name of mine, or may I still call it only Camelia?

**Answer.**—Your question is a good one, and in order that you may understand our answer, we will begin at the beginning. Living where you do in the central portion of New England, you have no doubt observed that the trees you see around you growing wild all have some general likeness; that is, that the maples, oaks, hickories, birches, etc., differ from the palms of which you may only have seen pictures, and that your Roses, Lilacs, Snowballs, Dentzeas, and others, are very much unlike the Lilies, Gladiolus, Grasses, and Tuberoses. Now, your native trees have in the trunk or any branch, first in the centre of the wood, then between the heart-wood and the bark, a more moist and sappy portion, where the annual growth takes place, the centre of any maple tree being the oldest. Now, in a Lily, as you can well see, the centre is the youngest. A maple is an exogen, a Lily is an endogen. These divisions are called classes. These classes are further divided for convenience into divisions called orders or families, each member of which resembles all other members in a greater degree than it does a plant of another; again, orders are divided for the same reason into genera (singular genus), and they into species, the genus and the species together constituting the botanical name. Thus, your plant is Camelia Japonica, Camelia being the genus, Japonica the species. It belongs to the class of exogens, and to the Camelia family, or order Cameliaceae. The remainder of your name is what is called a variety, meaning alba pleno, white double, and fimbriata, is fringed.

**Silver Sand, etc.**—What is silver sand? What is peat? What is loam? Should loam be without clay?  
J. L. H.  
Norfolk, Va.

**Answer.**—Silver sand is the fine white sand used by glass makers. When silver sand is recommended for plants any fine sand, not salt, will usually answer the purpose. Peat is the mass of close vegetable fibre found in fresh meadows; it may be wholly decomposed and look like black earth, or it may be very fibrous. Loam is common garden soil; it may be of various colors; the surface of the ground is usually so called; it is composed of vegetable matter thoroughly decomposed.

**Lime in Soil, etc.**—Can you tell me whether lime in the soil is good for plants? Should I mix guano with the soil, and in what proportions? What treatment should Cacti have?  
E. N. MAXWELL.  
Wilkesbarre, Pa.

**Answer.**—Lime is not good for plants; indeed, many plants, such as Heather, die in a limestone soil. Guano should be used very cautiously as it is a very powerful manure. It is best applied in a liquid form in the proportion of a teaspoonful to a quart of water; use this about once a week. We have recently given directions for Cactus culture. Consult former numbers of the CABINET.

**Spanish Moss.**—Where can I obtain Spanish Moss?  
S. B. DICKENSON.

**Answer.**—Miss Lillie Taylor, box 189, Fernandina, Florida, will for twenty-five cents and return postage stamp send a package of Spanish Moss to any address.

**Insects on Plants.**—For two months I have been troubled with what I am told are wood lice on my plants. It is a gummy lump which forms and in it are little flat insects. They begun on the Passion vine, then took the Fuchsia, Lantana, and Oleander, but did not touch the Rose Geraniums. Carbolic soap suds, sprinkled and powdered hellebore, did no good. What can be done for them?  
J. M. L.  
New York City.

**Answer.**—Your plants are troubled with a large scale; they are not wood lice. The only remedy is to wash them off with strong soap suds, using a tooth brush with bristles cut short. Or you may kill them by dipping the tip of a fine camel's hair pencil in kerosene or alcohol and touching the scale; but kerosene must be very carefully used, or it may injure the plant. Rose Geraniums are not troubled by insects.

**Treatment of Russellia, etc.**—I would like to have described the treatment of Russellia juncea, Hibiscus Cooperi, Saxifraga Sarmentosa, as regards soil, etc. Also of Primula Japonica, Coccoloba and Calycanthus. My seeds of Silver Fern (Pteris argyrea) Lomaria Gibba and Pilea muscosa, sown on the surface, in fine earth, and tried in sun and shade, under glass and without, in heat and out, have failed to germinate. Can the seed have been good? How is Farfugium Grande propagated, and where can I get it?  
R.

**Answer.**—The Russellia is a warm greenhouse plant, with drooping rush-like leaves, and red tubular flowers. It is not suitable for a window plant. In the greenhouse it looks best in a hanging-basket, or grown with a tall centre shoot from which the sprays fall like a fountain. Soil, peat and loam with a sprinkle of sand. Hibiscus Cooperi is a stone shrub and unsuitable for parlor culture; indeed, it is not a very desirable plant, the variegation soon becomes shabby and the flower is not as showy as most species. It needs plenty of heat and water when growing; soil rich sandy loam; it is a very free grower. Saxifraga Sarmentosa is a very pretty plant for a hanging-basket in a window. Give it plenty of sun, do not let it dry up and it will not disappoint you; common soil. Primula Japonica should be raised from seed, sown in light soil; when large enough to handle the plants should be potted and shifted on from time to time as they grow. The soil should be sandy loam, and care should be taken not to over water as the plants easily damp off. They bloom easily, and a package of seed will give a variety of shades, but the plant is disappointing; we never saw a flower one-half as good as the colored pictures represent it. We presume you mean Coccoloba platyclada, a plant with flat green leaves and infinitesimal flowers in the axils. It will grow in any soil and warm situation, but is of no value except as a curiosity. The Calycanthus are hardy shrubs, with fragrant chocolate-colored blossoms. They only require to be planted out of doors in spring and will take care of themselves. Farfugium Grande is a very pretty plant if well grown. It does not need heat and does well in the window. It is propagated by division, and needs a rich loamy soil. You ought

to find it at any large greenhouse. Your Fern seed should certainly have come up, especially the Pteris, which is easily raised, if the spores were good. Did you not cover too deep, or over water and rot off the minute plants or burn them up in the sun? Pilea muscosa is not a Fern.

**Oleander, etc.**—How can I make my Oleander bloom? The buds of my double Geraniums form, but when half grown drop off. How old must a Camelia and Vallota be to bloom? I have been troubled by white worms in the pots, but I put about a tablespoonful of wood ashes; dig it in with a hair-pin and water with warm rain water; the worms do not like the lye, but the plants flourish.  
PANSY VERNON.

**Answer.**—Your Oleander should bloom in spring if large; keep it warm and give plenty of light, and in summer set it on the piazza. Oleanders like plenty of water. Give your Geraniums more sun. The blooming season of a plant depends more upon its growth than on its age. Plants usually bloom when strong. A seedling Camelia may take ten years, but if unarched it blooms at once. Vallotas bloom when very small. Your remedy for white worms is good, but is the hair-pin necessary for success?

**Names of Plants, etc.**—I enclose a small vine which has a flower like a Snap Dragon. Can you give me the name? Shall I set out Lily of the Valley and Pansies in the fall or spring?  
L. J.  
Hawley, Pa.

**Answer.**—Your vine is the Coliseum Ivy (Linaria cymbalaria). The other flower mentioned was not received. Lily of the Valley may be planted either in fall or spring, but your Pansies should be planted in the spring. The best way to raise Pansies is to sow seed in July, prick out the plants in a cold frame, draw on the sash in winter, protecting from sun, and uncover in early spring.

**Hardy Yellow Rose.**—Which is the best hardy yellow Rose?  
MRS. J. A. MILLER.  
Woonsocket, R. I.

**Answer.**—The best is Persian yellow. Yellow Harrison is also very good and a few days earlier in blooming.

**Pelargonium not Blooming, etc.**—Why does not my Pelargonium bloom, it is over three feet high? I have a red Cactus six years old that has never bloomed. Tell me why.  
MARY SEACHRIST.  
Columbiana, O.

**Answer.**—Give your plants less water and more sun; let them become a little pot-bound. You are probably growing them too well.

**Camelia, etc.**—When shall I sow Camelia, Azalea, and Rhododendron seed? How soon will they germinate? How must they be treated afterwards to make them bloom?  
G. A. DENVERLINE.

**Answer.**—The seed may be sown at any time in the greenhouse; that of Azaleas and Rhododendrons is very small and the plants are very minute. The time of germination varies; we have had it come up soon and again not for months. As soon as the plants are of any size, say in two years or more, pot them off from the seed pans, and when about six inches high the Rhododendrons and Azaleas, if of hardy kinds, may be planted out in prepared beds. The time of flowering depends wholly upon the culture you give; the better you grow them the sooner they will bloom, but at the best you will wait many years for flowers.

## Floral Experiences.

### FIRST EXPERIENCE IN FLORICULTURE

Perhaps my experience in cultivating flowers may assist some lover of them to try her skill unaided by greenhouse or hotbed.

The first year of my housekeeping I saw the first number of James Vick's *Floral Guide* advertised in Moore's *Rural New Yorker*, to be sent to any address for ten cents. Very soon I possessed one, and it was studied faithfully, and from it I learned something new; therefore resolved to try my hand in raising flowers as fine as those described in the *Guide*. The plan of sowing seeds in boxes in the house and then to transplant in the open ground when danger from frost was over, was new to me; also to all of my neighbors.

Having filed on his order-sheet the names of those seeds best adapted to amateurs in floriculture, it was enclosed with cash for seeds. Very soon the seeds came all right with some extras. Mr. Vick is sure to add more than is ordered.

Now came the first sowing of seeds in boxes or pans, the premises being thoroughly ransacked for boxes or anything that could be utilized. My better half was willing to lend a helping hand in procuring soil and making a few new boxes.

In order to know flowers from weeds, the soil was committed to the stove oven until all seeds and insects were killed. Sifted soil on the surface to receive the tiny seeds. Balsams, Aster, Tenweeks, etc., were put in an inch or more apart, so they were easily transplanted when second leaves appeared. Besides, I knew whether the seeds all came up, for they were in rows, counted, and the number and name placed on each box or on a label. Some were saved for a second sowing. To my surprise nearly every seed grew; only a few damped off. How anxiously each seedling was watched until time for transplanting.

Next came the making of beds for my pets. Now came the need of stronger hands than mine, and I found the same ones that made the boxes and brought the soil from the woods ready to assist. Soon all was ready.

*Guide* and trowel in hand with box of Balsams or Asters, as the case might be, just before a rain, the tiny plants placed in the beds according to directions, so many inches apart, so different from the then usual way of crowding so many plants in one little bed promiscuously. You may be assured, the care bestowed on those seeds and plants doubly repaid me when they bloomed. Such lovely flowers! and many a bouquet from my yard adorned the homes of my neighbors. How they did wonder at my success with flowers, and how they grew so "perfectly splendid," as some said.

Since that time great improvement has been made in this town in floriculture, it being the first experiment on the new way, as it was termed then.

Let every ardent lover of flowers get a "Floral Catalogue" and order a few seeds, and follow the directions in it and they will be repaid for all the expense and labor in one summer.

I made a scrap-book for any pieces found treating on the culture of plants or anything about flowers, also illustrations adorn its pages. A journal of floral work, such as dates of sowing seeds, germinating, transplanting, blossoming, etc., I have kept for several years, which has been very valuable for reference. Note the time of slipping my house plants, and the

time of rooting, both in water and soil, also of repotting house plants.

I read everything I can find written upon this subject. The *CABINET* is just what we ladies need, also is "Window Gardening." ALMENA.

### CALLAS AS HOUSE PLANTS.

Several weeks since I cut from some daily paper a slip taken from the *FLORAL CABINET* on the Calla grown as a house plant in water, and I had a desire to try one or more in that way. It also said a few minnows introduced into the water would usually thrive. I looked about the house for a stone jar the depth mentioned, but found none, and made up my mind that a glass jar would be better, so the whole plant could be seen, when one day just as it began to grow dark, I was coming home from a walk, and I met three small boys who were cautiously calling a kitten in an alley, and thinking, of course, they were going to torment her, I said:

"Boys, don't abuse the cat."

They said, "No, we were going to give her some fish."

I said, "What kind of fish have you?" and found they had twenty-five minnows they had caught in a bottle in our public garden pond. I asked them if they were alive, and what they would sell them to me for; they said they were, and I might have them for five cents; so I hurried home and put them in a pail of water in our laundry room; there I kept them two weeks, changing the water two or three times daily. At last I found time to buy a glass candy jar twelve or fourteen inches deep, in which I planted my Callas in earth with a layer of sand and pebbles, in all seven or eight inches deep, and poured in water several inches above that; then I went down and got my fishes in a tin dish of water and brought them up in the warm room, where I had my Callas. Finding the water muddy, I thought I would wait awhile before putting them in, so turned to some other work; but what was my surprise, when I went to look at my treasures again, to find only four or five fishes in the dish, and the others seemingly lifeless on the floor, and on and in the marble bowl the dish stood upon. I called my sister, and we soon had them all picked up, even the two or three that were almost out of sight down the spout of the bowl, and gave them a pail for a pond again.

Can any one tell me whether it was the small size of the dish or the heat of the room that made them leap out? I have not the courage yet to put them in with my Callas for fear there is not water enough, or the rich earth I got at the florist's will kill them, and when I try to turn the water out of my jar the earth wants to come too; then again, won't the water be too hot for them if the Calla stands in a sunny window; and if I put in cold water often, will it agree with my Callas? What food do fishes need? I have given them crumbs, but I can't see as they eat them, and worms dug from the yard which they nibble upon. If any one can give me some information, I shall be greatly obliged, for it is a disappointment to me, and I do not feel ready yet to give up my Callas for my fishes. J. L. H.

### MESEMBRYANTHEMUMS.

This is a class that, to me, possesses an especial charm. Like the Cacti, it assumes various forms, bears neglect patiently, requires little water; is not troubled with insects, and is readily propagated by

seed and cuttings. *Mesembryanthemum cordifolium*, the Dew Plant, and *M. crystallinum*, the Ice Plant, are well known varieties. I once had a fine specimen of the latter, that entirely covered a wooden water-pail. It set on the north side of the house, and during the hot summer days on the prairie it was a delight to look upon. The radical leaves were very broad, and the whole plant glittered with an icy coating. Another variety had broad (spatulate) smooth lanceolate leaves—quite a singular-looking plant—so very smooth and pallid green, but over susceptible to moisture. Still another variety had long cylindrical, pale green leaves.

I have grown the above four varieties from one packet of mixed seed. I have a specimen of the last-mentioned, I think, growing in a miniature earthen tub without drainage; it was a little cutting last spring. The leaves are seven inches long, are clustered a half dozen together, about two inches apart, on the shrubby stems, which hang down eighteen inches and then curl back. The leaves, which are fleshy, are as wide as an oat straw, are "one-half cylindrical, three-cornered, elongated and recurved," and a pale green color.

London, in his "Encyclopedia of Plants," enumerates three hundred and seventy-nine varieties of this class.

The desire to learn the specific name of the one last mentioned, and the hope that others may write of their favorites, and so bring newer species into notice, has induced me to write this article. Will some one give me the botanical name of the Cinnamon Vine, and how it succeeds in the latitude of Pittsburgh?

MRS. KATE SHERMAN.

### THE NIGHT-BLOOMING CEREUS.

Frequent mention has been made through the columns of the *CABINET* of the plant named above. But my experience differs widely from what has already been given, and perhaps it may interest the reader to hear it.

The June of 1874, a friend sent me a small leaf of this plant, not more than four inches long; the September of '76, it stood a well branched specimen, between four and five feet high, with one blossom upon it. As I gave a description of it at the time in other journals, I will not repeat it now, except enough to distinguish it.

The flower measured nine and a half inches in diameter; was pure white, with straw-colored anthers, and of the finest texture imaginable. Aside from the blossom, this variety is worthy of a place in any collection; its broad flat leaves, when in a thrifty condition, are of a lively green color, and very glossy. Sometimes in winter and spring, it sends up long round stems, which in turn put out long flat leaves, the blossom coming from a notch in the leaf.

I grew it at a west window, in a compost of garden loam, sand, wood's earth, and old, thoroughly decomposed cow manure, changing the soil in May, giving plenty of water when growing rapidly, but withholding it almost entirely in the winter season.

MRS. G. W. FLANDERS.

The manner in which cut flowers are arranged in dishes has greatly to do with their beauty. A large flat saucer of pansies is the most suitable for the hat stand or corridor table. The edges of the dish should be fringed with "dog-ear ferns" or a cordon of smilax.

## Floral Hints.

## ROSES.

With almost every other flower there is more or less difficulty in cultivation; and it is very seldom that luxuriance of foliage is followed by corresponding bloom; but the Rose requires so little care, and a few good varieties furnish such a vast amount of pleasure from June to the middle of November, it will amply repay for the attention bestowed.

It is really only in preparing the soil for its reception, and the month or so following the planting, that the care is needed; and when well started a half hour every morning in mellowing the soil and watering them, will be found sufficient to keep two or three dozen plants in order.

The soil they most delight in is a stiff loamy one; and if never used before for Rose culture, it is astonishing the growth the plants will make, and the size of the flowers. If the soil is a clay one, it must be well drained, and with sand and good earth well mixed in, will be found to answer nearly as well; for the coolness and moisture furnished the roots by such ground during the hot, dry summer months, is very grateful to them; but in either case the Rose-bed must be properly enriched; such a gross feeder demands a very rich soil, and this can be accomplished by mixing the fertilizer with this before planting, and also frequent watering with liquid manure.

The digging and preparing of the Rose-bed should be done in early spring, as soon as the frost is sufficiently out to allow working, adding liberally well decayed material from the cow-yard; when warmer weather comes, this has become so well incorporated with the soil as to nourish the plants as soon as set out; but so few persons think of preparing a Rose-bed until seeing the plants in full bloom at a florist's that such will be obliged to depend upon the liquid fertilizer for the summer, and defer further operations until autumn, when a heavy coating of material should be given it, digging well into the soil the following spring.

The long drouths to which we are subject are very trying both to the young plants and those of larger growth. After experimenting in various ways, we have found this to be by far the most successful manner of watering them. Dig a hole by the side of the Rose-bush, not near or deep enough to injure the roots, however, and plant a flower-pot about four inches in diameter; do not fill the pot with earth, but leave it empty, and have it either even or a little below the surface of the ground. When necessary to water the plant, fill this pot with water, and it will be astonishing to see how very rapidly the water is absorbed; refill two or three times; the water given in this manner goes at once to the roots where it is needed, when, if applied to the surface of the ground, most likely would not be given in quantity sufficient to reach the roots; besides, surface watering tends to bake and harden the soil. Liquid fertilizers can be applied in the same manner, and should be given in moderate quantities, and not too strong, twice a week.

Frequent stirring of the ground is necessary; this is best accomplished by a very simple but exceedingly efficient little implement introduced the past season, and called the "Excelsior Weeding Hook;" it is galvanized and about the length of a trowel. Just imagine the foot of a chicken with the joints bent at right angles to the foot, and you have the implement at once.

And now for the varieties; it is perfectly useless for amateurs to experiment with those nutried, and introduced by many of the florists as "superb" and "splendid," when very often the description and high price demanded, are in striking contrast to the plant itself. It is only now and then one finds a new Rose worthy of purchase; while so many of the old ones are really fine, and can be obtained at reasonable rates, it is better to select from them.

First in the list stand the hardy Tea-roses; they are few in number, but nothing can surpass them in delicacy of color and exquisite fragrance—a fragrance peculiar to themselves alone. The Glorie de Dijon, creamy, pinkish white, with a buff centre, for its tint, perfume, and luxuriance, stand unrivalled, and, what is very rare, the half-opened bud and full-blown Rose are equally perfect. There is always a succession of bloom, and the flower does not soon wither; the foliage is a beautiful glossy green; it is a climber and rapid grower; one bush has in the last ten years covered the side of a house, and is now one mass of bud, blossom, and perfect leaf-spray; if possible, a south-western exposure should be given it.

The Brugere, of a peculiar, indescribable tint, is very perfect in its long, slender buds, which remain half-closed a long time. La Pactole will be found very valuable for its constant bloom and beautiful foliage; it is not a climber and the flowers are of a canary-yellow color.

Safrano is perfect in bud, but loose and open when full-blown; the color is extremely rich, a sort of orange-yellow, and there should be one of this variety in the smallest collection. Clara Sylvain and Madame Brary, both white, but the former a climber, are desirable.

There are a number of others, valuable for tint and perfume, which unfortunately are not hardy; among these is the Devouiensis, delicate in color, with the perfume of the Magnolia; the plant may live through three or four winters, and then again we have been obliged to purchase every spring—but we must have it.

A hardy plant, always in bloom, of the class called Bourbon, is the Souvenir de la Malmaison. The Roses are immensely large, very double, of a delicate flesh-color, and altogether one of the best in cultivation. Of the same class are Leuson Gower, salmon rose in color, and Sombriel, a white Rose, the early bloom of which will be found rather inferior, as it seldom expands perfectly; but the later Roses are all could be desired; the bush is inclined to climb, but if preferred more stocky, can be pruned into shape.

But it is among the bloom of the Hybrid Perpetual lovers of dark, rich velvety Roses will revel. The crowning glory of this class is one we purchased several years ago, labeled Professor Koch; as it has never been found at any of the florists since similar in color, we imagine it to have been an imported Rose, wrongly labeled; it is a climber of the most luxuriant growth, and surpassing all others in glory of color, perfect outline, and velvety petals; a trellis covered with this Rose, and the Glorie de Dijon, both in full bloom, with the sunlight bringing out the depth of color and rich tints of each, is more beautiful than could be imagined.

Next to this Rose, and in every way desirable, stands Prince Camille de Rohan; it is very similar to Professor Koch in color and form, only not uniformly so handsome; but where the two varieties cannot be compared, the Prince would be considered superb. Napoleon and Emperor of Morocco are so very similar in every respect, it is not necessary to add both to the list; the flowers of each are very dark, the edge

of each petal tipped with black, rendering them both unique and handsome. General Jacqueminot is a rapid grower, very hardy, fine bloomer, and every way desirable; the bud is perfect, but the full-blown Rose is rather too open.

King of Spain, of a dazzling color, should be added to every collection, while General Washington, of immense size, a beautiful shade of crimson and extremely double, is invaluable.

Geant des Batailles is showy, but the full-blown Rose is so wanting in color, and there are so many others more desirable, we have discarded it entirely. Victor Verdier, a beautiful, clear pink, and Anna de Diesbach, similar in color, are to be recommended. Baron, not Baronne, Prevost, one mass of magnificent flowers, each Rose large and full, of a bright rose-color, is a free and constant bloomer; as it inclines to climb, support should be given it.

La France, a delicate, satiny pink, is fine, both for color and rapid growth. The Archduke Charles is classed among the Bengals, but of so much greater luxuriance of habit, it hardly seems in place. Genoese Marble is another name for the same Rose, and is too valuable to be omitted from any collection; the outer petals are a dark crimson, and shaded to the centre, which is very light; a fine bloomer and fine grower. Celine Forrestier belongs to the Noisette family, which are those blooming in clusters; in color it is entirely distinct from any other, and is a very superior Rose. Marshal Neil is a superb Rose of the same class, but is so tender, it can hardly be depended upon; the beauty of the flower is so great, that it repays one to purchase a new plant every spring.

As the list of desirable plants I have given only comprises about two dozen varieties, it will be found sufficient for a small plot of ground, and when a larger space is to be filled, duplicates of many of these varieties would not be amiss; but this list really embraces those that best repay the care of cultivation, and for variety of color, hardiness and free blooming qualities, cannot but prove satisfactory.

The best time for transplanting is early in the summer, and after sunset should be taken in preference to earlier in the day. If done just before a shower, the ground settles nicely around the roots. The plant must be shielded from the sunshine for a week or so, until it is well established; this is best done by putting over it an old loosely woven basket, which will admit free passage of air, but not admit the sun's rays, and should be much longer than the plant. Another way is to drive a stake near the plant and incline a large square board, changing its position in the middle of the day, to follow the sun; at sunset the basket or board must be removed for the dew to fall, and replaced about eight o'clock the next morning. With care, Roses can be moved even in August. In purchasing do not select the largest plants, as transplanting checks their growth, while small ones hardly feel it, and make healthier and finer bushes.

If the leaves of a Rose-bush turn yellow, and it looks unhealthy, taking up in the morning, putting it in milk warm water and carefully washing the roots, is very beneficial; it should remain in water, sufficient to cover the roots, until evening, and after mellowing the soil, again set it out; shield from the sun a few days. A weak decoction of soot water is excellent; but it must be applied very weak and not too frequently.

Early in June a small green worm, called slug, appears, and if not checked, so destroys the leaf sprays, they look as if scathed by fire; if applied before the worm appears, early in May, whale-oil soap is a certain preventive; it is bought by the pound or can, and dissolved in cold water; a quarter of a pound to two pails of water is the right strength; applied by means of a syringe every evening for a week, effectually destroys all trace of the nuisance. They only appear once during the summer. SUSAN GIBBONS.

## Household Hints.

## ECONOMY IN VARIOUS THINGS.

I presume we would all be more or less interested in anything treating on economy, and although much has been already written, and many excellent ideas have been presented by the writers in the CABINET on that subject, perhaps I may be able to add a little yet.

I will begin in writing where I begin in practice, that is, in Dress. I think I admire elegant dresses, stylishly made, as much, perhaps, as any one does; but they are unattainable by many of us, and we must forego them. But those who are economically inclined, and who have some ingenuity and taste, will find that dresses and other garments that are fit and appropriate for a lady's wearing, are not beyond the reach of a very meagre purse.

There is no need that dress should be expensive if we wish it to be otherwise. I think I have proved this to my own satisfaction. I know that there are dozens of girls who can, and do, come out in an entire new suit of a fashionable color, made by a stylish dressmaker, at a stylish price, and with hat, ribbons, and gloves to match, every season, or it may be, every month, and who have no need to think of the cost. I have no fault to find with those who can afford to dress in this way; but I know well that I cannot, and I do not think I envy those who are more fortunate.

I have admired these dresses, but I know well that I can buy every article of clothing that I need for a year for what one or two of these beautiful suits cost. I always make my own dresses, and those for the rest of the family.

Almost every family now has a sewing machine, and every family of girls ought to have one dressmaker among them. It is very easy to learn to fit nicely with the aid of a good chart or dress-fitter, and good patterns for every garment that is worn can be had for a trifle. It is not only the saving of money that would be paid to a regular dressmaker, and this is considerable, as it frequently costs as much for the making as for the material of a dress or suit, but you can have your dresses made just as you want them; you can calculate with certain knowledge just how much material will be required; you will be able to get them out of much smaller patterns than a dressmaker would be at all likely to do, and they will be almost certain to be better made.

After one has learned to fit themselves nicely, they would be very unwilling to carry their material to a dressmaker again. Not that I have anything against the trade at all, or am afraid of ruining the business, if all that read this should follow my suggestions. The dressmakers that I know are generally overerowed with work. I know that there are enough women and girls who will always have their dresses made by other hands than their own. Some will do so from choice, and some from necessity, but my aim is only to suggest a remedy to those who, like myself, cannot afford it.

I do not own many dresses at a time. There can be so many changes made now with polonaises, loose waists, and sacques, that they assist very much in making a scanty supply into a plentiful one. A large stock of dresses of cheap material, poorly made and abundantly trimmed, is a very poor stock to have on hand. I do not buy cheap goods at all, except calico. In getting material for a dress I always put the cost into quality and not quantity.

I do not buy as much goods for trimming as is required for the dress. I have never worn but one suit that had more than twelve yards of material in it. I seldom alter a dress, though I have sometimes taken them all apart, and turned them inside out, or upside down, as they seemed to need, but I do not know that I ever altered a dress merely because the fashion had changed, for I try never to make up a dress in a way that will appear ridiculous as soon as it is a little out of date.

My calico dresses wear out about equally all over, except the back breadths of the skirt, and these are torn out, when the dress is ripped to pieces, and left nearly full length, hemmed around, a binding put on, and they make excellent kitchen aprons.

I do not say, in all this, that I have taken a way of my own choosing. Doing my own dressmaking—and I do my own milliner work, too, for the most part—has been the source of considerable labor and some vexation to me, but I am the oldest of half a dozen children, and am forced to consider the wants of others of equal importance with my own.

Of course we keep a rag-bag, and it is soon filled, but nothing but the smallest bits that cannot possibly be of use in any other way goes into it. Some writers, I notice of late, have taken to decrying patchwork quilts.

I am sure I do not know why, and I have wondered what such housekeepers did with the nice bits of new calico that every housekeeper always accumulates more or less of. I have nothing to say about those moustrosities called strawberry quilts, basket quilts, etc., in which red, green, or pink calico is cut into shape and hemmed on white muslin. I do not imagine I shall ever be tempted to undertake anything of that kind, or that I shall ever buy calico to cut out and piece together, only as a little may be needed to join together prettily what we already have on hand. In a large family there are many bedquilts needed, and we have a quantity of calico pieces left over from dresses, aprons, sunbonnets, shirts, etc., and why should we not have the pleasure of making them up into some pretty design and quilting them. We have one now in process of piecing that is made almost altogether from pieces left of light calico shirts, and I bought enough of one kind of bright red calico to make up with it.

There are so many pretty designs for piecing blocks that every quilt may be made different, and every bed in common use in the house may have a pretty pieced spread for the top quilt, no matter how faded and worn the under quilts may be. For some of the quilts it will not be necessary to buy any calico only for the lining, as every piece-drawer will contain both light and dark calico which may be nicely arranged and put together. Piecing blocks is very attractive work for children, and it is very convenient to put in your pocket when you spend an afternoon visiting. It is very nice light work for evenings, and, for girls, will make a pleasant variation from crochet work or tatting. And not the least value of such quilts is that they will descend to one's children as the work of their mother's hands in her girlhood, and pieces like dresses that she wore when a girl will be sought out and remembered.

Sewing carpet-rags is also pleasant work for evening. Every old garment that has fully served its purpose, and every bit of new stuff too small for other use, but large enough to cut a carpet-rag from, is used in this way. Then they are sewed together, at intervals, as such work can come in with the necessary making and mending, the long evenings serving well for such

work. They are assorted, the various colors mixed well as they are sewed, and by the time a new carpet is needed the rags are generally ready for it. The rag-bag only takes its turn after everything is turned into carpet-rags that can be used in that way.

Worn-out bedquilts, folded to the proper size, or cut if too large, make the nicest kind of cushions for chairs, lounges, stools, or anything else that you happen to want a cushion for. We have cushioned several stools in this way lately. We cut six thicknesses of the quilt, each just the size of the top of the stool. Then they are carefully laid in place, the sides just even, and two or three long tacks are driven through them all into the stool to keep them in place. Then the cover is laid on and tacked around the sides with common tacks, being stretched tightly over the top, and tacked alternately on one side and then on the other to keep it straight. Then the fringe is tacked lightly around with small round-headed tacks. We have made and covered, in this way, a pair of walnut stools that are covered with green rep, and trimmed with fringe to match; a pair of round ones, stained very dark and covered with black cloth with an embroidered spray in the centre, and black fringe, and a pair that were covered with the two sides of an old-fashioned carpet-bag, and trimmed with worn dress-fringe.

All were home-made, and all, we think, look very neat and workmanlike. For a chair cushion, six thicknesses of the quilt would be hardly enough unless the quilt was very thick. For this the pieces are cut to fit the chair-seat, all the same size, and tacked together in several places with a darning needle and cord.

This cushion is comfortable, and much more satisfactory every way than feathers, which is too soft, and any other material is too hard. The next best thing that we have found and used for this purpose, is our old woolen rags. They are of no other use, only to throw on the manure pile, so we cut them into pieces about three inches square and make our cushion the proper size and shape of ticking or other strong stuff, and fill rather tightly with the rags. They may be tacked in places, but for a small cushion, I prefer to leave them loose and shake them up frequently, as the cushion will be much softer than when tacked, as the rags would soon become packed from use. This, too, makes a much nicer cushion than feathers. Of course, you can have the outside as pretty as you choose, and every housekeeper has bits of bright worsteds and silks to piece up into such both useful and ornamental articles.

I have one in mind that I intend to make this coming winter. We have had a roll of soft, silky stuff that was originally a baby's hood, but has been ripped up and laid away for several years, that is now a pale pink, but is to be dyed crimson, that I want to piece with black velveteen, of which I have quite a large roll that has been left over from trimmings. I think I will cut the pieces hexagon shape, putting a black one in the middle and six crimson ones around it; then another circle of black ones.

For our sitting-room rocking-chair, I am going to piece one of scarlet flannel and the pieces that were left of my water-proof cloak. This, I think, I will cut diamond shaped, beginning the cover with a star of the scarlet.

When there are three colors to be used, there is no pattern prettier than the teabox, which is only diamonds cut so that three will fit together, the two darker pieces making the sides, and the lightest piece laid in sideways, making the top of the box.

AMARANTH.

Occupant can lie down or sit erect in it.

MADE BY

NEW HAVEN FOLDING CHAIR CO.,  
NEW HAVEN, CONN.

Exhibited at International Exhibition, Philadelphia.

NEW YORK, MAY, 1878.

## GOOD CHEER.

I want to tell you about our beautiful hanging-basket, the charm of our country home all last summer. We set out a few roots of Moneywort in a little gallon pail, painted and pretty, and perforated in the bottom. It grew slowly and honestly and the vines were hardy. When they were about a foot long, we snipped off the ends with scissors, and each end sent out two or three new branches; when they had grown about another foot, we clipped them, and in turn they rewarded us with new vines, and we did this until the waving mass of delicate vines hung like an airy, dainty drapery of green, perhaps a yard and a third in length. We might have continued the clipping and sprouting, only we feared for the one single stem of each that hung over the edge of the pail.

This beautiful hanging-basket, the delight of ourselves and our neighbors, we hung on a back porch between two large white pillars, and it beautified the whole house. The doors opened from the front veranda, so that it came in full view from the parlor, seen directly through the rooms.

The women pretended that "that was nothing," and that it merely chanced to hang there in sight of every caller—but, confidentially, we did it purposely. I told the girls when there was such a marvel of beauty about any one's house, it should be made to do its whole duty, and give out all its usefulness.

Poor old father don't like "foolish fixins," but I have seen him come in from the field and wash in the cool water, and while he slid the comforting towel over his hot forehead, his eyes would rest admiringly on the beautiful curtain of swinging vines that made his cosy porch prettier than any woodland bower. We always placed his chair near it, and the picture of that white-haired old man, sitting reading, while the swaying vines almost touched the crown that the years had so gently placed upon his head, has often made the mist of tears bedim my eyes.

I never had any one thing, green and growing,

about our house whose influence was so gracious and so gratifying as was this marvel of a hanging-basket, and I hope others may secure to themselves the same pleasure by the same means.

Just here I pause and look back over sentences, and when my eye falls on the adjective "comforting" before towel, I smile and say to myself, "the women will think that word is far-fetched."

If they only knew! Well, I *will* tell you how I came to use that old grand, motherly word, "comforting." It is because our towels and bed and table linen are so sweet with the perfume of roses all the year round. Why, I can bury my face in my fresh pillow in the winter when the wild winds are wailing and sobbing without, and I can bring all the glory and the sweetness of the summer, with its

"Gracious roof of gold and green"

right into my very life. In the season of roses we gather them and pound the petals in an iron mortar until they are made almost into a paste, then we make this into small cakes, say a thimble full for a measure, roll between the palms until it resembles a marble, spat it out into a little cake, and dry in the sunshine on a plate. Turn them two or three times, and when perfectly dry put them in little lawn bags or pockets, tied up, and scatter about in trunks, wardrobes, band-boxes, bureaus, and wherever you desire. They will keep for years. We have some that was made ten years ago, and they are as fragrant as ever. One does not need to hurry in making them; the paste will grow dark colored by remaining over night in the mortar, but it does no injury. The cakes will be brown any way. This is an odor that never wearies one, nor sickens, nor becomes old, like all others do. It is always fresh, and delightful and suggestive.

Do you women really know that the Madeira Vine is, *par excellence*, the vine? I could not get along without it. Like a good dog, it "will come when it is called." I had a bushel of tubers last spring, and after I had sent a lot to all the women in my neighborhood, there were a good many left, and hating to throw them away, I planted them along the palings, inside of the garden, and let them take their chances. Truly, that bed of vines was my best paying bank all summer. They worked into every pretty thing I made in which a bit of living green was required. To assist any of you I will tell you how useful and obedient they are.

To begin with, you know they are succulent vines, and like the traditionary, tough, lovable, old Yankee women they can "live on nothing and look well." In July I made a fern basket, or bought the pretty, large green wire basket ready made, to order, with a high, lattice-work, wide handle. The ferns were found in a very shady place—Cedar Point—oh, where they have grown for a century, until the very earth is knotty and gnarled and knobby with their splendid roots—where

Down deep in a hollow, from morning till night,  
Dun shadows glide over the ground,  
Where the glow-worm at noonday is trimming his lamp,  
And hardly a sound from the thicket around.

Where the rabbit and squirrel leap over the ground—  
Down deep in the dell where the bees never come;  
Where the shade is too black for a flower;  
Where jewel-winged birds, with their musical hum,  
Never flash in the night of that bower.

Well, as "I remarked to say," the ferns filled the basket, and made it look like the ideal I have seen with my eyes closed, only I needed vines over the handle, and about the edges, and to hang over in places. I went to my bank and drew out just the kinds I needed; broad leafed, to fill a vacancy; a cluster to hide a bare place; a heavy vine for each side of the handle; a fine, dainty one to run about the rim like a bit of embroidery, and a glossy, waxen one to run in and out among the plummy ferns; my very imagination was satisfied and my most practical wants, likewise.

ROSELLA RICE.

## SPECIAL OFFERS

FOR

Subscriptions to Floral Cabinet,

DURING MONTHS OF

MAY and JUNE.

Any one now a subscriber to the FLORAL CABINET who will bring the name of one new yearly subscriber to the CABINET, during the months of May and June, will receive a choice of one of the following EXTRA PREMIUMS. These offers are made to induce our friends to make a little extra effort at this time. The travelling last winter was so bad, no one could get up clubs, but now we get cheering reports from many agents that travelling is fine, and the *hardest of the hard times has passed*, so that they say it is easier to get up clubs now than at any time for a year past.

To encourage all our friends to work now, we give these new offers, good only until July 1st.

## SPECIAL PREMIUMS.

## For One New Subscriber.

1. Book, "Ladies' Guide to Needle Work," worth 50c.
2. " " "Household Hints and Recipes," " 50c.
3. " " "Every Woman her Own Gardener," " 50c.
4. " " "Fret Sawing for Pleasure and Profit," worth 50c.
5. Three Patterns of Embroidery, for Java Canvas Tildies, Worsted Work, etc.
6. One package Starch Polish.
7. One package Tidy Fasteners, set of four, each different color.
8. One Combination Pen and Pencil Holder.
9. One book, "Language of Flowers."
10. One Silk Book Mark, or Ten Papers Flower Seeds. }

Any one bringing two new Subscribers, may choose two of above Premiums, and for each new name an additional Premium for each name.

## For Two Subscribers.

11. Any of above-named books, bound in cloth, price \$1.00
12. Wood's Compound Magnifier, a splendid little article, price \$1.00, which is invaluable to all flower lovers for examining flowers, insects, and the common uses to which a microscope is applied.

## For Three Subscribers.

13. Book, "Household Elegancies," price, \$1.50.
14. " " "Window Gardening," " 1.50.
15. " " "Evening Amusements," " 1.50.
16. " " "Ladies' Fancy Work," " 1.50.
17. " " "Beautiful Homes," " 1.50.
18. " " "The Wonders of Prayer," " 1.50.
19. " " "The Pacific Tourist," " 1.50.
20. Warner's Health Corset, price \$1.50; the best corset for ladies' use.

N. B.—These Premiums are given only for new Subscribers sent to us *after this date*, and before July 1st, and cannot be applied to subscriptions forwarded before this date, nor after July 1st. Full descriptions of any of the above books are found in our illustrated catalogue, "How to Make Home Beautiful," sent to any address on receipt of 3c. stamp.

These are the finest offers ever made to our subscribers to get up new clubs or to induce their friends to subscribe. And the opportunity is one which will attract general attention as splendid in every respect.

## WOOD'S COMPOUND MAGNIFIER

(six times the size of illustration) is the most frequently useful of all microscopes. Its magnifying powers of ten, thirty-five and one hundred times, reveal myriads of interesting and valuable facts and phenomena of the animal, vegetable, and mineral kingdoms, which would remain concealed without it. It is by far the best detector of counterfeit money, the best for examining the textures and fibres of cloth, for discovering shoddy materials; the best for examining plants, flowers, insects, minerals, etc. To children, as well as adults, this little *Pocket Companion* affords an endless source of instruction and amusement, cultivating habits of observation that are worth a hundred times its cost. It will last a lifetime, and is warranted to give perfect satisfaction. Price, \$1.00, postpaid.

*Directions for Use.*—Hold the glass close to the eye, and the object, which must be in a *strong light*, from one to three inches from it until it can be seen clearly, or the right focus is obtained.

## Dr. WARNER'S IMPROVED HEALTH CORSETS.

Of the many corset contrivances for compressing woman's form into the unnatural and hideous shapes which the soulless and senseless Goddess of Fashion is supposed to require, Dr. Warner's is probably the least objectionable. Hence we are very fortunate in having secured from the manufacturers such terms as enable us to make the above announcements. The Adjustable Pads and the Skirt Supporter features of the Warner Corsets will be appreciated by those who value health or comfort, while in all other respects the Warner Corsets are fully equal to any others in the market which can be bought for the same price (\$1.75). The fact that they are approved of by physicians will also recommend them to many of our readers. The size required must accompany every order, and every order must be mailed to us before July 1st. Price \$1.75. For \$2.10, will be sent this corset and one year's subscription to the CABINET, or any \$1.50 book named above.

## PRIZES FOR HOUSEHOLD AND FLORAL ARTICLES.

Owing to the work of examination, which is very close and laborious, the announcement of prizes must be deferred another month.

THE GARDENS OF ST. GRATIEN, NEAR PARIS, FRANCE.

The scene in illustration is from the Gardens of St. Gratien, belonging to the Princess Mathilde. They are situated in the Department of Seine-et-Oise, near Paris, and are considered among the prettiest of the gardens which surround the mansions and chateaux of sunny France.

The summer house, arbors, vases, flower beds, and massive verdure of the forest, are in splendid contrast with the lake, and the prospect from the veranda of the villa is of extreme beauty.

**Beautiful Legend.**—We find in a sermon of Theodore Parker the following story. The subject of his discourse was "Rest." "They tell a story that one day Rabbi Judah and his brethren, the seven pillars of wisdom, sat in the court of the temple on fast day disputing about rest. One said it was to have attained sufficient wealth, yet without sin. The second said it was fame and praise to all men. The third that it was possession of power to rule the State. The fifth, that it must be only in the old age of one who is rich, powerful, famous and surrounded by children and children's children. The sixth said that all were vain unless he kept all the ritual of Moses. And Rabbi Judah, the venerable, the tallest of the brothers, said: Ye have spoken wisely, but one thing more is necessary: He only can find rest who to all things addeth this—that he keep the tradition of the elders. There sat in the court a fair-haired boy playing with lilies in his lap, and hearing the talk, dropped them in astonishment from his hands and looked up—that boy of twelve—and said: Nay, nay, my fathers, he only can find rest who loves his brother as himself and God with his whole heart and soul. He is greater than fame, wealth and power; happier than a home that is without it; bet-

ter than honored age; he is law to himself above all tradition. The doctors were astonished. They said, When Christ cometh shall he tell us great things? And they thanked God, for they said: The old men are not always wise. Yet God be praised that out of

of the thousands who throw old shoes after bridal parties as they are leaving home, know anything of the origin of the custom. Like almost all our customs, its origin is ancient, and can be traced to Bible times. It was then the custom for the brother of a childless man

to marry his widow, or at least, he had the refusal of her. If he chose to reject her, the ceremony was public, and consisted in her loosing his shoe from his foot, and spitting in his face. His giving up the shoe was a symbol of abandoning all dominion over her; spitting in his face was an assertion of independence. There was an affair of this kind between Ruth and Boaz. In some parts of the East it was a custom to carry a slipper before a newly-married pair, as a token of the bride's subjection. The custom, as it exists with us, is very old in England and Scotland. The usual saying is that it is thrown for luck, and that is the idea in this country; but originally it meant a renunciation of authority over the bride by the parents. It was formerly a custom among the Germans for the bride, when she was conducted to her bed-chamber, to take off her shoe and throw it among the guests. Whoever caught it, in the struggle to obtain it, received it as an omen that he or she would soon be happily married. Train, in his "History of the Isle of Man," says: "On the bridegroom leaving his house, it was customary to throw an old shoe after him, and in like manner, after the bride on leaving her home to proceed to church, in order to insure good luck to each respectively; and if by stratagem either of the bride's shoes could be taken off by any inspector on her way from church, it had to be ransomed by the bridegroom."

In Kent, England, after a couple have started on their tour, the single ladies are drawn up in one row, and the bachelors in another. An old shoe is then thrown, and the ladies run for it, the successful one being the first who will be married.

THE GARDENS OF ST. GRATIEN, NEAR PARIS, FRANCE.

the mouth of that young suckling has his praise become perfect."

**Throwing the Old Shoe.**—Very few, probably,

## Household Art.

## TWO PRETTY ROOMS.

We lately entered a family sitting-room, where is household adornment in all its beauty. The first thing that meets the eye is a beautiful illuminated text, "God bless our home," which seems to throw an atmosphere of safety over all. On the mantel is a deep frame, filled with exquisite flowers, made of shells, all painted and arranged with great skill. In one of the corners, between two windows, is a rustic stand whose dark crimson leaves are intermingled with the green, and whose Ivy climbs lovingly over an arched frame.

In each window is a box—fitted to the sill and upheld by a bracket—filled with delicate dainty plants and vines which clamber up each side of the windows. In front of the rustic stand, is a small centre table, which holds a lovely bronze image, with a background of Ivy, and stray green leaves peeping here and there over its dark beauty.

On another side of the room is a lounge, with a soft cushion, both covered with cretonne; at the head of the lounge is a wall-pocket which contains a weekly paper, a monthly magazine, and one of the dailies. Then there were fine engravings, one or two bright pictures, and, above all, or rather under all, a pretty carpet, a dark green with trailing vines. Here is a beautiful cross, covered with dried moss, gathered during summer's ramblings, and twined around it are bright tinted wax autumn leaves, forming a beautiful ornament. All is bright and cheerful; none would imagine that here some deep sorrow lingered in their hearts.

But though we have taken so long to describe the room, we had perceived its contents at almost a glance, and were now giving our attention to the slowly-recovering young girl. See how confusedly she turns from one face to another; all seems a maze whose intricacies she cannot unravel.

But just now the door opens. Alice—for such is the young girl's name—looks up and a brightness of great joy breaks over her wan features, and, reaching her hands out entreatingly, cries,

"Mother!"

For a few moments all is confusion, and we, being strangers, were of course unable to guess the meaning of this strange scene; but by dint of patient listening we discovered that Alice was the beloved and eldest daughter of the family. She had, years ago, married a man who possessed every requisite to make his bride happy. His home was far away in the sunny South, and thither they directed their steps. Letters were sent often by Alice to her dearly loved home, till a few years had passed, then they ceased suddenly, and she had never been heard of from that time till now. Alice, with tears of sorrow falling fast, told how, after a few years of happiness, her husband had shown a fondness for the wine-cup, and, after many bitter trials, and finally the sad one of his death, Alice resolved to return to her former home. She wrote to the old address, but after weary waiting, and no answer, she started with what money she had to find her friends. When we first saw her she had been in the city a few weeks, but her family having moved far to another part of the city, Alice knew not how to find them, till Chance, or rather Providence, led her to the very spot she had so longed to reach.

After long and interesting conversation, the mother said that Alice must have rest, and forthwith led the

way upstairs. Again we followed, and oh! that such an ideal of a room for rest should be in existence, unknown to any one.

In the first place the carpet; it was a delicate pearl tint with blue Forget-me-nots thrown occasionally here and there. The wall paper matched the carpet, and had been placed on the wall by Alice's sisters. The furniture was a cottage set, all pearl and blue; but, oh! such beautiful hangings over the bedstead, of pearl silk, lined with blue.

In addition to the dressing-case usually sold, there was one something like the one pictured in the *FLO-RA-L CABINET*; but in this one the Swiss was lined with blue paper muslin, and blue silk bows outside. On the dressing-case was an elegant pincushion, a beautiful and new-fashioned hair-receiver, a very pretty comb and brush box. Then the window curtains were white Swiss looped back with blue cord and tassel; the lambrequins were blue with a large A. worked in pearl colored silk. There were pictures and two or three pretty statuettes.

"My daughter," said the mother fondly, "this room was fitted up for you when you first left us, and it has waited for you untouched all these years, but now rest and peace awaits you."

The mother left her, and Alice, gazing dreamily at the little Forget-me-nots peeping forth gently from the carpet, sank back upon her pillow and was lost in the happy oblivion of sleep, and the evening star shone peacefully on, and the moon smiled serenely on the face of the happy sleeper.

## TO MAKE A PRETTY CHAIR.

Buy two pieces of dress braid, only about an inch wide, one drab and one blue. Cut into strips the length of the seat of a chair; place them over and under each other, like the darn of a stocking, blue and drab alternately. Fasten securely by sewing. Prepare another piece the same way to fit the back of the chair, but twice as long. Take a seatless chair, tack old carpet, or any strong cloth, where the seat ought to be; fill with straw, cover again with carpet, then tack the joined braid neatly over the seat. Tack one end of the braid for the back of the chair, to the back of the seat; bring the piece over the top of the chair down again, and tack the other end over the same place as the first end, thus finishing an easy made but very pretty chair. Those who wish to make the other pretty things in Alice's room, must try to obtain that much-to-be-desired book, "Household Elegancies."

C. E. C.

## GUEST CHAMBERS.

In the first place have a guest chamber. However welcome you may make a guest, if she finds that an inmate of the family has given up a room for her, she will feel disposed to shorten her visit, and will hesitate long before she repeats it.

She will feel sure that the person will be glad to get back to her own room, and that is about equivalent to rejoicing at her departure. In the next place, warm it in some way. A room that has been unoccupied, and that is not affected by the fire, is not a comfortable or even safe place for any one to sleep in cold weather. The attention that was called to this subject a few years since, and the articles that appeared in our papers, produced a change in this matter.

Housekeepers generally expect to warm the guest-chamber in some way. The room should also be provided with matches. Many persons are somewhat

nervous when away from home. If startled in the night, it is a great comfort to be able to have a light. Our homes are much more beautiful than they were ten years ago. Particular attention has been paid to ornamenting sleeping apartments.

Blue rooms are very attractive for guest-chambers. Let the wall be kalsomined in blue, and finished with a blue paper border. Place white shades in the windows with blue tassels. Put a blue and buff carpet on the floor. The set of furniture must correspond with the taste and purse of the purchaser. A black walnut set, with marble tops, is both elegant and durable.

Before the dressing bureau and washstand lay bur-lap mats, embroidered with blue shaded Germantown wool, with a fringe of the same. These mats are ornamental, and will also save the carpet where it is in most danger of being injured.

A white Java canvas tidy, worked with blue worsted, may be put on the rocking-chair. A toilet set of the same kind of canvas as the tidy, worked in blue and buff worsted, should ornament the dressing bureau. The set should consist of four pieces. A large mat—upon this a pincushion should be placed—and upon each side of the cushion there should be a small mat. Upon the dressing bureau there should also be a hairpin-cushion. This may consist of a small basket, filled with horse hair, covered with a very coarse white net. Over the net place a piece, knit or crocheted in loops, from blue worsted. The hair-receiver can be made of perforated card in the form of a cornucopia, trimmed with plaited ribbon, blue, and ornamented with one or two decalcomanie pictures. It should be attached to the dressing bureau by a bow of blue ribbon.

The pictures upon the walls may be framed in blue and gilt frames. Spatter work pictures, worsted wreaths, home paintings, and many other things that are not regarded as pretentious enough for the rooms below stairs, are just the thing for the guest-chamber, and will be interesting to the visitor. The stand should be provided with a few entertaining books.

Let the guest-chamber be a room to which you can invite your guest with satisfaction, and which the visitor will leave with regret, and feel constrained to go home and make her guest-chamber as attractive as the one she has left.

M. R. T.

**Directions for Making Blackberries.**—Take a piece of wire, bend the end and tie on cotton. Dip this in melted wax colored with lampblack. Mould the berry while the wax is soft. After the shape is perfect, dip the berry once in melted wax to give a smooth surface. Take the seeds from asparagus berries, and rub them carefully. Put these on the wax berries, with dissolved glue, colored with lampblack. After the berries are thoroughly dry, varnish them with copal varnish. Make the calyxes and cover the stems with green wax, and then rub them over with brown powder.

Blackberries can also be made by using small globules instead of asparagus seeds. These are formed by melting rosin and wax, colored with lampblack, then dipping a brush in the mixture, and shaking it over cold water.

I have recently made very natural blackberries in the ways described, and, having placed them under glass, expect them to last a generation or more.

## Housekeeping.

## SCRAPS.

Scraps are exceedingly useful morsels in this world; scraps of news, scraps of sense, scraps of wit, we can often make more use of than whole articles on weighty and important subjects.

Especially are scraps of use to the housekeeper, for she often has but few minutes for anything, and a great deal may be done, with many scraps, in a very short time. It is profitable for her to get in the habit of looking out for scraps.

There is much said, and with truth, about American housekeepers wasting scraps in cooking; there is also waste in cutting garments.

Often there are scraps of time, when one can rest between the thing accomplished and the one to be done, that might be utilized by lifting the mind from the routine of labor and letting it work out a scrap of thought.

Housekeepers seldom have any well-trained habits of thinking, but occupy their minds with planning their work, or in reverie.

By practice one can train their minds to work on short notice, and in a few minutes evolve some scrap of thought that may linger and please the imagination all day.

But the most careful saving of scraps will be almost useless if one is not possessed of true artistic economy in using them.

Scraps of food may be saved and put on the table in a careless, untidy manner, and the result will be a decided disgust, or they may be neatly prepared, put on in an artistic manner, and eaten with pleasure.

And so with scraps of cloth, they may be saved and used for patchwork of meaningless patterns or be made into things of beauty.

All scraps of new and pretty calico, good worsted, even if somewhat worn, silk and woolen, should be saved in separate boxes or bags.

The woolen scraps may often be badly worn or faded on the right side, and still be good on the wrong side, if strong.

As fast as the boxes become full, or time is available, the scraps may be used for mats or quilts, the mats to be put where necessary instead of using dirt-accumulating rag or other carpets all over the floors.

Commencing with the heavy woolen scraps, they may be made in mats we may designate as mosaic.

Make or find patterns of simple mosaic work, decide upon the scale on which you wish the mat made, cut the patterns in pasteboard a seam larger than you wish the pieces to be in the mat, then arrange them on the floor or table and decide the colors for the different parts.

The greatest skill is required in selecting the colors, or rather shades, for grays, browns, and black will be most common. Plain colors are best; checks, stripes or figures spoil the effect.

No two pieces of the same color should come together, yet the fewest different shades used, if harmonious, the handsomer the mat. All the pieces of one shape should be the same color.

After one becomes interested, they can find or invent all manner of pretty patterns, so that no two mats need be made alike, and by using different patterns, the scraps not the right size or shape for one may be used to a better advantage in another.

After the scraps get too miscellaneous for mosaic mats, several "log-cabin" mats may be made.

Old cotton cloth is good for the block foundations;

tear it in squares, the size you wish; about sixteen inches is a good size; then build your log-cabins on them around centric blocks of red, making one or two sides light, and the other sides of each block, dark.

The blocks can be put together so the light and dark will come in squares, diamonds or stripes.

The beauty in the "log-cabins" even more than in the mosaics, depends on artistic skill in arranging the colors and shading the light and dark distinctly. Eight blocks, two in width and four in length, make a good sized mat.

Long strips of black or dark brown may be used to border the mats, and they should be lined with good cloth; denims or sacking does well.

After all the "log-cabins" have been made that you wish, the remaining scraps may be cut in squares or circles about an inch and a half across, then taking good sacking for the foundation, they are folded twice through the centre and sewed through the folds of the centre on the foundation quite thickly so there will be no open spaces.

These mats may be of any shape, but the shades of color should be arranged in some order.

The strong, good bits of cloth still left may be used for another kind of mat, by cutting them into such form as to resemble fringe, making the slits about an eighth of an inch apart, and leaving an edge by which they are sewed very thickly on the foundation, then the fringe must be sheared evenly.

After a little practice the cutting into fringe may be done very quickly and evenly.

Still another kind of mat, very similar, may be made with scraps of yarn raveled from old stocking feet, etc.

The yarn is wound several times around two fingers, then slipping the fingers out, the loops are sewed near one end on to the foundation; more yarn is wound and again sewed on until the mat is done. The sewing on should be commenced at the outer edge and working toward the centre.

This makes a very warm nice mat, and is pretty if the dull browns and grays are nicely arranged, and a row of bright yarn put in occasionally.

Some pattern or method of shading is to be followed in these last two kinds of mats, like all the others.

The worsted pieces can be used to good advantage in quilts made generally after the "log-cabin" style. Like the "log-cabin" mats, no two need be alike. And here, also, the beauty is the result of artistic taste in the maker.

If one is so fortunate as to possess plenty of silk pieces, a handsome quilt may be made after the best of your mosaic patterns.

The smallest scraps, even of old ribbons, make beautiful "log-cabins."

What is left of the worsted and silk pieces will make pretty patchwork for cushions, ottomans, etc.

Calico quilts can, undoubtedly, be made as artistic as those of silk or worsted, though requiring even more skill because of calico being so much more figured, and sometimes far from pretty.

By making them as "log-cabins" on a foundation of old white cotton cloth, the same as silk or worsted, they will not require quilting.

The makers of calico quilts usually seem to be trying to find out how many microscopic pieces can be put in one quilt, and how many absurd and ridiculous patterns can be invented.

Perhaps the mosaic pattern could be introduced in calico quilts.

The only calico quilt I ever attempted—and that is not yet finished—is made from pieces of every calico garment I ever had. It is commenced in the centre

and built outward, in an original pattern, and is intended to be a little personal history.

Now I will suggest an innovation. Have all the pieces of any patch-work correctly cut out and arranged, then sew them on, on the machine. It is thus done much quicker and better than by hand. I know the sewing is usually accounted the fun, but the pleasure should be in the artistic part, not the mechanical.

KATE PRICE.

## BREVITIES.

Who can tell the number of homes that have been brightened since the existence of the dear FLORAL CABINET? How many feminine minds are stored with the most valuable knowledge gleaned from the instructive pages of that paper.

It is hailed with delight in thousands of homes by women and children, and even our sturdy "Isaacs" and "Jacobs" look upon it as something wonderful in the paper line "for the women;" and often we see them puzzling their brains over "chicken croquets," "Zephyr Lycopodiums," "Erythroniums," "barrel chairs," etc., and call us to the rescue. But, for fear of intruding on valuable space, let us lead you into a home where the CABINET has been a visitor for several years. You meet something that snacks of refinement and culture at every corner—something dainty and nice. I will mention a few little things for the benefit of others.

## FLOWER STAND.

Get your elder brother, or carpenter, to cut out of soft wood, a circular piece, about eighteen inches in diameter, and not more than one inch and a half in thickness; make a hole in the centre on the under side, deep enough to hold steady a leg three feet in length and three inches thick. Then make three small feet, carve them and screw them firmly on the bottom of the leg that supports the top of the stand. Give it a thick coat of varnish, and set away to dry. It will hold several small pots of flowers, and, as it is light and portable, you can move it whenever and wherever you please.

## RUG FOR BABY'S BUGGY.

Take a piece of heavy canvas—dark colored—four feet and a half long and three-quarters of a yard wide. Take purple and yellow zephyr and work a large bouquet of Pansies in the middle, using green zephyr for leaves. The stitch to be used is the common darning stitch.

The border should be about eight inches wide all around, and must be worked in vines and roses with leaves intertwined; work with different shades of red and green. When this is done, fill up the unworked space with brown Berlin wool. Line it with cardinal red flannel, and bind all around with green worsted braid. It is beautiful and very warm and comfortable.

## COVER FOR FOOT-STOOL.

Take scraps of velvet of two colors—blue and black—cut them into small hexagons, one inch and a half across; baste them over stiff paper hexagons—the same number of each color—and whip closely together, the colors alternately, in a circular form. When it is as large as you wish, fill out the edge with half hexagons so as to make it even all around. When finished, cut out the paper upon which the pieces are basted. Put wadding enough on the stool to form a gentle slant towards the edge. Finish with a row of black worsted fringe around the edge. It looks dainty and nice.

Small table covers are pretty made on the same order.

VICKIE BLUE.

## Household Elegancies.

## A COMFORTABLE SOFA.

We give the design of a comfortable sofa to show how an old worn sofa may be repaired and renewed. Supposing the seat, arms and back have become worn, procure sufficient material of whatever kind desired, and, measuring the size of each part accurately, fit the cover over and tack firmly to the wooden frame. The arms will require the greatest care, and as the form varies so greatly it is impossible to give a particular pattern, but it is not a difficult matter to cut the shape of back and arms with front piece, as shown in the illustration; in our own family it is such a usual thing for us to recover our furniture, that it has come to be considered as simple a job as the making of a dress or shirt.

Nothing helps the appearance of a sofa so much or imparts such an air of comfort as cushions. Where the depth will not admit of back-cushions, divide the covering of the back and tack it, so that when filled it will simulate cushions as in the illustration. The old-fashioned bolsters are again much esteemed, and give a quaint and cozy appearance to the seat. After covering the sofa as described, finish off with cord or flat furniture gimp and fresh tassels; fringe around the bottom is very elegant if deep and heavy.

## AN ELEGANT DRESSING-TABLE.

We show on this page a dressing-table, which will be found quite ornamental and useful.

It consists merely of a plain dry-goods box for the foundation; in size, three feet in height, four in width, and two feet six inches in depth—or about these dimensions—this has four blocks of wood one inch thick and four inches square nailed beneath each corner, to which castors are screwed. The box is placed with open side out, and this fitted with a shelf, or two of them, for containing various articles; the whole interior should be neatly painted or papered and varnished.

On each side (at the back) of the top are fastened two long narrow boxes, which may be obtained generally, from the drug or dry-good stores. These should be about two feet long and one wide, and from eight to ten inches deep. By sawing pieces of lath to fit the sides, and tacking them on in proper position, shelves may be made that will be convenient for holding various articles.

The covers to the boxes fitted with small hinges will make doors, and the whole must be neatly finished with mouldings put on with small brads, and an ornamental top and base made of square boards an inch or two deeper than the cases themselves. To these are screwed a pair of the iron brackets, which we can purchase for from 35 to 50 cents, or for 75 cents to \$1.00 fitted with lamps complete.

These cases are screwed or nailed very securely on the top of the table, as they are to sustain the glass which as shown by the illustration is of "comfortable

size"—perfectly plain but of good quality and neatly framed. Such a one can be purchased new for three or four dollars, and at second-hand, frequently for the half of that sum.

Over the top of the glass is fastened a frame, similar to the one described for the bedstead, around which is draped a hanging made of Swiss (figured or plain) lined with rose-color, or other tint. First, a width

A COMFORTABLE SOFA.

reaching from the top to within a few inches of the floor, is fastened to the upper back-ends of the semi-circular tester, the ends finished with a deep ruffle of the same, then on the tester above this is arranged two pieces, made by tacking a width of the Swiss and lining two yards long, folding it diagonally from corner to

AN ELEGANT DRESSING-TABLE.

corner, cutting and trimming the two cut edges with ruffles of the same, and arranging them as shown in the illustration; around the top tack another ruffle made with an edge above the cord, which runs along the centre of all the ruffles.

The table-top is covered with a piece of the Swiss over a lining like the curtains, and a drapery arranged around the front, made with rings at the top, which slide on a wire beneath the narrow ruffle finishing the edge. This allows access to the shelves within. The wood-work of this beautiful table should be carefully polished and ornamented to correspond with the rest of the furniture, which may be ebonized, enameled in colors, embellished with marquetry, ivory-inlaying, Decalcomania, painting, bronzing and gilding, or enriched with carvings at pleasure. Any one of these methods of beautifying will be found elegant, and may be made perfect of its kind. C. S. J.

## USEFUL ARTICLES.

## POSTAL CARD-CASE.

Take three pieces of pasteboard about seven inches long by five wide; round off the corners of one end of each piece. Take bright-colored pictures—the largest for the bottom piece—and paste them neatly on the pieces of pasteboard with flour-paste. Bind each piece with blue worsted braid. Place the three pieces lengthwise, so that they will lap over each about half way. Tack them together and sew two pockets on the under side of the pasteboard. Put a blue worsted loop on it to hang it by, and it is done. The cards are to be slipped in from the outside. It is quite an ornament, and very useful.

## PRETTY WATCH-CASE.

Cut the pasteboard in shape of a slipper; cut pretty designs out of stiff paper, and baste on scarlet delaine, and work the patterns in white glass beads; also work your initials on the upper piece of the slipper. Cover the pasteboard smoothly with the ornamented pieces of delaine and line the back of the case with white cambric. Make a heavy fringe an inch wide of beads for the lower part of the case, and for the sides and upper part, make only small loops of the beads, as fringe would not hang gracefully from the sides and top. Make a loop of a piece of scarlet velvet or ribbon with which to hang it by, and you have a beautiful little receptacle for your watch.

VICKIE BLUE.

**Rugs.**—I make my braids small; I assort my colors and shade them in, if desired, by first taking one strand of the next shade and two of the present, then two to one, and lastly three. Another rug is made cubework, three shades so blending in as to look like a pile of boxes; this is of heavy cloth and lined with a paper flour sack, and trimmed with scarlet and black pinking; but a much prettier one is a wreath of autumn leaves on a black ground. I cut them from patterns of the real, and of every shade from red to yellow, or green to brown, baste them on to suit my fancy in wreath or bouquet, then

buttonhole stitch them around with shaded zephyr; one ounce of red and one of green will form a variety, perhaps working a green leaf with the yellow shade, or a stem with the dark red, running in some strands to make the veinings. E. R. W.

## Fireside Reading.

### HOOK'S PRACTICAL JOKE.

Strolling one day arm-in-arm with Daniel Terry, the actor, up a street in Soho, Hook's nostrils were assailed by a most savory odor. Looking down an area, he saw the servants in the kitchen below dressing up a very fine dinner. "A party, no doubt," said Terry. "Jolly dogs! What a feast! I should like to make one of them," "I'll take a bet I do," replied Hook. "Call for me at ten."

Leaving his friend, he mounted the steps and knocked at the door. Believing him to be one of the expected guests, the servant conducted him to the drawing-room, where a number of persons were already assembled.

Making himself perfectly at home, he had half a dozen people about him laughing at his *bon mots* before the host discovered that a stranger was present. "I beg your pardon, sir," he said, addressing the uninvited one, "your name? I did not quite catch it, servants are so incorrect." "Smith, sir, Smith," replied the unblushing Theodore. "Don't apologize. You are quite right, sir; servants are great block-heads. I remember a most remarkable instance of their mistakes." "But, really, sir," interrupted the host, mildly, "I did not anticipate the pleasure of Mr. Smith's company to dinner. Whom do you suppose you are addressing?" "Mr. Thompson, of course," answered Hook, "an old friend of my father's. I received a kind invitation from you yesterday, on my arrival from Liverpool, to dine with you to-day. Family party, come in boots, you said."

The host at once disclaimed the name of Thompson or any knowledge of the vivacious Smith. "Good heavens! Then I have come to the wrong house," exclaimed the hoaxer. "My dear sir, how can I apologize? So awkward, too; and I have asked a friend to call for me."

The old gentleman, probably thinking so witty a personage would make an excellent addition to his party, begged him to remain. With a profusion of apologies, Hook at first pretended to decline; ultimately accepted. Everybody was delighted with him. All the evening he kept up a constant fire of wit and

repartee, and ultimately sat down to the piano and sang extempore verses on every one present. In the midst of these the door opened, and, true to his appointment, in walked Terry, at the sight of whom, striking a new key, he sang:

"I'm very much pleased with your fare;  
Your cellar's as fine as your cook,  
My friend's Mr. Terry, the player,  
And I am Mr. Theodore Hook."

**Mortarfyng Occurrence.**—"You see, my dear," he explained, "the mau was climbing the ladder with a hodful of mortar on his shoulder. Just as I passed

"Hush! Cudjo, you musn't talk that way; what stories were they?"

"Why, he tells the people no man can serve two massas—now dis is de fust story, 'cause, you see, old Cudjo sarves you, my ole massa, and also young massa John. Den de preacher says, 'he will lub one and hate de oder,' while de Lord knows *I hate you boff!*'"

A little five-year-old could not quite understand why the stars did not shine one night when the rain was pouring down in torrents. She stood at the window pondering on the subject with as much gravity as Galileo when he looked at the swinging lamp in the cathedral at Pisa, and with equal success, for all at once her countenance lighted up and she said:

"Mother, I know why the stars don't shine. God has pulled them all up so as to let the water come through the holes."

A gentleman, whose proboscis had suffered amputation, was invited out to tea.

"My dear," said the good woman of the house to her little daughter, "I want you to be very particular and to make no remark about Mr. Jenkins's nose."

Gathered about the table, everything was going well; the child peeped about, looked rather puzzled, and at last startled the table:

"Ma, why did you tell me to say nothing about Mr. Jenkins's nose? Ho hasn't got any!"

The Rev. Mr. G——, of Stirling, remarked to one of his hearers that he had heard that he was about to be married for the third time. The reverend gentleman added:

"They say, John, you're getting money with her; you did so on the last two occasions; you'll get quite rich by the wives."

"Deed, sir," quietly responded John, "what wi bringin' them in and putting them out, there's nae muckle made o' them."

Little Mary P.'s father had gone to Europe. During his absence she prayed continually for him that God would take care of him and bless him. On his return she ceased praying for him. "Why don't you pray for father now?" asked her mother. "We have got him at home now, and we can take care of him ourselves!"

"Why do you use paint?" asked a violinist of his daughter. "For the same reason that you use rosin, papa." "How is that?" "Why, to help me draw my beau."

CHILDHOOD'S JOYS.

under it he slipped, and the whole contents of the hod came down on my head."

"How ridiculous you must have looked!" she replied.

"On the contrary, my dear, I was sub-lime."

"Did you attend church to-day, as I charged you?" inquired an old planter, in the old time, of one of his slaves, as he returned to his dwelling.

"Sartin, massa," was Cudjo's reply: "an' what two mighty big stories dat preacher did tell!"

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

*Lemon Cake (Delicious).*—Beat one and a half cups of butter, three of sugar and the yolks of five eggs together thoroughly. Add one cup of sweet milk, four of flour, sifted, and one teaspoonful of soda. Grate the yellow peel from one lemon in a separate dish and squeeze out all the juice, no matter if some of the pulp does go in; add to the mass, lastly, the well-beaten white of five eggs.

*Ruth's Lemon Pie.*—Stir one tablespoonful of corn-starch in a little cold water, then pour over it, stirring diligently, one teacup of boiling water. One cup of sugar, one egg, reserving the white to beat to a stiff froth, with the addition of a little sugar to frost the top, (I use for my small family the round tin pie dishes, and the white of one egg will just cover one; this must be borne in mind throughout these recipes), and the grated peel and juice of one lemon. I can recall an ignominious failure in my earlier efforts at pastry making. Having in my mind the oft-repeated—as often as we had lemon pie—descriptions of pies eaten on the Mississippi steamers, made by darkey cooks, I was inspired to make an extra good one. So I sliced two lemons very thin, put in the other ingredients, and had two crusts, according to the directions of the afore-said admirer of Mississippi steamer pies. It is sufficient to add that I have never since used anything but the peel, pulp and juice, the thick fleshy part being always discarded, the bitterness of the last-mentioned pie being equal to gall and wormwood.

*An Old Way to Keep Lemons.*—In the summer when lemons are cheap, I cut them in slices one-fourth of an inch thick, take out the seeds, saving all the juice. Then place a layer of sugar in the bottom of a jar, then a layer of lemon, and so on until full. Keep in a cool place. It is excellent for dried apple (in the absence of green apples) pies in the winter, and for lemonade when one is "ten miles from a lemon." Few people are aware what an improvement a slice or two of lemon, or even a little fresh lemon peel, is to rhubarb pies.

*Spice Cake.*—No eggs; one-half cup of butter, one and a half of sugar, one of buttermilk, two and a half of flour. One teaspoonful of soda, do. of cinnamon, do. of cloves, and half a nutmeg. By adding raisins and Zaute currants, it make a good and cheap fruit-cake.

*Debbie's Cream Cake.*—Beat two eggs in a cup, and fill the cup up with sweet thick cream; one cup of white sugar, one of flour, one teaspoonful of cream tartar, one-half do. of soda; add salt; flavor with extract or essence of lemon, the latter is far cheaper, purchasing by the ounce. My first trial of this recipe was a miserable failure, occurring from using a scant cup of flour, whereas it should have been a little heaped, which shows we must not be discouraged at the first attempt.

*Em's Cream Pie, most Delicious and Cheap.*—One egg for one pie, or three for two round tins; one quart of milk, three eggs, reserving the whites of two to frost the top, two-thirds of a cup of flour and one and a half of sugar. Pour a little of the milk on the flour gradually to wet it up free from lumps; add the beaten eggs, a pinch of salt and the residue of the milk. Have a kettle of water boiling, over which place the pan containing the custard; stir diligently

until it boils, adding lemon extract to taste. Meanwhile line your pie tins with paste, allowing for shrinkage, and bake. Beat the whites to a stiff froth, adding two tablespoonfuls of white sugar; fill your pies, and lay the frosting over evenly with a knife, return to oven until a delicate brown. If you are successful with this recipe, you will discard all other custards, even though it is more trouble, until one becomes accustomed to it.

*Cream Pie, No. 2.*—Take the cream from a six-quart pan of milk, one egg, a heaping tablespoonful of flour, and nutmeg to taste. I prefer baking the crust first for custards; prevents being soggy.

*Boiled or Strained Custard.*—Beat four eggs thoroughly, one cup of sugar, one quart of milk, a little salt, nutmeg or lemon to taste. Cook in a spider over the fire, or over a kettle of water; the first is the speediest method, the latter the safer.

*Crullers.*—One egg, two tablespoonfuls of sugar, do. of buttermilk, do. of butter, half teaspoonful of soda, flour sufficient to mix thick enough to roll out well; add nutmeg, fry in boiling lard. Cut in squares of two by three inches, then cut five slits across the shortest way, thus making six bands; twist the second band over the third and the fourth over the fifth. A cousin, from whom I obtained this recipe, said it was her province one entire winter to make these crullers for their "surprise parties." When a party was decided upon, it was, "Josephine, you must make the crullers."

*Mother's Crullers.*—No milk; one and a half teacups of sugar, half a teacup of butter, three eggs, three tablespoonfuls of water, salt and nutmeg. Mix very stiff, roll thin, cut in sections two by four inches, then cut six or more slits in each section, across the narrow way, about one-fourth of an inch from each edge, press the two ends firmly together, thus giving the appearance of a little basket; it must be given a final squat, so as to press the little bands outwards just as it is dropped into the hot lard. These excel any fried cakes, or more properly, boiled cakes, that I ever tasted; perhaps one cause may be, that my mother has made them for nearly half a century, and no one else that I ever knew.

*Cookies Without Eggs.*—Two cups of sugar, reserving one-half cup, three-fourths cup of butter, one cup of sour cream or milk, one teaspoonful of soda, flour to roll well. After rolling out the dough, sift over the reserved sugar, pass the rolling-pin over again and cut out.

*Velvet Cake (Good).*—A correspondent sent this recently. We have tested it, and pronounce it excellent. One pound of sugar, do. of flour, one-half do. of butter, four eggs, one teaspoonful of cream tartar, one-half do. of soda, one teacupful of cold water, flavor with lemon. Beat the sugar and butter to a white cream, mix the cream tartar in the flour and sift. Dissolve the soda in the water, add to the butter and sugar the flour and water, stirring well. Have the whites and yolks well beaten separately, then add and beat all together about three minutes. Bake an hour. It makes good fruit cake by adding currants and raisins. It is delicious chocolate cake by baking in layers and filling with chocolate frosting.

*Chocolate Caramels.*—One and a half cups of molasses, two and a half of sugar, one and a half of sweet milk. Butter the size of a large hen's egg, half a cake of chocolate; add lemon or vanilla. Butter a tin baking pan, pour in, dip a knife in cold water, and mark off in squares. This is delicious, indeed.

*Mock Oysters of Green Corn.*—Grate the corn from a half dozen ears, or what is a quicker mode, shave off the outside of the kernels with a sharp knife and throw away, then scrape off the remainder of the ear, add salt, and allow one egg to a cupful of the corn mixture and flour sufficient to make a batter. Have ready a spider or skillet, or whatever you call it, with the bottom covered with hot butter or meat drippings, and drop the batter in in spoonfuls about the size of oyster patties, and fry brown, turning them like griddle cakes; to be eaten hot with a little butter. They require no milk, as that from the corn is all-sufficient. Some prefer them without either flour or eggs, adding merely pepper and salt. My family think they cannot breakfast without them during the green corn season.

*Egg Omelette for Breakfast.*—Add to six well beaten eggs three heaping tablespoonfuls of flour and a half teacup of sweet milk, and salt. Have four tablespoonfuls of butter or drippings in a frying pan, when hot pour in the omelette. Watch closely, cut in sections like a round pie and turn over, fry a delicate brown; carry to the table immediately and eat hot.

*Steamed Pudding.*—This is the best manner I know of for disposing of pieces of stale bread that will accumulate in the best regulated families. At night I put to soak in two cups of fresh buttermilk as much stale bread crumbs as it will cover. In the morning I squeeze out, with my hand, any hard lumps that may remain, add one egg to each cup of milk, a little salt and a teaspoonful of soda to a cup of sour milk. A cup of raisins, or dried cherries, strawberries, raspberries, or such dried fruit as farmers are apt to possess, and flour sufficient to render it very stiff. To be steamed two full hours. For a sauce we use a cup of sugar, a lump of butter the size of an egg and two heaping tablespoonfuls of flour; one pint of boiling water, add sugar, butter and flour, after gradually stirring in some water to prevent lumps; boil till of the proper consistency; flavor with nutmeg.

*Steamed Corn Bread, without Eggs.*—In winter, when there is usually a dearth of eggs, I endeavor to recall all such recipes as do not require them. Two cups of corn meal, do. of flour, do. of buttermilk, half a cup of molasses or sugar, if the former, add a handful more of flour and a half teaspoonful more of soda, two teaspoonfuls of soda, do. of salt; it requires to be very thick. Steam two full hours and bake half an hour, or until brown. My rule is to allow one teaspoonful, well mashed and spoon levelled off with a knife, of soda or saleratus to a teacup of sour milk.

*Graham Minute Pudding.*—Drop a small lump of butter into a kettle to prevent burning. Pour in one quart of milk, and when boiling add gradually sufficient Graham flour to render it very thick. Meanwhile have a cup of raisins cooking, and just before all the flour is put in, add them, having previously put in a spoonful of salt. Dish out in little teacups, turn upside down in saucers, and when the cups are removed they are molded. Eat with sweetened cream.

*Graham Gems.*—One cup of buttermilk, teaspoonful of soda, salt and lump of shortening the size of a hickory nut, and Graham flour sufficient to make very stiff. Have the gem-pans heating on top of the stove, grease with lard the first time, the second panful will require none; demands a very hot oven. I sift my Graham flour and use the bran, after dampening well with water, to sprinkle over the carpets to keep down the dust. I find it of great assistance in preserving my plants from this mortal enemy of the housekeeper.

EVERYONE WHO HAS A GARDEN  
SHOULD READ

NEW AND ENLARGED EDITION.

THE most practical work on Gardening yet published. Contains 220 pages closely printed matter, beautifully illustrated with several hundred finely executed engravings and a chromo-lithograph of a group of popular flowers and a list of upward of 2,500 varieties of Garden, Field, and Flower Seeds, with explicit directions for culture. Mailed post-paid, upon receipt of 35 cents.

Bliss' Illustrated Handbook, for the Farm and the Garden, and abridged catalogue of Garden, Field, and Flower Seeds, Fertilizers, Agricultural Implements, etc., etc. One hundred pages, many illustrations. Mailed to all applicants inclosing a three cent stamp for return postage.

Bliss' Illustrated Catalogue of Plants, for the Green House, Conservatory, Lawn, and Flower Garden.

Bliss' Illustrated List of Novelties for 1878, mailed free to all. Address,

B. K. BLISS & SONS,

P. O. Box 5712.

34 Barclay St., New York.

## The Country Home

IS AN  
ILLUSTRATED WEEKLY JOURNAL

FOR COUNTRY PEOPLE—Farmers, Village Folks, and all who cultivate a garden or own a country home.

20 pp. handsomely illustrated. From experimental work on our own and other farms, able writers will teach the lessons so learned from nature. Experienced, successful farmers, gardeners and stock men will draw lessons from their experience in teaching the "How to do."

The work of the field; the pleasures of social intercourse, and of outdoor country life; good literature, pure fun and all the news, will be commingled in THE COUNTRY HOME as the demands of real life require.

Subjects—Field and garden practice; Fruit growing and market gardening; Floriculture; Horses, cattle, sheep, swine, poultry and pets in health and disease; Grain crops a specialty; Distinct column for the Potato; Insect pests; All about the Markets; Winnowed News every week.

Landscape Gardening; Village Improvement; Home Adornment and Domestic Economy; Rural Society and Country Living; Farming for Boys; Pure Stories; Humor and Satire; Home and Foreign Correspondence; Query Columns—answers by specialists in each department, etc.

Horticultural Writers—Dr. F. M. Hexamer, E. P. Roe, Josiah Hooper, P. T. Quinn, etc.

A \$4 Weekly for \$3 per year.

Any one subscribing now gets it from the first number to the end of 1878 (8 months) for only \$1.50. Specimen number for 3 postage stamps. MENTION THIS PAPER.

Address, THE COUNTRY HOME.  
(P. O. Box 3039.) 323 PEARL ST., NEW YORK

## THE MOST WONDERFUL INVENTION OF ANY AGE IS MASON'S CHART.

Would you not like to play upon the Piano or the Organ? This most elegant of all accomplishments can be  
learned in one day. This is no humbug, the highest Musical Authority in the  
World endorses it and Press of Europe and America is enthusiastic in its praise. In one day you can  
play difficult music with the ease and expression of months of study. Mason's Chart is not a book or  
circular, it is a Machine which fits over the keys, changing its position for the different pieces of music you wish to play, and showing you exactly where to place your  
hands. It is as simple as the alphabet—as easy to understand as a child's story book  
and certain in its results—if you can read you can play the Piano or Organ in  
one day better than a Teacher could teach you in three months. If you  
have no Piano you can learn at some friend's house and astonish all with  
your knowledge. These Charts have been invented but a few months, yet  
they have found their way to every City in Europe and to every State and  
Territory in the U. S. Dexter Smith, the Editor of the most popular Musical  
paper in America, says: "They should find a place in every house, whether  
there is a Piano or Organ or not—they are to Music what the Multiplication  
Tables is to Arithmetic." 40,000 of these Charts have been sold, and tes-  
timonials by the thousand received—we guarantee perfect satisfaction. They  
have been sold for \$5.00 each in this country and that is the price of them  
abroad. Our extensive machinery and the unparalleled demand for them enable us to offer them for **ONE DOLLAR**, sent by  
mail, post paid to any address, securely packed, with complete directions. They fit any Piano or Organ. Will an-  
ny lady or gent regret the expenditure of this sum when for it they can learn in one day to play elegantly and become a bright  
acquisition to society and the home circle. The Turner M'f'g Co., (Sole Agents for the World) 93 Water St., Boston, Mass.

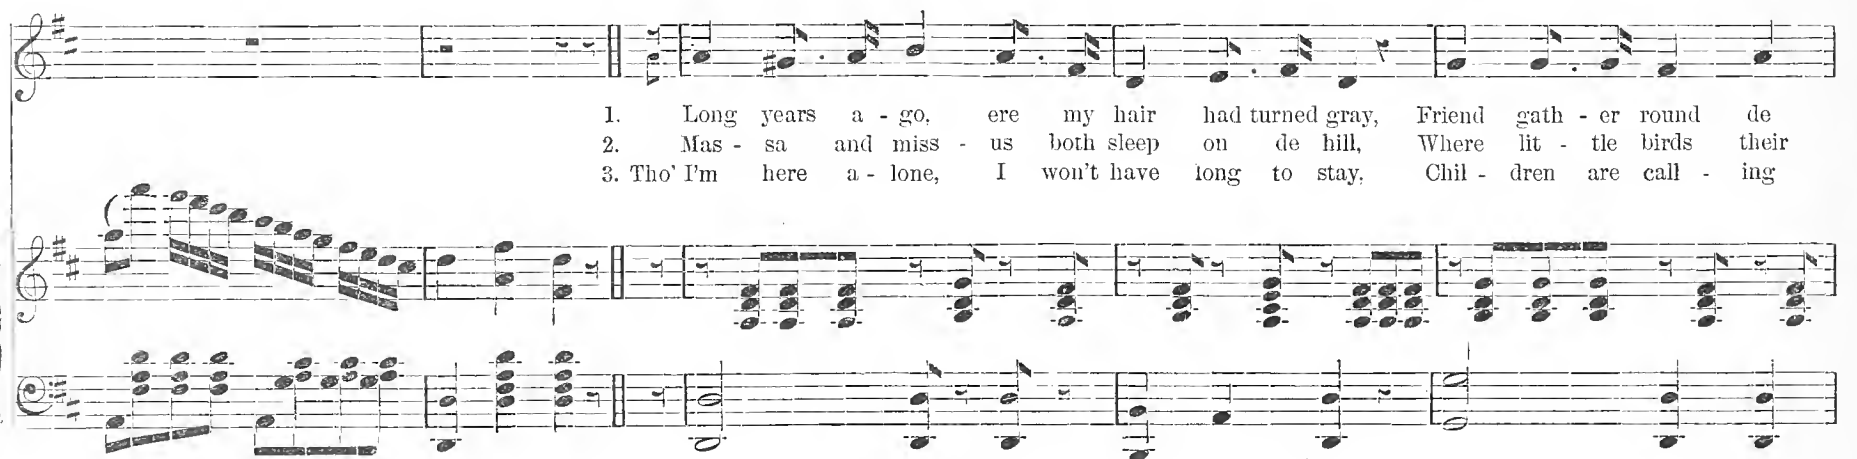

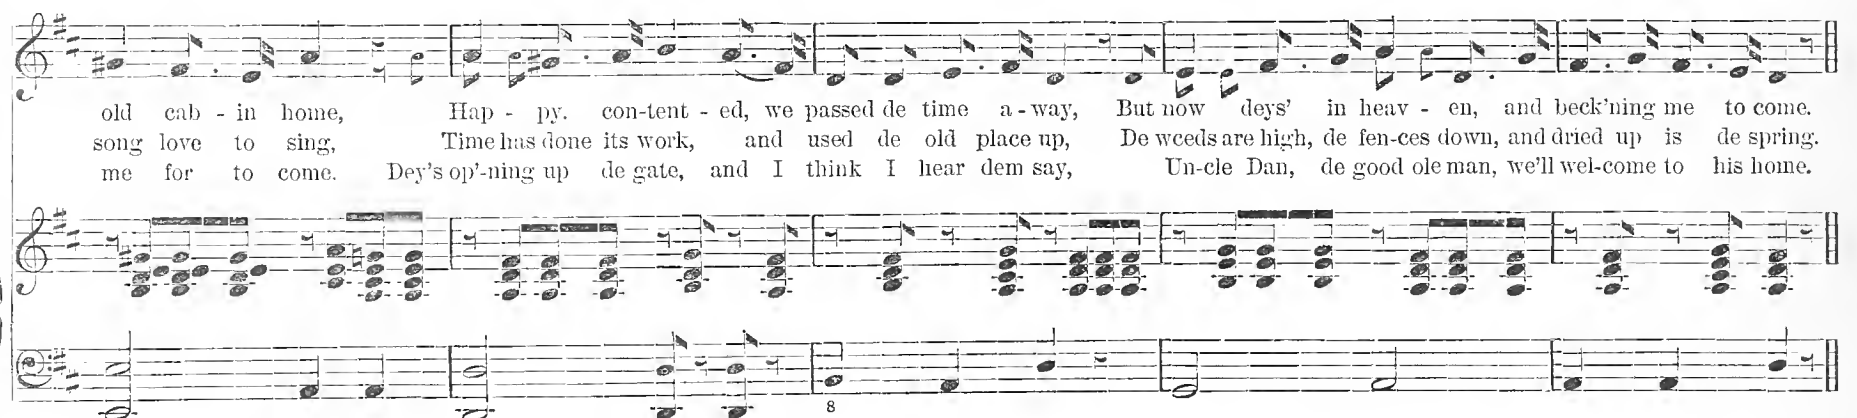

# OLD UNCLE DAN.

Words and Music by HORACE DUMARS.

*Moderato.*

PIANO.

The piano introduction consists of two staves. The right staff is in treble clef with a key signature of one sharp (F#) and a common time signature (C). It features a series of eighth and sixteenth notes, creating a rhythmic melody. The left staff is in bass clef with the same key signature and time signature, providing a harmonic accompaniment with chords and moving lines.The first system of the song features a vocal melody on a single staff and piano accompaniment on two staves. The key signature has one sharp (F#) and the time signature is common time (C). The lyrics are: 1. Long years a - go, ere my hair had turned gray, Friend gath - er round de  
2. Mas - sa and miss - us both sleep on de hill, Where lit - tle birds their  
3. Tho' I'm here a - lone, I won't have long to stay, Chil - dren are call - ingThe second system continues the vocal melody and piano accompaniment. The lyrics are: old cab - in home, Hap - py. con - tent - ed, we passed de time a - way, But now deys' in heav - en, and beck'ning me to come.  
song love to sing, Time has done its work, and used de old place up, De weeds are high, de fen - ces down, and dried up is de spring.  
me for to come. Dey's op'ning up de gate, and I think I hear dem say, Un - cle Dan, de good ole man, we'll wel - come to his home.

## CHORUS.

TENOR.

*pp* INVISIBLE CHORUS *pp* INVISIBLE CHORUS.

The chorus section is divided into two parts. The first part is for the Tenor, with a melody line and piano accompaniment. The second part is for the Invisible Chorus, also with a melody line and piano accompaniment. The key signature has one sharp (F#) and the time signature is common time (C). The lyrics are: I hear them sweet - ly sing - ing, Wel - come, wel - come o'er, They seem to smile and beck - on me To the gold - en shore;  
I hear them sweet - ly sing - ing, Wel - come, wel - come o'er, They seem to smile and beck - on me To the gold - en shore;

*Full Chorus.*

The full chorus section features a vocal melody on a single staff and piano accompaniment on two staves. The key signature has one sharp (F#) and the time signature is common time (C). The lyrics are: Where I shall meet them all, And der lov - ing fa - ces see, Com - ing, chil - dren, com - ing, Oh pre - pare to wel - come me.  
Where I shall meet them all, And der lov - ing fa - ces see, Com - ing, chil - dren, com - ing, Oh pre - pare to wel - come me.

# THE LADIES' FLORAL CABINET

By HENRY T. WILLIAMS.

NEW YORK, JUNE, 1878.

No. 78. PRICE 13 CENTS.

## SEEDLING PLANTS.

DID any of the readers of THE FLORAL CABINET ever experience the pleasure to be derived from the cultivation of seedling flower plants? Ofttimes strange and gratifying surprises await us, when the buds expand and disclose new and unthought of

I sow the seeds early, in a hot-bed or in a box in the house. When danger of frost is over, I transplant to a bed composed of sandy loam and earth gathered about old, decayed stumps, and well enriched with rotten manure. In a bed like this they grow vigorously, and seed-bearing does not seem to diminish the blooms.

which cuttings of all kinds can be readily propagated and soon become well rooted plants.

I take a box five or six inches deep, put in the bottom two inches of cow-manure and rich vegetable mold, next three inches of pure sand, and on the top one inch of good soil. Saturate with water and stick in your cuttings. Keep moist, and in a short

DESIGN FOR MODERN GOTHIC DRAWING ROOM.

beauties. I have met with considerable success in raising Seedling Verbenas. My beds from early summer until late in autumn are one mass of bloom; and at the same time yield a large quantity of choice seeds, which the next season generally give me some new kinds.

In case of a severe drought, it is well to give them a good sprinkling in the even'g.

I preserve the glory of my beds long after the first heavy frosts by covering them with any old carpet, and removing the next morning.

I must give the friends of THE CABINET a plan by

time you can multiply your stock greatly. I think the sand retains the moisture better by being covered with soil; so, if the cuttings are occasionally forgotten, they will not suffer.

## Floral Contributions.

### ORNAMENTS FOR WINDOW-GARDENS.

I WANT to tell the readers of the CABINET about my window-garden, which is very beautiful. I think in the first place I took an old stand and took off the top, and put in its stead a deep box, deep enough to hold plenty of well-rotted manure and good, rich earth, well mixed. Then put in as many plants of different kinds as you may wish. It will hold a large number, and you will be surprised at the effect. A thing of beauty you will have, with very little trouble. You can have a box large enough, with legs and casters if you like, so as to move it easily, which is much more handy than so many pots and much more beautiful. Plants, to thrive, should and must be sprinkled with warm, weak soap-suds as often as once in two or three days, and they will never have those terrible green bugs on them and will thrive continually. Give plenty of light and plenty of warm suds; and in return you will have plenty of beautiful foliage, besides very many beautiful buds and flowers. I can pick a bouquet most any time for my friends, which is a great recompense. Never be afraid to pick your flowers; because the more you pluck off the more you will have and the longer they will blossom. The proverb, you know, says the more you give the more receive. It can be wisely applied in this case, as I can testify.

It is well to start your Madeira Vines, also a large number of Ivies, for verandah decoration. They are the most beautiful of all climbers, very easily propagated, and after frost in autumn can be transferred to the sitting room, and the balance put in the cellar, for future use. Any kind of slip of Ivy will grow if kept well watered, which is a very important consideration to most plants, especially if the sun strikes them the most part of the day. Most plants need plenty of warm water, and above all plenty of light, but not wind. That is death to most house-plants. I have a bay window where I keep mine (although a bay window is not absolutely necessary), and they thrive as if in summer, and even better. Don't forget to sprinkle freely with warm soap-suds, and you will not be troubled with insects of any kind or those terrible little wire-worms. I think this is my experience, and I always keep very many plants, also raise very, very many annuals. I wish some of the readers of the CABINET could see my flower-garden this summer, presuming, of course, I shall be successful. Of course, I shall be successful. I always am with my flowers. I think those who love flowers and try to raise them will study their nature, their likes and dislikes; and, of course, will prosper with the majority of them. I always do all the weeding very early in the morning. You have double benefit. You have not only the pleasure of training your vines where you want them to run, watching the seeds springing up, and destroying weeds; but oh! the beauties of Nature when everything seems rejoicing and thanking its Creator. Those who are slow to rise lose the very sweetest part of the day. It signifies labor; but to me a labor of love. Rose-bushes in the yard should be thoroughly immersed in warm suds when you wash. It will pay you well to do so. I will try to tell the readers how to make a basket for dried grasses and everlastings. It can be made very easily in the following manner: Take cardboard, any color you may wish (mine is black), count off fifty holes

each way, and cut in squares; make five of these; embroider each piece around the edge, any way you wish; then sew each corner together, one after the other, then take the fifth (which is not sewed with the rest) for the bottom, sewing the corners together, to the bottom piece. Bend the top corners over to make it flare like a basket. Sew tiny bows on each corner that is sewed together. Put dried moss in the opening at the bottom, then fill with dried grasses and everlastings. You can color your grasses by dipping first in gum Arabic water, then in any colored paint you wish. They are elegant. They are also very beautiful for vases.

I make a pretty little ornament by taking an old glass globe, placing it on a large plate, putting inside the globe a small pot or tin can, putting earth in the can, then put Ivy and Creeping Charley in them. Around the globe and all over the plate put green moss. You can find plenty in the nearest swamp, and it is beautiful of itself. Wet the whole thoroughly, then sprinkle with grass seed. In a short time it will be a mat of velvet green and beautiful to look upon.

MRS. A. VANAKEN.

HILLSDALE, MICH.

### CHINESE LILIES.

PROBABLY many readers of the CABINET have seen an article going the rounds of the papers, taken from a Nevada newspaper, about the "Chinaman's beloved Lily." In Nov., 1877, a floral friend near Verona, Ill., sent me a generous supply of them, with these instructions: "Take a dish (delf, glass, or china), place the bulb in the bottom and pile stones and shells around it and over it, and water enough to keep it moist." Her's were brought the previous year from San Francisco, and were said to have come directly from China. Her's is in a fish-globe, which holds the long leaves together. She says: "In less than three weeks from the time it was set it had over thirty florets, for they grow in clusters. White and yellow and are very fragrant." The bulbs looked precisely like Narcissus, the description answered to it also, and I had decided it was *Polyanthus Narcissus* before the "California Lady's" letter appeared in the CABINET. The bulbs were scarcely large enough to warrant blooming, so I was not disappointed at their not. The leaves in March were thirty-three inches long. The blooming of this class in water was altogether novel to me, and I am endeavoring to grow mine so as to insure their blooming next winter. If any reader of the CABINET has large bulbs of this variety, I would suggest the experiment. I always put charcoal in the bottom of pots that have no drainage. It prevents all ill smells. I put it in bottles of water when rooting plants, and in vases to hold fresh flowers. It keeps the water pure. The charcoal I use was obtained in so peculiar a manner that I am tempted to chronicle the occurrence. One night in the spring of 1877 we were startled from our slumbers by a terrific peal of thunder, and in an instant the surrounding country was illuminated. Rushing to windows and doors, we beheld a cattle-shed some fifteen rods distant, that was covered with straw, on fire. The next morning revealed a singular freak of lightning. A post of a wire-fence was struck, shattering it to fragments; then followed the wire twenty rods west and thirty rods east (skipping the rotten posts and shivering the solid ones to pieces), until it reached a pig-pen, against the fence, which communicated with the shed by a covering of straw. It was raining all the time; but the flames ran up underneath the shed, and, seizing on the dry straw, in a short time it was reduced to ashes. The posts and boards furnished me with charcoal ever since, and it is a scarce commodity on the prairie in a coal region.

MRS. KATE SHERMAN.

STREATOR, ILL.

### WINDOW PLANTS IN SPRING.

Now, as the spring is approaching and the days are lengthening, we must try and stimulate our plants, to force them to bud and bloom. One of my rose-bushes, not more than a foot high, has sixteen buds and roses on it. My yellow one has three as large as a coffee cup. Oh! how beautiful! I hear repeated many times a day. Heliotropes, Verbenas, Geraniums, Fuchsias, Roses—all treated in the same manner.

Surely, there is nothing that will give us such pleasure and satisfaction as that we receive from our window-garden. Our flowers perfume the air, please the eye, and make us acquainted with Nature, and are something to care for and love. If they cannot love us in return, they do not annoy us. Every house is made beautiful with only one pot of flowers. Contrast a room where the windows are filled with beautiful flowers, hanging baskets, vines twined around the pictures, with a room where not a green thing is visible, and mark the difference. The one attracting and inviting; the other, no matter how rich its surroundings, has not the charm of the other. I take hen-manure about the size of an egg, dissolve in a gallon of hot water, letting it stand and cool long enough to use, watering my plants thoroughly once a week. Do not make too strong, as it will cause the leaves to fall; nor sprinkle them with the liquid. Flowers treated in this way will push forth most vigorous growth, and amply repay us the extra care we bestow upon them.

MRS. E. L. FREEMAN.

EAST ORLEANS, MASS.

### TROPICAL TREES AND PLANTS.

THE sweet-smelling Screw Pine (*Pandanus odoratissimus*) bears a fruit that, when perfectly mature, resembles large, richly-colored pineapples and plays an important part in the household economy of the Coral Islanders of the South Sea. The inhabitants of the Mulgrave Archipelago, where the cocoanut is rare, live almost wholly on the juicy pulp and pleasant kernels of the fruit. The dried leaves thatch the native huts and are made into mats and raiment. The wood is hard and durable. The natives use the flowers for decorative garlands, and the red and yellow nuts for ornaments. When the tree is full of blossoms the whole air is sweet with perfume.

But, while enchanted with the colors and scents of foreign woods and flowers, let us not overlook or undervalue our own. Our Cedars, our Balsamic Firs and Spruces and Pines, and pungent Balm-of-Gileads, and fragrant Hackmatacks and Junipers can equal, if not surpass, the trees and perfumes of any country under the sun.

M. J. CUMMINGS.

### THE CEDARS OF LEBANON.

THE Cedars, which still bear their ancient name, stand mostly upon four small contiguous knolls, within a comparatively small compass. They form a thick growth, without underbrush. The older trees branch into several trunks, and thus spread themselves widely abroad. The others are cone-like in form. Some of the trees stand out alone, exhibiting beautiful symmetry of outline. The older growth is much broken and will ere long be destroyed. Travelers carry off sections as relics, and vandal hands of those who pass the season in these regions burn the limbs for fuel. Thus destruction goes slowly but surely on. The wood of the Lebanon Cedar is white, with a faint, pleasant odor; but in beauty and fragrance it is far inferior to the Red Cedar of America.

M. J. CUMMINGS.

## Answers to Correspondents.

**Vallota Blooming Often.—Caladiums in Winter—Moist Atmosphere in Rooms—White Worms in Pots.—Seedling Acacias.—Starting Cannas.**—Allow me to inquire if any of the readers of the CABINET have ever had *Vallota purpurea* blossom more than once a year? A catalogue from a New Jersey firm says that theirs bloom three or four times when kept growing, and usually do in winter.

The same catalogue says that *Zephyranthes* will flower in three weeks' time from starting, any time in winter. Now, I never knew an instance of the kind, and have grown both bulbs several years. I think it very wrong to assert such things, to induce people to buy.

Can Caladiums be kept growing all winter? I have a very small one, which was given me by a friend in the fall, and I potted it, and it is now growing; but I did not know as I ought to allow it.

Will some one tell us the best way of keeping the air in a room moist, without spoiling the wall-paper and gilding on picture-frames?

Some complain of small white worms in flower-pots and wish to know what causes them. I think where partially decomposed vegetable matter is present in the pot—whether leaf-mold, decaying plants, or bits of grass-roots—that you will always find them. Merely heating the earth will not kill the germs; but if you put the earth in an iron pan (tin will not stand the heat) and leave it in the oven until the vegetable matter is charred and turns black you will cure the trouble. These worms will attack young seedlings and kill them; but I think only in the absence of decaying vegetable matter.

How long are seedling Acacias, the greenhouse plant, in flowering from seed?

What time should Canna roots be started in the spring? F. A.

**Answer.**—1. The assertions in the catalogue to which you refer are false. Vallotas bloom in summer and autumn, and usually but once a year. Occasionally a bulb may give a winter flower. Vallotas should always be kept green. It is one of the *Amaryllis* family, which is injured by drying off.

2. The chances of *Zephyranthes* flowering in winter are very small.

3. Caladiums may be made to grow at any season. Some species are evergreen; but most do better if allowed to go to rest part of the year. As your plant is growing, keep it so and dry it off in the summer, though the usual resting season of deciduous varieties is winter.

4. The best way to keep the air of a room moist is to evaporate water upon the stove or in the register of the furnace. For this purpose long earthen jars are made, which may be bought at stove stores. No moisture you can give in this way will be sufficient to affect wall-paper or picture-frames.

5. Thanks for your remedy for white worms. You are right in your theory of their generation. Your plan certainly is death to every worm; but baking does not improve earth, and repotting in fresh soil is often easier and quite as efficacious.

6. Acacias grow rapidly from seed, and, indeed, are usually thus increased. They bloom young, but the time depends much upon the species and the culture given. Some are shrubs; others immense trees. The former, of course, bloom earlier than the latter.

7. Cannas should not be started into growth until about the first of May. The best way is to put them in a mild hot-bed, and transplant to the garden about June 1st.

**Azalea Seedlings.—Cyclamen.—Smilax**—1. I wish to inquire how to treat the Azalea. I sowed the seed early this spring, in the house. It germinated very well and came up; but the tiny plants have now only the third leaf and seem very delicate. There may be a dozen plants in one pot. Shall I transplant them, and when? Do they need the open sun.

2. Also, how shall I treat Cyclamen bulbs raised from seed this spring? I have set them out in the open border, in partial shade.

3. Will the Boston Smilax bear the hot sun in the open air, and can it be transplanted out in the flower-garden? MRS. E. A. WARNER.

**Answer.**—1. You do not say whether your Azaleas are of hardy or tender varieties. If of the former, they may be set out in the open air in a carefully-prepared bed of peat soil. If of the latter, potted off. But it is best to let them grow in the seed-pot until they are larger. They have done well and are all right so far.

2. Take up your Cyclamen, pot them, and grow them well. You may get flowers by spring.

3. The Smilax will bear sun, but not frost. So it must be taken up in the autumn. Either pot it or cut off the vine and keep the tubers for planting out next spring.

**Raising Seedling Gladiolus.—Wintering Petunias.**—Can you tell me how to raise Gladiolus from seed? When shall I plant it and how treat it?

Will Petunias, double and single, keep in a cellar in winter, if kept above freezing? E. HOGE. LOYDSVILLE, O.

**Answer.**—1. The seed of Gladiolus may be sown at any season. Prepare shallow boxes or pans of sandy loam. Sow the seed and cover lightly. It is usually kept in a greenhouse or under a cold-frame; but out of doors in a shady place will do. The young plants will soon appear, looking like fine grass. Give more sun, plenty of air, and do not allow them to dry up. If kept growing, continuously flowering bulbs may be made in about a year; but any check in growth is fatal to this. If the foliage withers, the little bulbs must have a rest, and then be again started into growth. The time required to bloom them depends wholly upon culture.

2. Petunias will not usually keep in a cellar. They look well for a time and then die off. If, however, the cellar is very light and warm, they may succeed; as they are easily kept in a parlor and make good window plants, blooming freely toward spring.

**Fuchsia Culture.**—I have a double red Fuchsia of which the flowers are very small and soon drop off. There are no branches at the bottom, but it keeps growing tall. How can I make it heavier? MATTIE W. B.—

SACRAMENTO CITY.

**Answer.**—Fuchsias need plenty of light and air, but not much heat. We think you keep the room too hot and dry. It will be very difficult for you to make your plant throw out branches (or break, as gardeners say) at the bottom, as the wood is probably hard and old. Your best way will be to start slips. When they are a few inches high, pinch out the leading shoot, which will make the dormant buds at the base of the leaves break. Then pinch the ends of the side-shoots from time to time, until you get the plant as thick as you wish. If your old plant was cut into a bare stick, it would break; but probably unevenly.

**Name of Plant.**—Geo. A. Sawyer, Hampshire, Ill.: Your plant is probably a *Pyrethrum*; but it is difficult to identify a plant from a single leaf. If as we say, it will not bloom until Spring. The flower is large, like an Ox-eye Daisy (*Chrysanthemum leucanthemum*), with rays red, pink, or white.

**Fuchsia Culture**—How can I make Fuchsias grow? They are my favorite plants.

MRS. ANNA MURDOCH.

CUSHMAN, ILL.

**Answer.**—Procure your plants in spring. As they grow and fill the pots with roots, repot them, pinching the shoots from time to time, to make the plants bushy. During the summer grow them on a light piazza, where they will bloom. In autumn, put them in a warm, dry cellar; but be careful they do not dry up. In early spring repot the plants and start into growth. If of the winter-blooming varieties, grow them in winter in the greenhouse or parlor, where they will bloom freely; and in summer plant them out in the garden, taking them up before frost.

**Lemon Tree.**—Please tell me how to raise a Lemon tree. The leaves of mine are eaten, as if by caterpillars; but I cannot find an insect about it.

E. C. MAXWELL.

WILKESBARRE, PA.

**Answer.**—There is usually no difficulty in raising Lemon trees; but before they blossom and fruit they become rather large for window plants. They need good soil, plenty of drainage in the pot or tub, and a cool room. When not in growth, be careful not to overwater. They bloom in spring and summer. We do not know of any insect that would eat the foliage, as it is too aromatic. If your tree has been out of doors in summer, a saw-fly may have cut holes in the leaves. We have had Palms and Dracenas much injured in this way.

**Propagating India Rubber Tree.**—I wish to inquire how to propagate the *Ficus elastica*. Have made cuttings of one eye and planted, with a single leaf attached. The leaf continues to grow until the pot becomes filled with roots, but the bud will not start; and after a while the leaf falls off and the plant dies. If you can give me information so that I can propagate them successfully, I will be greatly obliged. T. E. CHAPIN.

OQUAWKA, ILL.

**Answer.**—You probably have not heat enough to start the eye into growth, or the eye was blind. Your mode of proceeding was right in every respect, as the plentiful growth of roots shows.

**Victoria Regia Seed.**—I noticed a description of Victoria Regia, seeds of which are sold by Mr. Washburn, of Boston. Can you give me his address, as I want some. Do you know of a variegated Cactus, the edge of the plant maroon? I. F. B.

GALENA, ILL.

**Answer.**—1. The address is E. F. Washburn, Horticultural Hall, Boston.

2. We do not know such a Cactus.

3. The plant, of which you enclose a leaf, is probably a species of *Tillandsia*.

**Fuchsias Ever-Blooming.**—Does it do to let Fuchsias blossom constantly? H. M. HAMMOND. E. ATTLEBORO, MASS.

**Answer.**—It will not injure your Fuchsia, if you keep it well grown. Very few of the varieties, however, are ever-blooming; but most of them rest at some season of the year, as we have written above.

**Moles in Gardens.**—Can you give me a remedy for moles, which trouble me very much in my garden? MRS. W. D. WELLS.

**Answer.**—One remedy is to trap the moles, baiting with raw meat. Another is to rub stick phosphorus on raw meat, cut into small pieces, and lay in the vicinity of their runs.

## Floral Experiences.

### FLORAL FESTIVAL, OR MAY QUEEN.

*1st Maid of Honor:* "Accept, fair Queen, this crown of flowers in token of our united esteem. We have sought the fairest flowers of summer, have twined them into wreaths of beauty, woven for you a bright coronal of Nature's sparkling jewels, to grace your youthful brow. Of this floral tribute may each fragile blossom whisper to your gentle heart, in the soft, yet impressive accents of its own poetical language, assurances of our affection. Each dewy petal is fraught with a mission, and the tear-like drops, which glisten here and there with trembling confidence, reveal the fond sentiments of our souls more forcibly than cold human language could portray. And, while we find ourselves incapable of giving utterance to the emotions that swell our hearts, we can only point to those lovely orators and bid you heed their silent eloquence."

*Queen:*

"Thanks. Many thanks, dear companions, for this offering of flowers."

You have made me your Queen, on my forehead I wear  
The crown which your own loving hands have placed there.  
And mine is a crown which priceless shall be,  
As a pledge of your love and your fealty to me.  
There are chords of my soul which your friendship hath swept,  
That ever till now have all silently slept.  
But those chords, newly awakened, shall slumber no more  
Till they reach the dim verge of eternity's shore.  
Oh! when, as it must, either early or late,  
Grief's shadowy form on my pathway shall wait;  
When the winter of life crowns my head with its snows  
And the bright crimson tide seems to ebb as it flows;  
Oh! would that these lips, though faintly, could tell  
But a part of the trust that my inmost heart swells."

*2d Maid of Honor, presenting Herbarium:* "On to-day a memento we would offer—a silent though lasting reminder. And when in after years you search amid Flora's vast domain for rare treasures, to place side by side with those we have gathered, let each flower and twig remind of absent friends, and warn you, too, that 'the fairest flower that blooms must die.'"

*Queen:* "See, how beautiful, how thoughtfull! Faded flowers; meet monitors to say how swiftly speed the joys of earth, how ephemeral are beauty, youth, and worldly splendor. These, at least, have preserved a form that bespeaks their wonted glory. Nay, more than that. See! What do I read? 'Culled on the shore of the Rhine.' Your gift, Hattie."

*3d Maid of Honor:* "Yes; and well chosen, I trust you will deem it."

*Queen:* "It speaks, indeed, of your poetic taste; and I imagine it grew upon some shelving rock, overhanging the placid waters of that historic stream."

*3d Maid of Honor:* "Now, do not ridicule me, if I am fond of poetry. And why should I not love that majestic river? The mere mention of its name recalls to mind all that is glorious in war or lovely in peace. When I gaze on this faded flower, methinks I see near it the blue Forget-me-not, the verdant plain, the rising mountain. I hear the murmur of the breeze rushing against the ivy-clad battlements of antique castles. With it are blended sounds sweet and low; tales of days gone by. Its waters keep time to the proud, patriotic hymn; to the soft, thrilling notes of the wakeful nightingale. They tell of valor and poesy. They are grand! They are noble! Blame me not, then, if I love the mighty old Rhine."

*Queen:* "You have grown enthusiastic, indeed; and, far from censuring you, we feel you've communicated to us something of your admiring spirit. (Turns to next page.) But near your valued Fern I find a Laurel leaf. Oh, see the crimson stain! Your name, Mollie, is attached."

*4th Maid of Honor:* "Twas brought from Italia's

strand. The foot of an apostle tread on the soil that nourished the parent shrub. Meekly, humbly he walked the proud city of the Cæsars. Pagan Rome yielded to the truth he taught—a lesson of wisdom and strength. There is victory in suffering and woe; glory in contempt and death. Hence, this Laurel leaf (tinged with red) should remind us never to quail in the hour of trial and gloom; but, though bleeding and sore, still hopefully to turn to the Laurel unfading, the Laurel of truth eternal, the victory that belongs to God."

*Queen:* "Well you have expressed it, my charming little friend. Yours is a token sacred; one 'tis hallowed joy to keep. And who so loves the sunny land of France as to seek a floral tribute on the banks of her beautiful streams?"

*5th Maid of Honor:* "I scarcely dare present my Fleur de Lis, for on its petals, too, there rests a gory stain; but 'tis the atoning price of infidelity and guilt. 'Twas culled near the banks of the Seine. Oh! lovely, peaceful Seine! How proudly thy waters flowed through the capital, queen of refinement and beauty! Alas! a dark cloud arose and broke into a fearful storm—the storm of defiance to lawful authority. And this men would call freedom! Yet, when from thy murmuring waves I look to the blue sky above, my soul is filled with hope anew. Thy waters, made holy by the blood of martyrs, a new baptism impart. Laved in repentance, France will arise!"

*Queen:* "Trusting that your words may be verified, I will treasure your sweet Lily. But here the eye is greeted by a bright green Ivy leaf, which looks as if it might recall more cheerful thoughts."

*6th Maid of Honor:* "That leaf was plucked from a vine that covered a desolate ruin near the celebrated Thames. Ah! could this Ivy leaf but speak, what tales might it not reveal, caught perhaps from the Thames's dark-rolling waters, for they pass by the Castle of Windsor and lash against the battlements of the Tower of London. But of these I would not speak. The Ivy of Time has cast a mantle over them. I wish not my gift to recall thoughts of gloom."

*Queen:* "It will not, my precious little friend. From Adna's eager glance I fancy her selected memorial comes next in order. See the Orange blossom, resting on its glossy leaf. From what quarter of our own loved land comes the well-known token?"

*7th Maid of Honor:* "From a blest spot, whose fragrant shores are gently washed by the crystal waters of the mighty ocean. 'Twas nurtured on the soil of San Salvador, whence first resounded the voice of Christian worship in the New World. What magic power association lends e'en to a tiny object! Here Columbus and his noble achievements rise to my delighted view. What hero can boast so great a conquest? And yet, what was his reward? But posterity will be more just. These are the familiar memories my flower would recall."

*Queen:* "Thanks for these reminiscences. Ever shall they be treasured in our hearts. Last comes Lucie's floral souvenir."

*8th Maid of Honor:* "Yes; last, but not least, in every sense, would I have my tiny offering deemed. A Violet white and one of delicate blue."

*Queen:* "Name the magnificent river whose banks your beauteous flowerets decked."

*8th Maid of Honor:* "It was a nameless stream in Florida's balmy land, whose odor-laden air and enchanting climate led the discoverers to believe that it was the fountain of perpetual youth. In unpretending simplicity it runs the course marked out for it by a wise Providence. It feels no ambition and knows no discontent, but silently pursues its beneficent labor."

*Queen:* "So may it be with us; for Him who gave even to the nameless rivulet a worthy object on each of us has bestowed an ennobling mission. May we then, like the modest little stream 'neath Heaven's blessings, nurture buds and flowers of virtue, till their fragrance fills our souls and spreads its balmy odors on all around."

MISS HELEN SANDERSON.

PRAIRIE VALLEY, TEXAS.

### FLOWER-BEDS.

My beds consist of two circular beds, three yards across; one oval bed, five yards by three; one triangle, seven and a half by three and a half yards; and the straight beds, which are over a yard wide. Taking them altogether—those around the house, next to piazza, and around door-yard fence—make over one hundred yards. In the spring I uncover the beds, spade them, and rake as soon as it will do. One year I did one bed when the ground was entirely too wet; and the bed was not fit to sow seeds in for two years, for, instead of the ground being mellow, it was like little stones, about the size of peas and hazel nuts. One year, thinking to have some plants grow extra nice, I went to an old sheep-yard, though hogs had run there for some time, took off the course litter, then carried some nice rich dirt to my beds. Some time after, finding the plants not doing as well as expected, found, on examining the ground, it was filled with slender worms, nearly an inch long, of an amber color—great clusters or knots of them, as large as a walnut. Soon took out all that dirt, and poured boiling water around the old plants. Now I don't know whether they were owing to the sheep or hog manure. Another year I found a rather queer lot of worms. My Star of Bethlehem not coming up good, thought I would see what was the matter. Found a perfect mess of brown worms, not quite as large round or as long as the cut-worm. Took out a bushel of dirt; but not a worm except where those bulbs had been. When digging up my flower-beds, I find the potato-fork much nicer than the spade. It doesn't cut the roots of the bushes and it's much easier for the one digging. I fork up two or three yards; then hoe and rake awhile. It's hard work, and yet a comfort to know that your plants are neither missing or destroyed. Farmers have too much to do in the spring to attend to flower-beds, and with most of the hired men the plants grow less in size and fewer in numbers. I find Linaria, Larkspur, Phlox, Candytuft, and Clarkia do much better to sow late in the fall. Clarkia will grow two feet high; perfect little trees. I have used them with good effect, when transplanting, to set them two feet or more apart, with Asters between. The Clarkias are done and pulled up when the Asters come on. I find Canterbury Bell, Ipomopsis, and Sweet William are apt to rot unless I put some sticks or a little brush amongst them before I cover with leaves and manure. Pinks and Sweet William sometimes make a great show. Have had friends from the East say: "They exceed anything they ever saw." My bulb-bed, which is the triangle, is truly a thing of beauty from early in the spring till Jack Frost takes possession. I often hear of people riding by to see "those Tulips"; but with me the charm commences when the Bulbocodium first pushes its lilac blossoms out of the ground, though it will not compare in beauty with *Scilla Siberica*. That's the brightest, most intense blue I ever saw. I potted some for the conservatory, and they were admired very much; but they are brighter outdoors. Flowers are blossoming nearly a month earlier than common. Myrtle, Daffodils, Adonis, Liverwort, and Bloodroot have also been in blossom some days. Our winters generally are very severe. Thermometer has been down 28° below zero; but this winter is an exception. Every three years I take up my bulbs. In the fall I take out a quantity of the dirt and put in fresh in the bed. Then I also do up twenty or more packages of about a pint of small bulbs, with a dozen or so of flowering bulbs, and send around where I think they would be acceptable or where there are children; for I think the love of flowers, may be, can be instilled, if not inherited. And now, to finish this chapter, I'll tell you how I fix my FLORAL CABINET. I sew and cut before I read a word; for I well know, if I commence to read, it will be turned and twisted and maybe torn. At the end of the year I sew the numbers all together, and get old pasteboard boxes at the village store to bind them with. It's heavier than common pasteboard; and, with a bouquet now and then sent to the store, they think they are fully paid for their kindness.

AUNT KATE.

## Floral Hints.

## OUR FLOWER-GARDEN.

I WILL tell you of my success in the cultivation of plants. As it is my greatest delight, when I can possibly spare a few moments from my domestic pleasures I spend it in the garden among my pets. I have cultivated plants ever since I was ten years old, and I am now more delighted with my flowers than when I was a child. I find I learn something new every season as it regards the treatment of plants and shrubbery. I have a flower-garden sixty-two by two hundred feet. Ninety feet in front I use exclusively for flowers, the back part being used for shrubbery and fruits. It has a southern exposure on the front, with an iron fence and a gate in the center, entering from the street into a walk three feet wide, which runs through the entire length of the garden. About eighty feet from the front gate there is a summer-house, which is entirely covered with vines—the Wisteria, Virginia or Silk Vine, Ampelopsis, Roses, Madeira, and Cinnamon Vines. The inside of this house is converted into a rockery, as it is very cool and shady. One side is used for the native Ferns and the other for exotics and Lycopodiums. It is built up two or three feet high with stone, and then filled in with leaf-mold and rich soil, in which we plant the Ferns and Lycopodiums. The latter grow beautifully. We often press specimens two feet long, which we use for decorating the walls in winter. The front of the garden is divided into six different parts by walks three feet wide. Each part is divided into beds of various shapes, so as to form a circular bed in the center of each part, which bed is used every year for Verbenas. When the seed ripen, they drop, and come up the next spring, without planting, and produce a great many very beautiful varieties; and in this way I have very fine ones. When the plants have three or four leaves we add a little rich soil and stir the soil around the roots. I have used these beds for many years with great success in growing fine and handsome Verbenas. I have tried several plants for bordering, but find nothing so good as the Dwarf Iris. The walks are all made of coal-ashes, which makes them very firm and prevents the grass from growing in them. I have one hundred and seventeen varieties of Roses, including the Hybrid Perpetual, Bourbon Chinese, Teas, Noisette, Moss, Prairie, and many varieties of the June. It is beautiful beyond description to go into the garden in the months of May and June, to see the various colors and tints of the Rose. In the month of August I prune them. In the fall I have them mulched with well-rotted manure, and in the spring have it forked and spaded in; after which put about one pint of air-slacked lime three or four inches from the main stem, and fork it in so it will reach the roots. It is a great preventive from the bugs and worms. Early in the spring we rake all the leaves and trash from the beds and have it thrown into an obscure corner of the garden for a compost-heap, which supplies us with leaf-mold. We apply well-rotted manure to all the beds before spading. This makes the plants very thrifty.

On each side of the front gate there is a bed of Pansies. In the center of each there is a large bunch of Lemon Lily. My Pansy beds have been a mass of bloom ever since the first of May, and now (snow on the ground) would afford several bouquets. I use liquid manure very freely all summer, and find it

improves the color and size of the flowers, as a great many measure five inches in circumference and are of the most beautiful and brilliant colors. Early in May I take all my plants from the house to the garden (with the exception of a very few, such as the Fuchsia, *Eucharis Amazonica*, and Night blooming Cereus, which have bloomed beautifully in the house) and put them in beds, each class to itself, and cultivate them accordingly. I use a rich soil for my Geranium beds and keep them well cultivated. My neighbors often ask me where I get my soil to make my plants bloom so finely. I tell them it is the good care they get. I use soap-suds once a week on my rose beds and keep the buds picked off, so that I can have them in bloom in winter, which they are doing; and upon my beds of Phlox, Pinks, Asters, Petunias, Plumbago, Ivies, Gladiolus, Mignonette, Sweet William, Tuberoses, and various Lily beds I use nothing, but keep the soil well stirred once a week with my trowel and fork. I have very fine Oleanders—crimson, pink, and white—eight or ten feet high, which are very great ornaments to the garden and attract the attention of every one that passes by. I treat them to a pail of weak manure-water every week. The Bananas I gave the same treatment, and they grew very rapidly. I imagine such treatment suits them very well, as one grew to the astonishing height of eight feet and had leaves measuring five feet and two inches in width in five months. On my Crape Myrtle I used soil from the pig-pen to great advantage, as it bloomed all summer very profusely. I set my English Ivy out in June, and when I took it to the house in October it had grown astonishingly. One branch had grown seven feet and several others had grown five. I grew it entirely in the shade and sprinkled it once a day. My Grasses for winter bouquets excelled all our expectations. The *Erianthus Prævenæ* grew twelve feet high and had forty handsome plumes—enough for myself and a few of my friends for winter. These were in one small clump.

ROSE GERANIUM.

## FLOWERS, GREENHOUSES, BAY WINDOWS, Etc.

WRITING from the Empire State of the Sunny South, as I do, where perpetual summer is supposed to reign, my Northern friends, who are snow-bound, and whose pleasures of the garden are limited to a few house-plants, will expect to hear of a variety of garden treasures from this more fortunate clime. And I will not disappoint them.

Though only the first weeks in January, we have blooming abundantly in the garden Camellias, Hyacinths, Narcissus, and the invaluable, profuse blooming little garden favorite, the modest Blue Violet.

I have an extensive garden, comprising twelve large flower-beds, and each one has a bordering of Violets. Frequently the whole air is laden with their fragrant yet delicate perfume.

My greenhouse, too, is an inexhaustible source of entertainment and pleasure. I have over two hundred plants. Many varieties of Geranium already budding for the early spring blooming, while the scented varieties are indispensable for bouquets, for which the winter-blooming Begonias, Bouvardias, Primroses, Salvias, and the Coral Berries give me abundant materials. The rapid-growing Parlor or German Ivy makes a pretty garland around the entire greenhouse, occasionally straying from its course and entwining it self lovingly around the plants; while Ferns, Palms, and the stately Calla Lily add their tropical beauty to the whole.

Now a word about bay windows. I think I would give them the preference over greenhouses, or, indeed, any other convenience for keeping house-plants, because it enables one to have the constant companionship of their flowers, and that is what we need, what

we desire, and the reason why we give ourselves so much trouble for their cultivation. We need their cheering influence, surrounding us constantly, as a bright oasis in the long, dreary desert of winter. Especially do we need it in bad weather, rainy days, when we are prisoners to the house. The eye, weary with the dismal prospect outside, has but to turn and feast itself on the incomparable beauties which our forethought has provided as a relief against this dreary time, and immediately everything becomes as bright, as cheerful, and as hopeful as in spring-time.

It may be urged against bay windows that the flowers cannot be watered abundantly; cannot be showered with a total disregard to carpets, etc., as in a greenhouse. I would never have the floor of a bay window covered. Have it painted, so that the boards will be impervious to water, and it will be much more satisfactory. The plants will not starve from insufficient watering.

We cannot be too grateful to the obliging editor of THE CABINET for the space he gives us in his delightful paper to converse on the ever new and attractive subject of flowers.

I have for three years entertained THE CABINET as an inestimably delightful visitor, and now, regarding it as so perfectly indispensable, have constituted myself a life subscriber.

GEORGIA.

## ABOUT THE CACTUSES.

THE Cacti possess the stiff form of the Aloe. Their fleshy stems exhibit bunches of hair and thorns, instead of leaves. The Torch Cactus rises to the height of fifty or more feet, generally branchless, sometimes throwing out arms like a candelabra, while other kinds creep like ropes along the ground or hang snake like from the trees. The Opuntias are without symmetry, constructed of thick, flat joints, springing one from another; while the melon shaped Echinocacti, longitudinally ribbed or covered with warts, remain attached to the soil. These plants vary astonishingly in size. One species, which grows in Mexico, attains several feet high and a yard in diameter and often weighs nearly two hundred pounds; while another dwarf Cactus is so small and slightly rooted that a dog passing over it may with his toes detach it from the soil. The splendid colors of the Cactus flowers are in vivid contrast with the ungainly, unsightly stems.

So, dear reader, we often notice pure, holy thoughts and rare gifts and talents outspringing from an ill-favored body.

The Cactus family prefer the arid sands, the naked plains, where the tropical sun pours his vertical rays. They are a strange, wonderful feature of the barren desert.

It is said that none of these plants existed in the Old World previously to the discovery of America. Be that as it may, they now have a wide range of growth.

The Nopal (*Cactus opuntia*) skirts the Mediterranean, along with the American Agave, and from the coasts has penetrated far into the interior of Africa, everywhere showing conspicuously among the primitive vegetation of the land. Although chiefly tropical, the Cactuses have a perpendicular range peculiar to their species. From the low sand-bars of the coasts of Peru and Bolivia they ascend, over ridges and through valleys, to the high peaks of the Andes.

Whether these wonderful plants hang dizzily over the mountain cliffs or blossom in the sandy desert wastes, they teach us still another lesson of Divine economy in fitting everything to its place; and an appreciative admirer of trees, shrubs, and flowers has a rich strata of poetic and artistic life underlying the uncongenial surroundings of every-day existence.

M. J. CUMMINGS.

## Floral Hints.

## HOUSE-TOP GARDENING.

A FRIEND of Mr. Vick writes to him in his *Magazine* of the great success of a lady in her attempts to grow a garden on the top of her house:

"This garden is on the top of a five-story building, in the very heart of the city of Boston, occupying the entire roof (except the skylight for lighting the rooms below), seventy-five feet long, twenty to twenty five feet wide, surrounded by a corrugated iron fence four feet high, and a wire fence or trellis work on top of that three feet high, for the support of running plants, vines, etc. The roof is what we call a flat roof, covered with composition. On top of that planks are laid for walks, etc. Around the entire roof inside, next the fence and attached to it, are wooden boxes, elevated from the roof on standards about two feet high. The boxes are from fifteen to thirty-six inches wide, from twelve to fifteen inches deep, holes bored thickly in the bottom, covered with potsherds for good drainage and circulation of air, and filled with rich loam. Besides these boxes, around the outside, in the middle of the roof, and in every place where they will show to the best advantage, are various other boxes, tubs, stands, flower-pots, etc., filled with plants. She has had this garden for two seasons. The first year was devoted more especially to a vegetable garden, raising successfully Watermelons, Cantelopes, Cucumbers in great abundance, Tomatoes and Lettuce, Peas, Radishes, etc. The past season was devoted more to flowers, with a few vegetables—Cucumbers, Lettuce, and Peas in abundance. A row of Peas were sown around the outside of the boxes, next to the fence, taking very little room, covering the fence with beautiful green, making a good background for the flowers to show. Sweet Peas were mixed with them, and these were beautiful. About fifty feet of the boxes were used for Geraniums. In that space she had about sixty plants, and they made a most splendid show all summer long. About twenty Roses, about the same number of Carnation Pinks, a box of Diadem Pinks, some very fine, and Pansies, Daisies, Balsams, Marigolds, Gladiolus, Heliotropes, Verbenas, Tuberoses, Japan Lilies, and several other varieties, Tropæolums, Clematis, Morning Glory, Phlox Drummondii, etc., Portulacas, the most splendid I have ever seen, blooming all summer long—in fact, everything seemed to do quite as well as on *terra firma*; and it was said by those who saw them that hardly any one had such beautiful things as grew on the top of that house. For herbs there was Thyme, Peppermint, Spearmint, Catnip, Wormwood, Sage, etc. For watering, a large lead-lined tank, holding about five or six barrels, is used. It is elevated six or eight feet above the boxes, receiving its supply from the city pipes. This tank was kept filled by a float-valve; but the water stood in it for some hours before using, that the temperature of the water might become about that of the air. The very hottest and driest days it might take two or three barrels of water, applied by means of a hose reaching from the tank to all parts of the building, to give them a thorough drenching; but it does not take as much water as one would naturally suppose. Then in stormy weather Nature does the work herself far better than art can.

"We found things raised here last year were about a month ahead of those on the ground, having no extra deep earth to warm, and up high and dry, where the sun could have full force at them. Sheltered by the fence, watered just right, the way they grew was surprising; and I must say it did look like a little paradise in the 'waste, howling wilderness' of brick walls, slate roofs, and skylights."

## HOW TO DESTROY INSECTS ON FLOWERS AND HOUSE PLANTS.

MR. CASE, in his practical little "Botanical Index" instructs his readers about the necessary efforts to destroy insects on all flowering plants, and we quote them in full for our readers' benefit:

"Insects are a very serious drawback to healthy and vigorous plants, and a most vigilant watch should at all times be set for them; but, in spite of all our care, they will appear and increase with such rapidity that no time should be lost in destroying them. No plants, however, should be taken into the house until thoroughly cleansed. Cultivated plants seem to furnish food for several different species of insects, and the treatment necessary to destroy one form will not answer for another. The black and green fly, or Aphis,\* are always the most numerous, and are first seen on the new growth of house plants; but in an amazingly short time spread to the older leaves, especially to the soft-wooded ones, as well as flowers, absorbing the juice and vitality of the plant. It is easy enough to fumigate a greenhouse, to destroy insects, which, of course, could not be done in our dwellings, and many plans have been recommended. One says, sprinkle Scotch snuff on the foliage and let it remain two or three days; another says, a weak solution of carbolic acid, applied with a swab or feather; and still another says, take a little coal-oil—just enough to make a colored scum on the surface of a tub of water—and dip the inverted plant in it, not allowing the pot to touch it. Others recommend hot water, and we have found that to be the least objectionable. Our plan is to dip the plant in a tub of water that will register 120° with a thermometer, repeating it the following day. Of course, the plant must not remain in the hot water, as it would be soon cooked. To destroy the green fly in greenhouses or conservatories, the most approved method is fumigating, which is done by placing on a pan of live coals a quantity of damp tobacco-stems, filling the house with a dense smoke and keeping it closed until morning; but, as Heliotropes, etc. are liable to be injured by smoke, spread paper over the plants while fumigating. It is better, however, to fumigate two or three nights in succession than to risk too dense smoke. But the most destructive and least known insect is the red spider (*Tetranychus*). It is too small to be readily seen; but its presence is easily detected by gray or yellowish spots on the apparently dying leaves. The little insect lives upon the underside of the leaf; and not only absorbs its vitality, but weaves a fine web, which closes the pores through which the plant breathes. They delight in a hot, dry atmosphere—just such a one as our sitting-room affords; but are readily destroyed by syringing the plant often with clear warm water, or a good bath in the tub, and then sprinkle with sulphur. But if small plates of bright tin or glass, with a little sulphur on them, are placed under the plants, in the full rays of the sun, no red spiders will trouble them, as the sulphur fumes kill them. A weak solution of whale-oil soap is excellent; but it must be very weak, or it would not only kill the foliage, but the plant also. The mealy bug (*Coccus Adonidum*) is also very destructive to hot-house plants; but is really the easiest to exterminate of any in this list. They are a large white, woolly-looking lump in the axil of the leaf, and are easily kept down by frequent syringing with warm, greasy water, to which a little sulphur should be added. But, if full grown, they should be picked off by hand or a small, sharp-pointed stick.

"For worms at the roots of plants an application of a weak solution of carbolic acid, applied quite frequently to the earth, is said to be a sure cure. Another good plan to kill them is to use water with lime dissolved in it for watering the plants. It also aids the soil in stimulating the growth. But probably the safest plan is to carefully shake all the earth from the roots, and, after a thorough watering with warm water, re-pot in fresh earth. But, for fear of a like trouble again in a short time, a good plan is to subject the required amount of earth to a strong heat, by placing it in an old pan in a stove-oven, until all insects as well as eggs are destroyed.

"And now we come to the least-known, least-understood, and apparently the most insignificant insect; but which in reality is the greatest scourge in the whole list. They are the Scales (*Coccidæ*), various species, and infest Cactus, Oleanders, Camellias, Fi-

\* Reaumur has proved that one individual in five generations may become the progenitor of nearly six hundred millions of descendants—HARRIS. Duval, in his experiments, obtained eleven generations of Aphis in seven months, being curtailed at this stage by the approach of winter.—PACKARD.

cus, and Tropical Ferns. Like all other insects, they increase and spread with great rapidity, covering the woody stem and leaves in a short time; and, as they are so small and so near the color of the plant on which they feed, they usually get a good start before being seen. A weak solution of whale-oil soap is the usual remedy; but the best remedy we ever tried is a boy with a pan of warm water and a stiff tooth-brush."

## DESTRUCTION OF PLANT INSECTS.

I HAVE been so successful in ridding my plants of insects that I am tempted to tell you what, perhaps, you already know. Through the early part of winter my plants were feeble, and when the sun began to grow hot in January multitudes of insects were quickened into life, and destroyed them in part. I expected to lose all; then I thought of the way in which bird-cages are got rid of these pests. I placed the tallest plants in the middle of the stand, and into them stuck four or five thin sticks, about eight or nine inches taller than the plants. At evening an old sheet was thrown over the whole, so that the edges of the sheet were in contact with the outer row of pots. Early in the morning, before the fires were started or the sun shone, the sheet was quickly removed and gathered up, so that none of the captives could spin down, creep out, or fly away. The quantity and variety of insects secured was surprising. Taken out into the cold, frosty air, they were easily shaken off on to the snow. This experiment, repeated five or six times, cleared my plants of vermin completely.—S. A. P., in "Vick's Monthly."

## THE OTHONNA FOR HANGING BASKETS.

HAS anybody tried Othonna as a water plant? I experimented a little last winter with it, and am much pleased with the result. The foliage is more graceful than our old stand-by, Tradescantia. Last December I put some short sprays in a hanging basket made of a broken goblet, covered with scarlet worsted and silver cardboard, filled it with soft water, and put in a little charcoal. It soon put out roots and grew and blossomed, and in April it hung down a foot and the roots filled the goblet. I was so pleased with this I filled a tall white vase with wet sand, and put some in that, on the mantel. This soon reached the mantel, and lay on the mat on which the vase stood. Then I put some in a glass stand for cut flowers, in wet sand. It looks well all the time, and makes a pretty draping when the stand is filled with cut flowers.—M. J. P., in "The Garden."

## THE MAURANDYA.

THE question is often asked us "What is the best vine for house culture?" Maurandya may not be the best; but there is certainly nothing better. It can be grown easily from seed. It will climb rapidly on a string or anything it can cling to. Its foliage is a beautiful green and very graceful. It produces its beautiful Gloxinia-like flowers very freely, and altogether it is a very desirable vine.

There are several varieties of the Maurandya; but Barclayana is decidedly the best. This variety will grow from 8 to 15 feet long, and may be trained into any shape desired. The flowers are of a rich violet. The writer has a window-garden in his room, and, although he has several greenhouses to select from, he chooses the Maurandya as his only vine.—The Garden.

## AN ENORMOUS LILY.

IN the garden of Hon. John Hamilton, of Montreal, Canada, there flowered last September an enormous *Lilium auratum*, the flowering stem of which was more than 7 feet in height and bore 51 flowers and buds. 26 flowers were open at one time, and several measured 10 inches in diameter.

### THE JAPANESE FLOWERS

THE Japanese cultivate cherry, plum, and peach trees chiefly for their blossoms, and force them to make them double. The flowers of the plum are often as large and double as a cabbage rose. They also have cherry trees dwarfed and twisted, and the flowers a double pink. There is an avenue out of Tokio lined with these blossoming cherry trees, and in the season of bloom every one goes out there to see them, and take refreshments in the tea houses; and it is a curious and fascinating sight, as Japs and foreigners are there in crowds. The Hydrangea grows

But the Chrysanthemums are cultivated to the most wonderful perfection and exhibited in the most remarkable arrangements. They are often larger than dahlias and endless in variety and color. It is a favorite flower with the Japanese and the Mikado's crest is one of these.

In the gardens where they are cultivated they have a series of little booths, where are figures that have mask faces; but the bodies and every detail of costume are made of the flowers and leaves. There were court ladies, and warriors in fierce attitudes; little children and animals.

etc. — supposed to be messengers to the kite. Later on my friends visited another part of Tokio where these shows were held. They describe it as one of the busiest, noisiest places in Japan.

You go through an immense gateway, with lanterns hung in it as tall as a man. On each side are gigantic statues of gods and dragons, with men's faces; and fastened to the gateway enclosing these are quantities of straw sandals and wooden clogs, and an immense foreign shoe—a sarcasm undoubtedly.

There was a temple here, and the grounds around it were full of everything you can imagine. Archery

HANDSOME DINING ROOM DECORATIONS.

wild in the mountains of Japan, and the commonest variety is a beautiful blue. They have in June a large yellow flower called "Evening Glories," that literally burst into bloom, as flower after flower springs suddenly open, till the whole bush is a mass of yellow and the air perfumed with them. The variegated maples come out in the spring almost as gorgeous as ours in October. My friend saw one where each leaf was in two shades of red. Their poets speak of the time "when the maple grows red in the spring."

Some of these have arrangements in the rear to move them in different ways.

In one place they had a young lady, with a corresponding mask, and peeping from her dress behind was a fox's tail. By a sudden movement the mask would be changed and a fox appear. The transformation a fox can make to deceive the unwary is a favorite subject with the Japanese. In another place a giant was flying a monster kite, and on the string were all sorts of paper figures—dragons, men, birds,

and photograph galleries, tea-houses and wax shows. All had runners out to attract you to their establishments, and a Japanese orchestra of flutes and drums; the former piercing and shrill, the latter deep and loud.

They had here scenes from the late war, and the principal rebels figured in them all dressed in chrysanthemum flowers. Their swords, shoes, and caps were as usual; but everything else of the flowers. They had horses with men on them almost life size.

## Household Art.

## HOUSEFURNISHING.

In furnishing a house let all harmonize with your fortune and position. Do not have one fine thing to set at variance all the rest or draw attention to their deficiencies. If you have a rag carpet on the sitting room (and what is more home-like and useful?), do not have a gorgeous one in the parlor; but something neat and sensible. Have nothing too fine for use. Cosy chairs, and sofas covered with chintz, having large pillows, are really more elegant than stiff hair-cloth or faded rep. A tassel on the corners or a cord round the pillows will be all needed to improve them. Study color in buying and arranging as far as circumstances will allow. If you do not know the proper contrasts, get different shades of one color. Do not put dark paper on your walls or dark paint on sunless rooms. Let all be as light and cheerful as possible. Dark rooms affect the spirits, and also bring on diseases of the eye, which needs light to preserve its health.

In arranging the parlor, do not fill it with too many ornaments; as it adds to your care and departs from the simplicity of true elegance. Be sure that your ornaments are in good taste. Flowers and shells are far better than tawdry vases, full of gilt and glaring colors. A good chromo is better than a poorly-executed oil painting. Do not accumulate indifferent pictures, or a miscellaneous collection of fancy articles. Some parlors resemble a bazaar of tidies, mats, etc. An elegant vase does not need a mat, to mar its beautiful outlines and graceful proportions. Flowers are always an adornment, and if arranged with taste are fitted for the costliest dwelling, as well as the humblest. In France we saw glazed earthen vases, in the form of a cornucopia, which are made to hang on the wall like a wall-pocket. These, filled with flowers and hanging vines, are a very graceful ornament.

In the sitting-room let comfort reign. There should be places of rest for the tired, who seek it as a place of refuge. Have closets and boxes for sewing materials, so that baskets be not the chief ornament or piles of unmended clothes. Have wall-baskets for papers, and a shelf for books of reference. Dictionaries and atlases should always be at hand. If there are children, they should be taught the pleasure of examining these for themselves, at meeting with any unfamiliar word or place. Be sure to have a convenient table and light, where the family can gather in the evening. It promotes a pleasant home feeling. If the dining-room is used as a sitting-room, a place should be left where the family may sit without being inconvenienced by the setting and clearing of the table. If the kitchen is large, it is much better for the family to eat there than crowd up the sitting-room, misplace the sewing, etc. A dining-room alone need not be encumbered with much furniture, yet should have an air of comfort too. Dark colors are considered appropriate to the dining-room; but we believe in light, cheerful houses, and that quite as much elegance would prevail if cultivated people would consult their own taste, and not follow the often false standard of fashion. Americans lack independence of opinion in social matters, and thereby lose a good deal of comfort. Here a lesson besides fashion might be taken from Europe, where most people seem to choose their dress, furniture, and style of living without consulting their neighbors about them.

For the arrangement of the kitchen good judgment is required; for it is lamentable that scarce one in a hundred is fitted for its purposes. Either the light is not where the work is, or the door is where the window ought to be, the fireplace or range set where

light could be let in to advantage (we have seen all these defects), or the windows open on a blank wall. There is only one, or there is a basement kitchen of dungeon-like aspect. How can the niceties of cooking be done in such places? Is it any wonder an American woman declines the place of cook? Does she find a comfortable place to sit in, or even a chair, during her intervals of rest? Is it any wonder the cook finds the alley gate or the street a pleasanter resort; or that an Irish girl we wot of declined a service place on account of the "back buildings." Here a woman having a taste for architecture might find a mission, and call it Kitchen Reform. We knew of two ladies who planned their own domicil; making a model for the builder out of pasteboard, with the doors hung to open as they wished, etc. The builder said he had never had less trouble, as he knew exactly how to proceed. Why could not ingenious ladies plan model kitchens, furniture, etc., and exhibit them at Paris, etc. They might be made as attractive as the parlor in their cheerfulness and cleanliness, not to say cosiness.

For cleaning regular days should be kept as inviolate as health will permit. Kitchen, closets, cellar, garret, and yard should have their days, or neglect will creep in, rubbish accumulate, and the labor be trebled. Articles kept on shelves and seldom used should be covered from dust or be put in paper bags. Shelves also can be covered with paper, to save scrubbing and strength. Painting strips, shelves, etc. will also save much labor, soap, and brushes.

Do not keep many things for extra occasions. It makes care, that had better be bestowed on the health by a walk in the open air or for needed rest. What is in use for the family should be good enough for its friends; for broken pots or dishes and things out of order are no more fit for the family than for guests, and give poor ideas of thrift to the "rising generation," who should see order daily, and not as an exhibition for strangers.

We hope to see more labor-saving machines for women. The excuse that they get out of order applies to all machinery; yet what man would give up an engine or a threshing-machine on that account? A washing-machine (we have seen two that were cheap yet good) will save half a day's labor, and a wringer nearly as much, where there are large washes. Fluids are next best. We have seen them all used to advantage. One lady we know is so choice of her washing-machine, because it washes bed-clothes nicely, that she will not allow her washwoman to use it for the week's wash; and yet it cost but five dollars and is easily worked (something inventors forget, and make many of the machines as hard to work as the washing by hand and often to greater disadvantage).

The sleeping rooms of a house should have only needed furniture in them, that they may be easily aired and cleaned. Do not keep out the sunshine. It is the best of purifiers. Have nothing that is too good for it in the way of carpets and bed furniture. Do not shut out this blessing and shut in miasma, mold, and dampness. Here again we would remark that a full supply of sheets, pillow-cases, towels, etc. and good bedding show far more elegance than any splendour in the way of bureaus or bedsteads. White-curtained windows, dressing-table, etc. will give more an air of grace by their purity and freshness than gilt or coarse carving. Overornamentation is not so elegant as plainness, if the quality be good.

Blankets should be washed nicely by being soaked in the hot suds of some cleansing soap for half an hour, and then rubbed clean; and be rinsed in hot water, with a very little soap in it. To keep them from moths, pin them up carefully in a large sheet, and they will need no further care. We have kept them and other woollens unscathed for years in the same way. Furs may be tied up in a muslin bag, and

be quite as safe, thus avoiding the odor of pepper, tobacco, and other disagreeable substances.

Take good care of the cellar, that it be sweet and clean, for all that is amiss in a cellar soon renders unhealthy the cleanest house otherwise. It is there that health commissioners first look for seeds of disease in an epidemic. The part in which food is kept should be paved or floored in some way, so that it can be scrubbed. It should always be well aired, except in the extremes of the weather. No rubbish should be kept in it that will decay and vitiate the air. An arch of brick shut up with a door is an excellent preserver of meat, etc., if cooled off during summer with a daily drenching of water. A hole three or four feet deep, lined with brick and reached by a few steps, is an excellent place to keep butter and milk, if refrigerators are not at hand. Always have well-covered pots, etc., to keep meat, etc. from vermin that may abound. The remedy for these is perpetual vigilance, besides the secondary remedies; and here we would suggest a few. For roaches we have found nothing so effectual as sprinkling ginger in all their haunts, and we have tried borax, Paris green, skunk cabbage, and insect powder, all of which are good in their way. For snails nothing answers but destroying them with salt. Beside this, you must wait till nearly 11 o'clock P. M., and then search their haunts. A large cellar was cleared in this way in one week's searching. Ants need the presence of coal oil, which soon puts them to flight. For the other vermin of a household there are nostrums innumerable; but constant searching and cleanliness is the best of all remedies. We would add that for fleas snuff sprinkled regularly about is effectual.

There are many little things we have not space to mention, such as drying herbs in paper bags, hung in the heat and then labeled, or made fine and put into bottles, etc. Keep a set of books for entries. One in which to set the time and season for certain work and any improvement in household arrangements; another for receipts in cooking—new dishes to try and any improvement or alteration made by yourself. Do not make this the regular receipt book, as the jottings down will often be hurried and need correcting. Keep one more for household expenses, wages, etc. This will help you to know the cost of living, and, if needed, where retrenchment may be made.

In conclusion, we would say: Take care of the children. Give them regular employment, and make them responsible for what they have to do. Do not ask too much. Their minds cannot take in much at a time without a strain; so let their work be simple. We knew of a little girl of five who had for her daily work the sweeping of the back stairs. She did this so carefully as to pick the dust from the corners with a pin. This task, faithfully performed, gave her the habit of regular, conscientious work. Another child, in a different family, having an excellent memory, had it so much taxed as to injure her by the responsibility put upon her of remembering that this or that should be done at a certain time. At times set let them assume new duties, so that they may grow up under the idea of responsibility, and not have it thrust on them all at once, like a heavy load, without the discipline of regular employment at regular intervals. Woe to the young minds thrust out in the world without this careful preparation. It accounts for the poor work and shiftless living so often seen.

Let all children have some amusement. It is necessary to their health. Let the boys have collections of minerals, shells, plants, etc.; but see that they are thorough in their acquisition of knowledge. Teach them to earn books. That will increase their interest in these things. "Put in the good, that the evil may have no place," said a wise man. These are saving tastes. Almost any kind of a book is better than a resort to corners of streets or indiscriminate company; for what a man learns in early youth seems to be seared in with iron. Above all, keep them pure from evil influences. Question them closely, even the little ones, of what is said and done in their play, especially with strangers. Let these innocent minds preserve their heavenly heritage.

ANNA GRISCOM.

BALTIMORE, MD.

## NEW MUSIC BOOKS.

JOHNSON'S

### New Method for Thorough Bass.

By A. N. Johnson (\$1.00).

A remarkably clear, easy, and thorough method of learning to play CHURCH MUSIC, GLEE MUSIC, and all Music containing CHORDS or that has Four or more Parts. All who play for other people to sing need to learn to play Chords, and these instructions, which are simplicity itself, and these exercises will enable one to do it, even without a teacher, thus greatly enriching the fullness of the Organ or Piano playing. Order by full title: *Johnson's New Method for Thorough Bass.*

Winner's Secret Duets for Cornet and Piano (75 cts.). Like Winner's other books, it is reliable. Music is well adapted to the instruments and very pretty.

### Sunday-school Song Books!

Good News! EACH BOOK Shining River!  
Good News! HAS HOSTS Shining River!  
Good News! OF FRIENDS. Shining River!

No better books are published than the above two, which are fresh, bright, and new, having been out just long enough to assure their popularity. Try one!

35 cts. each. Reduction for quantities.

Any book mailed, post free, for retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 843 Broadway, New York.

### HAMMOCKS, LAWN SETTEES, with Awnings,

Garden Tools, Flower-Pot Brackets, Plant Sprinklers, Automatic Fountains, Lawn Sprinklers, etc., etc. Scroll Saws and all appurtenances. Send stamp for illustrated Lists.

G. WEBSTER PECK, Manufacturer's Agent, 110 Chambers St., N. Y.

\$5 to \$20 per day at home. Samples worth \$5 free. Address STINSON & CO., Portland, Maine.

\$66 a week in your own town. Terms and \$5 outfit free. Address H. HALLETT & CO., Portland, Maine.

50 Perfumed Snowflake and Chromo Cards, no two alike. Name in gold or jet, 11c. STAR CARD CO., Clintonville, Conn.

## THE PEOPLE HAVE CHOSEN.

The experience of years has convinced an intelligent public that for all ailments involving weakness and irritability of the stomach, obstruction in the bowels, a morbid condition of the liver, and nervous debility TARRANT'S EFFERVESCENT SELTZER APERIENT is the surest, safest, and swiftest remedy. Not merely agreeable, but absolutely delicious to the palate, it also possesses four medicinal elements which have never been united in the same happy proportions in any other preparation. It is the gentlest and most painless of cathartics, a wonderful tonic, an unexceptionable alternative, and a certain corrective of all impurities which may exist in the blood or other fluids of the body. Decline all imitations of the genuine article.

SOLD BY ALL DRUGGISTS.

## THE LADIES' GUIDE

TO

### Needle Work, Embroidery, Knitting, Crochet, Etc.

By S. ANNIE FROST. Editor "GODEY'S LADY'S BOOK."

This is a charming little hand-book of all the various kinds of Needle Work, Embroidery, Crochet, Worsted Work, with their numerous stitches, and is invaluable to all who are fond of fancy work. Written by a lady who is familiar with fancy articles and needle works in this city, it will be found reliable, useful and indispensable. Its list of contents is of a wonderful variety of topics, and includes numerous patterns and designs.

Every Lady will find it a Needful Companion for her Work Basket and Toilet Case.

The following is a partial list of subjects to which the book is devoted. Each chapter is liberally and beautifully illustrated with designs to accompany all the directions and explanations. In some of the chapters, over twenty different stitches are described.

#### CONTENTS:

Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, Tambour Work, Wire Work, Doll Dressing,

with numerous designs also, for

Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Feather Embroidery, Zephyr Flowers, Picture Frames in Crochet, Tippetts, Wall Pockets, Shawl Case, Net Embroidery, Cretonne Work, Etc., Etc.

EIGHTEEN CHAPTERS.

NEARLY 100 ILLUSTRATIONS.  
160 PAGES.

Price - - - 50 Cents.

PAPER COVERS. RICHLY ILLUMINATED.

Price - - - \$1.00.

BOUND IN FULL CLOTH.

HENRY T. WILLIAMS, Publisher,

46 BEEKMAN STREET, NEW YORK.

### A \$8 REVOLVER FOR \$2.50

This engraving is made from a photograph (greatly reduced), and exactly represents the revolver we send for \$2.50. They are THE HANDSOMEST REVOLVERS IN THE WORLD, and are worth at least \$8 at wholesale; the failure of the manufacturers accounts for their sale at this price. IT IS THE BIGGEST BARGAIN EVER OFFERED IN REVOLVERS, and should be taken advantage of at once. We WARRANT every revolver to be a GENUINE and PERFECT ROB ROY, as nicely made as a Colt or Wesson, and equally as good. The barrel is OCTAGON, deeply rifled, and the cylinder is FLUTED, something never attempted in cheap revolvers. The cylinder turns when hammer is raised, loads and ejects shells without detaching. The stock is rosewood, the metal ALL English steel (NO CAST IRON), the workmanship the best ever put into a pistol. They are heavily nickel-silver plated, and HAND ENGRAVED in the most elegant manner. The fact that it costs \$2.00 to engrave a revolver will show you what a bargain this is; they could not be made for \$3.00; they are just what is needed by Express and Mail Clerks, Bankers and Police, and for self-defense. WE WARRANT THEM IN EVERY WAY, SHAPE, AND MANNER exactly as represented, and will send C. O. D. with privilege of examination, if so desired, on receipt of \$1.00 to guarantee charges, which will be deducted from bill. We will close out these revolvers for \$2.50 each, or with an elegant \$2.00 Ivory Handle, for \$3.50, or with a superb \$3.00 Pearl Handle, \$4.00; and where the cash accompanies the order will send FREE a box of long range Target Cartridges; we will not give the cartridges when it is ordered C. O. D. It can be sent by mail for 15c. extra without the cartridges. You can sell this revolver for \$3.00 in your own town, and it is worth more. "Our Am. Farmer" (N. Y.) says: "The revolver would actually be cheap at \$3.00. We have one for our own use." We are sure of satisfying you and will RETURN YOUR MONEY if the revolver differs in any respect from our description. Address the BAY STATE ARMS CO., 24 Water Street, Boston, Mass. We refer to the Banks, Press, and Expresses of our City. Parties in New York City can see this revolver at the editorial rooms of the "American Farmer," 32 Astor House. Do not confound this with the cheap, cast iron, engraved Revolvers sold in New York.

NEW YORK, JUNE, 1878.

**THE DANDELION.**

WHETHER we consider the Lilies of the field or not, it is strange how few of us consider the early Dandelion by the wayside—unless from a culinary point of view. And yet it is the very footprint of Spring herself, and whenever we see the Dandelion we know that she has passed that way. But we waste none of our ecstasies on the blossom. It has not the spicy savor of the Mayflower, nor the rich shadow of the Violet, nor the delicate fiber of the Anemone. We do not pluck it for our vases. We should laugh at ourselves if we wore it for a breast-knot. Yet, after all, find us a lovelier diamond than these wide-open golden stars would make below the dark braid. Examine it well, and see if more filmy beauty can be found than that of each one of the tiny flowerets. And for its purposes, coming to brighten a dark and weary land, still weary with the chill of departing Winter, is not the splendor of its tint a better thing than all the purples that a month later, when the scene is sunny and serene and secure, come and line the brookside and embroider the hills?

But, if the elders do not appreciate it, the children do. The child has never yet been born that did not love the Dandelion. The Rose is less welcome to the children. Orange and Jasmine could give them no blossom half so choice. Its color, its wildness, its abundance, its little worth in others' eyes are all dear to them. When they see it, they know the long outdoor freedom of pleasures has begun. They hail it with acclamation. They carry it in their little warm hands till it wilts. They make curls from its long, pliant stems, to hang around their ears. They stick it in old bottles and broken pitchers at every coigne of vantage. They set it out rootless, but

blossoming, in their miraculous flower-beds; and they tell their fortunes by its blowing dust, when it has gone to seed. It is as much their friend, the companion of their play as the household dog is. And what Spring would be to the children without the Dandelion is something we would not contemplate.

And the children are right. It is we whose eyes are shut; who do not see the perfect circle, the multitudinous petals, fringed fine as the Goutian's, the dusty delicacy of the tissue. It is so common that we give all this loveliness nothing but contumely; and we never stop to think of the exquisite work shut up in its corolla, with the only poet who, to our knowledge, has ever sung its praises:

"Gold such as thine ne'er drew the Spanish brow  
Through the primeval hush of Indian seas;  
Nor wrinkled the lean brow  
Of age to rob the lover's heart of ease."

**ORNAMENTAL BASKET FOR FLOWERS**

A VERY pretty and ornamental wall-basket can be made to hold some of Nature's wildwood children, in which they will flourish during the long, dreary winter and lend an additional charm to the window-garden or conservatory.

Take a board and cut it in the shape of a shield or heart. The size can be made to suit your taste. In the center of the top make a hole, to hang it on a nail, and around the edges make small holes, about half an inch apart. Now, take ordinary brass or white wire and make a pocket on the one side of your heart-shaped board, by passing the wire through the holes from side to side, taking care to fasten the wire in each hole. Then, commencing in the center of the top wire with a strand of wire, stay all the horizontal wires by looping them together.

Line the pocket with various colored mosses, and fill with such earth as is found where the plants grow which you wish to transplant.

The different Ferns, the Arbutus, Pipsicuway, Wintergreen, and many other sylvan plants can be transferred to this basket. Water freely, as the moisture evaporates rapidly.

**A MODERN GOTHIC DRAWING-ROOM.**

THIS is a very handsome illustration of drawing-room furniture of ebonized cherry, beautifully carved.

The panels of the cabinet are figured with Cupids and exquisitely-painted flowers. Sofa and chairs are finely carved throughout and covered with maroon satin, of the finest texture, with gold cord and rich fringe.

The fireplace is principally of light tileworks, of minute and pretty pattern. The mantelpiece is of ebonized cherry, high and substantial, with fine carving, and surmounted by a large and deep mirror.

The ceiling is also of ebonized cherry, with gilt-figured panels on the border.

The mirror in the center is handsomely draped with maroon satin, fringed with rich Velvet, mixed with gold.

**DESIGN FOR EASTLAKE PAPER HANGINGS.**

THE illustration given on page 12 is one of the latest styles in Paper Hanging of the Eastlake designs, by F. Beck & Co., of this city. The new designs are noticeable for their precise regularity and frequency of use of mechanical ornaments and antique shapes, figures, outlines, etc. Some of them for walls are exceedingly tasteful. Others cannot long be popular, as people like variety.

**HANDSOME DINING-ROOM DECORATIONS.**

At the Centennial Exhibition at Philadelphia were exhibited some most strikingly beautiful models of furniture. The illustration for one of the sketches is furnished by Lang & Nau, of Brooklyn, N. Y. The furniture of this room illustrated here consisted of mahogany and ebony, exceedingly massive in character, executed in the Italian style. The cabinet is very unique, with carved panels of pear tree, and also some finely-decorated panels painted on silver wood. A rich pair of embroidered curtains of olive green satin and blue borders gave great elegance to the compartment.

**SPECIAL OFFERS**

FOR

**Subscriptions to Floral Cabinet.**

DURING

**MONTH OF JUNE.**

Any one now a Subscriber to the FLORAL CABINET who will bring the name of one new yearly subscriber to the CABINET during the month of June will receive a choice of one of the following EXTRA PREMIUMS. These offers are made to induce our friends to make a little extra effort at this time. The traveling last winter was so bad no one could get up clubs; but now we get cheering reports from many agents that traveling is fine, and the hardest of the hard times has passed, so that they say it is easier to get up clubs now than at any time for a year past.

To encourage all our friends to work now, we give these new offers, good only until July 1st.

**SPECIAL PREMIUMS.***For One New Subscriber.*

1. Book, "Ladies' Guide to Needle Work," worth 50c.
2. " " "Household Hints and Receipts," worth 50c.
3. " " "Every Woman Her Own Gardener," worth 50c.
4. " " "Fret Sawing for Pleasure and Profit," worth 50c.
5. Three Patterns of Embroidery, for Java Canvas Tidies, Worsted Work, etc.
6. One package Starch Polish.
7. One package Tidy Fasteners, set of four, each different color.
8. One Combination Pen and Pencil-Holder.
9. One book, "Language of Flowers."
10. One Silk Book-Mark, or  
Ten Papers Flower Seeds.

Any one bringing two new Subscribers may choose two of above Premiums, and for each new name an additional Premium for each name.

*For Two Subscribers.*

11. Any of abovenamed books, bound in cloth, price \$1.00.
12. Wood's Compound Magnifier, a splendid little article, price \$1.00, which is invaluable to all flower lovers for examining flowers insects, and the common uses to which a microscope is applied.

*For Three Subscribers.*

13. Book, "Household Elegancies," Price \$1.50.
14. " " "Window Gardening," " 1.50.
15. " " "Evening Amusements," " 1.50.
16. " " "Ladies' Fancy Work," " 1.50.
17. " " "Beautiful Homes," " 1.50.
18. " " "The Wonders of Prayer," " 1.50.
19. " " "The Pacific Tourist," " 1.50.
20. Warner's Health Corset, price \$1.50; the best corset for ladies' use.

N. B.—These Premiums are given only for new Subscribers sent to us after this date and before July 1st, and cannot be applied to subscriptions forwarded before this date nor after July 1st. Full descriptions of any of the above books are found in our illustrated catalogue, "How to Make Home Beautiful," sent to any address on receipt of 3-cent stamp.

These are the finest offers ever made to our subscribers to get up new clubs or to induce their friends to subscribe; and the opportunity is one which will attract general attention, as splendid in every respect.

**PRIZE AWARDED.**

The Prize offered for Best Article on Leamon's Household Dyes has been awarded to Mrs. L. S. Gilbert, Andover, N. H. This Prize was offered by Wells, Richardson & Co., Burlington, Vt., and consisted of a set of 10 volumes of Chambers's Encyclopædia.

## Housekeeping.

### THE UNEXPECTED INFORMATION I RECEIVED.

It was a cold, still night in November. I wandered up the street of a small village. The pale moon wrapped o'er all Nature her mantle of gentle, silvery light. The stars glittered in the firmament, some twinkling as with modesty, while others gleamed forth with a brilliancy and splendor to compare with that of the departed sun.

Everything without seemed inviting and beautiful to behold. As I moved along, slowly, absorbed in deep thought, a secret sound came floating on the evening breeze. It was a strain of "Home, Sweet Home." My heart swelled with emotion of love and gratitude as I neared the place from whence the music came. The magnetism in those notes soon drew me to the window of a little cottage, not itself costly, but made beautiful by the owner.

The curtains opened just enough to disclose to my view an interesting panorama within. I halted. A young lady sat in front of the piano and played gracefully an effective air. Around an inviting fire-side sat a group of females, listening attentively. Each face was scanned. A look of comfort and happiness was portrayed on every countenance.

I was impressed with the thought that persons had assembled here for some particular purpose, when one of the number broke the silence by saying: "I have invited these, my favorite friends, here this evening to discuss household items; and let every moment be spent as pleasantly and profitably as possible. Let each one express her taste in regard to home beauties and conveniences. A seed may accidentally fall here and there which will spring forth and throw light around the family-circle that has never experienced the sunshine which should illuminate every household."

All expressed a desire to hear from Mrs. C., who was no other than the cheerful, accommodating hostess, known as the model lady of the village; and who could doubt but that she was deserving of the title, after seeing that sweet and placid countenance? Such a look of happiness, comfort, and unselfishness, showing that in the years spent from her cradled infancy up till now, when the once raven locks were variegated by streaks of silvery gray, many hours had been spent in making others happy.

"I believe," said she, "all here are married—some just starting out in their new life, all thirsting for some knowledge in regard to the different means by which our homes may be rendered inviting and comfortable; and I know of nothing that would be more interesting to all than to relate my own experience. My mind wanders back now to the ever-to-be-remembered childhood days, when care and anxiety were yet unknown; and oh! how my heart beats as I recall the many golden hours from sixteen to twenty. But the scene on which my memory dwells with protracted thought and interest is one of twenty years ago to-night, when, at the altar of the village church, two fair, happy girls were each to their chosen partner for life united in the holy bonds of matrimony. One of these was myself and the other a friend. The contrast between the two was great. While she was dressed in everything that indulgent and wealthy parents could secure, I was plainly and neatly attired, not even a jewel to sparkle about my person. At the church we parted. She started for her new home in the West; and I, with a few invited friends, proceeded to the humble cot of my father, where we spent a very pleasant evening. The next morning

myself and husband started out to battle with the stern realities of life, in a little house composed of four rooms. Business soon called him away, and I was left alone. There I sat wondering and planning. I said to myself: I am now responsible for the future happiness of this household. It is in my power to make it either a place where husband and friends may come for rest and comfort, or shadow it with discontent, disorder, and melancholy. It is not always those that have an abundance of money that have the most poetry in their lives; not always the material that is in a house that renders it an attractive, desirable place. But it mostly and we might say wholly depends upon how things are arranged and managed, and on the taste and especially the disposition of the hostess. I made up my mind that I would always try to be cheerful, patient, and contented; for without this any house will fall. I had but little to begin with, and my ingenuity and economy had both to be exercised. My sitting-room, reception-room, and parlor, all in one, required my first attention.

"Many little fancy articles that smile on our walls to-day were yet to be invented; but, by studying beauty, and at the same time convenience, I succeeded in making this room a pleasure to myself and a wonder to my friends.

"Everything I endeavored to keep clean and in order; and even the few choice plants that adorned a rustic stand of my own invention and the ivy leaves that fell in garlands over my front window united with me in enjoying and drinking in the first rays of rosy morning light and added an indispensable charm. My little bedroom, dining-room, and kitchen were all furnished plainly indeed; but just as well as circumstances would permit. I lived as nearly as possible in accordance with the rules that I had laid down at first; looked forward to better, and tried to be contented, and not wish for the luxuries which others enjoyed, for 'multiplying wishes is a curse that keeps the soul perpetually awake.'

"By good management and accumulating little at a time myself and husband became the owners of the lovely little home in which you are assembled this evening."

Every eye was turned in a new direction, scanning the different adornments. In front of the fireplace was a beautiful home-made hearth-rug, which some of your readers would, perhaps, be glad to know something about. Take a piece of coffee-canvas about a yard and a half long and one yard wide, and with black Germantown wool fill in the whole piece by cross-stitching, taking three threads at a time. Then in the same stitch work a deer or some other figure in the center with red wool, also a border to correspond.

Take strips of red and black carpet about three inches wide; ravel out two inches for fringe, leaving one inch to sew under the rough edge of the rug, which must be turned under. Line with another piece of canvas. This rug is rather tedious to make, but amply repays for the trouble. Various colors may be used, to suit the taste.

The two front windows were dressed in snowy white curtains; a beautiful basket, filled with plants and vines, hung in the center of each; and at the top was a cornice, lovely to behold. It was made of white tarlatan. Take a piece about eight inches wide, turn in an inch at each edge and gather, making it as full as desirable, leaving a little ruffle on each side. Tack this across the top of the curtain and mix pressed ferns in on the tarlatan to suit the taste, making them come down several inches on the curtain in the center.

In one corner of the room was a beautiful bracket, made of light wood or pasteboard, and covered with pine-cones, lichens, and moss; and on this was a rustic cross, made to correspond, with a little wreath of

ferns and autumn-leaves twining about it. Above this hung a lovely little chromo, framed thus: Take four pieces of thin, light wood, an inch wide, long enough to suit the picture; notch the ends, tack at the corners, leaving about an inch extended; wrap this with candle-wick, and hang in alum-water till it is crystalized.

The many other attractions which were seen are too numerous to mention; but most of them have already been described in the columns of THE FLORAL CABINET. The same air of comfort and happiness that beautified this room seemed to extend throughout the entire house.

The hands of the little clock that sat on the mantel had already passed the hour of nine; and, at the solicitation of the hostess, the friends passed into the dining-room, partook of some nice, yet plain refreshments, and then, after an expression of thanks for the information received and a kind good-night, the crowd dispersed, and each one went on her way rejoicing, feeling benefited, and remarking that Mrs. C. certainly led an enviable life, and rendered herself and all around her happy by cultivating a disposition to make the best of everything.

FAY R. POWELL.

### THE POWER OF JAMAICA GINGER.

It will be good news to that multitude of sorrowing people who have dear friends in the clutches of intemperance that a genuine cure for that terrible disease has been found in the free use of the extract of Jamaica ginger. We publish the following portion of a private letter from a resident of East St. Louis, Mo., to a friend in New Britain, Conn. It tells its own story:

"You will rejoice, I know, and help me in praising God for the safety of our dear old father. You know how long he has been a source of distress and misery to all his friends, through the fatal habit. We had tried everything to bring back the same old father we had before the war; and our prospect looked hopeless, until — said she had heard that a rich young man in Baltimore, a friend of people she formerly lived with, was cured by drinking ginger. So unhappy and anxious were we that we jumped at any remedy that seemed reasonable, and I sent for a bottle of Jamaica ginger and commenced giving it to Father: a good deal at first, four or five times a day, or as often as he wanted it, for he tried to reform. The first few days it went hard with him; but in a week or ten days we had him mending, and now, after two months' discipline, he don't want any other stimulant than ginger. How thankful we are you won't believe. A great weight is taken off, and our happiness is near complete. It is Jamaica Ginger we are using."

### HOUSEHOLD HINTS.

*To Stop Blood-Flowing.*—Take the fine dust of tea or the scrapings of the inside of tanned leather and bid it close upon the wound, and blood will soon cease to flow. These articles are at all times accessible and easy to be obtained. After the blood has ceased to flow laudanum may be advantageously applied to the wound.

*Cleansing Marble Mantelpieces.*—There is great art in cleaning properly a marble mantelpiece. It must be washed with soap and warm water. If there are any stains, mix two ounces of powdered pumice-stone with two ounces of powdered chalk and a quarter of a pound of soda. Sift these; then make them into a paste with cold water. Rub the marble with the paste, and afterward wash it with soap and water.

## Household Elegancies.

## ELEGANCIES.

HAVE the readers of THE CABINET become aware that the old-fashioned crewel embroidery has been revived? This I know will delight many ladies, for in it we have something permanent and most desirable. Like the work of our grandmothers, it can be handed down to another generation. The crewel has much strength and the colors unfading. Linen canvas is the best material for the foundation. By using it the article can be washed when soiled, and yet is as fresh as at first. The designs can be embroidered in the shades of one color, or colors used to carry out the imitation of the pattern. Stamping, of course, is necessary, and also some knowledge of embroidery stitches. Old chairs can thus be renewed and again become beautiful. Lambrequins for window, mantel, or bracket are readily made. Ottomans, toilet sets, tidies, etc. are not only pretty, but serviceable. Little children's suits look well made of brown linen and embroidered in the darker shades of crewel. Unbleached hose can be purchased and embroidered to match the dress.

Spatter-work is also quite at home, when arranged properly on tidies, splashers, etc. All ladies are supposed to know the secrets of the spattering process, and certainly all, if disposed to try, can succeed. Splashers or wall-protectors can be made in no prettier manner than by using white Swiss or tarlatan, with a design spattered on. A cross, anchor, wreath of leaves, animals, birds, almost anything, when surrounded by delicate ferns or grasses, will present a richness not thought of. Pink the edges and place bows of delicate ribbon in the corners. Various colored inks or anniline dyes can be used. Lambrequins and table-covers are cheaply made, using white Canton flannel and spatter-work.

No mention, I believe, has been made in THE CABINET of pottery ornamentation. This being at present a fashionable pastime, it is also a most pleasing work. The vessels to be ornamented are copies of antique pottery. We buy the clay imitations,

paint them black, and choose such pictures as may please us from among the myriads found in our stores—Grecian, Chinese, and mythological figures and the greatest variety of flowers, heads, birds, etc. After the paint is dry, paste the pictures on with a thin mixture of flour and water, and then varnish. I use as paint a preparation made for renewing iron mantels. This has the paint and varnish combined, and at once my vessel is bright and glossy. I then place my pictures, and all is complete. Many of the

Toilet-mats made in this way are pleasing to the eye, and can be freshened every day by a gentle rub with a wet cloth. They will be new and pretty until you will want some other style.

To make a beautiful cross, procure a white pine cross, secured in a base representing three steps, as it were, and cover neatly with double white wax, as we do in wax work. Boil a white horn, which any meat-market can furnish, for six hours. Scrape with a piece of glass into shavings, allowing them to fall on the cross. Secure the first of them by pressing into the wax, thus forming a foundation for the remainder. Continue the scraping until the cross is almost concealed beneath the trailing tendrils. This, placed on a mantel or bracket, is quite imposing, especially if a background rich in color can be arranged for it. Another lovely cross was made in the rustic for a church ornament, to serve during the winter months. A limb covered with white lichens was made into the form of a cross, with the arms slanting, nicely proportioned, and firmly secured in a base. The base was then covered with fern moss, and at the foot of the cross were arranged pressed ferns, delicate grasses, and the red berries of the Indian turnip. A few small shells were added, and a little humming-bird nestling in the midst. Around the arms was wound an artificial holly wreath and berries.

## CARD RECEIVER.

It was originally a large rustic basket which I kept flowers in last summer. Cleaned it up a few weeks ago. The basket is 48 inches around the top and is an oval shape. The bottom is 28 inches around. It slopes from the top to the bottom. It is 10 inches deep and 44 inches from the top of the handle to the floor. Well, I have a photo of it when I used it for flowers, which I will send you. Perhaps you can form a clearer idea by looking at that. That is the way it looked before I decorated it with moss and leaves and ferns. I put moss on which was brought from California. Moss gathered from off of rails and limbs of beech trees will answer the same purpose. Take glue (and if you dampen the moss a little it will all come out in its right shape) and dip it in, and stick it on the basket. I covered my basket all over with moss; and then I took pressed autumn-leaves, moss, and fern and covered the handle. I

lined it with pink satin. It took just a yard, worth 90 cents. I made a very neat border around the top with white silk lace, worth 15 cents a yard. It makes a very handsome Card Receiver. Every person who sees it thinks it perfectly splendid.

MRS. W. D. ADAMS.

LAUREL, IND.

DESIGNS IN EASTLAKE STYLES FOR PAPER HANGINGS.

smaller specimens can be used as match-safes, taper-holders, jewel-caskets, or flower-vases.

Good table or stand-covers are made of white marbled oil-cloth, the edges pinked and corners and sides ornamented with decalcomania pictures. Varnish the pictures, to make impervious to water.

## Fireside Reading.

### A LITERARY CURIOSITY.

A LADY occupied a whole year in searching for and fitting the following thirty-eight lines from English and American poets. The whole reads almost as if written at one time and by one author:

#### LIFE.

Why all this toil for triumphs of an hour? —Young.  
Life's a short summer—man is but a flower; —Dr. Johnson.

By turns we catch the fatal breath and die— —Pope.  
The cradle and the tomb, alas! so  
nigh. —Prior.

To be is better far than not to be,  
—Sewell.

Though all man's life may seem a  
tragedy; —Spenser.

But light cares speak when mighty  
griefs are dumb; —Daniel.

The bottom is but shallow whence  
they come. —Sir Walter Raleigh.

Your fate is but the common fate of  
all; —Longfellow.

Unmingled joys bere no man befall;  
—Southwell.

Nature to each allots his proper  
sphere. —Congreve.

Fortune makes Folly her peculiar  
care; —Churchill.

Custom does often reason overrule  
—Rochester.

And throw a cruel sunshine on a fool.  
—Armstrong.

Live well—how long or short permit  
to Heaven; —Milton.

They who forgive most shall be most  
forgiven. —Bailey.

Sin may be clasped so close we cannot  
see its face, —French.

Vile intercourse where virtue has not  
place. —Somerville.

Then keep each passion down, how  
ever dear, —Thomson.

Thou pendulum betwixt a smile and  
tear; —Byron.

Her sensual snares let faithless pleas-  
ures lay, —Smollet.

With craft and skill to ruin and  
betray. —Crabbe.

Soar not too high to fall; but stoop  
to rise; —Massinger.

We masters grow of all that we de-  
spise. —Crowley.

Oh! then, renounce that impious self-  
esteem; —Beattie.

Riches have wings and grandeur is a  
dream. —Cowper.

Think not ambition wise because 'tis  
brave; —Sir Walter Davenant.

The paths of glory lead but to the  
grave. —Gray.

What is ambition? 'Tis a glorious  
cheat, —Willis.

Only destructive to the brave and  
great. —Addison.

What's all the gaudy glitter of a crown?  
The way to bliss lies not on the beds of down. —Dryden.

How long we live not years, but actions tell;  
—Francis Quarles.

That man lives twice who lives the first life well.  
—Watkins.

Make, then, while yet ye may, your God your friend,  
—Herrick.

Whom Christians worship, yet not comprehend.  
—William Mason.

The trust that's given guard, and to yourself be just;  
—Hill.

For, live howe'er we may, yet die we must.  
—Dana.

—Shakespeare.

### A CHAPTER ON MARRIAGE.

How does a young man ever propose to marry when he is too bashful to ask the minister to perform the ceremony? Perhaps the young lady can tell whether she helps him. I was just home from school one afternoon, and a young man was let into the parlor. He was blushing like the rosy morn and trembled like a convicted horse-thief.

"Will you please read this," he said, handing me a note.

The note read something like this:

"Mr. Minister:—Will you please marry me at eight o'clock this evening? JOHNNIE SLOWBOY."

"Did you write this note?" I asked.

"Can you marry me without a fee. That is," he added, for my smile had altered to a gloomy frown—"that is, trust me, and I shall send it. I have no money at present."

It is a good thing to be generous when you are compelled to be; so I married them, gave them the certificate, and off they rolled in their splendid carriage. Two weeks after, sure enough, a letter came with a greenback inclosed, and the letter bore these words: "Pleas find one Dolar for maryin me."

Poor young man! Not many weeks after he was tried and convicted for stealing a horse and carriage—doubtless the one he began housekeeping with—and sent for a term of years to the state-prison. There is a stern moral about this incident which, though obvious, we must point to our readers: Do not ask the minister, when you are married, to trust for the fee, and after that give him only a dollar; or—or—(here is logical reasoning equal to that in many theological works)—or you may be sent to prison for stealing a horse and carriage.

"Will you marry us?" asked a rough-looking man of about fifty, on whose arm hung a faded woman of about the same age.

"I will not," was the prompt reply. At which they looked surprised, and the man bluntly asked:

"Why won't you marry us?"

"Because you are drunk; and it is better for a man to be sober all the while, but specially when he is going to be married."

It may be hard to tell why, but the man got angry.

"It is false," he said; "because—because I have not taken a drop of whiskey since last night."

Quickly they faded from the parsonage like a beautiful vision, and I saw them no more.

"A messenger has just left word that you are wanted at once at No. 27 Washington Street."

It was about dusk, and in a few minutes I started and walked to the house indicated, and rang the bell once—twice—thrice, and then, as there was no response, was about to go home again. Just then the door was cautiously opened, and a lady invited me into the parlor. She was—well, it is hard to tell—say at a venture thirty-five, though she may have been ten years younger or older; but she was quick and active in her movements. She lit the lamp, and introduced her lady friend, Miss Rosie Mills; then she gave a signal, and in walked a young man, tall and awkward, who seemed weary of life. He said not a word, but bowed a low introduction, and put one hand to his head, as if he was in pain.

"We sent for you to marry us," said the lady, decisively. The book was opened and the words read "Dearly Beloved! We are assembled here in the presence of"—

when there was a sudden and furious ringing of the door-bell. Then it was opened, and some one tried the door of the parlor, which, to my surprise, had been locked.

"If any minister is marrying a couple in this room,"

screamed a voice from without, "I forbid the ceremony." There was an awkward pause.

"Go on," said the lady, in a commanding tone.

"We are of age. Pronounce us man and wife."

I refused until I could find out what the objection was. The woman entreated, her lady friend grew white with fear, the noise outside kept waning, and the expectant groom was motionless and indifferent.

"It is only the father," said the lady; "and he says the young man is weak-minded, because—because—he wants to marry me. He has persecuted the young man terribly; but he shall do so no longer, for the young man is of age, and we shall yet get married and I shall protect him."

Sure enough, they were afterward married, but not by me.—The Methodist.

LOVE WITHOUT WORDS.—DESIGN IN SILHOUETTE.—THE START AND THE RETURN.

"I did, sir," he said, timidly; "because—because I thought it would be easier than to speak to you."

He was so ill at ease that I determined to make him all right by an innocent joke.

"Very well, come with the young lady, and I will tie the knot harder than a beau (bow) knot."

Johnnie gave quite a natural laugh, and was himself again. One Saturday afternoon a young man alighted from an elegant carriage, with his bride, all in white and spangled with rainbow-colored ribbons, and came gayly into the back parlor.

"You came to get married, of course?"

"I would like to see you a few moments first," said the young man, and we walked into another room.

screamed a voice from without, "I forbid the ceremony." There was an awkward pause.

"Go on," said the lady, in a commanding tone.

"We are of age. Pronounce us man and wife."

I refused until I could find out what the objection was. The woman entreated, her lady friend grew white with fear, the noise outside kept waning, and the expectant groom was motionless and indifferent.

"It is only the father," said the lady; "and he says the young man is weak-minded, because—because—he wants to marry me. He has persecuted the young man terribly; but he shall do so no longer, for the young man is of age, and we shall yet get married and I shall protect him."

Sure enough, they were afterward married, but not by me.—The Methodist.

## Housekeeping.

## MY EXPERIENCE WITH HOUSEHOLD DYES

AFTER considerable experience, I have found that Leamon's Aniline Dyes are better and will do more than they profess. One can color anything with them, and the work is nothing; and there is no elaborate preparation to be made for using them, as they are very simple. I have replenished my wardrobe with them by simply coloring over old dresses and making combination suits; and when one lives in the country it is worth a good deal to be able to get just the right shades for a dress, by a little labor.

With the black dyes one can brighten up their old black alpacas, merinos, silks, or laces, or color over any other color, making a splendid black; renew their old black kids or make black the soiled ones of other colors; sponge their cloaks and coats with a little of the dye, to look like new; and even dye their own hair switches, frizzes, etc. This dye makes the cheapest and best black ink one can get. The violet dye makes splendid ink, and costs comparatively nothing. The same might be said of almost if not quite all the colors. And these inks can be used with a brush for coloring cards, mottoes, etc. Mottoes colored in this way are as handsome as worsted ones, and not nearly the work to make. By using one-half the water a good stencil ink is obtained; and by the addition of a little glycerine and sugar one can obtain a superior copying ink. The inks are made by using for one package of dye two quarts (for scarlet only one) of boiling water, in which has been dissolved one ounce of gum Arabic, for all but black; and there are full directions for making that with each package, which will make two gallons of nice black ink.

The violet dye will color over rusty or dingy black, making seal brown, which fact alone would render it invaluable. I colored some old but good black ribbon in that way, and renewed some faded brown of a lighter shade with brown dye; and this will save buying new ribbon for a hat, and no one will know, unless I tell them.

The blue dye makes the cheapest as well as the best laundry blue one can get.

I have used all the colors successfully, both in coloring over other colors and with white. One can have stockings to match one's dress with ten minutes' work, which is a satisfaction to poor women. I have colored and renewed with these dyes a lot of old ribbons, ties, pieces of silk and velvet—getting on the lighter ones lovely shades of lavender, fawn, salmon, pink, blue, etc.; and on the darker, rich, clear tints, as blue, cardinal, scarlet, old gold, bronze, and a number for which I have no name, but they are beautiful. I colored an old drab ostrich tip a handsome brown, and after curling it looked as well as one costing a dollar. I have also colored hens' feathers and quills, both for wings and flowers; and find that for the latter purpose they are unsurpassed, giving as they do so many shades of the same color. I might say the same of them for coloring rags for carpets, rugs, and patch-work quilts.

I prepared a number of colors in small vials as for ink, and with a soft brush use them as paint for decorating wood and paper articles, as boxes, baskets, wall-pockets, etc. A still better way for this purpose is to prepare them, as for leather, with alcohol and shellac. There is another way these dyes can be used to decorate wood; and that is spatter or splash work. The effect when the colors are well chosen is rich in the extreme. To do this, put a little of the required dye in a saucer, reduce to the desired shade by the addition of boiling water, then, having prepared your board (or whatever you wish to decorate) by securing the patterns so the dye cannot get under them, dip a small brush (tooth-brush) in the dye, shake out

all you can, then hold a small but stiff stick over the work, and draw the brush quickly across, repeating until the right effect is obtained. I have a paper-holder, the front of which I made in this way, by taking a perfectly smooth pine board, pinning a paper the size of a small chromo (a bird on a branch) in the center, a wreath of tiny autumn leaves around that, a small bunch of leaves in each corner, and splashing with brown. Then I removed the leaves and paper, veined the leaves by dotting with a pen dipped in brown dye, pasted the chromo in the center, varnished and finished by putting in ends and a back, and it is very much admired by all who see it.

I have made lovely table and stand-spreads by using unbleached muslin, cutting my patterns from paper and pasting in place with very thin boiled starch and a hot iron (they will adhere nicely, but are readily peeled off when the work is done), then splashing all over lightly with brown, then in the center quite thickly with crimson, shading out toward the edge, then the edge with violet, shading in toward the center. They are rich, soft, and elegant. I have just completed a cover for a chair-cushion which I made by first splashing all over with green, then pinning a cluster of small leaves and ferns in the center, with sprays of vines around it, and splashing again with brown. It looks like moss, and no one would dream it was unbleached cotton, and only cost ten cents, dye included. Lambrequins for windows, brackets, etc. can be made in the same way; while beautiful bedspreads, curtains, toilet sets, "splashes," etc. can be made by using ten-cent bleached or unbleached muslin and splashing with only one color—as pink, blue, scarlet, green, etc.

I color splints for fancy baskets, frames, etc. by simply putting in a hot bath of the color wanted, and moving about till they take the right shade, which they do readily. Easter eggs are made resplendent either by applying the color, prepared as for dry leather, with a brush in figures, flowers, etc., or by immersing in a hot bath. The eggs must first be boiled hard, of course. Leather can be colored any shade by washing, stretching, pinning on a board, and applying the color with a sponge; or, if it is not desirable to wet the leather, put enough of the desired color in alcohol, in which has been dissolved bleached shellac in the proportion of an ounce of shellac to a pint of alcohol, and apply to the dry leather. Paper boxes, etc. can be ornamented in this way, and old book-bindings made to look like new. A good imitation of Russia leather is obtained by combining Magenta and brown in equal quantities.

These dyes will color quills, scales, shells, wood, straw, rice, feathers, everlasting flowers, moss, etc., etc., by simply immersing in a hot bath of the desired shade. In fact, there is nothing where color or shading is required in fancy work that they will not do. And there is certainly no domestic purpose where any dye is required for which Leamon's will not give full and ample satisfaction.

There are two points which I have not dwelt upon, that would recommend them to all, if they were only ordinary in other respects. The first is their simplicity and the ease with which they are used; all that is needed in most cases being a tin or earthen dish, boiling water, and two sticks with which to stir and lift the goods, which take the color so readily that the process doesn't have time to become tedious. It is rather a pleasure to use them, the result is always so good; and if the dyes have been dissolved in large bottles, one can color a ribbon, a feather, a pair of stockings, or anything that may present itself, at a moment's notice, with no preparation save to cleanse the article and boil the water. And only just enough of the dye need be used to give the right shade; which leads me to the second point, which is *economy*. From the fact that for the same money one can get more dye than of any other kind, and in using it is almost

all taken from the water, leaving it nearly colorless, any one can see that Leamon's are the cheapest dyes. And still another point presents itself, and that is the diversity of hues and shades; for from the twelve packages which make up the different colors every conceivable hue can be obtained, and each in its way perfect.

Therefore, if I were asked why I considered Leamon's dyes superior to any others, I should say: They are cheaper; they are more durable; they are more easily and quickly used; they give a greater number of beautiful colors and shades; they can be applied to vastly more uses, and for either domestic purposes or for fancy work are indispensable.

GRACE GILBERT.

## TO WASH GREASY WOOL.

DISSOLVE a large tablespoonful of borax in a pint of boiling water. Mix one-quarter of it in the water in which the wool is to be washed. Put in one piece of goods at a time, using soap, if needed; and if necessary add more of the borax water. Wash well and rinse in cold water, or in water only slightly warmed. Shake well and hang where the goods will dry quickly. For twenty-six years I have used for washing my white flannels water about as hot as would be used for cotton clothing. My flannels are beautifully soft, as well as white. I never have any shrink.

For washing goods that fade, use crude ammonia instead of soap. Soiled neckties may be made to look like new by taking one-half a teaspoonful of spirits of hartshorn to a teacup of water; wash well; and if very much soiled, put through a second water, with less ammonia in. Lay it on a clean white cloth, and gently wipe with another until nearly dry. Then lay a cloth over it, and smooth with an iron not very hot. If the color fades, it will all come back to its original hue. Use no soap and do not rinse. Just think how many pretty girls who have to practice economy will bless you for this recipe.—*Exchange*.

## A CLEAN FLOOR.

THE other day I went to see my friend, Mrs. Cook. She had just finished mopping her kitchen-floor. I noticed it looked very nice, and asked how she kept it so well. "Why," she said, "don't you know I oil it about every six months? That is what makes it so easy to keep clean." "Oil!" I said. "How do you do that?" So then she told me, as follows: "I take a quantity of the cheapest and least offensive oil (linseed) I can secure, and apply smoothly, so that it will strike equally all over and yet not stand in spots on the surface. I do this at night, after the evening's work is done, and fix the place ready for use again next morning. Of course, it would not injure the oiled surface itself to track upon it at once; but grease is liable to be tracked from it, at first, to adjacent parts of the house. A neat coat of oil, applied once in six months, or even once a year, sometimes is sufficient to keep a floor in perfect order. One may in this way prepare to great advantage the floors of kitchens, pantries, summer dining-rooms, porticoes, closets, bath-rooms, and laborers' bedrooms."—*Household*.

## INFORMATION WANTED.

A RECEIPT for making nice light home-made graham bread?

How to prepare and bake a dish of turbot à la crème?

How to prepare and lard sweet-breads?

How long will an iced pound cake keep good?

How can stains from perspiration be removed from scarlet merino stockings and underclothing, without injuring the color or the garments?

How to starch and iron collars and cuffs, so they will not blister?

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## EVERYONE WHO HAS A GARDEN SHOULD READ

### NEW AND ENLARGED EDITION.

THE most practical work on Gardening yet published. Contains 220 pages closely printed matter, beautifully illustrated with several hundred finely executed engravings and a chromo-lithograph of a group of popular flowers, and a list of upward of 2,500 varieties of Garden, Field, and Flower Seeds, with explicit directions for culture. Mailed post-paid, upon receipt of 35 cents.

Bliss' Illustrated Handbook, for the Farm and the Garden, and abridged catalogue of Garden, Field, and Flower Seeds, Fertilizers, Agricultural Implements, etc., etc. One hundred pages, many illustrations. Mailed to all applicants inclosing a three-cent stamp for return postage.

Bliss' Illustrated Catalogue of Plants, for the Green House, Conservatory, Lawn, and Flower Garden.

Bliss' Illustrated List of Novelties for 1878, mailed free to all. Address,

R. K. BLISS & SONS,

P. O. Box 5712.

34 Barclay St., New York.

## THE NIGHT-BLOOMING CEREUS.

THE Night-blooming Cereus, somebody says, "reminds us of a poet who gives one precious song to the world and is silent forever after."

*Cereus Grandiflora* has a large, lovely, straw-col-

ored blossom, but without fragrance. The plant grows like a great green four-sided snake, with aerial roots at intervals hanging from it. One that I know of is ten or twelve feet in length, trained along the side of the room at the ceiling.

Cob Cactus, will grow as tall as you can give it room in your house. It is as large around as a very large corn-cob, with many spines. The blossom of this is smaller than that of the *Grandiflora*, white and of singular beauty. The thin white petals open at midnight, and disclose what at first appears like a delicate

I have all my life heard of a wonderful variety, having such a powerful and exquisite fragrance that it filled the midnight air at a great distance. Is it a myth? If not, will some of your readers tell us about this also, and give its botanical name. They are all rare and lovely, and impress one very strangely.

BEAUTIFUL LAKE SCENE IN COLORADO.

ored blossom, but without fragrance. The plant grows like a great green four-sided snake, with aerial roots at intervals hanging from it. One that I know of is ten or twelve feet in length, trained along the side of the room at the ceiling.

Another variety, which has been erroneously called

hand of chiseled marble. This has no fragrance. I am acquainted with one other, said to be "Dr. Regil's" Cereus. It seems to grow less stocky than *Grandiflorus*, which it much resembles. It is said to be a seedling, originated in St. Petersburg. Will some one tell us of the blossom.

"Children of night! unfolding meekly, slowly,  
To the sweet breathings of the shadowy hours,  
When dark blue heavens look softest and most holy  
And glow-worm light is in the forest-bowers;  
To solemn things and deep,  
To spirit-haunted sleep,  
To thoughts all purified  
From earth, ye seem allied,  
O dedicated flowers!"

MRS. ANNA P. HAYNES.

WATERVLIET, MICH.

## Floral Contributions.

## THE SECRET OF THE BROOK.

ALL day have the hills been calling,  
 All day has the brooklet said:  
 "Leave the toil that is making weary,  
 Leave even the book unread  
 And come with me through the meadows,  
 Through clover and daisies white,  
 Till the phantom of care that follows  
 Is spirited out of sight."

With a faith that is half desponding,  
 A heart that is sad and faint,  
 I go to the brooklet, calling,  
 Yet bearing a weak complaint:  
 "O brook, thou art singing forever,  
 Wherever thy way may be;  
 Thou hast hidden, deep in the wildwood,  
 Some secret of joy from me!"

The hills come down to the dingle,  
 They circle me kindly round;  
 The trees bend over to whisper  
 Some marvel of light or sound;  
 The welcoming shadows beckon,  
 And into each mossy nook,  
 Through leafy lattices shyly.  
 The frolicsome sunbeams look.

List! Is it the brooklet's low tinkle,  
 Or daintiest warbling of birds?  
 Nay, the lady-ferns talking together,  
 And my heart interprets their words.  
 "Oh! stay in the wildwood, brooklet,  
 Where sweetest of blossoms tell  
 How, blithest of all the fairies,  
 You gladden the darksome dell."

"Nay, nay. From the pastures are calling  
 The herds, and the flocks from the hills;  
 The peasant has brought from the harvest  
 His burden of grain to the mills;  
 The voices of children—I hear them—  
 Their faces I haste to see;  
 The tiniest blades of the grasses  
 Have blessings, I know, for me."

O brook! I have found your secret,  
 That never my books had told;  
 That never I learned from sages  
 Of all the centuries old.  
 Close to my heart I fold it,  
 And there like a bird it sings;  
 And its song shall be to my spirit  
 What to the lark are its wings.

MRS. ELLERY E. S. CHASE.

## A LITTLE GIRL'S EXPERIENCE IN FLOWERS.

As so many of the subscribers of this paper write about the different ways they have their flowers, I thought I would tell you how we have ours. We have a conservatory on the southeast corner of our house. We have doors opening from both the kitchen and the dining-room. It is ten feet long and six feet wide. We have a great many varieties of plants—Roses, Fuchsias, Geraniums, Begonias, Lilies, and a great many other kinds. It would take a long time

to tell you of them all; so I will describe only those which I think prettiest. Our Smilax is beautiful. Mamma trained it all up on a straight cord, and now it is about seven feet high and is full of flowers, which come under every leaf and look like little White Lilies. We have a hanging-basket, which is very pretty. It is made out of a piece of root of some tree and painted black. It has a very pretty leafed Begonia in it, and some Lobelia, which hangs over the edge and makes it very pretty. We think there is nothing prettier for winter blooming than the Primulas. We have every color, I should judge. Besides, we have the Double White. They are so very fragrant that I don't see how any one who ever saw one could help liking them. We have nine different kinds of Begonias, all of the choicest R x varieties and flowering kinds. Our Calla Lilies are perfectly enormous. Each one of them has a flower on it. I must not forget our dear little White Roman Hyacinths, which are now in bloom and are so sweet. We have Maurandya, Ivy, Solanum trained to run up to the top of the conservatory, to give it a pretty finish. We only keep such flowers in the conservatory in the winter as bloom or show to some advantage. The rest we put in a spare room. I cannot tell you what makes our flowers so very pretty; for I am only ten years old and Mamma tends to them mostly. Our yard is very pretty for this time of the year. We have one little Yellow Tulip that is in bloom already in the yard. After a while we will have a great many of them in bloom. It would surprise any one to know how many Rosebushes we have, loaded with buds and half-blown buds. We can have flowers here almost all winter, on account of the weather never being very cold.

LULU A. WILLIS.

ROSEBURG, OREGON.

## OUR FLOWERS.

I MUST tell you about our flowers which we have and how much pleasure they have given us. The vines we have are things of beauty, surely. You ought to see our *Hoya Carnosa* (Wax Plant). It is yards and yards in length, and last fall, when we removed them, the largest had some twenty or thirty bunches or clusters of flowers. We have one, two years old, that has several clusters on it. We are very successful with it. We have an English Ivy twining around one window, besides Kenilworth Ivy in baskets, and Smilax; and then we have the Wandering Jew in a pot on a bracket, which hangs down some two or three feet. We have a cool room, which is warmed by the sitting-room stove. The temperature is about 60°, and we have a number of plants that do well in it—such as Begonias, Geraniums, Mallow, Lobelia, Vinca, and the Barclayana, of which we have two varieties. The Thunbergia does well too. Last fall, it looked so well, we thought it a pity to have it frozen; so we took it up carefully, put it in a pot, gave it a trellis, and it has bloomed all the winter. Our Lophospermum we took up also. Its leaves are such a beautiful green and the largest I ever saw. Some leaves measured nearly eight inches in diameter. Sometimes there were fifty blossoms open at one time. I never knew these vines would do

as house-plants; but they did not mind the change in the least. I noticed that some of your correspondents had no success with the Lily of the Valley. They grow so luxuriantly in our yard that we thought it grew anywhere. They have spread so much that we were obliged to dig them out and throw them away. It seemed a pity to do so, as they have such lovely, fragrant, pearl-like blossoms. There are only a few of our neighbors that care for plants, and they have enough. I wish the readers of the CABINET could see our violets. They are all blue and white and look like patches of snow. The blue blooms so profusely that no leaves can be seen until within a few feet of the bed. They multiply so fast that we can give to all that wishes for them, besides throwing a vast amount away. They are so fragrant that the perfume reaches you fifty yards from the bed. We have quite a number of other plants, that I will not now speak of; but I must tell you of a "Gardenia" we have, that dropped all its leaves. I took it out of the pot, shook off all the dirt, repotted it in rich soil, and put it under sash. It is beginning to put out new leaves and has a bud. We have four varieties of the Jasmine. One variety blooms yellow, but we have had no experience with it yet.

L. H. GETTER.

LIBERTY, OHIO.

## ARTIFICIAL IVY LEAVES.

ARTIFICIAL ivy leaves are made by taking green window Holland and using an English ivy leaf for a pattern. Cut out any number of leaves, making different sizes. Next lay them upon paper, and with a warm iron, upon which you first rub some beeswax, press each leaf. To shape and vein the leaves, fold the leaf from side to side, making a crease from stem to tip; then likewise through to each point, from stem. For stems, take fine wire (not too fine to stand in shape), push the end through two small holes previously made with a pin far enough to turn back upon the underside, and twist carefully around, to secure it in place. The smallest leaves are placed upon the ends of the vine. Twine the wires with tissue paper, the color of leaves, and make long vines, with branches here and there. Ornament a flower-pot with a fancy cover, fill with clean sand, which place upon a shelf or bracket. Then plant therein your artificial ivy and train it as your fancy dictates, and you will have a vine that can look fresh and green without care and one that will not freeze.

MRS. T. C. H—

## A FLOURISHING CALLA LILY.

"Rosa" writes *The Cottage Hearth* of a very vigorous Calla Lily: "It has had seventeen blossoms since the first of February, five are open to-day, and two more buds are coming out now, making nineteen in all, with a prospect of more yet. Have had as many as eight open at one time. Four years ago one bulb was given to me, which has thrived, and now there are eighteen or nineteen. All have budded now. I do not let it die in summer; but set it out of doors, watering it when I do other plants all through the summer. Then in the fall change it into something larger, giving new earth obtained from the swamp. It is now in a butter-firkin, with holes in the bottom for drainage, and a tin plate set under it. I wet it with hot dish-water or suds once a day, not having the water hotter than I can bear my hand in.

## Answers to Correspondents.

### Sowing Seeds of Green-House Plants.—

Please tell me when to sow the seeds of the following named flowers and the soil suitable for them. *Begonia Sedum*, *Calceolaria*, *Cineraria* (double), *Clianthus*, *Cyclamen persicum*, *Fuchsia*, *Geranium*, *Gloxinia*, *Primula*, *Smilax*, *Lantana*, *Azalea Indica*, *Auricula*, and *Primula Japonica*. Please tell me when they will flower. I never succeed in growing Pansies. Why is it?  
W. G. I.

HAMPTON, VA.

*Answer*.—1. *Begonia*.—Sow in heat in spring. It will flower the same year. *Calceolaria* and *Cineraria* seed should be sown early in autumn to flower the next spring. Sow *Clianthus* in an old hot-bed frame (one in which radishes have been forced) in May. It will bloom the same summer. *Cyclamen*, *Fuchsia*, *Geranium*, and *Gloxinia* sown in spring will flower the next year. *Primula*, *Smilax*, and *Lantana* sown in spring will flower the same year. *Azaleas* sown in spring will flower in from five to ten years. *Auriculas* and *Primula Japonica* sown in spring or summer will flower the next year. The soil for all these seeds should be sandy loam. All, except as noted, should be grown under glass.

2. Your climate is probably too warm for the Pansy to grow satisfactorily.

**Hardiness of Plants.**—Can I keep the following named plants here out of doors through the winter by protecting them, and how much protection will they require? *Coleus*, *Gloxinia*, *Fuchsia*, *Begonia*, *Clianthus*, and *Lantana*. We seldom have snow or a hard freeze, but have frosts which kill such tender things as Wax Plants.  
MRS. E. M. B.

REFUGIO, TEXAS.

*Answer*.—Most of the plants you mention are quite as tender as the Wax Plant. Possibly the *Fuchsia*, *Lantana*, and *Clianthus* might stand, if the plants were old and well-established and were protected so no frost could reach them. But we think it very doubtful.

**Tube Roses.**—I have taken my Tube Roses from the ground and put them away until spring. Is this right? Should they be planted early or late in the spring, or be left in the ground during the winter?  
AMY HODGES.

KENNES, LA.

*Answer*.—Your treatment is that usually adopted; but possibly the bulbs might with you endure the winter in the open ground. Where there is no frost they will grow on from year to year in the garden. They should, if taken up, not be replanted till the ground is warm.

**Largest and Sweetest Rose.**—What is the largest and what the sweetest Perpetual Rose?  
AIMEE.

ALBANY, N. Y.

*Answer*.—The largest is Paul Neron, and the sweetest La France. The latter is not classed with Perpetuals, although a constant bloomer.

**Anchusa Italica.**—Will some one give me some information in regard to the abovenamed plant? I have been searching through all my floral catalogues, and find it mentioned in but one out of ten. This says: "A fine bedding plant, 4 feet." An old English work on floriculture, published in 1867, mentions it among a list of biennials. I have several plants which I raised this summer from seed which came from the Agricultural Department of this city (Washington). The plant is similar in appearance to the Mullein; leaf same shape but much longer than the Mullein leaf. Some of them are now two feet long. As it requires considerable room, I should like to know whether it must be housed for winter; whether the flower will repay the trouble of careful nursing during winter, and when does it bloom?

*Answer*.—*Anchusa Italica* is a coarse, weedy biennial plant, hardy south of New York. It blooms the next summer from spring or summer-sown seed. The flowers are pale yellow. The plant is hardly worth growing, there are so many better things.

**Names of Plants.—Treatment of Crassula.**  
**—Cuphea Seed not Growing.**—What is the matter with my *Crassula*? It grows but little. Does it require much water, and what soil?

Can you give me names of enclosed plants, also of the leaf?

My *Cuphea* seeds have not come up. I sowed and treated them as my other seeds, which all did well; but have sown these twice, and no plants.  
MRS. H. G.

PLYMOUTH, MASS.

*Answer*.—1. Your *Crassula* should have a light, rich soil, such as you would give a *Geranium*. Keep it moderately moist when growing, but rather dry when at rest. Give plenty of sun and light.

2. We cannot undertake to name plants from scraps of leaves, with no locality or information given. No. 3 is *Gilia tricolor*; the others are unrecognizable.

3. If all your other seeds have come up successfully and only your *Cuphea* failed, the seed was probably bad.

**Name of Plant.**—Will you be kind enough to tell me the name of the plant to which the enclosed leaf belongs? Also how to treat it so as to have it flower, and what time in the year it should flower. Also describe the flower.  
E. H.

GARDNER.

*Answer*.—This is a fair sample of many queries which we receive, accompanied, as in this case, by a small dried leaf, broken into numerous fragments. No information as to whether it is a tree, shrub, vine, or herbaceous plant; whether tender or hardy, wild or cultivated. No locality given, for the writer does not give his state. Sometimes we can answer a question under all these difficulties; but generally one would have to be omniscient botanically to do it. Will many correspondents whose questions remain unanswered take this explanation as a reason?

**Name of Plant.**—Can you name me the enclosed plant? It is very bright and does well in the garden in summer.  
MRS. N. J. MALONE.

*Answer*.—Your plant is *Achyranthus acuminata*.

**Plants of Lady's Slipper.—Propagation of Gloxinias.**—Can you tell me where I can obtain plants of *Cypripedium acaule*, *arietinum*, *spectabile*, and *pubescens*? Can they be had of florists in the United States? Where can I get *Saracenia purpurea*, or Pitcher Plant?

How are Gloxinias propagated?

GALVESTON, TEXAS.

MRS. E. W.

*Answer*.—1. *Cypripedium acaule* could probably be furnished by any florist in Boston. It is very plenty, wild, in that vicinity. *C. spectabile* and *pubescens* could probably be sent you by Louis Menard, Albany, N. Y. *C. arietinum* is one of the rarest of our wild flowers and is seldom seen in cultivation. It is more curious than handsome. *Saracenia purpurea* could be furnished by any Northern florist.

2. Gloxinias are propagated by leaves rooted in silver sand and by seed.

A good way to find rare plants is to advertise for them, and, in reply, you will probably receive letters offering them in any quantity. There are parties in the West who make a business of collecting *Cypripedia* for shipment to England, where they are in demand.

**English Ivy Dying.**—What was the matter with an English Ivy I had last winter? When I brought it into the house it looked healthy and was a yard long; but suddenly the leaves dropped off and the vine died. It was kept wet and I enriched the dirt every week.  
M. SMITH.

FLINT, MICH.

*Answer*.—It may have been kept in too hot a room, or perhaps your enriching the dirt killed the plant. The Ivy does not need manure when grown in pots; and in any event it must be very well rotted.

**Colors of Amaryllis.**—Please let me know whether there is more than one color of Amaryllis?  
CLARA B. RICE

BEAVER VALLEY, PA.

*Answer*.—Yes; there are many colors. Those most usually met with are red and pink, in various shades to white. Then there are many striped varieties, and in a lot of seedlings no two will be alike. Some are green, a nearly allied plant (*A. Teranthus*) is yellow, and one very large-growing species (*A. Tracera*) has blue or purplish flowers.

**Wintering Panicum Variegatum.**—Will some one inform me through the CABINET how to keep *Panicum variegatum* during the winter? Mine invariably dies as soon as I bring it into a warm room in the fall.  
J. E. H.

*Answer*.—It is best kept in a cellar. Take it up in autumn and put it in a box, with soil.

**Camellias from Seed.**—Please tell me whether Camellias grow readily from seed, and how old they must be before they bloom?  
ANNA C.

*Answer*.—We have several times replied to this question in full, as reference to back numbers will show. Camellias do not grow readily from seed, and seedlings do not bloom until large.

## Floral Experiences.

## FLOWER-STANDS, Etc.

I LOVE flowers, and I want every one to love them. Indeed, it provokes me very much to hear any one say they can't make them grow. I think "where there's a will there is a way." I have flowers in five different rooms; and those I want to rest for the coming season I put in the cellar when the Frost King comes. At my northeast window in my bedroom I have a flower-stand of my own invention. I have used it for four winters, with the greatest success. It was an old side-table of our grandmother's. The top was broken off; so I had a top put on it, 5 inches deep, 23 inches wide, and 43 inches long, with perforated holes in the bottom. Put casters on the legs, so I can move it easily. I fill the top or box with clean river-sand, mixed with a little charcoal dust. In this I sink my pots that I prepared in August for winter blooming. In the center I have a Fuchsia, which is two years old. It is 47 inches high (I cut it down last fall one foot). It will bloom next month. Last year it had 53 blossoms on it. I give it a drink of rust-water once in a while. Ammonia water is good, too—three drops to a pint. Now, around this Fuchsia I have some Geraniums, pink, white, and scarlet (Happy Thought), and several different kinds of Double Geraniums. These I give a drink of hen-manure water once a week. It must be very weak. Now in the next room, which is my nursery, I have plants at two windows. At the southwest window I have three shelves full of 6-inch pots of Geraniums, Vincas, Oxalis, Morning Glories, Madeira Vines; and a hanging-basket above them, filled with Scotch Ivy, forms a pretty curtain. At the opposite window (northeast) I keep my Smilax and Parlor Ivy. I have a frame in the form of a cross covered with the Ivy, which was very pretty for Easter decoration. The next room is our bath-room, where we have hot and cold water. I keep an old watering-can filled with strong manure-water, from which I pour a little in my small sprinkler and mix it with tepid water. Every Friday, after our general sweeping, I take a large sprinkling-can and wash all the dust off. The great secret of flower-growing is to keep them free of dust. Down-stairs, in our sitting-room, which also has a northeast window, I have a lovely window-

garden. I will try to describe it. The window is long, reaching down to the floor. Hanging from the top is a fish-globe, from which is growing and going in every direction two Sweet Potato vines; a red and white one. I start them in July. I have a small earthen castle in the center of the globe (a stone would do). On this I lay my potatoes, put in the water, a little charcoal-dust, and fill up with cistern-water. The water must not touch the potatoes, but nearly. In time little tiny roots will fill the globe, and beautiful vines will run to a great length, and every one will ask: "Where did you get that pretty vine?" The red potato will have a red stem, while the yellow one will have a light green. The contrast is pretty. Now, on either side below this globe I have iron brackets, two on each side of the window. On one I have Ivy, one Madeira Vine; the other two Maurandya. These run all over the upper sash and

only made this for me. He made one for his wife during the year 1850. The next window is in our back parlor. It is another southwest window, but only gets the afternoon sun. I keep my Cactis, Aloes, Night-blooming Jessamine, and one basket of different kinds of Begonias. I have another curtain of Madeira Vines at the top of this window. We have regular heat all the time in our rooms, and I give them fresh air on every pleasant day, by lowering the sash a little for a few minutes. I have tried this window-gardening for five winters, with the greatest success, and find that giving them stimulant once a week and keeping them free from dust are the two great secrets in making them grow. And starting them in August is another secret to have winter bloom. You cannot expect your summer plants, that have bloomed all the season, to continue to bloom. They need rest. So start your cuttings the

last of August.

AUNT JEN.

## THE TROPICS.

DURING his explorations in tropical America Agassiz counted one hundred and seventeen different kinds of wood (many of them fitted for the finest cabinet work) growing within the space of half a mile square. He spoke of the blossoms as being magnificent beyond imagination. Splendid white, yellow, and red clusters mingled with flowers of humbler and duller hue. Here were delicately feathered leaves, there were narrow ones, and yonder

broad. Here, again, were pointed ones; there were obtuse; further, fleshy and lustrous foliage.

In the lowlands the forests are gloomy. Damp, cool, odorous arches rear heavenward. Under these there is no moss, no creeping plant. Only mushrooms spring from the humid soil. When the rainy season comes on, thick fogs encircle and penetrate these forests. No bird nor butterfly comes forth. There are hoarse croakings of monster toads and frogs, and the roaring, grunting, and snorting of wild animals; while the stentor monkey sends out his distressful howls.

Oh! such a change as comes over the late scorched, barren deserts. Beautiful palms wave their green, plumey tops; richly-scented flowers burst to their hearts' centers, and shake out of their velvet cups rare incense offerings to their Creator; gorgeous birds pour through the trees like strings of jewels; and with the dawn of tropical morning the air vibrates with the joyous notes of animate Nature.

AN ENGLISH VILLA FLOWER-GARDEN.

form a lovely curtain. On the floor I have a low stand of Hyacinths, Heliotrope, Daisies, Roses, Cal-las, and a Begonia in bloom. I try to keep all at this window in bloom, because it looks pretty and cheerful from the street. The room opening from this is our dining-room. In this, at the northeast window, I have a Centennial flower-stand (I tried to draw you a picture of it. Was afraid you would laugh at it, so burned it up), made of old gas-pipe. Crossing at the top, it forms an arch, while the cup or bracket at the top, where the arch meets, is a bell, in which I set my large Aloe. On each side of these arches are brackets, on which I have pots of Tom Thumb Ferns, Kenilworth Ivy, Wandering Jew. The bottom of the stand is lined with zinc and filled with sand, in which I set my plants. All shade-loving plants I keep here. I have Martin's casters on the bottom of the stand, so I can move it easily. The stand is six feet high. If any one would like one, I can have one made for five dollars, as the old man who makes them

## Floral Hints.

### ASHES AND IRON FOR FLOWERS.

THE observation of practical and experimental gardeners seems to confirm the fact that, to procure brilliant colors in flowers, it is necessary to supply the soil with an abundance of ferruginous constituents and silica. The latter supplies a material which is of vast importance in the production of that brilliancy of the petals and the dark green luster of the leaves. Then, if potash be added, or the ground dressed round about the growing flowers with unleached wood-ashes, an increased brilliancy will appear in every petal and leaf.

Any person who cultivates only a few flowers, in pots, or on grassy lawns, or on spacious parterres, may readily satisfy himself of the exceedingly useful part the foregoing materials play in the production of beautiful flowers.

Even white flowers, or roses that have petals nearly white, will be greatly improved in brilliancy by providing iron-sand and unleached ashes for the roots of growing plants. Ferruginous material may be applied to the soil where flowers are growing, or where they are to grow, by procuring a supply of oxide of iron in the form of the dark-colored scales that fall from the heated bars of iron when the metal is hammered by the blacksmiths.

Iron turnings and iron filings, which may be obtained for a trifle at most machine-shops, should be worked into the soil near the flowers, and in a few years it will be perceived that all the minute fragments will have been dissolved.

#### HOW I TREAT MY CALLA LILY.

Put it in a pot that will hold four gallons of earth. Get the earth that is about one foot under ground, some place where it has been used considerably, take the top off till about one foot deep, then fill your flower-pot with the soil, and it will do well. In a short time you will not think it was the same flower, if it is treated correctly.

#### HOW I MAKE MY HANGING BASKETS.

I take my old earthen bowl or deep dish that has a piece out of the bottom, so that it will leak. Then I take a piece of wire and put a piece around the bowl; then take three pieces about one foot and a half long and fasten these, at even distances from each other, to the one around the bowl; then fasten them all together at the top; then put a ring on them, to hang it up by; then paint it any color you desire, although I prefer

green; then put in a Pink Geranium in the center, and fill out all the rest with Joseph's Coat or Wandering Jew. Of either of these two as fast as they grow pinch out the center. This will cause it to branch out, and it will soon be so thick and nice that you cannot see through it. If your basket is hanging where the sun will shine only on one side, turn it around every other day.

#### HOW I START MY SLIPS.

I take such as Geraniums, Fuchsias, Red Plants, Cactus and put them in about an inch and a half deep in a pot with about one-half sand and the other half good fresh, mellow soil. Then I set them where the sun can shine all over and around them; and then I put a glass tumbler on them all, and it is not long till they are nice, healthy-looking slips, ready to be put in larger pots.

A. A. S.

P. S.—Some reader of the greatly-esteemed CABINET please tell me if it is better to leave the Oleander in a tub in the summer time or put it in the ground.

000 are standards and 1,200,000 are dwarfs. To this must be added roses on their own roots, propagated by cuttings or layers. The Bengal and Provence roses, together with several old kinds, are mostly propagated in this way; and, taking these into account, the total number of roses raised in that vicinity must be fully 2,000,000. Not less than 600,000 plants are cultivated for cut flowers alone.

The great center of rose culture in France is situated in the vicinity of Lyons. The quantity sent out yearly from this point varies from 700,000 to 1,000,000 of plants. Nearly all the roses are budded on roots of wild briar (seedlings), with perhaps 20,000 on their own roots and about an equal number on standards. Some idea of the extent of the rose culture in France may be obtained from the fact that in the thirteen communes which surround Brie-Comte-Robert more than 2,500,000 roses are annually cultivated, the number of growers being about a hundred. The number of varieties grown is stated at

from 700 to 800, although it is only a limited number of the most robust and the greatest favorites which are most extensively cultivated.

### REPORTING PLANTS.

THE amateur who intends to repot such plants for the summer as are to be turned out into the open air in June, or for summering in pots, will find decayed and dry catcl-droppings of value. They should be thoroughly heated before being used. Boiling water may be poured over them, to kill insects or noxious germs contained therein. Thus you will have a most ex-

cellent fertilizer and one natural to most plants. As materials for compost, well-rotted sods from an old pasture or fence-row, two parts to one of sharp sand, and one of the pulverized cow-manure, will be well adapted to the growth of most house-plants.

In repotting, use a pot one size larger than that containing the plant. Put in some pieces of broken pots, bits of brick, or coarse gravel, for drainage. Over this place soil until the sized pot containing the plant will just be even with the rim. Fill with soil between the two pots; lift out the smaller one, turn the plant out of the pot, with the earth entire; break the ball somewhat, to loosen the earth; put it in the larger pot, and pack the soil from the sides pretty firmly about the ball of roots. Now fill up with earth even with or a little above the ball of earth, always being careful that there is half an inch of space from the top of the earth to the rim of the pot. Water and the thing is done.

It is, nevertheless, advisable to watch the plants after repotting, especially those liable to wilt. Such should be kept from the sun until somewhat established. Most plants, however, if care is taken, will go right along as though nothing had happened.—*Prairie Farmer*.

FOUNTAIN IN ENGLISH PARK.

### THE ROSE IN FRANCE.

FRANCE has been the originator of a majority of the notable roses. The cultivation of roses in France gives employment to thousands of its population. In the vicinity of Paris it is quite an important affair, where first of all the roses are grown as ornamental shrubs for sale. They are mostly grafted on the briar, either as standards or dwarfs; and about 250 acres of ground are devoted to the growth of grafted roses. As the plants are left for two seasons on the ground, being cleared off and sold only at the end of the second year, the produce of half that extent only is put in the trade every year.

On an average, not less than 24,000 plants are put on an acre; but, as nearly one-half fail to grow well or are not successfully budded, the number of budded roses sold from an acre seldom exceeds 12,000, giving for the total number reared in one year in the district around Paris something over 1,500,000. Of these about 300,

## Household Hints.

## HOUSEHOLD ARTS.

THERE are many "arts" of the household to which a thorough and skillful housekeeper must give attention, if she would also be a *home-maker*. Home-making begins in the kitchen; and the woman who cannot manage her kitchen properly may grace her parlor like a princess, but the happiness of her family rests on a precarious foundation. Opening the kitchen-door often reveals the temper of the family; for, if order and economy reign there, we may safely assert that the family is comfortable, nerves are not "out of tune," and that the necessary cares and duties of the house, and even its drudgery, shall not diffuse their unpleasantness beyond its walls. Let the routine of daily work go on without interruption as far as possible, that the methodical workers may not be "put out" and the mistress be saved much daily planning and talking. Let every useful article have a place for *its own*, so that every member of the family can find (in the dark, if necessary) the broom, dust-pan, poker, coal-hod, hammer, wrapping-paper, matches, lamps, strings, and tacks. Any woman can with a gimlet put a hole in a broom-handle and a stout string through the hole; and there should be a box, in some concealed corner, where the family can put, and can find when wanted, broken shoe-strings, stout cords, tapes, braids, and strips of leather. These are often useful for various repairs and in supporting plants, shrubs, and grape-vines. Cotton twine may be wound in a ball when undoing packages, the paper to be folded smoothly and put in its place, till called for. Put away whole newspapers in a barrel, in shed or cellar; all refuse pieces in another, to save time and handling when whole papers are wanted. Cover shelves and the bottoms of drawers which are used for food and kitchen utensils with papers, neatly folded. This will save much cleaning. Arrange kitchen furniture to save unnecessary steps. Articles which can wait to go up-stairs or down-cellar lay down till you are obliged to go. Teach children and servants to avoid unnecessary steps in their labor and to make every motion count. The value of such habits cannot be computed. "Load both ways" is a good motto for houseworkers. Let your brain serve your hands; your thought go before you. This makes your labor interesting; and when the mind is a co-operator you are no longer a drudge. Housekeeping becomes a fine art. I will not touch upon cooking, which in itself is a profession. Excellence in that art is largely made up of, first, the ambition to be a good cook; then comes, naturally, a discriminating taste; study of results; attention to those small variations which affect results; judgment; practice. These things are all necessary and have an importance, to which rules and recipes are secondary. This art merits a separate paper; so let us go on to the dining-room. Keep the dining-table always set, if possible. It saves a great amount of time and labor. In summer a netting can cover it, to protect from flies; in winter, if exposed to dust, a white tablecloth may be laid over it. A home-maker should be fastidious about her table-linen. Get

good, heavy, handsome cloths, and then take good care of them. As washing, and particularly ironing, wears heavy linen (in the folds), be choice of their purity. Put napkins or even towels (white) under the children's plates; and under the carver's plate, reaching under the edge of the platter, put a mat of enameled cloth. Put table-mats (they can be crocheted easily and cheaply of coarse cotton) under all dishes which come from the stove, and place plates under pies and puddings. Doing this, your cloth, excepting accidents, will keep clean enough for anybody to sit at for two weeks. The heavy, handsome folds will be undisturbed and much labor and linen saved. This is economy for poor people, rather than to buy cheap, sleazy linen and wash two a week, as many do. The same rule will apply to stockings and shoes. Many buy cheap ones and wear old ones all the time. It is cheaper to buy good ones and take good care of them. This illustrates the extravagance which keeps poor people poor. Heavy linen need not be starched. Ironed quite damp, it will be stiff and smooth and the folds less obstinate than when starched. Besides, starch makes them wear out faster, to say nothing of the additional labor. Care should be taken to darn the first small holes with soft cotton. When worn out, they may be cut up into napkins and put under the children's plates and chairs. A sponge and towel should hang where the children can reach them, and the children be taught to use them after eating. They will not need teaching if the habit is formed when in their high chairs, never being released from them till they are washed. I know children who think they cannot get down till they are sponged off, though large enough to descend *ad libitum*. A tape can be sewed to the sponge, forming a loop to hang by. A family of little ones can be easily cared for by having a small salver on a side-table, on which keep a bowl of water, napkin, and sponge. This goes far toward teaching habits of cleanliness to children. They will soon hate to be dirty; consequently, avoid much nastiness. No one but a mother can caress a child with dirty hands and face, and everybody will like a clean one.

## MY SITTING-ROOM.

How beautifully the first beams of the rising sun dart into the windows of my sitting-room! They come with all the ease and freedom of guests sure of a hearty welcome. They have often entered thus, and the green leaves of plants arranged on the shelves seem almost to laugh as they raise their tiny cell-lids and drink in the life-bestowing freshness. Pretty blossoms take on a deeper hue and the twining vines grow longer.

I am very careful to keep the earth in my flower-pots moist and light—stirring it frequently around the edges, but not disturbing the rootlets of any. My stand is in the form of steps, far enough apart to admit the light between them; so that, by placing the smaller ones in front, all may be accommodated.

I have exercised some skill in the manufacture of pots—if I may call them so—and many of them have been much admired. One kind is made in this wise: I had a quantity of old fruit-cans (which are not very easily wasted); so it seemed best to appropriate them.

I sent some of the two-quart ones to the shop and had them cut in  $\frac{3}{4}$ -inch strips, within one inch of the bottom (he did not charge me, as it took him but a few minutes, with his big shears); then, with a thick wire around the top, I fastened them in shape of a basket, giving them a curving slope. The end of each strip was securely bent over it, which made them quite firm.

The next move was to paint them. We usually have a pot or two of paint in the cellar—mere remnants, which we keep in condition by covering with oil; and, as a brush is close by, plunged in a can of water, it is but little trouble to use it on short notice.

For my baskets I took some mineral paint, that was left since we built our back picket fence. It is a brownish red, very dark. After giving the tins two coats and letting them dry, I warmed up my glue—I am never out of this convenient article—and lined them with anything that would best hold water. For one I used the old serge tops of my gaiter boots; another the crown of an old felt hat. Green moss from the woods is very pretty. When completed, I filled them with light, rich mold and set my plants. In one I planted a German Ivy. Being small, I coiled it, put a Dew Plant in the center, and some Creeping Charlie (Love Entangled) around the edge. In another I have a Smilax, with a neat little frame, and Sedum around the outside, the green falling down below the ends of my shelf. And I assure you they are very ornamental. Last summer I had them hanging dotted all over my porch; which, together with other vines and flowers, made it a pretty little parlor in the afternoon, being on the east.

I have made a long digression, for I was going to speak particularly of my sitting-room, the most home-like room in the house, especially since we have moved into winterquarters and considered more our comfort and coziness than display. Notwithstanding, some ornaments on the wall we think tend much in that direction. In one corner we have hung all the family portraits, and we have quite a little picture gallery. As these are more prized by ourselves than others, we have given them our choicest place.

Some pretty winter flowers and grasses are in a cornucopia made of shells and cones, with a design in the center and bordered with the leaves stripped from the cones; all secured with putty, in which a littleumber was mixed, and varnished handsomely. Near it is a group of small engravings, framed in pasteboard by clusters of acorns; the groundwork of putty covered with clover seed. These are, of course, varnished and are really pretty.

Over one door is an arch made of autumn leaves, pressed and dried and then dipped in hot water on which some white wax was floated. And above another is a motto "There is no Place like Home," worked by my youngest daughter. We have also had presents of handsome brackets and vases; but the glow of the room is retained most, in a day of clouds and winter darkness, by a large oil painting representing a sunset scene of mountain, lake, and forest. The deep green shadows in the water, and the water, and the rosy-tinted mounds, the grassy slopes, and light skiffs are so suggestive of a summer evening that we almost forget the outdoor elements.

**THE LADIES' GUIDE**

TO  
**Needle Work, Embroidery, Knitting, Crochet, Etc.**

By **S. ANNIE FROST**. Editor "GODEY'S LADY'S BOOK."

This is a charming little hand-book of all the various kinds of Needle Work, Embroidery, Crochet, Worsted Work, with their numerous stitches, and is invaluable to all who are fond of fancy work. Written by a lady who is familiar with fancy articles and needle works in this city, it will be found reliable, useful and indispensable. Its list of contents is of a wonderful variety of topics, and includes numerous patterns and designs.

Every Lady will find it a Needful Companion for her Work Basket and Toilet Case.

The following is a partial list of subjects to which the book is devoted. Each chapter is liberally and beautifully illustrated with designs to accompany all the directions and explanations. In some of the chapters, over twenty different stitches are described.

**CONTENTS.**

Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, Tambour Work, Wire Work, Doll Dressing,

with numerous designs also, for

Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Feather Embroidery, Zephyr Flowers, Picture Frames in Crochet, Tippets, Wall Pockets, Shawl Case, Net Embroidery, Cretonne Work, Etc., Etc.

EIGHTEEN CHAPTERS.

NEARLY 100 ILLUSTRATIONS.  
160 PAGES.

Price - - - 50 Cents.  
PAPER COVERS. RICHLY ILLUSTRATED.

Price - - - \$1.00.  
BOUND IN FULL CLOTH.

NEW YORK, JULY, 1878.

## HINTS AND HELPS.

No close observer, who compares the homes of to-day with those of ten or fifteen years ago even, can fail to notice a most rapid and satisfactory advance in household art and taste. Those who remember the parlors of our childhood—with their formal arrangement of furniture, their absence of anything which could tend to relieve the painful air of primness and constraint—turn from the recollection with a smile and a sigh.

More and more we are learning that our homes, if they are to be true homes at all, must express our own taste and culture; not that of some one else. It must exhibit harmony, fitness to the family life and wants, if it is to be the means of culture and growth, which a real home spirit implies; an outward index of true and earnest living which it is its highest office to foster and promote. Beautiful materials for home decoration are cheap and abundant, and directions for their use are freely given. Our FLORAL CABINET is an invaluable guide, and many will join me in acknowledging gratefully the pleasure and help they have derived from its pages. Some directions for articles I have not seen here described may be of use to some one.

Very useful vases or stands for the hall, designed

for the purpose of holding umbrellas, may be constructed from earthen sewer-pipe. Choose a section and place it with the projecting joint at the bottom. Paint the inside with some delicate tint, and the outside in a more decided color; put a band of scarlet, black, or brown near the top and bottom. After the paint is smooth and dry, ornament with decalcomania embossed pictures, Japanese designs, or figures carefully cut from cretonne, arranging and grouping them according to fancy. When all are firmly pasted into place, give the entire vase two coats of

FLOWER-STAND, OF CORK.

white varnish. Place inside, to receive the droppings of umbrellas, a small tin basin, painted both inside and out; and this can be easily removed for cleaning. When all is done, you will have a handsome vase at very slight expense, which will be found both ornamental and useful.

Some pretty ottomans shown me lately were attractive enough to deserve description. They were about twelve inches square at the top and twelve

DESIGN FOR A LAWN SETTEE.

inches high; but different from the ordinary box ottoman, in that each side was an inch narrower at the bottom than at the top, thus removing the clumsy look they usually have. The sides of those mentioned were covered smoothly with tapestry carpet, tacked on with brass-headed nails. The covers, first hinged and cushioned, were covered with the same. The inside was lined with paper muslin, tacked

smoothly in place; casters were added to the bottom; and a large tassel hung from each upper cover. Remnants of carpet for this purpose may be bought very cheaply, or any ornamented goods might be used in its place.

The common printed woolen table-spreads may be made very pretty by outlining the figures and veining the leaves of the pattern with coarse silk in chain-stitch. Various colors are used, the more striking the contrast the better. A green and black spread, for instance, is greatly improved by chain-stitching the edges of the design with gold-colored silk.

Another pretty way to make stand or table-covers is to use for the foundation *écru* Turkish toweling. Allow three inches all around for a raveled fringe; then just above this tack on three rows of dress-braid, scarlet, brown, and orange, one and one-half inches apart. Cat-stitch down the edges of the braid with silk, and between the lines of braid work feather-stitch in black silk or wool. A center-piece in applique may be added, if wished; but the table-cover is very pretty without it.

Turkish toweling seems to be well adapted to fancy-work purposes. Here is a rug made of the same convenient material. A piece of the size you wish your mat has placed upon it, lengthwise and as far apart as the width of the strips, strips of blue or scarlet flannel, three or four inches wide. These are ornamented before applying either in applique or by working on them some desirable pattern over coarse canvas, the threads of which are afterward to be pulled out. After these strips are nicely basted to position, lines of black braid, half an inch wide, are placed over these edges and cross-stitched on with gold colored silk. Similar bands are placed across the ends of the rug, and the whole is bordered with a heavy worsted cord fringe. Such a mat, laid by the bedside or before the commode, forms a pleasing addition to any bedroom.

ALICE M. WEST.

## ILLUSTRATIONS OF THE MONTH.

UPON page 1 is one of the most beautiful sketches of Lake Scenery in the Rocky Mountains. It is a charming body of water in Southwestern Colorado, called Cliff Lake, and the mass of rock and mountain rising up directly from its shores is named Bristol Head. These form a portion of Antelope Park, a most charming valley, full of verdure and flowers. Colorado possesses such lakes and parks in great abundance, and it is becoming the most noted region for famous scenery in America.

The illustration of an English Villa Flower Garden and a Fountain in an English Park show some of the elegancies which characterize the English love and way for rural decoration. This garden is at Stoke Rochford, near Grantham, England, and the reader will notice the elegant lawn and flower-beds on the terrace, with borders and lovely evergreens. Upon this page is a sketch of a little article, a Flower Stand, made of Cork. There is an article sold in the English markets called Virgin Cork, which is easily cut and molded into a great variety of shapes and forms very unique rustic hanging baskets and stands.

The Lawn Settee can be imitated by any one who will hunt up the rustic legs in the woods.

Upon pages 9 and 13 the joys of children are personified in their love for the fields and their devotion to papa's comfort.

GOOD-MORNING TO THE BIRDS.

## Household Art.

## HOUSEHOLD ELEGANCIES AND CONVENIENCES.

WELL, Jennie, I am really glad you have come to see me before you commenced housekeeping. I have had the cares of a house for some time, and I know when once you enter on them it will not be so easy to get away to visit.

You think my room looks bright? I always try to brighten up as much as possible in the fall. It seems to me the winter is not so long if there is something indoors to attract us and keep our eyes from continually wandering to the bleak lawns and leafless trees outside.

You see I have nothing expensive here. I expect your pictures, brackets, etc. will quite throw mine in the shade. If you have a fancy for any of these things, I can easily tell you how I made them.

This box I have in my west window is a yard in length and fits the window, is eight inches deep, and about as wide—just wide enough to hold a row of good-sized pots. Parlor Ivy is about all that will grow with the light we have here; but you see that does grow. It has gone to the top of the trellises I have in each end of the box, reached across, and festooned the entire window. This hanging-basket of Oxalis was started in a sunny window, but blooms nicely here. I keep my pots of blooming plants in an east window up-stairs. When they come in blossom I bring them down and sink them in the box. But I did not intend to tell you of the flowers. I know you have better success with them than I. I had my box painted brown; but it looked so somber that I concluded I must have something brighter, and made this lambrequin of scarlet pressed flannel and black alpaca. Would have used black cloth instead of alpaca, if I had had it.

The lambrequin is long enough to go around one side and both ends of the box. It is in seven pieces, three of black and four of scarlet. The center one is black, and every alternate one scarlet. They are straight at the top and each one has a point in the center of the lower edge; are lined with calico, slightly stiffened, and bound with worsted braid, such as is used to bind dress-skirts. The black ones are bound with scarlet and *vice versa*. They are then finished at each point with small tassels of black and scarlet zephyr. Fancyful designs of the scarlet flannel and some of black cloth are cut and sewed on each piece. I cut mine with a pinking-iron; but you can cut them nicely with the scissors, if the iron is not convenient. I would have pinked the entire edge of the lambrequin if the black ones had been of cloth; but alpaca does not pink nicely. This other window I did not want to close. The little ones must have some place to look out. But I did want the Ivy vines. So I put these small boxes at each side and covered them with lambrequins to match the larger box. These hanging-baskets are favorites of mine. To make them, take oxmuzzles or wire hanging-baskets. The muzzles hold the most earth, which is an advantage. If you use the muzzles, you must press them into a conical shape. Get ten or a dozen yards of brass wire, something

thicker than a good linen thread; or common annealed wire will answer, though it rusts quicker and then breaks, loosening the cones. You will need twenty-five or thirty cones for a basket. These are about four inches in length. Commence at the bottom of the basket. With the wire fasten one cone on very securely. You can slip the wire under the leaves of the cone, so it will be completely concealed. But the next row will cover it, if it should show a little. The second row should be fastened up on the basket so high that about half of the cone at the bottom will be seen. This row will take about eight cones. Select cones as near the same size as possible for the upper row. If they are a little defective, you can do with them as we do with many another thing—put the best side out. When done, varnish with furniture varnish and put the basket, mouth down, in a moderately warm oven. The heat causes the leaves of the cones to expand and adds to their beauty. I cut the crown of an old felt hat to fit the inside of my baskets, filled with good earth, and planted my plants. They were quite a success last winter.

This vessel under the chandelier, in which these Tradescantia vines are growing is merely a white bowl. With the sharp point of a three-cornered file I bored holes in its edge to pass the chain by which to hang it up, painted the outside with a couple coats of black paint, glued small autumn leaves around it in a wreath, and varnished it.

What are these vines that festoon the pictures on the wall growing in? Oh! Jennie, don't lift their covering, or you will only see some earthen jelly-molds of an oval shape. It was not everything that would sit on these small brackets. These molds do it nicely, and hold a good quantity of earth, too. The covers, of scarlet trimmed with black cloth, are cut large enough to go around the exposed part and come down to the bracket. They are fastened on by making loops of thread at the top, running hairpins through the loops down into the soil in the vessel.

I made some small corner-brackets for my rooms upstairs. (You know we all wanted to have things look nice this summer.) My brackets are small, but could be made larger by using wider boards. These were inch boards. One was six inches wide, the other five. From these I cut as many right-angled triangular pieces as I wished to make shelves or brackets. Of course, the pieces cut from the narrow board were an inch narrower than the other, so when they were nailed together they were the same width. I measured seven inches of the length of the board, then sawed diagonally across the board, thus cutting triangular pieces. Half of the top of a quarter of a barrel, sawed into two equal parts, answered for the tops of two brackets. One pair is covered with buff piqué; has curtains of the same, which are cut in three points at the bottom, trimmed with scarlet braid and finished off with buff fringe. These little corner-brackets add much to the tasteful appearance of a room, and made in this way, their trimmings may be varied to suit any room or any taste.

Another thing I must show you, Jennie. It belongs to the kitchen. I presume you will have a kitchen in your house. It is this little article for cleaning kettles, pots, or anything that requires scraping. It saves the

knives very much, does the work better than they do, and with less injury to the vessel operated on. It is cut out of sheet-iron or tin. This one is of tin (cut it myself out of an old blacking-box lid), has four sides, but is not square. One side is slightly rounded, and one corner quite sharp, to go into all the corners easily. It has a hole in it large enough to hang it on a nail. Mine was lost for a while, and I missed it more than I would some costlier article. There are so many things one could make, both for ornament and use, if time was not so precious. I hope these hints will assist you. Maybe by the time you come again I will have something new.—*Letter to a Young Housekeeper.*

## HOW TO MAKE A FROST BASKET.

Buy a yard and a quarter of very thin bleached sheeting. The thinner it is, the better it will "ravel" or fringe out. Cut it all up into half-inch widths, following a thread across the web, so that the sides will be straight. Then fringe it equally on each side, until there are only three threads left in the center of each piece. Let it lie upon a clean paper until you have fringed all the strips. Then take a piece of bonnet-wire about eighteen inches long, cover it nicely with thick bleached cloth, and stitch the ends together to form a circle. Take your fringed strips one by one and twist them slightly, as you would a twine that you wished to double. Then draw one end of the ribbon inside the wire hoop, leaving the other outside. Bring the selvage ends together and stitch them at the bottom, taking care to keep the curl or twist in the ribbons until they are fastened. Follow around the wire with pieces, placing them about an inch apart (they can be placed nearer, if you choose), then slightly catch them to the covering of the wire to hold them in place. Then tie a thread around the whole, about one-third of the way up from the bottom, thus forming a sort of oval basket, with a large feathery tassel below it. Take four or more of the fringed strips and tack them an inch apart on one side of the top or wire of the basket, twist or curl like the other pieces, and carry the other ends down on the opposite side, securing them as you did the first ends. This is for the bail. You can take a thread around this near the top, making the loop by which the basket is to be hung. With the remaining ribbons make tassels to ornament the top of the basket, fastening them to the wire. Add little bunches of the twisted, feathery fringe to the bottom tassel, on the inside of the basket, to the bail, and on the sides, as fancy may dictate. The effect is delicate and lovely, as no one would imagine unless she has seen them. Their ethereal lightness and whiteness is an exact counterpart of loose frost on the shrubs in winter. If one chooses, a few rich frosted artificial flowers and leaves can be laid on the fringed stringers, which may cross the basket; but it would hardly add to the snowy, ethereal beauty of this cheap, beautiful ornament.

After making one, an endless variety of changes and improvements will suggest themselves to the maker. And, in conclusion, let me say that, if my reader friends do not readily understand these directions, I will forward one of these baskets to Mr. Williams, and let him have his artist picture it for THE CABINET.

M. J. CUMMINGS.

## The Household.

### THE MYSTERY SOLVED.

"WHY, bless me, Katie, what a solemn face! What is the matter, child?"

"Matter enough, I should say. Norah has gone home—her mother is sick and sent for her; and what am I to do about the dinner? I never cooked a meal in my life, and Harry will be sure to come home half-starved."

"Is that all, dear? Well, well, Aunt Ellens are handy creatures to have around sometimes. Take my bonnet and shawl, and get me a large apron (because this is my new alpaca), and I will show you about the dinner. Thank you, dear. This apron will do nicely. While you were getting it, I went to the cellar, to see what was there. Here is the tough end of a beef-steak, some cold mashed potatoes, and a few apples."

"But, Aunt Ellen, that won't make dinner for three; for, of course, you must stay. Oh, dear! Love in a cottage is very nice; but you can't eat it."

"Now, Katie, we'll make what I call a Brown Stew. Cut this meat in very thin slices. Put a frying-pan on the stove, and put in a small piece each of butter and lard. Now it is very hot, put in your meat; sprinkle with pepper, salt, and flour; stir it around till it is quite brown; pour in a quart of hot water and let it simmer for about two hours, and you will—both you and Harry—like it, or I am mistaken. Bring me two eggs, please. While I am beating them, you beat this bowl of potatoes a little. Then add the eggs, a quart of milk, half a teaspoon of soda, and a pinch of salt. Add flour to make a stiff batter; pour in patty-pans a quarter of an hour before dinner. Bake in a hot oven. These we will call potato-puffs or muffins."

"What are you going to do with the apples, Auntie?"

"Make a pudding, child. Get me a teacup of tapioca. As it is late, we will boil it a little while. It is best to soak it over night. Pour a quart of cold water on it and set it on the stove. Pare and quarter enough apples to fill your dish. Cover them with water till the tapioca is done; then add to it a teacup of sugar and a piece of butter the size of your thumb. Drain the apples, sprinkle with sugar and spice, pour on the tapioca, and bake about an hour. With these and some bread and butter, pickled peaches, beets, and cucumbers, I guess Harry won't starve. While dinner is cooking, I am going to look around and see what pretty things you have and tell you how to make a few more. What a cunning little table! But nothing on it. Here in this closet is some Florida moss. What are you going to do with it? 'Tisn't good for anything? Indeed, it is. Either buy or make a wooden cross. Oh! you have one. So much the better. Take this moss, begin at the base of the cross and wind it closely around, tying it on with gray thread. When it is all covered, touch here and there with glue and dredge with flour. Set away to dry, and your cross will look as if it had been caught in a snow-storm. Make a vine of Autumn Leaf wax and another of Ivy. Twist around the cross, then sprinkle with diamond-dust and set it on this little table, and you will be surprised to see how much it will be ad-

mired. A pretty ornament to hang over the center-table is made by taking a large, coarse, round sponge, suspending it by four cords, then sticking it full of ferns (pressed, of course)—the longest ones put in the top and small ones around the sides and in the bottom. A few bright autumn leaves, tied on broom-splints, to lengthen the stems, add to its appearance. Pin clusters of ferns and leaves on your lace curtains and picture-cords, and they will brighten your pretty room amazingly. Take a pair of those crimson damask curtains your mother has thrown in her attic, cut them into lambrequins, line them with cream-colored silesia, finish with a plaiting of damask or a heavy cord, and they will be something to be proud of. The scraps will be nice to make little lambrequins for brackets. Goodness! how I have run on! I am like one of Dickens's characters and have 'the gift of gab quite gallopin'.' Dinner is done, and here is Harry."

"How'd'y do, Aunt Ellen. I am real glad to see you."

"Yes, indeed, you had better be glad to see her; for if Auntie wasn't here you would not see any dinner. For Norah's mother is sick and she has gone to see her."

"That is what I call a good dinner, Auntie. You are a tip-top cook."

"I did not cook it. Katie did. I only told her how. Isn't she an apt scholar?"

"I guess she is. Well done, little wife! Keep on and prosper. Good-by till tea-time."

"Oh! Auntie, I am so glad Harry was pleased. You sit down while I wash the dishes. Is this pudding good cold, Auntie?"

"Yes, quite good; but, if you would prefer it warmed over, it is just as good as new. For supper let us make chocolate blanc mauge, water-melon cake, and chocolate-drop cakes. For blanc mauge take a quart of milk and a cup of sugar; put them in a tin in a pan of water and let it boil; then add two squares of grated chocolate and three tablespoonfuls of corn-starch, dissolved in a little of the milk. Let it boil, flavor with vanilla, and pour in molds and set away to cool. Now we will make the watermelon cake. *White part.*—Take 2 cups white sugar,  $\frac{3}{4}$  cup butter,  $\frac{3}{4}$  cup milk, 3 cups flour, whites of 5 eggs, 1 teaspoon soda, 2 teaspoons cream tartar. *Red part.*—1 cup red sugar,  $\frac{1}{2}$  cup butter,  $\frac{1}{2}$  cup milk, 2 cups flour, 1 cup raisins, whites 5 eggs, 1 teaspoon soda, 2 teaspoons cream tartar. Roll the raisins in powdered sugar, stir into the cake, put it in the middle of the pan, and pour the white around. The drop cakes I know you will like. Everybody does. Take one cup of sugar,  $\frac{1}{2}$  cup butter, 2 cups flour,  $\frac{1}{2}$  cup milk, yolks of 3 eggs, 1 teaspoon cream tartar,  $\frac{1}{2}$  teaspoon soda. Drop on buttered tins and bake in a hot oven. When done, spread with chocolate glazing. I will make it while you make the cakes. I take the white of three eggs,  $\frac{1}{2}$  pound of sugar, two teaspoons corn-starch, and 2 tablespoons grated chocolate. Beat together till stiff. If your cakes are done, spread them and set in the oven a minute, and they will become glossy."

"I am so glad you came to-day, as I did not know what to do about the meals, and you solved the mystery."

"Katie, you should take THE FLORAL CABINET. It is just what every young housekeeper needs and is just the dearest little paper in America. But I won't try to praise it, as I would not do it justice. I will bring you some of mine to look at. They will plead their own cause better than I can. Every one falls in love with them. I only wish they were larger and would willingly pay more for them. Well, I must go. If you get in trouble and want help, just call on

AUNT ELLEN.

### A RAY OF SUNSHINE FOR THE SICK-ROOM.

SHORT as the winter days were to most of the household, they were long enough to Lina, who was a prisoner in her chamber, while others came and went at their pleasure. She had studied the pictures on the wall and the pattern on the paper-hangings, had noticed every flaw in the ceiling, and the very folds of the window drapery, until seeing seemed almost a weariness. How little the well and strong appreciate this feeling in the helpless invalid.

But Lina bore her troubles so patiently that they only drew her nearer to the hearts of all those who ministered to her.

"What can we do to enliven her sick-room?" asked Lottie, as she and her sister and brother were gathered about the evening-lamp below stairs. "Charley, cannot you contrive something pretty for that corner of her room between the two windows? It is just opposite her bed, and if we had something pretty there for her to look at, I am sure it would cheer her and do good like a medicine."

The result of this evening consultation was a very pretty device for the corner, which was prepared down in the family sitting-room and hung up one night, when Lina was fast asleep.

Charley prepared a nice shelf, that would just fit in the corner, and the girls glued on it some beautiful dried moss and sedgy grasses. A few gray branches were set up over it, looking like trees in miniature; and from these hung long festoons of gray swamp moss, making the spot look like a forest dell. To complete the picture, a pretty snow-white heron stood in the deep recess, as if just startled by the observer and ready to take flight; and a pretty cedar bird, of a greenish-gray color, with a red berry in his mouth, seemed just to have alighted on a mossy spray.

When Lina awoke next morning, the first object that met her eye seemed to be a glimpse of her native Southern forest. She rubbed her eyes, and concluded that dreamland shadows had followed her into the realms of day. But as the outlines grew more distinct she saw that the picture was real.

"It is something the dear girls have planned for my enjoyment," she thought; and her loving, sensitive heart brought the quick tears of gratitude to her gentle eyes, as she drew the white covers for a moment over them. Two pair of arms were soon thrown about her and merry voices gave her a happy greeting. The little surprise was a perfect success, and when spring came Lina always would believe that the pleasure it brought with it had done more than anything else to restore her to health once more.

If you have a loved one sick under your roof, you will find that there is no medicine like happiness to work a cure, and even the smallest things that bring enjoyment are worthy of your attention.

## Household Elegancies.

## WHAT I SAW "WHEN I WENT VISITING."

I VISITED the home of a dearly-loved friend, not many weeks since, and saw so many beautiful things to admire that I asked permission to tell everybody how they were made; in other words, to write it for the readers of THE CABINET, provided, of course, Mr. Williams saw fit to give it them. My friend readily signified her willingness, only saying: "Begin with the parlor, if you please, Estrella, as that is furnished or, rather, ornamented entirely by my own hands. The house is of stone, fronting south, and the parlor has two south and two west windows.

The windows were all hung with lace curtains, of beautiful pattern. At the sides, between the sash and curtains, about one-third of the way from the bottom, were placed brackets, on which stood dishes, in which were planted vines, that were growing luxuriantly and were trained in an arch over each window, and also looped the curtains back at the sides. In the west windows were planted Morning Glories and Madeira Vines. In the south Smilax and Cypress mingled their delicate tendrils.

At the parting of the curtains a dainty contrivance was suspended, which greatly enhanced their beauty. In one window it was a hanging vase of crystallized alum, made of wire ripped from old hats and bonnets, twisted into basket shape, tied with twine, bits of twine were tied on here and there, and the whole dipped in a strong solution of alum water and left in the water twenty-four hours. When removed, it was covered with sparkling crystals, strongly resembling frost-work. The basket was filled with green moss, from which peeped pansies of various colors made of zephyr; but so true to Nature were they that we were deceived and thought they were real hearts-ease.

In another was a similar basket, only, instead of alum, a mixture of two parts beeswax and one of resin were melted, earmine enough stirred in to give it a coral tint, and poured over the basket, covering a small part at a time, and when entirely covered put away in a cool place to harden. In this was placed a lovely bouquet of white feather flowers, with green foliage, the edge fringed with delicate grasses and ferns.

At the third was suspended a cluster of egg-shells—one goose and four hen's eggs. They had a small round opening cut at the largest end and were each enclosed in a crochet cover of rose-colored zephyr. The goose egg was placed in the center; the others at equal distances apart, about half way to the top of the center one, and sewed firmly to position. Tiny tassels of the zephyr were attached to the points of the shells. In the center one was placed a large lily, made of white horsehair; in the others a rose, a tulip, a dahlia, and a carnation, of natural hair, and all glued to position.

In the last window hung a small hoop of wire twined with woodbine, with its leaves and berries. In it was perched a canary. "Poor Dickie!" said my friend. "When he died I could not bear to lose him altogether; so I preserved the semblance as well as I could."

I can only leave to your imagination the exquisite

beauty of those windows, with their lovely green arches lit up by the crimson stars of Cypress and the blue and pink cups of the Convolvuli, as they appeared through the misty lace, the sparkling baskets with their flowers, the novel egg-castle, and Dickie swinging on his perch. Between the two west windows hung a mirror, around which a luxuriant Wax Plant, in full bloom, was trained. In the southwest corner stood, upon a little stand, a deep frame, two feet high, lined with crimson satin. In it was placed a cross, wreathed in flowers, all in wax of purest white. On the east side of the room, in the middle, stood an organ. Upon the wall at each end of it was hung a wall-pocket for music, that, while extremely useful, was neat and pretty and not at all expensive. They were of the same size, cut of pasteboard, the fronts an inch larger each way than sheet music. The backs were the same, only shaped to a pretty point about six inches higher than the fronts. One was covered with braid of two old hats, which were no longer wearable—one brown, the other white. The brown braid was stretched across the front quite closely (lengthwise) and fastened at the ends; the white was then woven over and under, from side to side. Any simple crochet pattern may be used. In this the border was simple cheeks; the middle, brown background, with initials in white. The upper part of the back was covered with checks and each piece bound with brown braid; the bottoms sewed together; and sides laced together, with brown cord and tassels at the bottom. A cord is fastened at the two upper corners of the back, allowed to fall loosely over the back, brought to the point, tied in a knot with three loops, sewed firmly. The middle one served to hang it by. The other was covered with corn-husks. Pieces were cut in strips half an inch wide and sewed in loops around the edge—two rows. Then with a pencil an oval was marked on the pasteboard, the ends just touching the center of the ends. Next, the space between the pencil line and the corners was filled in with loops. Now husks were folded crosswise and cut off a little over an inch long, double. The doubled edge was cut finely, to fringe it, and sewed on thickly, putting the fringed edge over the pencil line, sewing the other edge fast. Another row of fringe was put on, turning the fringed edges inside the oval. A row of loops of strips an inch wide were sewed between the fringes, to hide the stitches. A rose-berry was put in now and then. The inside of the oval was filled in with large loops, with a cluster of berries. The upper part of the back was ornamented the same; except that, instead of an oval, the fringe followed the outline of the point. It was finished with brown cords, to match the other. Over the instrument hung a group of nine photographs of children, arranged in a diamond. A diamond of pasteboard was cut, the nine pictures sewed on, and worsted leaves in various shades of green and a few tiny buds were placed about them, wreathing each picture separately and framing the whole in a garland of green. Tacked upon the wall, it presented a charming appearance. The sweet, innocent faces of the little ones looking out from their green bower was very attractive.

There was a lamp-mat of scarlet flannel over pasteboard, with a border of the white, downy feathers of

chickens, that was beautiful. Picture-frames of cones and acorns, of shells and mosses, yes, and one of popcorn, several of paper, in imitation leather work, formed a portion of the attractions of this lovely home.

A rug that we admired greatly was made of breadths from an old alpaca dress, cut into a six-sided square. A wreath of leaves of different shades of red, green, and brown was sewed on it; and the stems and veins of the leaves made of common stocking yarn, old at that.

But I have not told you of the half of that "one woman's work" in beautifying her home. Yet she does all the work for her husband, herself, and two little ones, and lives on a farm at that, with plenty of extra work thrown in.

ESTRELLA VERNE.

## AN ÆOLEAN HARP.

MAKE a long, narrow box, as long as the window or other place it is to occupy is wide; four inches high and five inches wide of wood about  $\frac{1}{4}$  of an inch thick or even less. Pine wood will answer for this case. On each end glue very firmly two pieces of hard wood, such as oak or walnut,  $\frac{1}{2}$  of an inch high,  $\frac{1}{4}$  of an inch thick, and long enough to extend from one side to the other—or the width of the box, in other words. Before fastening these on, furnish one of them with seven brass pins and the other with seven wooden pegs—such as piano strings are wound on. These may both be procured, as also the strings, at any music store. Within the case,  $\frac{1}{4}$  of an inch below the top, fasten two pieces of wood, beech or pine, one inch square, and to fit in the box against each end. On this place a piece of thin board,  $\frac{1}{8}$  of an inch thick, with a circular piece cut out in the center, larger or smaller according to the size of the case, just as you see the sounding-board in a guitar or violin. The strings must first be fastened at one end to the pins, then wound round the pegs, which must turn, so as to allow of their being turned when tuned. Next fasten in the corners of the box four pins or pegs, four inches high, on which place a piece of  $\frac{1}{4}$ -inch thick board, to allow a free current of air to pass over the sounding-board and across the strings.

## AQUARIUMS.

A READER of your paper asks how to make an Aquarium, and if your space will allow I will give her my experience. To begin, I purchased four panes of ordinary window-glass, which cost me one dollar. Two of these panes were 12x16 and two 16x26. I got a carpenter to make me a substantial walnut frame, with an oaken bottom and furnished with small grooves for the glass, which I inserted and cemented with the following preparation, that cost me just forty cents: One part by measure of litharge, one part plaster paris, one part fine beach-sand, one-third part of finely-powdered resin. Mix well and make into a putty with good boiled linseed oil. It will stand water at once. I was obliged to cement the entire bottom of my aquarium, as there were some knots in the timber, through which the water leaked, and then gave it a good coat of white paint, to make assurance doubly sure.

## Fireside Reading.

### FLOWERS FOR A SICK-CHAMBER.

"Along her cheek the deep'ning red  
Told where the fev'rish hectic fed;  
And yet each token gave  
To the mild beauty of her face  
A newer and a dearer grace,  
Unwarning of the grave."

In a valuable and instructive book by Miss Nightingale upon "Nursing" and the duties and cares of the sick Miss Nightingale thus speaks upon the value and restorative power of beautiful flowers.

As a proof that flowers are beneficial in such a place, *The Herald of Health* endorses this practice.

"I have seen in fevers (and felt, when I was a patient myself) the most acute suffering produced from the patient not being able to see out of the window, when the view to be seen was nothing but a clump of trees. I shall never forget the rapture of patients over a bunch of bright-colored flowers. I remember in my own case a nosegay of wild flowers being sent me; and from that moment my recovery became more rapid. People say that the effect is only on the mind. It is not so. The effect is on the body, too. Little as we know about the way in which we are affected by forms, by color, and by light, we do know this, that they have an actual physical effect upon the body. Variety of form and brilliancy of color in the objects presented to patients are actual means of recovery.

"Do not be afraid to place shrubbery, plants, and bunches of cut flowers in the patient's room.

There is a 'learned ignorance,' common to nurses and physicians, that such things are injurious, on account of the carbonic acid they are supposed to give off. Of course, if you should fill a room like a hot-house with plants and flowers, some evil effect of this kind might be expected. Besides, plants only give off carbonic acid at night. And even if they should be left in the patient's room at night, which is not at all necessary, the amount that would be given off by a good-sized plant or bunch of flowers would hardly poison a fly. As to cut flowers, the actual is the reverse of that feared. If they are placed in a tumbler or vase of water, as they generally should be, they absorb carbonic acid gas, decompose water, and give off oxygen, which is a healthy process. Some flowers are not healthy. The smell of the Lily depresses the nervous system; so the Jessamine; and some other flowers, of a disagreeable,

faintish, sickening smell, though ever so handsome and brilliant, should not be brought into a sick-room. The Rose, the Pink, the Geranium, and such flowers of grateful smell are beneficial, on account of their healthful and agreeable fragrance, as well as their beauty and brilliancy of color. Brilliant colors are to be preferred. Red is the best color, blue the poorest. Blue seems to be a depressing color to the sick."

"The power of kind words and soothing sounds appease  
The raging pain and lessen the disease."

### ANGELS WHISPERSWEET GOOD-NIGHT.

[The following beautiful song of "Sweet Good-Night" was sent to us by a sweet little child, with a request for us to republish it.—ED.]

Close your eyes, my little rosebud,  
Lay your hand upon your breast,  
It is time, my little darling,  
Now to tuck you in your nest.

PAPA'S SLIPPERS.

"On the perch your birdie's sleeping—  
He will call you when 'tis light;  
And around your pillow, darling,  
Angels whisper: "Sweet good-night."

With the break of early morning  
You will hear the birdie sing;  
He will raise the head that nestled  
Underneath his golden wing.  
With a trill that is enchanting,  
He'll awake you from repose;  
For the faintest rays of daylight  
Rouse him from his quiet dose.

Then adown the dewy meadows  
You can trip, with joy and glee,  
And awaken from their slumbers  
Yellow butterfly and bee.  
They will all be glad to meet you,  
In the sunshine warm and bright.  
So, my little darling, kiss me,  
While the angels say: "Good-night."

## HUMORS OF THE TIME.

"QUI S'EXCUSE S'ACCUSE."—Officer (visiting rounds, midnight) to sentry: "How is it you did not challenge us?" Private: "Sure, sir, I did not know who you were."—*Fun.*

.... "Will you please insert this obituary notice?" asked an old gentleman of a country editor. "The deceased had a great many friends about here who'd be glad to hear of his death."

.... An old Negro fiddler of Cuthbert "got religion" a few days ago; whereupon he shivered his fiddle on the doorstep, saying: "No man kin hab religion an' be a fiddler."—*Columbus (Ga.) Sun.*

.... A beautiful little Brookline girl, being reproved the other day by her elder sister for using a slang expression, sharply retorted: "Well, if you went into society more you would hear slang."—*Brookline Chronicle.*

.... We heard of a Sunday-school scholar who, being

told how God punished the Egyptians by causing the first-born of each household to be killed, rejoined with: "What would God have done if there had been twins?"—*Boston Transcript.*

.... Professor: "What was the state of French affairs at this time?" X (rapidly): "The majority ruled the minority, and consequently the minority was ruled by the majority, as it were." Professor (sternly): "Sit down, sir!"—*Yale Record.*

.... A BUY AND A SELL.—Operator (apropos of customer's beard): "Yes. Great improvement, indeed, sir, since you took our 'Balm of Lilyria.' Of course, you will try another bottle?" Customer (drily): "No, thanks. Haven't tried the first yet."

.... "Ouida," the gushing novelist, asks: "What will the children now growing up with us know of our

Italy?" Well, they will know that "our Italy" furnishes this country its dirtiest organ-grinders and the sorest-eyed monkeys.—*Norristown Herald.*

.... "Leave your great-coat, sir, if you please!" said a theater cloak fiend. "Oh! with pleasure!" assented the gentleman, taking it off (he had no other on) and walking toward the stalls in his shirt-sleeves; but the fiend relented.—*London paper.*

.... Small Hartford Boy to Police Commissioner: "When'll you buy dogs, Cap'n, and give a dollar apiece?" "Why, my young man?" asked the Commissioner. "Corz I've got six in the sullen and Tom White he's got twelve. We're keepin' um for the dollars, you see."

.... In a recent case for assault the defendant pleaded guilty. "I think I must be guilty," said he, "because the plaintiff and I were the only ones in the room, and the first thing I knew was that I was standing up and he was doubled over the table. You'd better call it guilty."

## Housekeeping.

## YOUNG HOUSEKEEPERS.

"WELL, Nellie, I have come for you to tell me all you know. Are you prepared?" exclaimed my young friend, Annie C—, as she entered my sanctum one sunny afternoon, tossing her hat on the table and seating herself with a whirl on a low stool at my feet.

"That may not take me long," I replied, smiling. "But what subject would you have me ventilate my wisdom on first?"

"Oh! it's something to eat I want to know about." "Here I am, only eighteen, married, with a husband to please. And I know just nothing at all about pleasing his palate. I had helped mother some while I was going to school; but that did not amount to much, and I was married so soon after graduating I could spend little time on housekeeping arts. But, of course, I thought everything would come right; supposed instinct would tell me how much coffee to put in the pot. It does not seem as if we had had a decent meal since we went to house-keeping. I can't run home and ask mother, and I am just sick and tired of my experiments. Charley boarded with your mother so long he has come to quoting her, instead of his own mother, that husbands proverbially hold up to their wives for example. So I have come here hoping her mantle has fallen on you. In the first place, my bread is poor, indeed. You know our village does not afford a baker, and I have tried all the receipts I could find for yeast-making. Have boiled hops and potatoes, and have decocted any quantity of messes supposed to have a lightening effect; but, in spite of all, my bread is execrable. Charley says your mother made the best bread he ever ate, and he don't believe she used yeast at all. And I want to know how, if possible. And—would you believe it?—I can't even make decent pie-crust; and my cookies—oh! oh!! oh!!! Then Charley quotes some ginger cookies he used to get at your house, that were perfection."

"Oh! well, if that is all you want, I can give you the required information." I agree with your husband perfectly about that bread. I don't like yeast-bread half as well. But the milk-rising, as it is called, is more difficult to make. That is, it requires more care while rising. But as to how. Take a little less than a pint of water, as warm as you can bear your finger—just cool enough to scald the flour. Add a lump of soda as large as a pea; a few spoonfuls of milk, if you have it. Stir in flour to make a moderately stiff batter and set in a warm place. If your flour is good, they will be light in five or six hours. Then take a pint of warm water, with a lump of soda as before, pour about half of this into the center of a pan of flour, stir up a thin batter; then add a small teaspoonful of boiling water, stir rapidly; then pour in the rest of the warm water, and finally the rising. But be sure your batter is not hot enough to scald them at all. Stir as thick as you can with a spoon, leaving flour under and around the sponge. Also cover about a half inch deep with flour, and set in a warm place

as before. It will be ready to mix in about an hour. Do not knead too hard, and place in tins to rise again. When light, bake in a brisk oven. The oven must be just right, and this you can only tell by experience. A moderate-sized loaf ought to bake about forty minutes. Some flour makes better bread if mixed with part milk. Milk will make your bread a little whiter. Do not salt it, as it makes it hard and causes it to get dry sooner. I find it much easier to get rid of dry bread of this kind, as there is no flavor of yeast about it when made into pudding or toast. I make an inexpensive pudding, that we all like well. Take about a pint of crumbled bread, a little more than a quart of milk. Sweeten to taste. I think two tablespoonfuls enough. Two eggs, well beaten, salt a very little, flavor with cinnamon or nutmeg, add raisins, butter your pudding-dish, and bake slowly an hour and a half. Do not fill your dish full, as it swells while baking. Does not require any sauce.

## PIECRUST.

I use equal quantities of lard and water. Rub the lard cold into the flour. Then add cold water. A teacupful of each is sufficient for three pies. Mix hard as quickly as possible, and bake immediately in an oven as hot as possible and not burn.

## COOKIES.

Two cups of white sugar, one of butter, one of buttermilk, one teaspoonful heaped of soda, two eggs. Mix as soft as possible to roll and cut nicely. Bake in a hot oven.

## GINGER COOKIES.

One egg, one cup of brown sugar, one cup of molasses (New Orleans the best), one cup of shortening, not necessarily butter,  $\frac{1}{2}$  cup of buttermilk, one and a half teaspoonfuls of soda, one teaspoonful of ginger. Mix stiff and bake in a hot oven.

Watch your fire closely, and you will soon learn to temper it to the needs of the dough. Success depends almost as much on having the oven just right as on anything else. The dough may be perfect and your cake or biscuit a failure because your oven was a little too hot or too cold. You will find experience a great help with all receipts; but that will come in time.

## HOUSEHOLD ECONOMY.

Why is it that nearly everybody puts up their tomatoes in tin, instead of glass? It is believed by many that they cannot be kept in glass. This is certainly a mistake, as we have canned in glass for some years, and experience no trouble in keeping them and do think it is the cheapest and most wholesome way.

The principal features to be observed in canning in glass are as follows: Temper your cans well. Close the doors of your cook-stove and set the cans on the stove-plate and pour in warm water, gradually increasing the quantity and the heat of the water until you can pour it in boiling hot.

Heat your tomatoes in a porcelain kettle. (This is the handiest and most convenient kettle for all canning operations.) When ready for the cans, empty the hot water out and turn up to drain, and then fill.

If you are short of cans, you can boil down the tomatoes considerably, and they will require little more than a good heating when served.

When the can is full, wipe off carefully, and adjust the gum and top, screwing the latter at intervals. Next day store in a cool, dark place, and you can keep them the year round. I think this is one reason why some people lose so much of their fruit. I have seldom lost a can of fruit in hundreds of quarts canned every year.

After canning, it is well to examine the cans several times, at intervals of a week, as it often happens, even in new cans, that there are flaws. Or sometimes a seed gets under the gum and lets the air have vent, which will cause the fruit to work or ferment and spoil. This is readily seen by bubbles rising to the top. It can be saved by reheating. We now can all our fruit without sugar; so that, if any happens to spoil, nothing but the fruit is lost. We always open the cans and sugar the fruit a few hours before using.

By constant use the can-lids become incrustated. This can easily be removed by washing in a solution of sal-soda.

To have tomatoes like fresh ones sliced in vinegar the year round, slice nice ripe tomatoes and place in your cans, and let them come to a boil in a water-bath (stand cans on sticks in the bath), and then seal. Serve in sweetened vinegar, with pepper and salt.

An excellent pickle for winter use is made as follows: Slice green tomatoes and onions. Put in a stone vessel alternate layers of onions and tomatoes until full (pressing down occasionally).

If a good-sized vessel, put on top 1 pound of brown sugar,  $\frac{1}{2}$  ounce cloves,  $\frac{1}{2}$  ounce cinnamon, and  $\frac{1}{2}$  ounce allspice. Set on the stove and heat gradually until it comes to a boil. When cool, put away.

## TO CLEAN ENGRAVINGS.

It frequently happens that fine engravings, despite the care taken of them, will in some unaccountable manner become stained and dirty to such an extent as to seriously impair their beauty. To those of our readers who own engravings that have been injured in this way a simple recipe for cleaning them will prove of value. Put the engraving on a smooth board and cover it with a thin layer of common salt, finely pulverized; then squeeze lemon-juice upon the salt until a considerable portion of it is dissolved. After every part of the picture has been subjected to this treatment, elevate one end of the board, so that it will form an angle of about forty-five degrees with the horizon. From a tea-kettle or other suitable vessel pour on the engraving boiling water, until the salt and lemon-juice be all washed off. The engraving will then be perfectly clean and free from stain. It must be dried on the board, or on some smooth surface, gradually. If dried by the fire or sun, it will be tinged with a dingy yellowish color.

**Hoarseness or Tickling in the Throat.**—Take a small quantity of dry pulverized borax, place it on the tongue, and let it slowly dissolve and run down the throat. It is also good to keep the throat moist at night and prevent coughing.

## THE CRUCIAL TEST

of the value of medicine is time. Does experience confirm the claims put forth in its favor at the outset? is the grand question. Apply this criterion, so simple, yet so searching, to TARRANT'S EFFERVESCENT SELTZER APERIENT. How has it worn? What has been its history? How does it stand to-day?

TARRANT'S SELTZER APERIENT is a household name throughout the United States. It is administered as a specific, and with success, in dyspepsia, sick headache, nervous debility, liver complaint, bilious remittants, bowel complaints (especially constipation), rheumatism, gout, gravel, nausea, the complaints peculiar to the maternal sex, and all types of inflammation. So mild is it in its operation that it can be given with perfect safety to the feeblest child; and so agreeable is it to the taste, so refreshing to the palate that children never refuse to take it.

## BEAUTIFUL HOMES;

## Or, Hints in Housefurnishing.

No. 4. Williams' Household Series. Ready in Oct. 1877.

This charming book is a companion volume to "Household Elegancies," and "Ladies Fancy Work," and superior in many respects. The contents are so practical, relating specially to housefurnishing and furniture, (the other volumes were devoted to Elegancies and Fancy Work), and beautifully arrange all the rooms of the house, that no lady can well afford to be without it—and the author, MRS. C. S. JONES, has made it the most complete of any book on this subject in America. The same style of elegant engravings which has characterized the previous books of this Household series, is continued in "Beautiful Homes," and with profuse sketches, it illustrates and describes the following topics:

Carpets,  
Wash-Stands,  
Wall-Paper,  
The Living Room,  
The Parlor,  
Bed-Rooms,  
Halls,  
Umbrella-Stands,  
Door Mottos,  
Toilet & Dressing Tables  
Curtains,  
Lambrequins,  
Screens,  
The Library,  
Cabinets,  
Etageres,  
The Dining Room,  
Window Screens & Blinds,  
Mantels,  
Chairs,  
Rugs,  
Ottomans,  
Tables and  
Stands,  
Sofas,  
Foot-Stools,  
Cushions,  
Affghans,  
Baskets,  
Racks,  
Tidies,  
Miscellaneous  
Conveniences,  
Etc., Etc.,

Everything relating to the picturesque furnishing of bedrooms, halls, parlors and sitting rooms, is given, that any lady may, with the little or much money at her command, make a winning and beautiful home.

## SKETCH OF PRETTY WINDOW-GARDEN.

It has lately occurred to me that a sketch of my window-garden might be acceptable.

The apartment is better lighted than is often the case with a bay window and the usual curtains and blinds. As the window faces west, the sunshine is allowed to penetrate the room unchecked, and has never proved inconvenient, even on the longest and brightest summer days.

My window-garden does not need heat, and, of course, I never plant in it any orchids or other tender plants, that a few cold nights would kill or injure past recovery. I am content with such Ferns as will live through the winter.

If possible for all readers to get a window which does not need special heating in the winter, do so, for the number of lovely plants that will thrive in them is beyond counting, and the care required to keep up an artificial temperature all the winter is really oppressive. Servants are fallible and forget. If you begin say in November to heat the case if closed, you must go on until April or May.

If you leave off when the pressure is very severe, say in January, you will probably lose all your plants, even if they are quite hardy, because the employment of heat will have kept them in a state of activity, instead of rest, and a severe frost, finding them unaided, will effect their ruin.

My bay window is fitted in a very simple manner. It consists, in the first instance, of a series of zinc trays, 18 inches wide and the same in length, the depth being one foot. These fit closely together and are completely hidden by an ornamental kirting of rosewood, which can be removed in one piece, as it is attached to a front of deal. The zinc trays are all freely pierced, for drainage, and they rest on thin slips of wood on a slab of slate, which in its turn rests on the sill and the central sup-

port. The furnishing consists of a combination of pot-plants, with plants which are naturally rooted in the zinc boxes.

Thus in two of the side boxes small-leaved Ivies

movable when required. In these I generally plant fine-leaved Ferns; and as soon as they begin to decline in beauty I take them out, plant them in the fernery, and refurnish the trumpets with fresh plants.

In the boxes which are reserved for pot-plants I put chopped moss only, packed closely around the pots; and I keep the whole surface covered with living Lycopodiums, which are rooted in the boxes containing earth. I have but to lift the Lycopodium gently, when changing the pot-plants, and then replace it, to afford a living, lace-like covering.

I obtain from the gardener some good farm compost, consisting of fibrous peat chopped up with silver sand, and I find that this will grow any plant, from an early Tulip to the most delicate Fern or Lycopodium.

When my pot-plants have declined in beauty, I return them to the gardener, and obtain from him others in return, always securing pairs, if possible.

I find Dracenas, Yuccas, Agave, Bambusas, and Rhododendrons admirably adapted for the purpose, if not too large, and almost all kinds of Ferns are suitable.

If I were to begin my garden and build over again, I would admit light from above, as well as at the sides. I would have wooden, instead of zinc boxes, and I would have the window-frames made to slide up and down easily, by means of cords and pulleys within the room.

"JULIET."

## VIOLETS IN POTS.

About the end of October put the plants rather firmly in six or seven-inch pots, using any good garden soil, thoroughly watering when newly potted and partially shading for a few days. If not properly watered, the leaves will become yellow and the flowers not attain full size. Kept exposed to the sun, with a cool temperature at night, they flower well. M. MILTON.

SKETCH OF WINDOW-GARDEN.

have long been established, and form a most elegant tracery on iron wires, the two main supports to the trellis being fitted with glass trumpets, removed from a table decoration and fitted into a socket, so as to be

## Floral Contributions.

## MY HOUSE PLANTS.

[To this Article was Awarded First Prize for Floral Topics.]

I believe I was perfectly happy the day my Plant-Room was finished. It is very pleasant to have something exactly one's own way, and to find one's own way a very excellent way is more pleasing still. I looked at the large windows, the pretty, dark-tinted woodwork, and the white ceiling, contrasting so well with the dark panels, and thought how pleasant would be the arranging of my Floral treasures, and how many I could add to their number, and pictured the vines that should be wreathed around and above the windows; and, as I said before, was happy. I thought once that if I could have a bay-window for my plants I should be satisfied; but by the time I could have the window my ideas had enlarged (they had had ample time, for I had waited a good many years), and I thought how satisfying a thing it would be to have a little room built out from the dining-room for the sole use and comfort of my beloved flowers. Our house stands with its front to the west, and there is an extension in the center of the rear, containing dining-room and kitchen. This leaves a sheltered corner to the south and east, and in this corner was built my plant-room. It extends out about eight feet from the dining-room and is fourteen feet in width. One side and one end are principally composed of glass, and one side is open to the dining room. The other end, of course, joins the main part of the house. There is a good stone foundation, and a double floor, filled with sawdust. The roof is a common shingled one. I could have no glass about that, as after every snow-storm we are liable to quite an avalanche of snow and ice from the roofs above. But the windows reach to within six inches of the floor, and, as there are three in the side and two in the end, there is an abundance of light. The inside woodwork and the window-sashes are of butternut, oiled, not painted, and the rich, warm hues of this wood are very beautiful. The floor is of cedar, also well oiled.

I shall not have room to tell of my flowers, if I say much more about their dwelling-place; so we will suppose three years to have passed, and I will give a description of those I now have—at least, part of them—and my mode of treatment. The large stand in front of the window nearest the main building is filled with Geraniums—single, double, and sweet-scented. So much has been written of these favorites that I can do little but repeat the oft-told "small pots, plenty of fresh air, and not too much water." Those for winter blooming I keep on a partially shaded verandah through the summer, with no more water than is necessary to keep the leaves from wilting, and pick off any enterprising buds which make their appearance. The first of September I bring them into their winter-quarters and am a little more generous with their supply of water. After the first of November I let them have their own way in regard to blooming, and give them a drink of liquid manure once a week. By the middle of December there are usually quantities of

buds, and on Christmas Day some of the kindest offer me a handful of brilliant blossoms to grace my dinner-table. All through the rest of the winter the stand of Geraniums is a thing of beauty; the double ones adding their beautiful clusters of maroon, pink, and scarlet the latter part of January. I take care to allow no seeds to form on these plants, for they blossom much better when the flowers are removed while in their prime.

The next stand, a great favorite of mine, is made of an old kitchen-table. The top was taken off, and boards nailed across underneath the frame-work of the table, leaving a sink-shaped receptacle. This was lined with zinc, a thick layer of charcoal put in the bottom, and the flower-pots placed thereon. A grand old Fuchsia occupies the center of this stand, and around it are ranged younger branches of the same family. These Fuchsias have the very richest soil I can give them. They require more water than Geraniums, and also a little more care; for, if left entirely to their own devices, they are not likely to grow symmetrical. The other pots in this stand hold two or three Double Stocks, a Begonia Weltoniensis, a pink Bouvardia, and a Heliotrope. The Stocks were taken up from the garden just before the first frosts, into good-sized pots, filled with common garden-soil, and, after having been kept in the shade for a week or so, were brought into the full sunlight and have done admirably. The Begonias I find require poorer soil than most house-plants, else they grow too long and slender for beauty. I use a large proportion of sand for them, and very little for the spicy Bouvardias and sweet-breathed Heliotropes. I like to start fresh cuttings of the Bouvardia every second year—I root them in wet sand; but I think the older and stronger a Heliotrope is the better it blossoms. I cut back my Heliotropes every summer and take out as much of the surface soil in the pots as I can without disturbing the roots, filling up again with fresh, rich earth from the woods.

The spaces between the pots in this stand are filled with sandy soil, and slips of German Ivy, Tradescantia, and Maurandya planted therein. These ramble among the flower-pots and hang in long festoons from the old brown table, and one adventurous Maurandya has embraced the Fuchsia tree and nods its head from the topmost branches. This stand is on casters and is occasionally turned around, to keep the plants in perfect shape, and is showered regularly once a week with lukewarm water, and when in bud or blossom the plants are given a weekly dose of liquid manure.

I may as well state here how I prepare this stimulant. I put about two tablespoonfuls of dry hen-manure and a pint of charcoal in a bucket, and pour over it a quart of boiling water, stirring it well with the old iron spoon I keep for this purpose. Then I fill up the bucket with a gallon of warm water and let it stand till cool enough to use. There is no disagreeable smell to this stimulant, and the plants like it wonderfully. They are given a spoonful or two, according to their size, not oftener than once a week.

Across the window near which stands the plant-table above mentioned I have two shelves—one at the bottom and the other about half way to the top. On the upper shelf my Chinese Primroses open their large

clusters of delicate blossoms from November to May. For constant bloom I know of no flower to equal these. I sowed the seeds in sandy soil in large flower-pots in June, and covered with glass until the tiny green shoots made their appearance. Then I gave them the morning sun every day, and when the first rough leaves had begun to assert themselves I transplanted the little things. I must confess that I lost several by this operation, and another time shall not transplant quite so soon. In October I put the tiny plants into the pots in which they were to remain during the winter, and in February they began to blossom. I had seventeen nice plants from the one packet of seed, and I think the principal difficulty in raising these beautiful additions to our window-gardens is in the improper sowing of the seed. I sprinkled mine lightly over the surface of the soil in the pots, and then through a fine sieve I sifted a very little earth over them. In regard to their after-treatment, they should never be showered or sprinkled; but the dust should be occasionally wiped from their leaves with a piece of velvet or plush. Also in the occasional doses of liquid manure given to other plants pass the Primroses by; but give them plenty of warm water.

My Roses are in unglazed pots, in a soil composed of equal parts of leaf-mold, loam, sand, and the contents of an old hot-bed. The bottom of the pot is provided with good drainage. A layer of broken crockery and bits of charcoal first, then above it a handful of the soft, thick gray lichen that grows on rocks. They are showered with clean warm water twice a week, and red spider, green fly, and the other rose-pests are unknown to them.

In front of the other south window is a stand similar to the one that holds my Geraniums, both made of well-oiled pine, and containing a large number of miscellaneous plants—Lantanas, Begonias, Calceolarias, Carnations, a few Pelargoniums, a Stevia, and a Daphne among them. I put the Lantanas and Pelargoniums in the garden in the summer, and start fresh slips for the house. If only the Pelargoniums were not such shy bloomers, how desirable they would be! Calceolarias are among my favorites. Mine are grown from cuttings and are in light sandy soil. I cut them back every spring and keep them on a shady verandah, giving them very little water through the summer. I bring them into my plant-room in September, so that they may become accustomed to indoor air before the fires are kindled for our long winter.

Carnations are very obliging plants, and if you will only give them very rich soil, not too much water, and plenty of sunlight and fresh air, they will reward you with quantities of sweet-scented blossoms.

I would part with many things before I could spare my beautiful Daphne, with its pearly clusters and dark green leaves. Mine has the same treatment usually given to Oleanders, and I should think every one would prefer a Daphne to an Oleander.

Opposite one of the east windows is the gem of my collection—a Calla Lily. The stand here is a circular one, about two feet in diameter and raised only a few inches from the floor; and in its center a rustic support, made from the curved and twisted roots of a birch tree, for the large jar containing a Lily, or more proper-

(Continued on Page 5.)

## Answers to Correspondents.

**Common Names of Plants.**—A correspondent from Salena, California, writes: "THE CABINET is generally so correct in its names and descriptions of plants that I would suggest printing in your paper or in pamphlet form a correct list of garden flowers, with a list of the erroneous names commonly given in seedsmen's and florists' catalogues. No one expects a list describing each variety of Rose Geranium or Fuchsia, of which new kinds are every year sent out by florists; but such blunders as calling *Dicentra spectabilis* Dicylstra or Declytra, *Calla* Cally, or *Calecolaria* Lady's Slipper. *Lilium speciosum* (Japan Lily) is described as "speciosum album lancifolium" (Our correspondent is a little out. The Japan Lily is *Lilium lancifolium*.) *Sedum carneum variegatum* is written Caruecum. Hemrocalles and Funkia are classed as one, and both with Day Lily and "Fugia." These are but a few of the examples. And then there is another annoyance: calling seeds and plants by their Latin names alone, or giving descriptions in one place by a Latin name and in another by a common. A dictionary of Latin names, with corresponding common names and the improper names most usually found, would be a blessing to lovers of flowers, and would, we think, well repay any one who would produce such a book at reasonable cost."

We agree with our correspondent that such a book might be useful; but that it would have any extended circulation or pay the publisher we very much doubt.

It would have no effect in making florists' catalogues more correct. Many who issue catalogues are illiterate men, and such probably would not take the trouble to be correct. There is, however, in this respect a marked improvement of late years, many of the catalogues published being generally correct in nomenclature. But, even supposing such a volume would pay the publisher, the difficulty of compiling it would be very great, for the simple reason of the confusion of common names in this country, the same common name being applied in different sections of the country to totally different plants. A well-known horticultural writer has been for many years collecting the common names of plants in the United States, with a view of publishing just such a work as you suggest. He has already several hundred pages of close writing, and the more he investigates the subject the more inextricably confused does the work become. There is no general rule to go by, no uniformity of action, and generally no obvious association of the name with the plant. This fact brings us to the second part of your letter—the objection to Latin names. These scientific names are uniform all over the world. One name suggests the same plant to the botanist here and to one living at the antipodes. Even if the names were arbitrary and without meaning or application, the reason we have given would be sufficient to recommend them; but they usually are given for some reason either commemorative or with reference to some peculiarity of the plant.

In this connection we cannot do better than to quote from a volume recently published in this city:

"Botanical or scientific names have generally been given for some good reason. As a rule, they are gen-

erally intended to point out something remarkable or characteristic in the plant, and are no more than classical ways of stating facts identically the same in nature as those expressed in "blue bell," "white-thorn" or "dandelion," or *dent-de-leon*. To persons acquainted with Greek and Latin their meaning is obvious. [It would be a great educator if every botanical writer would subjoin to his book a glossary giving the derivation and signification of every botanical name used by him. This is done in the volume above referred to.]

"The question is often asked: 'Why cannot flowers have English names?' In one point of view, to give them English names is impracticable. On the other hand, they are already possessed of English names. Appellations like daisy and buttercup they can never possess and to attempt to bestow them would be a useless and thankless task; for no one would be willing to accept them. It would be absurd. *Fuchsia*, *Rhododendron*, *Iris*, *Chrysanthemum*, *Crocus*, *Narcissus*, and a thousand others of corresponding fabric are thoroughly un-English.

"The people who talk of Lilies and Roses, yet complain of Latin names, belong to the school of M. Jourdain in Molière, who had 'spoken prose all his life without knowing it'; for in the former names they are wholly free from Saxon, Lily, Rose, and Violet being nothing more than Latin words with the endings slightly altered. Botanical names will in time be adopted by all sensible people, without a murmur; just as we have accepted *Fuchsia* and *Rhododendron* and the hundreds of similar names, which have virtually become the English ones. They will in time slide into everyday speech, just as *Polyanthus* has done. Our own experience leads us to believe that those who object to Latin names do not want to learn the English ones either.

"There is no need to point out anew that without scientific names there could not possibly be any reciprocal understanding or any uniformity of action among florists and botanists, especially those residing in different countries, every geographical change implying a new set of vernacular terms."

**Climbing Plants.—Training Zonale Geraniums.**—Can you give the name of two good climbing plants for a hot greenhouse—one with variegated leaves and one with fragrant flowers?

A. C. B.

New York.

*Answer.*—1. *Cissus discolor* is a very ornamental plant, with beautifully marked foliage, which in certain lights is very lustrous. If good heat is given, it will grow all the year; but we prefer to let it rest a little in midwinter. *Stephanotis floribunda* has a dark green, thick foliage and pure white, waxy, fragrant flowers. It blooms in spring and summer. Both these plants need rich soil and plenty of heat and water when growing; but less, of course, when at rest. They do best if planted out in the inside border, growing very freely and will in a short time cover the rafters; but may be grown in large pots very successfully.

2. Zonale Geraniums may very easily be trained into a handsome shape by pinching the growing shoots, and thus causing the axillary eyes to break; repeating this as the side-shoots grow long.

**Scale on Plants.**—Can you tell me what the insect is on the orange twig which I enclose?

Lenox, Mass.

A SUBSCRIBER.

*Answer.*—The insect is the scale which infests vine Roses and all woody-stemmed plants. Make a strong suds with tobacco-soap. Take an old tooth-brush and scrub the stems where the scale is. Then with a sponge and lukewarm water wash every stem and leaf and

shower the plant with clean water. If tobacco-soap does not kill the scale, try a suds made of carbolic soap with warm water in the same way. Several washings from time to time may be required, if the scale is bad.

**Magnolias.**—What Magnolias are hardy in the Northern States? A neighbor has a very fine one, with purple flowers, which bloom before the leaves come out.

A. B. S.

Troy, N. Y.

*Answer.*—Your neighbor's Magnolia is probably *M. Soulangiana*, one of the Chinese varieties. *M. purpurea* and *Lenne* also have purple flowers, but would not be hardy with you. *M. conspicua* has white flowers. All these are Chinese. *M. glauca* has small white flowers; *M. tripetula*, *Fraseri*, and *macrophylla* very large white flowers; and *M. acuminata* greenish yellow flowers. All these would probably stand with you; the last mentioned certainly.

**Name of Plant.**—Please tell me the name of the plant of which I enclose a leaf. I have had it for nearly four years and it has never bloomed. I think it is a hardy plant. It grows very little through the year; but every spring its buds, which are slowly forming during the year, burst out, and several new leaves are the result.

M. G. RORER.

Richboro, Pa.

*Answer.*—We cannot name plants from single leaves. It is quite probable your plant is a hardy shrub. Turn it into the open ground in spring. It may make more growth, and possibly flower.

**Name of Plant.**—I enclose a plant raised from a seed resembling a scarlet bean. The plant is, in fact, a small tree, the body and branches of which have thorns resembling those on rose-bushes. Can you name it?

C. A. O.

Fulton, N. Y.

*Answer.*—As we have often said, we cannot name plants from a single leaf. Your plant is probably one of the Erythras. It should be planted in the garden in warm, deep soil in summer, and may be wintered like a Dahlia, in a frost-proof cellar. The flowers are dull red, in long spikes.

**Seed of Banksia.**—Can you tell me where I can obtain seeds of the plant called Banksia, named in honor of Sir Joseph Banks?

Ipswich, Mass.

S. B. DICKENSON.

*Answer.*—The Banksias are coarse-growing New Holland plants, with flowers more curious than beautiful. Unless in some botanical garden, they will not now be found in cultivation, though formerly they were much grown in England. We hardly think you could find the seed in commerce; but it could be obtained by writing to Australia.

**Name of Plant.**—Please tell me name of enclosed flower.

SUBSCRIBER.

Allentown, Pa.

*Answer.*—The flower is *Brugmansia Suavolens*. The plant is coarse-growing and requires much room; but the flower is very showy, like a long white trumpet, and very fragrant.

## Floral Experiences.

## A FEW HINTS FOR THE WINDOW.

Everybody likes to have a pleasant "spot of greenery" upon which to rest the eye, and in almost any form one is a "thing of beauty and a joy"—if not forever, at least the whole winter long. Those who are fortunate enough to own conservatories and employ gardeners lose in a great measure the delight of tending to and caring for the wants of their different plants. So it is to those who have waited with patience and watched with eager eyes the unfolding or sprouting of some precious "Piceiola" that I will give my few hints.

To turn a nice sunny window to account there is nothing like a window-garden; and those whose amusement it is to train a few window-plants will find themselves greatly helped by procuring from the nearest greenhouse a peck or two of sifted, fertilized earth, prepared for plants in pots or boxes. A little money invested in this way will save many disappointments and failures with pet flowers. Plants in hard, caky earth cannot thrive; and a little care in loosening and keeping it moist will do away with this trouble.

For the center-piece a rustic box is best; and a very pretty one can be made of cork, glued in pieces on the wood and varnished with walnut-juice, which will resemble rough bark. Others are covered with bits of rope, arranged in patterns and painted over with oak varnish. Be careful, when ordering the boxes, to have a strip of wood nailed at each end, to raise it slightly, and three or four holes, half an inch in diameter, bored, to give drainage.

One of the best things for window decoration is what is commonly called German Ivy. Some of the florists say that it is not the true Ivy; but takes its name from the great resemblance which it bears to it. Also that it cannot be a native of Germany, which is a cold country; while this Ivy is easily killed by a little frost, although it will endure a very low temperature and seems, indeed, to grow best in a room not too warm. It does well in shadier places than suits most flowers and grows easily by slips. The smallest piece, if it have a leaf or two, roots in a few weeks. When it is trained over windows and given plenty of room to ex-

tend itself, it will before spring produce a quantity of golden flowers, although it is seldom seen in this condition. Start a pot of Madeira Vine—which is a rapid and also graceful climber—on each side of your box, letting the vine run up on strings and meet in the center of the frame above, and you have a pretty outline, which can be filled in according to your fancy. An Ivy going about and over the window will make a rich frame; and as the side tendrils shoot out they can be fastened in swinging festoons across the window. But the vine altogether lovely is the Maurandya, with its white, pink, and purple flowers, which can be arranged with great effect in hanging baskets.

Strive to produce leaves, rather than flowers, and depend upon foliage and its grouping for pleasing effects. A few drops of ammonia to a quart of water will turn the spray from the watering-pot into a summer rain,

DIEFFENBACHIA NOBILIS.

imparting to the water something which rain derives from the atmosphere.

L.

## SOME QUESTIONS ANSWERED.

**Mrs. Kate Sherman:**—The botanical name of the Cinnamon Vine is *Dioscorea batatas*. It is really a Chinese Yam and the root is edible. It is hardy in New York; so, of course, it will prove so in Pittsburgh. Plant in ordinary garden soil, or very rich soil (either will do), several inches deep, and allow it to remain undisturbed for several years, when they should be divided and reset. I had two tubers and a handful of balls two years ago, and now must have a peck or more.

If Irene H. Williams will send me a bulb of her Scarlet Gesneria, I will send her a lovely, fragrant White one

In the January CABINET Mrs. Eleanor Jordan desires a Cactus. I think I have the one she describes, and will send her a small one, if she will send me her address. I wish our writers would give their locality or their latitude, so their hints would be of greater value to flower-growers. For what suits in the South does not in New England, and *vice-versa*. So many persons complain of their Oleanders dropping their buds. It is because they are root-bound or kept too dry. Either condition is fatal to their blooming well.

Mrs. R. S. TRUSLOW.

Kanawha C. H., West Va.

## SWEET-SCENTED CACTUS.

In reply to Mrs. Anna D. Haynes in regard to the wonderful variety of Sweet-scented Cactus, I would say that I have one which was said to be the Night-Blooming Cereus. It is as large around as a very large corn-cob and is seven feet high. Do not know how tall it would grow, as mine has been broken off several times. Has a large, lovely, creamy-white blossom and sends forth a most powerful and exquisite fragrance, filling the midnight air at a great distance. The flower begins to open about sunset and closes about sunrise. Blooms in July and August.

NANNIE C. Q.  
Quicksburg, Va.

## PERFUME OF FLOWERS.

The perfume of flowers may be gathered in a very simple way, without any apparatus. Gather the flowers with as little stalk as possible, and place them in a jar three parts full of olive oil. After being in the oil twenty-four hours, put them in a coarse cloth and squeeze the oil out of them. This process with fresh flowers is to be repeated, according to the strength of perfume desired. The oil, being thus thoroughly scented with the flowers, is to be mixed with an equal quantity of pure rectified spirits and shaken every day for a fortnight; then poured off, ready for use. During the season for sweet-scented blossoms any one can try it without any great trouble or expense. It would lend additional interest to the cultivation of flowers.

Mrs. E. L. F.

(Continued from Page 2.)

ly Lilies. The soil is rich loam, mixed with a little sand, and the outside of the jar is nearly concealed by the thick growth of German Ivy and Tradescantia planted among the Lily bulbs. The best way of treating Calla Lilies I ever heard of is to keep the pot containing the bulbs in the open air during summer, and give water enough to prevent the surface of the soil from cracking open. Bring them into the house early in the fall, and give them plenty of warm water, occasionally washing their large leaves with a soft sponge, and if they have arrived at years of discretion they will blossom from November to May. Once in three or four years is often enough to change the soil. There is only room for one row of small flower-pots around the rustic support in this stand, and these contain a few bulbs, two or three kinds of Lobelia, and some small Chrysanthemums.

A large pot of Madeira Vine stands in the corner between the south and east windows, and its delicate leaves and graceful sprays are trained across the windows, mixing with the Ivy and Maurandya vines, which start from the opposite corners of the little room. On the panel between two of the south windows I have a bracket, on which stands a pot of Smilax, the pretty sprays trained in the shape of a fan. The shape of a fan is first made of wire and the sticks are formed of slender threads, on which the Smilax climbs. I can do nothing with Smilax unless it is kept in such a condition that I can remove it from a shelf or bracket and shower it plentifully with warm water once a week or so.

Between the other two south windows is another bracket, holding a pot of Ivy Geranium—the white-edged, rose-tinted variety. It took me some time to find out that this plant required very poor sandy soil and very little water in order to grow and thrive.

Swinging brackets in the east windows hold my three varieties of Oxalis, and a pot each of Mignonette, Smilax, and Morning Glory.

The arched opening into the dining-room is decorated with the slow-growing, ever-patient English Ivy, which will try to do its best under such circumstances as would quench any less patient climber. But give it rich soil (at least half of it should be composed of leaf-mold) and not too much water, and with a soft wet sponge occasionally wipe its glossy leaves, then—watch the result.

This article is assuming an untoward length, and I have not said one word of my hanging-baskets. After

which suspend the basket, while some drooped over the sides; and when they were long enough I crossed them underneath and let them climb on the opposite side. Hanging-basket, stick, and cords are now covered with the healthy vines and there are dozens of blossoms. No seeds must be allowed to form and the supply of water must be ample. My box of Petunias, which stands before the fifth and last window, is now a sight to behold. In July, when the bed of seedling Petunias was in the full flush of blooming, I took

cuttings from eight of the most beautiful varieties—five single and three double ones. I rooted these in wet sand and had a box made, about four feet long, one foot wide, and one deep, for their benefit. The box was made of pine, and the outside covered with strips of bark from the white birch, glued on. Curved iron supports to a light framework of hoop-skirt wire were fastened to the ends of this box, and it was then filled with loam and sand in equal proportions, and the slips of Petunia, a few of German Ivy, and three Smilax bulbs placed therein. The framework is in the center of the box and the slips were planted on each side, and the remaining surface was covered with soft green moss. The single varieties and the Ivy soon took possession of the frame, leaving the slower-growing but more beautiful double ones to put forth their immense blossoms from a perfect nest of Ivy leaves. The pretty Smilax sprays ramble about on the green moss and spread a misty veil over the silvery white of the birch-covered box. This is, I think, a most satisfactory way of growing Petunias. I tried them once without the Ivy; but their long branches were too straggling and the framework was not properly covered. Care must be taken to pick off all the blossoms as soon as they begin to fade, or the strength of the plants will be expended in the formation of seed. I have no space to speak of my Oleander and Abutilon trees, which occupy the center of my little room; nor of the rustic Fernery in the shady corner. The room is heated by the large double stove in the dining-room, on a few of the very coldest

MOUNTAIN SCENERY IN COLORADO.—WAGON-WHEEL GAP.

all, I suppose they are much like other people's baskets, with one exception. Who has tried Sweet Peas for a hanging-basket? I sowed the seed of mine in a good-sized basket, in common garden-soil, in September, and stuck a branching stick some two feet high in the center of the pot. As they came up, some attached themselves to the stick, and others to the cords

nights I put newspapers between the plants and the glass. Fresh air is given them every day, except in very severe weather, by means of hinged openings in the upper windows. To this and the regular showerings with warm water I owe the dark green leaves and fresh, bright blossoms of my house-plants.

MARGARET SUTHERLAND.

## Floral Hints.

## MY DAPHNE.

Ere my query appeared in your columns my Daphne had bloomed. It repaid me fully for my watching. The clusters of waxy blossoms were charming and a whole conservatory of sweets seemed concentrated in its quintessent fragrance. It requires little or no attention—a cool place, moderately damp; and its symmetrical, glossy leaves remain “*in statu quo*” for months.

I have a correspondent who is also a subscriber of yours, and she writes favorably concerning the Cinnamon Vine. She says it grew luxuriantly and the blossoms were quite sweet.

July is one of our most verdant months in Florida. It has rained for six weeks. The Roses have put on their May vigor, and the Marechal Neil and Anna de Diesbach, with heightened tints, are indescribably lovely. The Grand Duc and Night-blooming Jasmine growing in the yard fill the air with their fulsome aroma, and the luxuriant and rampant Madeira Vine, unblighted for two winters, is redolent with an excess of long, trailing spikelets. The sweet and tender annuals—such as Mignonette and Alyssum—do not thrive here. Portulacas and Petunias glory in this bright sunshine and the Rose Geranium, which puts out enormous foliage and growth in my flower-bed, dies out completely in my box on the verandah. The Amaryllis is a success here. The pale pearly pink, the brilliant red, and the white, with red stripes through each petal, glorify the year, each succeeding the other. Flowers have fewer pests or insects about them than I have seen elsewhere. The small green slug sometimes riddles the leaves of my Abutilons; but with that exception they are almost exempt. I discovered on a crimson Geranium limb what I thought was an unsightly excrescence. On examination, I found it to be three perfectly round adobe cells, built by a species of small Dobber. With curious eye I detached and opened them, and found them filled with the small green slugs that had perforated the foliage of my Abutilons in the spring. I feel more peaceably inclined to the class of Dobbers in general, who are so persistently and industriously annoying to us. They have frescoed the white ceiling in many ingenious devices in black stucco, the lime in the soil assisting their adhesive properties; and the green-glazed tree-frogs are saucy and lively now. Some are pale, others a deep green, all as if fresh from the painter's varnish-brush. They squat almost as thin as a knife-blade on your Apple Geranium leaves, which thrive wonderfully in this sunny clime, with ampler and more fragrant foliage than I ever dreamed the Apple Geranium could aspire to anywhere. If unmolested, these green horrors will not unnerve you by their spasmodic leaps; for you may gently touch them, without a motion save that unmeaning blink of their eye. Last eve, as we sat in the hall by the lamp, one crawled up the wall as glibly as a fly, and actually crawled around the burner of the kerosene lamp, thence to a vase of flowers, and back again. What were his immediate wants I dare not conjecture; but, turning to the side-lights beside the front door, flat-

tened against the glass, clung his pop-eyed, panting mate, vainly endeavoring to force an entrance. At nightfall they begin their chorus in the Magnolia by the cistern, and their almost human croakings are as intelligible as a phonograph or telephone, and I just imagine I have a vast aquarium, for the white Oleanders, Four o'clocks, and Amaryllis bloom beside the cistern's edge.

I brought seed of the improved scarlet Canna with me. Its ample foliage is always green, resembling a dwarf banana; while in Georgia it was ever turning yellow, requiring a sea of water. There is more water in this country than there has been for forty years. Tuscawilla and Paine's Prairie have submerged the public highway, and Orange Lake has encroached on the lake settlements. The Spiderwort and large Solanum are indigenous and grow in rank luxuriance on the Lake. Wherever you turn your eye, it is verdure, from the nutritious Beggar Weed to the glossy green of the Orange leaf and fruit. You would not realize that it was the parched and sunny months of July and August of the upper states. Corn-harvesting has already begun and the mature shocks lend a rich background to our panorama of living green.

Magnolia Hill, Orange Lake, Fla.

L. L.

## THE NIGHT-BLOOMING CEREUS.

I notice an article in the July No. of THE CABINET from Mrs. Anna P. Hanes. She describes two or three varieties, and says that the blossoms are not fragrant, and adds that she has all her life heard of a variety having a powerful and exquisite fragrance, filling the midnight air at a great distance, and asked “Is it a myth?” and, if not, wishes some of your readers to tell about it and give its botanical name. This I am unable to give; but can tell something about the wonderful variety that she speaks of, and can assure her that it is not a myth, as I now have several plants of that description.

Five years ago I secured a plant, which has thrived nicely ever since; equally as well in the sitting-room as in the greenhouse. From the first I have watched its habits very closely. About thirteen months ago I noticed two buds, which developed quite fast until they were about six inches long. In the evening, as I was watering my plants, I saw that the buds, which were of a reddish brown, began to crack open at the tips, showing a white center. I concluded that this was the long-looked-for night when they were to unfold their wonderful beauty. I told some of my neighbors in the village (who were as anxious as myself), and scores of people came to witness what they had heard of, but never had seen. About ten o'clock in the evening the buds had opened so as to leave a cavity into them, when a very powerful and exquisite fragrance filled the room, and was noticed by people coming into the yard, at least forty feet from the door. The fragrance continued until midnight, when the blossoms were fully developed. After this they commenced to close, and in the morning were entirely shut, never again to open. About four months ago this plant bloomed again, in the same manner as before; and to-day there are four buds, each about three inches long, on the same plant, which I think will open in about two weeks. I have another plant from this one, four years old, that has never blossomed, that

has now three buds, about two inches long. So I shall soon expect plenty of bloom.

This plant resembles the common Flat-leaf Cactus and blossoms from the edge of the leaf, much the same. The blossoms are a delicate, almost pure white, except a little color of reddish at the extreme end of the pistil.

The stamens are numerous and white. Each leaf of the blossom has somewhat the appearance of a delicate white feather or quill, about one-half inch wide and four or five inches long, which makes the blossom when open about the size of a large dinner-plate. The plant itself is very singular. After three years old it throws up a spike or rod about five or six feet long with aerial roots, which after a few months fall off. After reaching this height, the end flattens and forms a leaf, from which other leaves form. Each year another spike will start from the preceding one and go still higher. I had not room for mine to grow upright; so I trained it around a hoop, which keeps it more compact. Each time it buds and blossoms the buds all grow alike and blossom exactly the same time.

Bantam Falls, Conn.

W. P. BARTHOLOMEW.

## SOME HINTS ON RAISING FLOWERS.

Verbenas and Petunias vie for pre-eminence in our garden. Slips in the latter part of summer are better than to take up old ones. This will also apply to the Scarlet and Pink Salvias. The rich velvety leaf of the Pink Salvia I think beautiful and its flowers a curiosity of Flora's kingdom. Self-sown Verbenas, in a sunny spot I have found to come on earlier than seed sown in the spring, and it is interesting to speculate on the new varieties which all seedlings will bring. A little fertilizer from the chicken-house thrown under and around the roots when planted out will make rapid growers. Plants taken out of pots and root-bound should have the roots loosened with the fingers, or they will remain in a ball all summer. Seedlings are becoming more fragrant. The universally-beloved Pansy, which seems so much like a sentient being, with its “eyes, nose, and mouth,” seems to need some tact on the grower's part, in order to have a succession of them. If left to seed themselves, they will soon degenerate into the old-time “Johnny Jump-Up.” But seed from the largest planted in spring will bloom well in autumn and seed planted in summer or fall will do well the following spring. The grandest one I ever raised I treated thus: In August it was a wee thing, kept back by dry weather. I worked a little guano around the roots. Rainy weather came on and it grew rapidly. In the fall I wrapped some frosted vines around and fastened them with sticks. It was not without bloom at Christmas, and in the spring produced branches a foot long and multitudes of large blossoms. But they grew smaller as hot weather came on, and declined. One must not expect large Pansies in the summer months. I have an Arbor Vite five feet high and about as many summers old, raised from seed. I kept it in the house the first winter. Persons whose windows do not suit flowers or who have more than they will accommodate may find the pit a great convenience. It differs but little from a hot-bed, save in depth, and can be constructed so cheaply as to come within the reach of almost all flower lovers. It is a safe retreat for most plants and seems particularly adapted to the keeping of Verbenas, if set in the sunniest part. Have known Rose-cuttings set in in the fall and not kept too wet to put forth in spring. Pansies and Wall Flowers will come into bloom earlier, and the modest little Sweet Alyssum will greet its owner with its cheerful little white blossoms all winter. Nasturtiums also will bloom there.

“Make your homes beautiful, plant 'round them flowers;  
Plant them around you, to bud and to bloom.  
They will give life to your loneliest hours,  
They will give light to enliven your gloom.”

## Beautiful Books for Every Home.

The following books contain over 2,000 illustrations and more than 1,000 ways and plans to make your home beautiful and attractive.

HOUSEHOLD ELEGANCIES. - A splendid new book on Household Art, devoted to a multitude of topics interesting to ladies everywhere. Among the most popular topics are: Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Work-Boxes and Baskets, Straw Work, Skeleton Leaves, Hair Work, Shell Work, Mosaic, Crosses, Card-board Work, Worsted Work, Spatter Work, Mosses, Cone Work, etc. Hundreds of exquisite illustrations decorate the pages, which are full of overflowing with hints and devices to every one, how to ornament their home cheaply, tastefully, and delightfully with fancy articles of their own construction. By far the most popular and elegant gift-book of the year. 300 pages, 265 illustrations. Vol. II, WILLIAMS'S HOUSEHOLD SERIES. Price, \$1.50; gilt, \$2. Sent, postpaid, by mail.

BEAUTIFUL HOMES. - Devoted to House-furnishing. Everything relating to the picturesque furnishing of bedroom, hall, parlor, sitting-room, how to beautifully arrange all the rooms of the house is described. Carpets, Wash-Stands, Wall-Paper, the Living-Room, the Parlor, Bedrooms, Halls, Umbrella-Stands, Door Mats, Toilet and Dressing-Tables, Curtains, Lambrequins, Screens, the Library, Cabinets, Etageres, the Dining-Room, Sofas, Rugs, Ottomans, Tables and Stands, Sofas, Lounges, Foot-Stools, Cushions, Afghans, Baskets, Racks, Tidies, Miscellaneous Conveniences, etc., etc. Contains over 300 pages, 350 illustrations. Vol. IV, WILLIAMS'S HOUSEHOLD SERIES. Price, \$1.50, by mail, postpaid. Gilt, \$2.

EVENING AMUSEMENTS; or, How to Entertain Company. - A splendid book for Young Ladies, Gentlemen, and Children. This volume contains over 150 Games and Ways of Entertaining Company, and amusing young people at school, at parties, in home sports, picnics, for Christmas charades, tableaux, and all social occasions. Fireside Games, Tricks of Magic, Mystery, and Conjuring, Cards, Riddles, Acrostics, etc. Vol. V, WILLIAMS'S HOUSEHOLD SERIES. Price, \$1.50, cloth; or gilt, \$2.00. Postpaid by mail.

WINDOW GARDENING. - A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants, or vines, or flowers. Instructions are given as to the best selections of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy for decorative purposes. Bulbs for House Culture are fully described; also ornamental plants for Dinner Table decoration. Other topics are well considered - such as Balcony Gardens, House-Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer, and fall. The volume contains 300 pages and is profusely illustrated with 250 choice engravings. Vol. I, WILLIAMS'S HOUSEHOLD SERIES. Price, \$1.50; gilt, \$2.00.

LADIES' FANCY WORK. - A charming book devoted to Feather Work, Paper Flowers, Fire Screens, Shrinkers, Rustic Pictures, a charming series of designs for Easter Crosses, Straw Ornaments, Shell Flowers and Shell Work, Bead, Mosaic, and Fish-Scale Embroidery, Hair Work and Cardboard Ornaments, Cottage Foot Rests, Window Garden Decorations, Crochet Work, Designs in Embroidery, and an immense variety of other Fancy Work to delight all lovers of Household Art and Recreation. Vol. III, WILLIAMS'S HOUSEHOLD SERIES. Price, \$1.50; gilt, \$2.00.

EVERY WOMAN HER OWN FLOWER GARDENER. - A delightful little treatise on in-door gardening for Ladies - practical, timely, charmingly written. Contains valuable information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, etc. Send for it. Printed in excellent taste. Price, 50 cents, postpaid. Bound in cloth, \$1.00.

LADIES' GUIDE TO NEEDLEWORK. - This is a charming little hand-book of all the various kinds of Needle-Work, Embroidery, Crochet, Worsted Work, with their numerous stitches, and is invaluable to all who are fond of fancy work. Every lady will find it a useful companion for her work-basket and toilet-case. Beautifully illustrated.

Contents: Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, with numerous designs, also for Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Picture Frames, Wall Pockets, Shawl Case, Net Embroidery, Crochet Work, etc., etc. Eighteen chapters. Nearly 100 illustrations. 130 pages. Price 50 cents, paper covers, richly illuminated. Bound in full cloth, \$1.00.

HOUSEHOLD HINTS AND RECIPES. - This is not a Cook-Book; but a valuable little book devoted to housekeeping topics and full of useful hints, hints, and directions about the house in all its departments, from the kitchen to the parlor, bedroom, and attic. It contains a wonderful amount of real good practical information about housework, and there are recipes by the hundred so valuable that no prudent housekeeper can afford to do without them. A single hint may save her many dollars in money or much wasted time and trouble. Price, 50 cents, paper covers.

All of the above Books sent by mail on receipt of price. Address orders to

NEW YORK, SEPTEMBER, 1878.

## ODDS AND ENDS.

I do not believe that it matters what station we occupy in life; every one of us likes sincere approbation of our acts or labors. Therefore, it is a pleasant duty for me to write my opinion of Mr. Williams's FLORAL CABINET. I do not think there is any other publication just like it in America. It fills a place that no other magazine can. Nearly all the finely-gotten up periodicals are lavish in fashion articles and such like literature, which can be useful only to wealthy people—those with money sufficient to purchase ready-made all their little elegancies and articles for home adornment; but there is little knowledge that can be useful to the women of the middle class in the above-mentioned works.

Now, I claim that in the middle class is the birth-place of genius. From that class have arisen the inventors, the discoverers, the artists, the poets, and the self-made men and women of the world. Many a woman with fine poetic tastes and artistic eye and talent finds her home barren of those beautiful things that please the mind and lighten the labor of every-day life. For such as these THE CABINET is a gem of great worth. It shows how, from the homeliest materials, to form useful, pretty, and oftentimes elegant articles; and I wish that it might be found in every home in the land. Its pictures are sermons and "things of beauty," and, therefore, "a joy forever"; and, as I have gained many useful hints from its pages, I feel inclined to reciprocate. About flowers. Persons are apt, if they are passionate lovers of this wonderful gift of God, to crowd too many together, whether they cultivate indoor or outdoor plants. In crowding too many plants upon the stand by the window you interlace the leaves or branches and destroy the individuality of the plant. Some will shade others and there will not be "equal rights" and the flowers will not prosper.

Now, take a large pot (even a water-pail does very

well), and place a handful of broken earthen ware or oyster-shells in the bottom, for drainage, and fill it with rich earth. Then place a plant of slim, erect form in the center, and some creeping vine around the edge, and give it a central position before the window, and it will soon grow and be enough, with perhaps a small thumb-pot on either side, for the lower part of the sash. This, with a hanging-pot above, gives a much finer effect than crowding. Then, if you choose to have some light, pretty curtains, parted in the center and looped each side of the window, the effect is fine. I never saw a finer living picture than that of a friend of mine—a dear lover of plants—who has an Oleander tree of low, bushy form, showing hundreds of blossoms and buds at one time. This sets in an ordinary tub, of the size of a barrel sawed in two, and around the foot of this tree is planted what we call "Dew Plant"—a vine with small, fleshy leaves and innumerable flowers, of a pink color and looking like brushes of floss silk.

With the vine hanging like a fringe of green around the tub, and the tree with its dark, glossy, lanceolate leaves above—it is *such* a picture! And it wants to be raised a bit from the floor and to have the whole window to itself.

Then a Cactus that she has, with its upright and its pendant leaves, with its pencil stems and its fluted, triangular leaves—for its blades are of all forms—ought to stand alone too. Another lady had a beautiful Calla in the center of a large pot, and a creeping, mossy plant entirely covering the earth at its roots, setting alone on the window-ledge, with an Oxalis hanging above, which made a "living chromo." So I say again to the window-gardeners: "Don't crowd."

Last summer I saw the only beautiful window of crowded plants that I remember. They were so arranged that the Zonale Geraniums presented a bunch of their rich, varied-hued flowers in the center of each pane of glass in the entire easement.

M. I. CUMMINGS.

## DESCRIPTION OF ILLUSTRATIONS.

*Dieffenbachia Nobilis*.—This is a new plant lately introduced from South America, of a remarkably bold and effective character, especially intended for the greenhouse. The plant is stocky in habit and well set, with spreading leaves. The leaf-stalks are very pale green, mottled transversely with brighter green. The blades are of a deep, rich green, marked over the central portion to within about an inch of the margin, with largish, angular, irregular, and variously confluent white spots, which contrast strongly with the color of the margin and intervening portions.

*Canyon Scene in Colorado*.—In Southern Colorado is a place of remarkable beauty—*Wagon Wheel Gap*. The Rio Grande River flows through a canyon whose walls rise precipitately nearly 2,000 feet into the air, and whose course is very winding and gives charming views of fine scenery. It is about 300 miles from Denver, southwest into the San Juan mining district, and is reached by the Denver and Rio Grande Railway and stages of about a day's ride, beyond its terminus at Alamosa.

*Straw Picture Frame*.—This design, upon page 12 is a sketch of a pretty ornament, made of the little straws usually sold in fancy stores, cut of different lengths and with colors intermixed, and bound with blue or crimson ribbon into a pretty easel or picture-frame.

*The Wall Pocket*, on same page, is constructed of Fret Work, being sawed with a Fret Saw out of White Holly or Black Walnut.

*The Saucer Garden* is nothing more than a sponge in a eup, saturated with a little water, upon which is sprinkled some flax seed, which has sprouted and is growing most beautifully.

## New and Beautiful Premiums.

TO EVERY YEARLY SUBSCRIBER

— OF THE —

## Ladies' Floral Cabinet.

— O —

TO EVERY ONE HEREAFTER SUBSCRIBING FOR ONE Year to "THE LADIES' FLORAL CABINET,"

at \$1 30 for Monthly Edition, One Year,  
or 50 Cents for Quarterly Edition, One Year,

will be given your choice of any of the following beautiful Premiums, sent postage prepaid. Some of these Premiums are alone worth as much as the Paper itself, and all are just what everybody needs. We specially recommend Premiums Nos. 2 and 6 as remarkably choice.

If you will get up a Club of Seven, for one year, to either edition, each member of the Club will receive a choice of one of these Premiums, and the Club Agent will receive, free, one Premium, and also the Paper one year, free.

There will be published hereafter two editions of THE FLORAL CABINET, to accommodate all lovers of flowers and all purses. One edition will be published Monthly, at \$1 30 per year, each subscriber being entitled, free, to any of the Premiums named below; and a Quarterly Edition, at 50 Cents per year, with the privilege of the choice of same Premium, will be sent to any who cannot afford the higher price of the Monthly.

Hereafter, instead of spending large sums of money in Chromos, Engravings, etc., as Premiums, we will spend an equal amount in giving to each Subscriber a beautiful and useful Floral Premium, which will furnish not only pleasure to every Subscriber, but also ornament and utility.

Subscriptions may commence at any time this Fall, and Clubs may be made up from separate post-offices.

The Premiums of Bulbs and Flowers must be sent either before November 1st or after March 1st.

## LIST OF PREMIUMS.

- No. 1.—50 Cents' worth of Flower Seeds. Five packages seeds, each worth 10 cents.
- No. 2.—One Bulb *Gladiolus*. A new seedling variety, worth \$1.00. These *Gladiolus* bulbs are of finest seedlings; never sold before; and have splendid flowers of all possible colors—Stripes of Red, Pink, Scarlet, Violet, Rose, Carmine, Crimson, Lilac, Vermillion, Yellow, and White, variegated most charmingly. We esteem this offer most choice and recommend every Subscriber to obtain one.
- No. 3.—Set of Five Tidy Fasteners, of different colors, for fastening tidies to sofas, chairs, lounges, etc.
- No. 4.—One Package of Household Dyes, for dyeing silk, woollens, cotton, or anything. Will dye Crimson, Violet, Yellow, Purple, Green, Maroon, Scarlet, Slate, Brown, Black, Blue, Red. One package, of one color, your choice, given to every Subscriber. Any one can use them.
- No. 5.—Three Patterns of Embroidery. Designs for embroidering on Java Canvas, Crochet Work, etc. These Patterns are in large sheet form, printed in blue, and are sent in rollers.
- No. 6.—*Hydrangea Grandiflora*. A plant of most beautiful flowers, very large and extremely showy. The prettiest of all shrubs for the lawn. One plant, worth \$1.00, given to every Subscriber. Enclose 10 cents extra for postage.
- No. 7.—The last three months of 1878 will be given free to any one paying \$1 30, in advance, for CABINET for 1879 before December 31st, 1878. This offer, however, does not include any of the other Premiums named in this list.
- No. 8.—New Scented Geranium, "Mrs. Taylor" (Scarlet Flower). This is a distinct variety of the Scented Geranium, with a strong Rose fragrance and large Deep Scarlet flower, of the Hybrid Perpetual class, combining free-flowering qualities with fragrant foliage. It is very useful for summer cut-flowers, and as a pot-plant for winter, to grow in-doors, it cannot be surpassed. To "window gardeners" this is a very agreeable accessory. Enclose 10 cents extra for postage.
- No. 9.—*Crassula Perfoliata*. A very desirable winter-blooming plant. Blossoms just before Christmas and lasts in flower a long time. Plants in small pots will give three or four large spikes of flowers, consisting of hundreds of pure white flowers. Enclose ten cents extra for postage.
- No. 10.—*Marshal Neil Rose*. This is now fully established as the best of the Yellow Roses in cultivation. The buds are really magnificent, of a deep Canary color, shaded to a Golden Yellow toward the center. A fine bloom, of exquisite fragrance. One fine plant, worth, at least, 50 cents, sent to any one subscribing for one year. Enclose 10 cents extra for postage.
- No. 11.—New Rose—"Duchess of Edinburgh." This is the finest of all the new Roses and the demand for it is extraordinary. In habit and profusion of flowers it is a Tea Rose, with the true Tea odor. In color, shape, and flower it is like the old hybrid perpetual "General Jacqueminot," whose Deep Crimson flowers are so fine. The "Duchess of Edinburgh" has the additional advantage of being a monthly bloomer. Single plants are selling now at \$1.00 each. One plant given to every Subscriber. Remit 10 cents extra for postage.
- No. 12.—Set of Goodrich Hemmers and Dress Binders for Sewing Machines. This is silver-plated and the best manufactured; the same as has been advertised so largely the past few years. Every one who possesses a sewing machine needs a set. Retail price is \$1.00. In selecting this Premium, please state what sewing machine it is for. Remit also 5 cents extra for postage.

Remember that Every Subscriber remitting his Subscription for One Year to either edition of The Floral Cabinet is entitled to one of the above Premiums free. Most of them are postage free; but with a few a small sum is added, to cover necessary postage.

In addition, any one getting Clubs of Seven will receive his Paper free one year, and a Premium free also.

SCENES IN LAFAYETTE PARK, ST. LOUIS.

The sketches of Lafayette Park given in this number are most delightful. There are thirty acres of landscape gardens, embowered with 2,500 choice shade trees, disposed in most charming nooks and glens, with over 3½ miles of roadway, elegant seats for visitors, and

across the shining water. One of the most interesting features is the Rockery, where 67 car-loads of mineral blossom from the Iron Mountain region are arranged in a fanciful form around a natural depression. This rockery partially surrounds and covers a large cistern, where is found a delicious grotto, where an abundant supply of cool, refreshing water may be had.

der, sentimental suggestiveness. The Benton Statue, Pavilion, Music Stand, and Summer House are among the most attractive resorts for visitors. Opposite the western entrance-gate is the "West Fountain"—a lovely gem, where is constructed an elaborate rockery. A basin of clear water is encircled by this rockery, which is clad in verdure—a profuse growth of ferns, etc.

1. Music Stand.  
2. Police Station.

3. The Lake.  
4. The Rustic Bridge.

LAFAYETTE PARK, ST. LOUIS.

5. Benton Statue.

7. Pavilion.  
8. The Lake.

pretty streams, rockeries, fountains, statuary, groves, alcoves, flower-beds, shrubs, and evergreens; while on certain days everything is made doubly attractive by the presence of a fine band of musicians. In a rustic arbor you can watch the white swans sailing on the lake, and note pretty barges, with happy cargoes, gliding

There are climbing vines scattered all through the Park. Clematis, Wisteria, Lonicera, Ampelopsis, Aristoclia cling and hang from many nooks and crevices. The "Lovers' Walk" is a narrow rustic bridge thrown across the depression at its deepest and most secluded part, and is full of ten-

From the center of the basin a fountain sends its spray 30 feet into the air; while from out of the rock sparkling cascades pour over the glistening mosses. Misty spray, falling upon the aquatic plants that beautify the basin's edge, keeps the surrounding vegetation "dressed in living green."

## Household Art.

## BAGS AND BOXES.

[To this Article was Awarded Second Prize for Household Topics.]

I think I hear some gentle reader exclaim: What a homely subject! Granted; but then you must admit that it is a useful one. Yes, from Miss MacFlimsey's dainty bag of silk and beads, for gold and silver coins, to the coarse gunnybag of the old woman fishing up rags from the gutter, all have their uses. One bag has been made notable by Dickens: that of Miss Flite, filled with important documents and always carried by that slightly unsettled person. How could our grandmothers have got along without their black silk bags, that held their handkerchief and caraway or dill on Sabbath days and knitting-work when visiting? Even lawyers carried their briefs in a bag. But there are bags and bags. It is of bags as conveniences in the household that I wish to write. Those who have plenty of closets, drawers, shelves, and hooks in the house—of course, they won't need to read this; but there are many who live in rented houses, and especially those in some portions of the West and South, where carpenters seem to think that if they build a house with four walls, divide it into rooms, and put on a roof, their duty is done. No closets, shelves, mantels, or hooks. If you live in such a house, and don't know where to put all the things that accumulate in a family, especially where there are children, then I want to tell you how a friend of mine managed. She left a house where she had plenty of closets and cupboards, and moved into one consisting of three small rooms and a bit of a kitchen on the ground-floor and two chambers and small store-room above. No closet excepting a small one in the bed-room, a small dish-closet in the dining-room. No mantel in the house. She used the front room for parlor and sitting-room; the next for dining-room and kitchen (bed-room opened out of this), doing the rough work in the small kitchen. Of course, there must be somewhere to put things; so she set about making bags and boxes, and, with the help of her husband and two little girls, made over thirty. Now don't laugh, and I will tell you how she made some of them and what she put in them. Let us begin in the rough kitchen. Here are several bags, all made alike, of striped bed-ticking, gored toward the top, both edges bound together, and, instead of having a string run in, hung by two stout loops at the top. A slit six or eight inches long made in the middle of the front, faced; and a button and buttonhole fastens it, to prevent the contents falling out. One is for clothespins; one for papers, bags, and twines; one for scouring-cloths, window-cloths; one for rags. As there is no sink, a table has to do the duty of one, and a box, painted drab, with a hinged cover, lined with tin, holds the iron kettles, etc. A similar one holds the wood. Another holds the ironing-sheet and bosom-board, the latter covered like a bag, to slip off when soiled. A small box on the shelf over the stove holds kettle-holders, which are made with covers like a bag, so as to slip off to wash.

One more box holds stove-blackening, scourables, and so on. A large dry-goods box, stood on end, filled with shelves, makes quite a cupboard for tins and baking-dishes. One thing more—not a bag or box, but very handy—is an old machine-table. Where the machine part had been was a large hole, of course. This is covered with a thin board; another is fastened on the bottom and casters put on. When there are batter-cakes to fry or any cooking requiring a number of dishes, there you have them together, and it can be trundled anywhere without effort.

Let us step into the dining-room. Under one of the windows is a long box, on casters, with hinged cover, covered with furniture-patch, stuffed on the top like a cushion, put on plain on the sides, and finished with a box-plaiting on the edge of the cover. Inside it is lined with paper and divided by a partition. One side holds face and dish-towels, the other table-cloths and napkins. Another made like this holds pieces and cut work, and various boxes for buttons, extra spools of silk, thread, yarn, braid, etc. The sewing-machine stands near; for this room is used for sewing, as well as for eating. Behind it hangs the scrap-bag, made of red yarn and white cotton, and over it the newspaper-holder. In another place is a letter-case.

In the entry-way leading to the stairs from this room is a large pocket made of bed-ticking, bound with scarlet braid and feather-stitched on the white stripe with red yarn. It has four places for slippers and rubbers. A similar one, only smaller, holds gloves and mittens. A painted box holds boots. Opening out of the dining-room is the bed-room. Here is a trunk, covered with cretonne, laid in side-plaits on the body of the trunk, fastened top and bottom with small tacks; the top stuffed like a cushion, with a box-plaited ruffle to finish it. This is used for extra bed-clothing. A long box, on casters, covered with the same cretonne, holds sheets and pillow-slips. Inside the closet-door is a large shoebag or pocket, made of buff holland, bound with scarlet braid. Above it one of same material, divided into four pockets, holds patterns for cutting clothes for each one of the family. The window has a lambrequin, made of the same cretonne as that on the trunk. The curtain is a yard wide, unbleached cloth, open in the center, and a stripe of the cretonne stitched on each edge. On the bureau are toilet-mats, boxes, and other things too numerous to mention.

The room opening out of the dining-room, used for parlor and sitting-room, is made comfortable and pretty by home-made things, that do not cost much time or money. When my friend moved into the house this room had bare white walls. She coaxed the landlord to cover them with some plain drab paper, with a narrow scarlet border. Then her husband put up a pine shelf on bronze brackets, for a mantel. She covered it with scarlet merino; made a lambrequin of the same for the front, cut in three scallops, lined with stiff cambric and trimmed with woolen fringe to match. Made lambrequins in the same way for the windows. Put them up over full white muslin curtains. There are two boxes, on casters, with hinged covers, stuffed on top and covered with scarlet merino. Outside they are Ottomans; inside they hold pamphlets and papers. An old-fashioned three-legged light-stand is covered with scarlet merino, lined with stiff cambric and trim-

some Begonia Rex. The pot is not a pot at all; but a med with same fringe as the mantel. This stand is placed across one corner of the room. On it is a green moss mat; on the mat a flower-pot; in the pot a hand-three-pound lard-pail, with handle taken off, a piece of cardboard fitted to the bottom, silver perforated paper fitted around it, worked with Romankey pattern top and bottom, and a figure on front. The top is cut in castellated points. Above the table is a bracket, made of pine, covered with drab merino; and the lambrequin on the front is brightened with leaves of scarlet velvet, appliqued in satin stitch with silk of the same shade as the ground-work, finished with cord and tassels. On it is a handsome China bowl, past usefulness on account of a crack in one side (the whole side out, of course). It is filled with a thrifty Madeira Vine, that climbs around a picture above it. In front of one window is a plant-stand. An old sewing-machine table the foundation, a box for the top, a board screwed on the bottom for another box to rest on, finished with casters. The whole stained black-walnut color. Maderia Vines and German Ivy are planted in the lower box, Coliseum Ivy and Maurandya around the edge of the upper box, and in the center scarlet Geraniums and white Petunias. From the top of the window hangs a deep glass dish, enclosed in crocheted scarlet worsted, filled with Maurandya Vine. On each side flower-pot brackets hold Ivy and Madeira Vines. I have only room to mention the gray and scarlet carpet, furniture-covers of scarlet and gray cretonne, table-cover of drab ladies' cloth, embroidered in appliqued work, fern-holders, newspaper-holders, etc. Up-stairs in the little girl's room are boxes, covered similar to those downstairs, for clothing. A bottomless cane-seat chair, by fitting a stout bag inside, makes a nice place for shoes. Where the seat should be is a board, covered, stuffed, and trimmed, with a flounce nearly reaching to the floor. The toilet-table across one corner is made of a clean flour-barrel, with a triangular piece of board fitted to it, rounded on front, covered with cretonne, a full curtain to reach the floor, finished at the edge of the board with a box plaiting. This barrel is nice to put clothes in not used often. A looking-glass is fastened above the table and draped with the cretonne. In the opposite corner is a wash-stand, made in the same manner; only the top of the table is covered with marbled oil-cloth and a splash-cloth of the same behind it.

But I am at the end of my paper and your patience, I fear; so I will stop right here.

M. J. W. P.

**A Clear Complexion.**—If once a week or twice you will take warm water and a little white Castile soap, with soft flannel rub it carefully on every part of the face, then as carefully off with clean water; and if every morning you will use this same flannel—not with one hasty flourish, but with gentle rubbing for a minute or two—you will see improvement in the cleanliness of your complexion very soon.

**To Prevent Mildew on Preserves.**—Take the white of an egg and wet slightly both sides of a piece of letter-paper sufficiently large to cover over the top of the preserves snugly. I have kept them free from mold and spoiling two years.

## The Household.

## THAT HOUSE OF MINE.

[To this Article was Awarded First Prize for Household Topics.]

There could be no doubt. The place was a bargain, and I told Harry he had better buy it at once. To be sure, the house was somewhat old-fashioned, and situated on a quiet, secluded street; but everything was in good repair, the rooms were large and sunny, there was a small conservatory for my plants in winter, and a yard about as large as a handkerchief for them in summer. A grape-vine and rose-bush covered the trellis by the kitchen-door; and here, said Harry, tragically, "shall we dwell in peace and contention under our own vine and fig-tree. Let May come and go. No moving-day shall fright us or make us afraid."

After the house was bought and paid for, the next question was: What shall we put in it. Here I paused, dismayed, for Harry had spent all his money on the house; but I had \$650 Grandma Mills, for whom I was named, had given me, on my 18th birthday.

This magnificent sum, together with two oil paintings, several chromos, a nice lot of plants, a canary, and a napkin-ring, was all I had to furnish six or eight rooms. How Papa, dear old soul, did laugh when I told him; but there was something like tears in his eyes, as he took me in his arms, and said that was more than Mamma and he had when they began housekeeping, and that Harry was a fine fellow, and I was a sensible girl, so he would furnish the parlor for me. Then Aunt Mary, who had no girls of her own, said she would give me my table and household linen, and a set of decorated China; and Frank, who could handle a saw or paint-brush as if to the "manner born," offered his help. Much encouraged, I went on a voyage of discovery to the attic, which had been used as a store-room for worn-out furniture ever since Mamma went to housekeeping, thirty years ago.

Here I found one old parlor set, covered with hair-cloth, much worn, about a dozen cane-seat and rocking chairs, six or eight stands and tables, of all sizes and shapes, one large easy-chair, a bureau, and a lounge, whose springs protruded like so many bones. All these, together with a number of barrels, kegs, soap-boxes, and old blankets and quilts, I had sent over to the house, in spite of the horrified protestations of Mamma "that the old trash was only fit for a bonfire." I decided to furnish the sitting-room first. For the walls I chose a creamy-brown paper, with a wide border. The carpet was an ingrain; a mottled design in oak and brown and a deep crimson border. I made the carpet myself, at the expense of a "pain in de head and misery in de back"; and Frank nailed it down. I put newspapers under it. Straw is so "humpy." The gilt chandeliers being tarnished, I took six onions; boiled them in water until soft; then dissolved as much flour of sulphur in a quart of water as would tinge it a bright yellow; then strained the onion-water into the sulphur-water. When cool, wash your chandeliers and gilded picture-frames, letting it dry on. This will also prevent the flies from specking the gilding. The globes and chimneys were washed in cold tea. Now

came the tug of war. I did feel "unbersome" when I looked at the hair-cloth set. But, after providing myself with an upholsterer's needle (they are about four inches long, pointed at each end), a number of yards of brown rep, striped with crimson, gimp, and buttons, I "went at it." The hair-cloth served as a pattern to cut the rep by, and by long-continuing in well-doing I succeeded in getting the rep on without its looking "baggy." For the frames I made a polish by taking alcohol (98 per cent.) one pint, gum-copal and shellac of each one ounce, dragon's blood one-half ounce. Mix and dissolve. Apply with a sponge (by a fire is best), two or three coats, about fifteen minutes apart. Then polish with a cotton cloth. The more you rub the better. This gives a beautiful polish. At the windows I put curtains of Nottingham lace, over buff shades; six yards to each window. The lambrequins I cut from a pattern I bought. They were of crimson rep, bordered with oak leaves of brown velvet, veined with yellow floss, and a fringe of crimson and gold. The table-spread was brown, with a heavy appliqué border of crimson velvet leaves on an oak ground. The large arm-chair I covered with écru Turkish toweling; a medallion on the cushion and back, a bouquet made of crimson leaves and flowers in velvet and satin, the entwined border of brown, edged with gold cord. It was "perfectly lovely" when finished. A rug for the floor, of brown, had a medallion in the center of toweling, with an appliqué bouquet, like the large chair. The border of brown, with crimson leaves. A heavy fringe at the edge. I made Ottomans of the starch-boxes, to match the rug. The mantel and window-seats had lambrequins of the same design, with the addition of tassels. I found an old cabinet at the auction-store. This I ebonized by the following recipe: Take a quarter of a pound of the best size, with sufficient water to cover; put it in a stone pot and set over the range to melt (not boil). Then take three cents' worth of lampblack; a little blue-black to improve the color. Mix it up with oil until as thick as paste. Pour the melted size on this black paste and mix thoroughly together. Use while warm, painting it on thickly. When quite dry, varnish with three or four coats of oil-copal varnish. While varnishing keep the room at a temperature of sixty degrees and free from dust. Use a large brush, putting on uniformly. Take the finest pulverized pumice-stone. Mix with water until as thick as cream and polish the work until as smooth as glass. Then dry and rub with sweet oil and tripoli. Dry again with a soft linen rag, rub with starch-powder, and polish with a clean linen cloth until you can see your face. I forgot to state that, before ebonizing, I drew some simple double lines and center design, and painted them with Mars yellow and Chinese white. This work is well worth trying; it being quite easy to do and very rich looking. A closet in one end of the room I converted into a book-case. The door was taken off the hinges; a valance of pinked brown leather tacked onto each shelf with gilt-headed nails and crimson gimp.

Frank had the parts to a number of folding chairs turned on a lathe. These were ebonized, put together, covered with rep, with an embroidered strip down the back and seat. Some of the turned pieces made the

supports for an easel for my prettiest picture. Still others made a standard for a lovely screen, which was really quite simple. A smooth pine board of the right size was fastened to the standard. The center was painted an oval of cream color and ornamented with a large decalcomanic Cupid. The edges were then inlaid and ebonized. The hanging of the pictures came next. Frank bought the moldings at so much a foot, and put them together himself. It is much cheaper. My next step was to order the tinman to make me a number of wedge-shaped pans. These were filled with earth and planted with Ivies, both German and English. These pans I hung by cords behind the pictures, and twined the branches over the cords and frames. Over the mantel hung my favorite Beatrice, on one side of the window a Swiss Lake, and on the other an Italian Rustic Scene, in rich colors. On the opposite walls are a large Sea-scape and a view of the Hudson. I had two large Waxen Hoyas. The pots to these I painted black, with gilt bands. I cut an oval from gilt paper, pasted it on the sides of the pot, and transferred a brilliant little decalcomanie on its center. I wanted something to put the pots on; so a pedestal was made of a pine box, painted cream color, with a border of narrow black lines. On this I put the Hoyas, one in each corner, and tacked their branches to the wall. I like Hoyas and wish they were more cultivated. They are much prettier than English Ivy to train up the walls. It delights in a soil of chip-dirt and the leaves should be occasionally washed in warm soap-suds. I now wanted some bronzes and Parian figures. As these were expensive, I bought a number of plaster figures. Some I made into bronzes by painting a greenish-gray or brown. When dry, varnish with bronze-powder, ground on a marble slab with gum-water; or grind tin, sift fine. Mix with a solution of isinglass, which is then applied with a brush. Burnishing gives a brilliant luster. To imitate the film of carbonate of copper on real bronze apply sal ammonia with vinegar.

Some of the figures I marbleized. A wash was made of plaster of Paris, soaked in a strong solution of alum. Bake this in an oven and then grind to a powder. Mix a little in water. Spread evenly and quickly over the figure. This is a thin wash, setting like a coat of marble, taking a high polish. Sometimes I had to try the second coat. Frank being an adept at fret-sawing, I was provided with a number of pretty brackets. These were fastened in the corners of the room and under the pictures. On these I placed my marbles and bronzes, and they were as handsome as the "rue thing" and cost very little. The conservatory of which I have spoken was separated from the room by large glass doors and was arch-shaped at the top of the entrance. On each side of the door was placed a pot full of large English Ivies, which were trained to the top of the arch, making the entrance a wreath of living green. Directly over the door was a staffed white dove. On each side and a little below was a marble bust of Flora, on a walnut bracket. As I am yet a novice in horticulture, my collection of plants consisted of the more common kinds. For climbers I used Smilax, Cobea, Tropæolum, Lobelia, Madeira Vine, and Ivies. For flowers I found I succeeded best with Carnations, Callas, Abutilon, Geranium, both double

and single, Bouvardias, Chinese Primroses, Heliotropes, and Roses. For the leaf or foliage plants, the Dracaena, Pilea, Ferns, Palms, Camellias, Azaleas, Orange and Lemon trees, together with the various kinds of Begonias. In the center of the conservatory stands an aquarium and fountain.

The book-case filled with my favorite authors, the piano placed in its corner, the Swiss clock and vases arranged on the mantel, and my room was finished. Such a bright, pretty room, too! And the carpet was the only thing that cost much.

For the dining-room I bought a black-walnut table, buffet, and leather-covered chairs. The walls for thirty inches above the base-board were papered with a "grained" black-walnut and oak paper. This was beaded with a walnut molding. Above this I used a pale green satin paper; the border a dark green velvet. As I could not afford a carpet, the floor was painted in oak and walnut strips. A rug made of several widths of mottled oak carpet with a wide green border. The curtains were unbleached cotton flannel, the "fuzzy" side turned out, the top laid over in a deep valance. This was edged with a wide strip of figured green chintz. The sides had a narrow strip of the same. The lambrequin for the mantel was of oak color, cut in deep scallops, each scallop pinked on the edge. I then made of braid, by taking green worsted, from the lightest to the darkest shade (five shades does very well), arranging these according to the shades. Sew onto a flat braid, cut into strips, double, and make into leaves. A vine of these leaves, with chain-stitch stems, runs around the edge of the lambrequin. I now took the old lounge I had brought from the attic, covered it with unbleached muslin, and trimmed it with a strip of green chintz. A couple of easy-chairs were made to match, and really looked quite handsome. For a plant-stand I took an old music-stool, ripped off the plush cover, and screwed an old round chopping-bowl on the top. This was painted black and the edge concealed by a lambrequin to match the mantel.

WALL POCKET.

The bowl was filled with earth and planted with Hyacinth and Crocus bulbs. The space between these was filled with moss. A grape-vine made a handle, which was wreathed with Ivy. In the center I hung a tiny globe of gold-fish. A pretty floral ornament of mine, which was much admired, was easily made. One of my marble (plaster) figures had its brains scooped out; a glass dish cemented to the head. The figure was then set in a tray, which was filled with sand and heaped up against the figure. The sand was covered

with moss, the edge covered with Smilax. A tiny mirror lay in front of the figure, wreathed with Smilax, and a Geranium flower or two. The dish above is filled with cut-flowers and vines droop over the edge. This is quite handsome for the center of a table. A couple of pottery vases, in the antique style, were bronzed and placed on the mantel; window-boxes fastened to the win-

STRAW PICTURE FRAME.

dow-seat; pictures and brackets put in their places. I haven't the space to tell you about the other rooms down-stairs; but will give you a description of how my spare bed-room was furnished.

The walls here were papered with a pale pink; a gold border run around the room, 30 inches above the floor; the wall above this was divided into panels by bands of white satin paper; in the center of each panel was a decalcomanic wreath of roses and forget-me-nots; the panels to the door had sprays to match and were framed with a narrow gilt molding. The floor was covered with a matting; over this a rug of blue-and-white carpet, with a wide blue border.

The furniture is painted pine; but is very pretty. The bedstead, dressing-case, and washstand cost me \$35. The chairs were made of two old rockers, which were covered with an old quilt, put on loosely, then stuffed with Excelsior. The outside covering is pale-blue satin. Down the center and cushion is an embroidered strip of dark-blue velvet, with appliqué figures of gold-colored satin. Ottomans, made of starch-boxes, match the chairs. The curtains are dotted Swiss, a fluted ruffle on the edges, and lambrequins of blue rep. The cornice is of silver. This, though handsome, illustrates that it's not all silver that glitters. A strip of pine covered with tin foil makes the cornice. In the center is a spray of flowers and leaves, made of foil, pressed on wax-leaf molds. An old stand made my toilet-table. The covering is dotted Swiss over blue cambric, and trimmed with fluted ruffles, ruching, and bows of blue satin ribbon. The looking-glass, over the table, has a silver frame, to match the cornice. Full draperies of the Swiss fall over each side of the table. At the top they are caught into a carved half-round bracket, on which stands a bust of Clytie. My pillow and sheet-shams are made of strips of pale

blue satin and coarse lace insertion, edged with wide lace. As hair mattresses are expensive, I made mine myself. The mattress-needle costs 20 or 25 cents. Nine yards of yard-wide ticking is sufficient for one mattress. My mantel is a piece of pine board; the lambrequins white net, darned in deep scallops and lined with blue. The toilet-covers and splash-mat are to match. For my brackets I had Frank saw me out a pine board. This was covered with several thicknesses of fine white muslin, stretched tightly. Several layers of cloth were pasted together and made into leaves and flowers, by pressing on wax-flower molds. These, when stiff, were put into place on the bracket. I like a rose and bunch of leaves best. Fasten your spray, one above and one below the shelf, then cover the whole bracket with a wash of plaster-of-Paris and water.

My crockery was plain stone-ware; but was made beautiful by medallions of transfer pictures and embossed gilt bands. My pincushion is blue velvet, embroidered with pearl beads, with a lace cover. A watch-case to match. A catch-all hangs in one corner. Cut a piece of silver board, 5 inches wide and 18 long. Sew the ends together. For the bag part take blue silk, 6 inches wide and 25 inches long. Sew one end quite full on the edge of the cardboard and gather the lower edge tightly together. This makes a bag. On this hang a silk tassel. Trim the edges with plaited satin ribbon and white lace, transfer a spray of moss roses in the center, and hang up with satin ribbon. The hair and hairpin-receivers, match-holder, and shaving-paper case were all to match.

A sachet and handkerchief-holder was a square of blue satin, wadded with perfumed cotton (quilted), and the corners folded over and trimmed with plaited ribbon and lace, and a tiny rose laid in the center, where they meet. For my bracket I made silver vases by painting pottery urns of antique shape a pale gray and covering with tin foil. For my mantel I bought lamp-chimneys with scalloped tops. Some were painted blue some white, with transfer medallion on the sides and gilt-embossed bands on the edge. When filled with crystallized grasses and put on blue mats, no one would guess they only cost 10 cents apiece. Grasses put into water and sprinkled with flour are very snowy and pretty for vases. My pictures were

SAUCER GARDEN.

engravings and photographs. I could not afford to buy frames; so I made them of pasteboard, covered with blue velvet, and pinked bands of gilt paper on each edge. This makes a frame you need not be ashamed of.

I haven't told you of half the ways I made something out of nothing, for I know the editor is frowning, and saying I have run over my 6 pages; but I hope some of the hints I have given may be of use to some one whose purse, as well as mine, resembles Anne Boleyn's neck, in being very small.

## Fireplace Reading.

### HOME AND FRIENDS.

Oh! there's a power to make each hour  
As sweet as Heaven designed it;  
Nor need we roam to bring it home,  
Though few there be that find it!  
We seek too high for things close by,  
And lose what Nature found us;

For life hath here no charms  
so dear

As home and friends  
around us.

We oft destroy the present  
joy

For future hopes—and  
praise them;

While flowers as sweet  
bloom at our feet,

If we'd but stoop to raise  
them;

For things afar still sweet-  
est are

When youth's bright spell  
hath bound us;

But soon we're taught the  
earth hath naught

Like home and friends  
around us.

The friends that speed in  
time of need,

When hope's last reed is  
shaken,

To show us still that, come  
what will,

We are not quite for-  
saken;

Though all were night, if  
but the light

From Friendship's altar  
crowned us,

'Twould prove the bliss of  
earth was this:

Our home and friends  
around us.

### SAUCER BOU- QUETS.

A writer in the *Fruit Recorder* gives the following as her description for making these pretty bouquets:

"Did you ever make a bouquet in a saucer? I think it is the prettiest way of all. I fill the saucer two-thirds full with water and place some large flower, like a lily, in the center, or a little to one side, as fancy may suggest. Then I arrange a fringe of fine, feathery sprigs around the rim, and fill up the interstices with small flowers. The result is charming; and flowers arranged in this way will, with me, remain fresh longer than if arranged in a vase. As I write I have before me a bouquet put together thus: It con-

sists of a Tiger Lily, sprigs of Asparagus and Southern Wood, Drummond Phlox, Petunias, and a few blood-red blossoms of Coreopsis. But do not turn up your noses, being, perhaps, the possessors of more costly and varied material for floral ornaments; for my bouquet is not to be thrown in the shade. The Coreopsis blossoms are borne on slender, wiry stems, and after I had filled my other flowers in thickly around the Lily I inserted a few of these on longer stems, leaning them upright against the Lily stamens, and

assists the ingenuity in giving fanciful forms to bouquets, as it affords a firmer foundation in which to embed the flower-stems."

At the renting of the pews in a Chicago church, the other evening, there was a hot competition for pew No. 78, and bids ran up to a large sum. It was finally knocked down to Brother B. "Why were you so anxious to get that particular seat?" he was asked by Brother C. "Why? Because it's just next to Brother M's," he replied. "Well. What of that?" returned the other. "Why," replied Brother B., "M's as bald as a jug, and he draws flies from everybody around him. I made up my mind to get a pew near him this year, for if there's anything I hate it's to be pestered with flies when I'm—when I'm—listening to a good sermon."

**Boy's Letter.**—Little John is visiting his grandfather. This is an extract from a letter to his mother: "Potatur-bugs is plenty, an' I enjoy 'em very much, 'cause they makes gran'-father swear, an' every time he biles over he spills his false teeth, an' always forgits ware he spills 'em, an' he hires us to roust 'em out. So yer see huntin's good here. He pays us in pigs, an' 'fore the sesin's over I think ile hev enuf to start a swine-shop. Tell Sam Jenkins; 'cause it'll make him hoppin' mad to know ime hevin' such a binanzer."—*Ex.*

The following translation was made by a Frenchman who professed to teach languages, and who thought he was telling a story in really beautiful English: "A lady which was to dine chid to her servant that she had not used butter enough. This girl, for to excuse himself, was

PUSSY'S DINNER.

they seem like richly-tinted stars of velvet, glowing above a bright-hued, mossy groundwork of sister stars. This manner of making bouquets permits having the use of a host of those flowers that have short stems and that would be almost useless for a vase. But, as water is so easily spilled from shallow receptacles, an excellent substitute is wet sand. And this

bring a little eat on the hand, and told that she came to take him in the erime finishing to eat the two pounds from butter who remain. The lady took immediately the cat whom was put in the balances. It just weighed that two pound. 'This is all the very much well for the butter,' the lady then she said; 'but where is the eat?'

## Housekeeping.

A PLACE FOR EVERYTHING, AND  
EVERYTHING IN ITS PLACE.

How few understand how much time, labor, and confusion is saved by practicing this simple rule. It is an easy matter for every housekeeper to have a place for everything, and then how very easy it is to keep everything in its place. Then, when an article is wanted, there is neither time nor patience lost in searching for it. Take a fair view of both sides of the question, and then decide which would be the most conducive to ease, comfort, and harmony. I will give two scenes illustrative of my theory. Scene First.—“Well, here my sweet pickles are all ready for scalding in alum-water; but where in the world did I put the alum the last time I used it? It must be on the top shelf in the pantry. No, it is not here. It must be in that old sugar-bowl. No, it is not here either. I am sure I did not use it all and I know I put it where it would be safe; but where it is I can't imagine. Perhaps it has got mixed in with these packages of garden-seeds. No, it has not. Dear me! was ever mortal so tormented? Here the time is flying, and a whole day's work to be done; but those pickles must be made first of all. I will take just one more look. It may be in the bureau. It is not here, that is certain; but I cannot waste any more time looking for it. I am completely tired out. I shall have to make the pickles without alum, and trust to luck to their being good. Here I have wasted nearly a half day with these pickles, and they are not fit to eat; and all because I could not remember where I put the alum. If I had only had a little, the slices would have remained nice and whole; while now they are in a perfect mush and will have to be fed to the pigs. Children, do get out of my way. I have been tormented enough this morning, without having you teasing the life out of me. I don't believe there ever was a woman had as much trouble as I do.” Now, let us take a view of Scene Second.—“I have got a big day's work before me to-day, and first of all these sweet pickles must be finished up. First, I must get some alum, red pepper, borax, saffron. Alum, here it is. How much time and trouble this little box saves me. I have never spent a moment in searching for anything since I adopted the rule of having a place for everything and keeping everything in its place. It will take nearly all of this alum. I must send for some more the first time John goes to town, so I will be sure to have some on hand. Well, my pickles are out of the way, and they are just splendid. It has not taken me very long either. How much trouble it saves to have everything just where I know where to find it. Now, children, pick up your playthings and put them where they belong, and I will get you a piece of bread and butter. There, now sit down and eat it, while I finish up my morning's work.” Look at the difference in the two pictures. And surely they are not overdrawn. One is tired and worried, out of all patience, before the day's work is commenced. Everything has gone wrong. All the trouble was caused by the seemingly trifling thing of

not “having a place for everything and everything in its place.”

There is no house so small and no person so poor but that they, at least, have a semblance of order. I will show how, with trifling expense and very little labor, housework may be done systematically and with ease, by merely having a place for everything and a time for everything—everything in its place and everything done in its time. Monday for washing. We then start out for the week with the heaviest and dirtiest of the work done; and, take it the year round, I have found that it will average as many pleasant Mondays as other days in the week. Tuesday for baking and ironing. Wednesday and Thursday for sewing and for any extra work there is to be done. Friday for baking and mending. Never leave mending until Saturday night; for something is almost sure to happen to prevent you from finishing your mending. Consequently, ragged clothes have to be worn and made worse to mend, unless you can afford more than one change. And even then it makes that much more work for next week and sets the household machinery running wrong. So never put off your mending until Saturday. Do not let Friday night find you in bed until everything is mended and put in its place. Saturday for cleaning and putting things in order. Sunday for rest; and with how much more satisfaction one can rest when they know that they have left nothing undone that should have been done! So much for “a time for everything and everything in its time.” Where is there any one that cannot have a place for everything and cannot keep everything in its place, if they have the will so to do? If you have a bureau, have a certain drawer for certain articles, and always keep them in their respective places. Should you have need to send any one for an article, you can tell them in which drawer and just the spot or corner it may be found. Even that little will save time and confusion, especially if you are in a hurry. Have a shelf in your closet for bedclothes. If you are not the possessor of a closet, a shelf in a clothes-cupboard will do, or even a box. In the spring mend and wash all winter clothes and blankets, and pack them away. Do it before the millers are around, and no danger of moths. Then when fall comes serve the summer clothes the same way. Then when the time comes for changing clothes for the season you do not have to wait to get them ready to wear. I have found by experience that all summer clothes that require starching should be starched and ironed nicely and put carefully away, where they will not get wrinkled or soiled. They are then ready to put on without any delay. I have had white garments away for two years—part of them starched and ironed and part without either starch or ironing. When wanted for use, the latter had to be bleached before they could be done up, while the former were ready to wear. I hear some one say the starch will rot them. I know it will not. If starch will rot, why is not the muslin, linen, and calico we buy rotten, some of it having lain starched for years? Every housekeeper has pieces left from cutting out sewing. As soon as a garment is cut out, pick out all pieces large enough for mending or piecing quilts. Tie them up in a neat bundle. Those that are only fit for carpet-rags cut the right width and put in the box or bag you should keep to put carpet-

rags in. The clippings that are good for nothing else put in the paper-rags. Many a twenty-five and fifty cents is saved by buying tinware with waste paper and rags no one can afford to waste. It is but a few minutes' work to make a cheap calico bag, about two feet long. Put a draw-string in the top, have a place to hang it up, and keep all your bundles of pieces in it. It saves time and trouble. They are out of the way and you know just where to find them. Have a box for your ribbons, one for laces, and one for worsted, embroidery cotton, silk, and articles necessary for that description of fancy work. Get a good-sized paste-board box, then label all your patterns, tie them up neatly, and keep them in the box. Have a box for thread and buttons; another for spool silk. Have a place for them and keep them in their place. It will cost nothing to get a small wooden box. Label it “Miscellaneous Articles.” Tie your alum, brimstone, borax, mustard, etc., etc. in neat packages and label them. Keep them in the box and have a convenient place for the box. If you have a spice-box, grind your spices as soon as bought and put them in their respective boxes. They are then ready for use. Grind your sage in a coffee-mill and put it in a tight tin box. There is no delay caused by having to stop and prepare it any time you wish to use it. Have boxes for everything you can. It is more convenient and economical than to have things done up in papers and laid just where it happens, which wastes both time and material. These are but a few of the many ways by which time and labor may be saved. Let every housekeeper try the rule, and I warrant they will agree with me, that time, money, and patience are saved by “having a place for everything and keeping everything in its place.”

H. E. F.

**To Keep Hams.**—An exchange says: “The best way to keep hams through the summer is to put them in thick paper sacks, such as millers use to put flour in, made of thick Manilla paper. Wrap the ham in several thicknesses of old paper of any kind, to keep the moisture from striking through; tie up tightly, first twisting the top around well; and then hang up anywhere. The fly will not find its way into the ham. The paper is strong enough to bear the weight of the ham.”

**A Cure for Rheumatism.**—Take a piece of saltpeter, as large as a small pea, every other morning, for three mornings. Then put a piece the size of a hickory-ut into a pint of vinegar, and bathe the afflicted part thoroughly three times a day, keeping a band of flannel around the same. This cured a very severe case of sciatic rheumatism, when the patient had been confined to the bed for a number of months.

**Rough or Chapped Hands.**—Mix Indian meal and vinegar together thick. Rub the hands long and well. Dry near the fire, without washing. When dry, rub with glycerine. If you give this a thorough trial, you will be surprised at the change. To cure a burn, without leaving a scar, mix beeswax and linseed oil together to a salve; put on the burn thick; let it remain till it comes off in a shell, of its own accord.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES

We deliver **STRONG POT ROSES** for Winter Bloom and Fall Planting, safely by mail, at all post-offices. Five Splendid Varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5; 75 for \$10; 100 for \$13. Send for our **New Guide to Rose Culture**, and choose from over 500 Finest Sorts. Our Great Specialty is growing and distributing Roses. **THE DINGEE & CONARD CO.,** Rose-Growers, WEST GROVE, CHESTER CO., PA.

**ORNAMENTAL GRASS BOUQUETS** FOR HOUSE DECORATION. MOST BEAUTIFUL ON EARTH. **ARNOLD PUETZ FLORIST** SEND FOR CATALOGUE JACKSONVILLE FLA.

100 Scrap Pictures, 10c. 100 Transfer Pictures, 10c. 20 Floral Motto Cards, 10c. 10 Perforated Mottoes, 10c. 2 Chromo Mottoes, 10c. 4 fine 6x3 Chromos, 10c. 1 Floral Surprise, 10c. All for 50c., postpaid. **AGENTS WANTED!** Circulars 3c.; with Samples, 10c. Stamps taken! **J. W. FRIZZELL**, Baltimore, Md., Headquarters for Pictures, Mottoes, Frames, etc.

**VINEGAR.** HOW MADE FROM CIDER, RUM, WINE, MOLASSES, or SORGHUM, in 10 hours, without using drugs. Address **F. I. SAGE**, Cromwell, Conn.

25 Styles of Cards, 10c.; or 10 Best Chromos, 10c., with name. Samples 3c. **J. B. HUESTED**, Nassau, N. Y.

18 ELEGANT New Style Chromo Cards, with Name, 10c., postpaid. **GEO. I. REED & CO.**, Nassau, N. Y.

20 Chromo Cards (perfect beauties) with Name, 10c. Outfit 10c. **TURNER CARD CO.**, Ashland, Mass.

50 Flowered, Diamond Cards, no 2 alike. Basket, Roseate, etc. Name neatly printed on all. **STAR PRINTING CO.**, Northford, Conn.

60 Decalcomania or Transfer Pictures, 10c. 60 Scrap or Jar Pictures, 10c. All postpaid. **J. W. FRIZZELL**, 478 W. Baltimore St., Baltimore, Md.

**FUN.** 1 pk. each Escort, Love, Pop Question, Courtship, Flirt Cards, all for 10c. **H. LEE & CO.**, Middleboro, Mass.

\$5 to \$20 per day at home. Samples worth \$5 free. **STINSON & CO.**, Portland, Me.

40 Mixed Cards, with name, in a Card-Case, 15c. Try us. **H. LEE & CO.**, Middleboro, Mass.

20 Rep or Damask Cards, with name, 10 cents, postpaid. **J. B. HUESTED**, Nassau, N. Y.

25 Fashionable Cards, no 2 alike, with name, 10c., postpaid. **GEO. I. REED & CO.**, Nassau, N. Y.

65 MIXED CARDS, with name, 10c. and 3c. stp. Samples, 6c. **DOWD & CO.**, Bristol, Conn.

25 Fashionable Visiting Cards, no two alike, with name, 10c. **NASSAU CARD CO.**, Nassau, N. Y.

25 Snowflake Assorted Cards, with name, 10c. Outfit 10c. **SEAVY BROS.**, Northfield, Ct.

25 Cards, 25 styles, with name, 10c. Outfit 10c. Samples, 2c. **J. B. HUESTED**, Nassau, N. Y.

65 Mixed Cards, with name, 10c. and stamp, Agt's Outfit, 10c. **L. C. COE & CO.**, Bristol, Ct.

**GOLD.** Any worker can make \$12 a day at home. Costly outfit free. Address **TRUE & CO.**, Augusta, Me.

\$66 a week in your own town. Terms and \$5 outfit free. Address **H. HALLETT & CO.**, Portland, Maine.

50 Perfumed Snowflake and Chromo Cards, no two alike. Name in gold or jet, 1 c. **STAR CARD CO.**, Clintonville, Conn.

40 Mixed Cards in a case, 15c.; in gold, 20c. Agt's outfit, 10c. **GEORGE TURNER**, Bristol, Conn.

**INVALID RECLINING CHAIR ON WHEELS.**  
Occupant can lie down or sit erect in it.  
MADE BY  
**NEW HAVEN FOLDING CHAIR CO.,**  
NEW HAVEN, CONN.

Exhibited at International Exhibition, Phila.

## THE LADIES' GUIDE

TO

## Needle Work, Embroidery, Knitting, Crochet, Etc.

By S. ANNIE FROST. Editor "GODEY'S LADY'S BOOK."

This is a charming little hand-book of all the various kinds of Needle Work, Embroidery, Crochet, Worsted Work, with their numerous stitches, and is invaluable to all who are fond of fancy work. Written by a lady who is familiar with fancy articles and needle works in this city, it will be found reliable, useful and indispensable. Its list of contents is of a wonderful variety of topics, and includes numerous patterns and designs.

Every Lady will find it a Needful Companion for her Work Basket and Toilet Case,

The following is a partial list of subjects to which the book is devoted. Each chapter is liberally and beautifully illustrated with designs to accompany all the directions and explanations. In some of the chapters, over twenty different stitches are described.

### CONTENTS

Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, Tambour Work, Wire Work, Doll Dressing, with numerous designs also, for

Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Feather Embroidery, Zephyr Flowers, Picture Frames in Crochet, Tippets, Wall Pockets, Shawl Case, Net Embroidery, Cretonne Work, Etc., Etc.

EIGHTEEN CHAPTERS.

NEARLY 100 ILLUSTRATIONS.  
160 PAGES.

Price - - - 50 Cents.

PAPER COVERS. RICHLY ILLUSTRATED.

Price - - - \$1.00.

BOUND IN FULL CLOTH.

# THE BEAUTIFUL VALE.

1. My soul with rap - ture waits for thee, Beau - ti - ful vale of rest!  
 2. Thy ra - diant fields and glow - ing skies, Beau - ti - ful vale of rest!  
 3. The joys of earth, how soon they fade! Beau - ti - ful vale of rest!

1. My home be - yond the roll - ing sea, Beau - ti - ful vale of rest!  
 2. Too pure and bright for mor - tal eyes, Beau - ti - ful vale of rest!  
 3. Like morn - ing dew or ev - 'ning shade, Beau - ti - ful vale of rest!

1. I long to sing thy pleas - ures o'er, The beau - ties of thy tran - quil shore, Where  
 2. Be - side the liv - ing stream that flows, The wea - ry heart shall find re - pose-- Thy  
 3. Yet when we reach thy gold - en strand, Our gen - tle Saviour's prom - ised land, We'll

1. pain and sor - row come no more, Beau - ti - ful vale of rest.  
 2. pear - ly gates shall nev - er close, Beau - ti - ful vale of rest.  
 3. sing with all the an - gel band, Beau - ti - ful vale of rest.

## CHORUS.

Beau - ti - ful vale..... of rest, Beau - ti - ful vale..... of rest!  
 Beau - ti - ful vale of rest, Beau - ti - ful vale of rest!

My soul with rap - ture longs for thee, O beau - ti - ful vale of rest!

## Floral Contributions.

## WINTER FLOWERS.

WE all know that southern or southeastern windows are best for plants, and if one rejoices in a bay-window with this sunny aspect, "all other things being equal," we may reasonably expect plenty of bloom and lovely foliage. I am an ardent lover of foliage plants, though not to the exclusion of those cultivated for their blossoms. Many devote space to plants that will not pay for the time and trouble expended upon them merely because they do not know the best varieties for window-culture in winter. I have been also much surprised to read in THE CABINET of the non-success of some of its readers in the winter cultivation of Geraniums and Pelargoniums, some saying they had no blossoms upon either until spring. As a general thing, young Geranium plants rooted in August or September will blossom freely all winter; but I find some varieties much more free than others, and would recommend for winter use the following: Cheerful, bright cherry color; Master Christine, dwarf, beautiful pink; Tom Thumb, scarlet, dwarf; White Tom Thumb, pure white; Mrs. James Vick, white, with pinkish centre; and Jean Sisley, scarlet, white eye. All these are single. The double variety, Asa Grey, of a lovely salmon color, has proved an almost constant bloomer. The above selection furnishes a variety of colors and continual bloom. Do not fail to have a few of the tricolor, gold, and silver varieties, for their showy foliage; for instance, a Marshal MacMahon, Mount of Snow, and Lady Cullin; or Mrs. Pollock, Beauty of Calderdale, and Beaton's Silver Nosegay. The new "Happy Thought" is very desirable and quite distinct in its markings, having a yellow blotch in the centre of the leaf and green margin. Pelargoniums are general favorites, but most persons think them too difficult for common cultivation. This is a mistake; it lies in "knowing how." Start cuttings in June or by the middle of July, in small pots. It is best to root them under cover, as heavy rains injure them. Pinch off the ends of the branches frequently, to make them bushy, and by fall repot in four or five inch pots. Before placing in the windows give them a thorough smoking, and in two days afterwards repeat it. This keeps my Pelargoniums perfectly free from the aphids. In November and December give little water, gradually increasing in January. Keep them in cool, sunny windows, out of danger of frost. A room but slightly heated suffices. They will grow stout and strong, and when buds appear should be brought to a warm room and stimulated once a week with liquid manure. Old plants blossom earlier than young ones, and it is well to have two sets of plants—an old one of each kind to bloom early and young plants to come on later. Cut old ones down in July, but do not repot till August, and again in the autumn. They will blossom by February (I have had some bloom in January), and throughout March, April, and May your plants will delight all beholders with their wonderful beauty. In my experience the best varieties are Pet of Cambridge, rose and white; Mazeppa, maroon and white; Madame Dolby, car-

mine-crimson, with white centre; La Vésuve, rich shaded, velvety scarlet, very large; Bride, white; Empress, white, with maroon spot in each petal; Fire-King, orange-scarlet, spotted with black; and Competitor, pink, scarlet, and black. Their foliage should be washed frequently; when in bloom great care should be taken that the blossoms do not get wet, as it injures them greatly. Pelargoniums are great favorites with me, and I wish their cultivation were more common.

A few plants of the Coleus, such as The Shah, Setting Sun, Chameleon, and the well-known Verschaffeltii, add much to a collection. I find the Chameleon needs to be "starved" in order to make its foliage beautiful. Indeed, its rich velvet leaves, spotted with rose, purple, yellow, and green, are far handsomer than some blossoms. Give it soil composed of two-thirds loam and one-third sand; never use manure in the soil or use stimulants if you wish it to retain its beauty. A few plants of Achyranthus are quite desirable, especially Aurea Reticulata, leaves bright green, marked with a network of bright yellow, and sometimes blotched with carmine; also Gilsonii, leaves carmine, stems rich pink. To mingle with these, get a plant or two of Centaurea, with their silvery-white leaves; Candida and Clementii are considered best. By all means procure a Dracæna, with its lovely crimson ribbon-like leaves, and a plant of Farfugium Grande attracts attention, with its shining green leaves spotted yellow. All the above foliage plants are of easy growth, the Coleus being most tender and requiring most heat. Use soil as for other plants, and repot when you see the little rootlets creeping through the aperture in the bottom of the pot, for that indicates a need of more sustenance. A few greenhouse Ferns will add grace to your window, and will grow in the shade, behind the blooming plants, requiring plenty of moisture and partial shade. Both the large and small silver-leaved do well; also the delicate Maiden-hair and the Lygodium Scandens, or Japanese Climbing Fern. I am delighted with the latter. It will droop as well as climb, and its delicate, graceful vine looks charmingly creeping on a tiny cord about my window. Every one loves the Rose, the "Queen of Flowers," while few have success in their cultivation in warm sitting-rooms; but the cool room above mentioned for Pelargoniums will just suit them. Such an one can be easily obtained by having a register either in the sitting or dining room, communicating with the chamber above; and should the latter possess sunny south or east windows they will be well suited to many greenhouse plants. Roses need stiff, rich soil, and considerable water while in rapid growth. Some of the best winter varieties are Agrippina, bright crimson; Hermosa, pink; Safrano, yellow; and the new white Tea-Rose, Cornelia Cook. This reminds me that I never yet saw a window containing too many white flowers, and each year I try to increase my collection. The fine tassel-like flowers of the Stevia and Eupatorium; the sweet-scented white Polyanthus Narcissus; white Ixias, with their delicate blossoms; the new Abutilon, Boule de Nieve; white Primulas, double and single; the winter-blooming white-fringed Chrysanthemum, Laciniata, are all fine for the window in winter. These, together with

the White Tea-Rose, white Geraniums, and Pelargoniums (mentioned previously), and an Azalea and Camellia, will furnish a fine variety of white flowers.

All the readers of THE CABINET have been told of the hot-water treatment for the Calla, and its need of weekly stimulants. I consider the dwarf Calla best for house-culture, as the plants do not grow as large, consequently are easier to handle, and, the blossoms being smaller, are more useful as cut flowers. I know a lady who has two Callas grown from seeds. They were good-sized plants, one year old, when I saw them, and looked as if they might bloom the next winter. Besides the enjoyment derived from the cultivation of house-plants, there is much pleasure in being able to gather flowers for the parlor vases, for button-hole bouquets, and, last but not least, in having an occasional box of blossoms to send to a friend. We need a few fragrant flowers, such as Mignonette, Heliotrope, Daphne, Mahernia odorata, and plenty of sweet-scented Geranium-leaves, but space forbids the enumeration. I have not dwelt upon the necessity of even temperature, weekly washing, giving fresh air, etc., as it is already a "twice-told tale"; neither have I given a full list of the many plants that may be used in the window-garden, to say nothing of vines and basket-plants; but if one-half I have mentioned be successfully cultivated one need never be without "Winter Flowers."

H. J. M. G.

## FLORENCE'S SNOW-TREE.

THE description of a snow-tree in last December's number of THE CABINET came just in time to add one to the list of Christmas gifts.

I had wanted something for a gift to a very dear invalid friend, and that was just the thing. There were plenty of fairy-baskets in town, but not a solitary snow-tree, and, better still, I had never seen one in any of my travels.

Of course I did not make it exactly like the one described, for with my inordinate love for experiments it would be almost impossible.

I reduced it somewhat in size, shortening the tassels to correspond. I used quite small skirt-wire, so that the branches would bend easily in any direction I chose to have them. I covered the trunk and base of the tree with clean white cloth.

I used linen instead of cotton for ravelling. I think it much prettier. There is a delicate sheeny look to linen that is wanting in cotton. A partly-worn linen sheet is best, and will be sufficient for two trees. I gave it a good bleaching, and ravelled it crossways of the breadth. I twisted it before winding, and twisted it for the tassels. I wound the branches thick but loose. I sewed the tassels on the end of every branch, all along the branches, and wherever else they were needed, until the tree was as perfect in shape as a tree ought to be, and the foliage neither too dense nor scanty.

After winding the base I fastened tassels all around the foot of the tree, cutting them just long enough to reach the lower edge of base.

To a critical eye it needed a great many finishing touches, but at last it was pronounced complete, and I drew a long breath of admiration. It certainly was beautiful, and my invalid friend went into such an ecstasy of delight over it that I felt more than amply repaid, and I send my sincere thanks to "Florence" for her kindly offering.

SEAWEED.

## Floral Experiences.

### WINDOW PLANTS.

THINKING that my experience might benefit some of the *Floral Friends*, I'll give a "wee bit." For many a year an east and two south windows have been filled with plants, and many a night have they had to be moved for fear of Jack Frost; but all that is ended by my having a conservatory built last year, much to my delight and of many others. My south windows didn't do me much good, as the roof of the piazza kept the sun from coming in. My plants all grew very thrifty, but so few blossoms.

Now I have the sun all day, and therefore have more blossoms; averaged about twenty kinds every day this winter; just now counted twenty-four different flowers.

Last fall I took up a lot of Lily of the Valley, Liverwort, Scilla, Bluebells or Grape Hyacinth, and Bleeding-Heart; put them in an upper room after they had been frozen (as they are said to do better to freeze); when ready to blossom would bring down in conservatory. They all did nicely. The Bleeding-Heart made a great show, grew very rank; one day I counted thirteen clusters out at once. For steady blossoming *Browallia* goes ahead, if you will only pick off all the seed-pods. The blue is a lovely color; the white doesn't grow quite so strong, but helps to make bouquets till the *Eupatorium* come on. *Eupatorium Kiparinn* comes first, then another kind, which grows larger; the leaves are as broad again, and the flower clusters more compact. *Mignonette* and *Sweet Alyssum* did well, had blossoms all winter; the little sprigs of *Sweet Alyssum* are pretty to put in bouquets, even without the blossoms. *Maurandia* is a lovely, graceful vine; the ends of the branches or little vines with ferns also add much to the beauty and grace of a bouquet.

You know the more we pick our flowers the more we have. Four kinds of my *Enchysias* have had many on; never a day without buds or blossom. The speciosa has been most abundant. *Oyalis* is another steady bloomer. Have white, pink, and yellow, and expect they will keep right on, till next summer I shall have to dig them up.

This year I tried a *Canna*, and it has been a great success; been in blossom over a month; two main stalks had twenty blossoms, and the little side shoot half as many more, and more still coming. For hanging-baskets *Blue Lobelia* and *Kenilworth Ivy* are always in blossom. Last summer, instead of letting my *Callas* rest, I kept them growing to make them as large as possible, and they have looked noble and grand, but never a blossom till now; the first bud is almost out. I have four roots in a large pot, with *Lobelia* and *Kenilworth Ivy* running over the top and sides of pot. I painted a six-quart pan dark brown to hold the *Calla* pot, and then pour boiling water in that; also use manure water often. I fill an old pail part full with manure from stable; pour boiling water on it; then, as I water my plants, use a little of that now and then; hurt my *Geraniums* at first by using it too strong; some dropped leaves and buds.

Jean Sisley has been and is a beauty. A *Cycla-*

men I raised from seed had over three dozen flowers, eighteen out at once; it was pure white. My roses, when they are just ready to open, I cut off and wind a piece of yarn (that's softer than thread) once or twice around—that keeps them from opening—and put them in water in the dark, and you can keep them two or three days till you want them. Another thing that has been admired very much is a lot of Ferns that I took up from the woods about Christmas; they are lovely. I find *Petunias* in the house last much longer than when blossoming out doors. *Bouvardia Liantha* has given a good many clusters; my white one, too, is beautiful, so velvety. Am looking daily to find buds on *Mahernia*.

Wish I knew the names of my *Begonias*; have white, coral, and a number of different kinds of pink ones. White Daisy, or *Feverfew*, is a favorite, the blossoms are so perfect and last so long. But it won't do for me to tell of any more of my flowers, or I never shall come to tell the true reason of flowers growing: they want to be truly loved and tended.

AUNT KATE.

FULTON, ROCK CO., WIS.

### A PLEA FOR THE COLD-FRAME.

VERY satisfactory results are obtained by starting young plants for summer flower-gardens in a cold-frame. One the size of two common window-sashes will enclose sufficient space for twenty-five varieties of seed. Select a sheltered, sunny spot, and make the soil mellow with sand and leaf-mould to prevent its crusting over, for the slender sprouts cannot force their way through a hard clay or grow and thrive upon a rough, uneven surface. When all is prepared and the glass in place, allow it to remain for several days, until the earth is thoroughly warmed. In Rhode Island we sow our seed about the middle of April, and by the 20th of May have fine, vigorous plants to fill our beds and borders. Do not allow the seed-bed to become dry; if neglected, and the hot sun shines brightly, the delicate seeds or plants soon become parched, and the very choicest variety will be the first to take its departure. Give the moisture through the fine rose of a watering-pot—the finer the spray the less danger of washing the tiny seed. The young plants need a little air when the noonday sun becomes too fervid. As the time approaches for transplanting they should be gradually hardened off, the glass being removed entirely for a few days before they are taken up. Soak the earth thoroughly before disturbing the plants. If possible, choose a cloudy, dull day for making up the garden-beds; if not, take the time just at night after a nice shower. Then the soil is moist and pliable, and the plants will not be subjected to the sun's rays for several hours at least.

No more "toting" of countless window-boxes for us: here to find a breath of air, there to catch a ray of sunshine; on the mantel-shelf for bottom-heat, and out of doors and in every day for a week before the young plants can be removed to the garden! All these extra motions to make in the midst of house-cleaning! And, after all our labor and painstaking, the little things had a forlorn, wizened appearance—the most desirable kinds never advancing beyond the seed-leaf, if, indeed, they ventured forth at all. In a

cold-frame we may have constant warmth and moisture, abundant light and sunshine; in fact, every requisite for speedy germination and healthy growth, with only a minimum of care. Plants will attain a larger size here in one month than would be possible in twice the time if kept in the dry atmosphere of a dwelling-house. Many delicate varieties may be started in this manner which elsewhere would surely disappoint us. We grow *Verbenas* from seed of our own gathering, and have many new and beautiful colors each year. Stocks that remain very slender, and are so liable to damp off in the house, are easily propagated in a frame.

By having strong, vigorous plants to set out as soon as the weather permits, we can have our annuals in blossom much earlier than by the old method of sowing the seed in the open ground; then, if a certain kind failed to come, that spot—perhaps the most conspicuous in the garden—was destitute of flowers and foliage for a whole season; whereas now we have ample time to supply all deficiencies.

P.

WARREN, R. I.

### HYACINTHS.

HAVING tried the following plan with Hyacinths, I can recommend it. My rooms are warmed by a furnace, and I have had a good deal of difficulty in getting the flowers to open well, on account of the dryness of the air.

When the pots were well filled with roots I washed all the soil from them, and, after cutting off the roots within an inch of the bulb, I placed it in a Hyacinth-glass, and there every bud matured and opened splendidly. I followed the same plan with every one, with the same result. I never put Hyacinths in the sunshine, but bloom them in a window which faces the north.

M. P. G.

### BUDDING ROSES.

THIS is a simple process by which amateur cultivators often increase their stock. A sharp penknife can do duty for a budding-knife, and the handle of a toothbrush, if ground down smooth, will answer for a spud to aid in lifting the bark. From the last of June to the last of August is the best time for this process, as the bark can then be more easily raised from the wood. Take a smooth stalk and make a horizontal cut across the bark through the wood, but not into it. From the centre of this cross-cut make another cut straight down the stem an inch or more in length. These two cuts should resemble a T. Slice off the bud you desire to propagate with one cut of the penknife, cutting it close to the main stalk. Now, with the edge of the spud, turn back the bark on each side of the straight cut and insert the bud on the wood of the branch to be budded, fitting it tightly to the crossed cut. With a bit of soft yarn bind down the bark, leaving the point of the bud exposed. A handful of dampened moss must then be bound round the stem, taking care to leave the tiny point of the bud exposed to the air. In six weeks the wrappings can be removed, but all other shoots must be kept from growing on the budded branch. By this means a rose-bush can be made to bear half a dozen different-colored roses.—*Er.*

## Floral Hints.

## THE AQUATIC BOUQUET.

WHILE on a journey the past year I saw a most charming floral arrangement in what was called "The Aquatic Bouquet," and, whether for the drawing-room bracket, or the stand in a sick-room, or even the dining-room or tea-table, it is a most beautiful object. But to describe this beautiful object is what I now will try to do, hoping whoever may try it may have the best of success; and if they do I am very well assured they will be paid for all their trouble and expense.

It consists of flowers, buds, and sprays of grass, ferns, and moss, or, indeed, any treasure of the floral kingdom in a state of perfect beauty and in an upright position, surrounded and buried in the limpid element—a singular yet very wonderful sight, merely one of nature's laws beautifully demonstrated—the power of atmospheric pressure—and the old rule of our school lessons, that two elements cannot occupy the same space at the same time, in this instance is proved by following the subjoined directions.

Have ready a glass shade such as we use for covering fern cases, wax flowers, statuary, or other delicate objects of any size convenient, or substitute any plain glass tumbler or bell glass (though these are only suitable for small bouquets); a glass or china dish with flat bottom sufficiently large to admit the shade, and with a deep dish, such as a soup-plate, for instance; a selection of flowers of even ordinary species, such as Dianthus, Abronia, Verbena, or many others which I will not stop to mention, and some grasses, ferns, and moss; a piece of stone one half as large as diameter of shade, some fine strong green thread, and a tub of clear water, cold, from a spring if convenient. Now commence by arranging the flowers and leaves tastefully into a bouquet, using judgment and skill, in order that by contrast and pleasing combination the most satisfactory results may be obtained. Fasten this when completed to the stone by tying the stems to it (for which reason the stone might better be rather rough). The stone itself must then be entirely hidden by tying moss and colored leaves around it, commencing at the top and covering the stems of the bouquet. For this the leaves of Coleus, Achyranthus, Alternanthera and variegated Geraniums, contrasted with moss and green fern leaves, will present a charming appearance. The

stone so covered is placed in the centre of the dish, around it (if space intervenes between it and the side of the dish) arrange pretty stones, shells, moss, and bright leaves with graceful vine sprays. Now immerse this dish, arranged as it is, in the water contained in the tub; then, taking the shade in the hand, place one side of it in the water just over one side of the dish, and slowly sinking it until entirely filled, all the time turning it over the bouquet until finally

is room, place pieces of stone, shells, and any other pretty ornament prettily dressed with Tradescantia, Ivies, or delicate plants that will grow in water.

We have said this is a beautiful object, but the half has not been told, until after standing for twenty-four hours, or perhaps a little less time, each tiny leaf, every feathery spray, the crimson of the gorgeous foliage and plants and soft, velvety petals of the blossoms, have become encrusted with a glittering coat of diamond-looking stones, draped and festooned with tiny ropes of shimmering spangles, gemmed and studded with sparkling jewels and pearls in the form of a hundred minute air-bubbles, so transparent that every shade and tint of the rainbow is reflected, and the star-like incrustations give the bouquet the appearance of some wonderful piece of fairy-work arising from a sylvan grotto covered with white frosty gems far more brilliant than anything cut and polished by human hands. I cannot describe, nor can any one, how beautiful this is. I was told by those who were the happy owners of this bouquet that it would remain for some time to look just as it then did, and it was so very handsome it was the admiration of all who saw it.

This wonderful and beautiful object is well suited for the sick-room, where flowers are generally so acceptable yet frequently inappropriate on account of the odor. But for the dining-room it is exceedingly elegant and capable of astonishing the eyes of beholders. Very small blossoms will seem quadrupled in size, so you may judge how large and fine flowers must look, to say nothing of the glittering, sparkling bubbles of all shades in the inside of the globe or shade.

I hope all who may perchance read this will try it, and tell of their experience through the columns of the LADIES' FLORAL CABINET, so others may know of their success.

B. F. LAWRENCE.

JAFFREY CENTRE, N. H.

PAMPAS GRASS PLUMES FOR HOUSE DECORATION.

it is placed down on the dish; then raise dish and all up from the water slowly, and you will find the atmospheric pressure will keep the shade firmly fixed, while before you will be the most lovely objects you ever beheld.

Do not disturb the water around the rim of the dish, as it aids in making the shade air-tight, and for this reason it might better be renewed from day to day as it evaporates.

Around the outer rim of the plate or dish, if there

is room, place pieces of stone, shells, and any other pretty ornament prettily dressed with Tradescantia, Ivies, or delicate plants that will grow in water.

## ROSE SLUGS.

THESE are the larvæ of a black four-winged fly. They have a wonderful sawlike instrument, cutting grooves in leaves and twigs to deposit their eggs. The larvæ, when full grown, are three-fourths of an inch long and have twenty-two legs. They eat the pulp of the leaves. Whale-oil soap is a sure remedy. A weak solution of carbolic acid is as good and more pleasant. The *Rose-chaffer* must be picked off by hand.

## Miscellaneous.

### HOW THE PARKS OF PARIS ARE ILLUMINATED AT NIGHT.

A WRITER from Paris thus describes the beautiful illumination of the parks at night.

"We were so late that we had to drive past a mile of empty carriages before we could find a place to leave ours. All this section of the wood was in utter gloom. Within the park, along the avenue and the alleys bordering on the lakes, rose Venetian masts, each mast bearing a great shield or banner of colored lamps. But all that was nothing. The beauty of the evening was in the lakes and in the edges of the wood surrounding the lakes. The moment you touched the water you were out of the world; you were in a world of light which belongs to the domain of dreams. The charm of the Bois de Boulogne in common times is its foliage; to-night the foliage was used as a background for the illumination, and the simplest means were the most successful. Trees hung thick with fiery fruit which never bore fruit before. Their branches were hidden with globe-shaped lanterns of pale India red, which grew rosy and ruddy with the light inside. There must have been millions of them. I counted the number on one tree of no great size, and there were a hundred and thirty-four. This was repeated with no effort at variety in form or color, and the result was absolutely bewildering—no Arimida's or Hesperides garden could have been so wonderful. Mere monotony and endless repetition of the same idea by the same means have done what no variety of delicate device and changing purpose could have done. It is monotonous as the sea is monotonous, and you can no more tire of it than you tire of the waste of waters which spreads to the horizon, and there is no more poverty of design in one than the other. You may fancy, if you like, that this illuminous semicircle has as little of mortal handiwork as the sunset glories of the sky which blend with the illimitable ocean. From end to end of the lake the deep recesses of the wood are pierced with the intense white rays of the electric light. Bengal fires blaze up every few minutes, red, blue, and white. On the surface two hundred boats rigged with lamps and lanterns are moving about—flame-freighted argosies—never still for an instant. And the sky is filled as far as you can see with showers of trailing sparks from innumerable rockets and great sheets of flame from exploding mines. This goes on for two hours, with half a million of people for spectators, or twice that, for no estimate of such a multitude is possible. Wherever you go shouts of delight accompany you. The Frenchman is never slow to express the immense joy he feels in any event that honors his country and his beloved Paris."

### GRECIAN BEAUTY.

MUCH has been said in praise of Grecian beauty, and the men are handsome in every sense of the

word. We might well imagine them to have been the models of Phidias and Praxiteles. Their large eyes, black as jet, sparkle with glances of fire, while the long, silky eyelashes soften the expression and give a dreamy appearance of melancholy. Their teeth are small, white, and well set. A regular profile, a pale olive complexion, and a tall, elegant figure realize an accomplished type of distinction. As to the women, they seem to have left physical perfection to the men. Some possess fine eyes and hair; but, as a rule, they have bad figures, and some defect in the face generally spoils the good features. It is among them, however, that the Oriental customs are most strictly preserved. While the men are gradually undergoing the process of civilization, they, in a moral point of view, remain stationary, and are just as they were fifty years ago. It may, indeed, be said that, with the exception of Athens, the women possess no individual existence and count as nothing in society. The men have reserved every privilege for themselves, leaving to their helpmates the care of the house and family. In the towns where servants are kept they are of the poorest class of peasants, who know nothing and receive miserable wages. The families are generally large; seven or eight little children demand a mother's constant attention. The morning begins by directing the work of each servant, repeating the same thing a hundred times, scolding, screaming, even beating them, to be understood. In the evening, when the children are sleeping, if there remain some little time, the poor worn-out mother sits down to her spinning-wheel to spin silk, sew, or knit, or, if it be summer-time, to look after her silk-worms and cocoons, happy if she has not to do the work of her incompetent servant over again.

The women of Cyprus are quite peculiar in their costumes, wearing pantaloons fastened around the ankles, with fancy-colored boots, a profusion of chains and trinkets around the neck, and a heavy girdle fastened by massive metallic plates. They dye the hair a lustrous brown with henna, and they deepen the expression of the eyes by coloring the eyebrows with the same dye. Their dress is of the brightest colors, crimson, etc., and their head-dress is a perfect copy of that seen on Phœnician and Egyptian statues. They seem to take a pride in exposing their charms, which other women conceal. Their bosoms are almost entirely uncovered. They are tall and Juno-like in mien and figure, with remarkably handsome and classic features. They are among the most beautiful women of all the islands, recalling the finest faces of the ancient statues. Unfortunately, they do not cultivate grace or form, and by thirty they become quite stout and heavy. There is a certain dignity and elegance about the women of Cyprus that is very striking. They probably approach nearer to the ancient type of classic beauty than any other of the modern descendants of Helen. They have but little or no education, but they are not lacking in intelligence, nor in a desire for knowledge. I cannot speak as well of the men. They have been so long crushed to the earth by Turkish oppression that they have lost most of the best qualities of their race. They are, nevertheless, industrious, patient laborers, peaceful and temperate.

### FLOWER WORSHIPPERS.

VERY beautiful is the Persian's love for flowers. In Bombay I found the Parsees use the Victoria Gardens chiefly to walk in, "to eat the air"—to take "a constitutional walk," as we say. Their enjoyment of it was heartily animal. The Hindoo would stroll unsteadfastly through it, attracted from flower to flower not by its form or color, but its scent. He would pass from plant to plant, snatching at the flowers and crushing them between his fingers, and taking stray sniffs at the ends of his fingers as if he were taking snuff. His pleasure in the flowers was utterly sensual. Presently a true Persian, in flowing robe of blue, and on his head his sheepskin hat,

"Black, glossy, curl'd, the fleece of Kar-Kul,"

would saunter in, and stand and meditate over every flower he saw, and always as if half in vision. And when at last the vision was fulfilled, and the ideal flower he was seeking found, he would spread his mat and sit before it until the setting sun, and then pray before it, and fold up his mat again and go home. And the next night, and night after night until that particular flower faded away, he would return to it, and bring his friends in ever-increasing troops to it, and sit and sing and play the guitar or lute before it, and they would all together pray there, and after prayer still sit before it, sipping sherbet and talking the most hilarious and shocking scandal, late into the moonlight; and so again and again every evening until the flower died. Sometimes, by way of a grand *finale*, the whole company would suddenly rise before the flower and serenade it together with an ode from Hafiz, and depart.

### ATTRACTIVE LUNCHEONS.

A WRITER in *Scribner's Magazine* utters a protest against making the school luncheon so unattractive as to destroy the child's appetite. She says:

"There is something very dampening to the appetite in the aspect of thick bread and butter rolled in a bit of coarse brown paper, with a cookie or two sticking to the parcel, and an apple covered with crumbs at bottom of pail. Such a luncheon will often prevent a delicate child from eating at all. A little care spent in preparation—in cutting the bread trimly and neatly, packing the cake in white paper, and the whole in a fresh napkin, in choosing a pretty basket to take the place of the tin pail—is not pains thrown away. Some children are born fastidious and with a distaste for food. They require to be tempted to eat at all—tempted, not by unwholesome goodies, but by taking trouble to make simple things dainty and attractive to them. We have heard a grown woman, whose fastidiousness had survived her childhood, describe with a shudder the effect which her dinner-basket at school had upon her. The very sight of it took away all appetite, and she went through the afternoon faint and fasting rather than meddle with its contents. By all means bake the custard in a 'pretty cup,' and do what is possible to give the luncheon an appetizing appearance to the little people who depend upon it for the working force of their long school-day."

## Our Homes.

## HOUSEHOLD SUBJECTS.

THE manner of furnishing our living rooms, or kitchens, as they are usually called, where so many of our American housewives spend a large share of their time, ought to be duly considered. A cheerful room will do a great deal towards making the family cheerful. I have seen such rooms kept in such a manner that I wanted to go out of them and not stop for a moment—almost entirely destitute of ornaments of any kind; or, if one chanced to be there, it looked very much out of place. When there are so many simple ways of ornamenting our homes it seems too bad to spend one's life in such places, for it is not always amongst the needy that we find those ill-furnished homes. There are a class that "have no time" for fancy-work or to cultivate flowers; with others, it is too much work.

In painting the woodwork use light colors; the paper the same. Mine is painted a light lavender color, with paper of a corresponding tint, with a narrow shaded stripe of green, the bordering mostly green with some white, also a little black in it. This makes a very cool-looking room, as well as light. The most of my windows being north, I do not get much sun in winter. In those windows I keep a few plants that do not want much sun. I have one south window, and that is full of flowers. There is no curtain to that, as the vines answer that purpose. I have German ivy and Madeira vine on the east side; on the other, ivy, geranium. This makes a very pretty screen. In front is a stand with a colons, monthly rose, abutilon, with its golden red bells, and several kinds of fuchsias. From the top of the window hangs a basket of Kenilworth ivy. East of this hangs the "Rustic Wreath" which came with your paper. Over this some green tassels of pine are, with bitter-sweet berries drooping from the hook that holds the picture. A motto in perforated paper—"God Bless our Home"—in colors, hangs near; with several other prints that are inexpensive, but pretty, hanging on the other walls. In one corner is a very pretty wall-pocket, ornamented with carved work and decalcomanie pictures, for newspapers. In another corner, a bracket with a vase of grasses and winter flowers. A very pretty way for fixing them is to get fine grass that has numerous little buds or seeds on it, dip it in water and shake it, then dip it in flour and shake also; this looks as if covered with white buds. I know that brackets and picture-frames, wall-pockets with carving on them, cost money if they have to be bought. I happen to have a "John" (as all of THE CABINET writers call them) in the person of a son, who says that he is a "Jack" at all trades and good for nothing. But I find him very useful, as my house is well filled with all kinds of such work, made of fret-sawing and turning, also carving. There are very many pretty ways for making those things besides those I have spoken of. I saw at our Fair, this fall, a picture-frame made of old rubber boots cut out in leaves and flowers, then varnished with black varnish; it was very pretty.

I have wandered away from my room that I was speaking of, so I will just make my way there to fin-

ish it. My remaining windows are north; for them I have white curtains on rollers. A rag carpet covers the floor; and it is furnished with all that is necessary for such a room. I always keep a white cloth neatly starched and ironed on my table, with a vase of flowers as long as there is any to make bouquets of; a glass goblet is my vase—it makes a pretty one. My parlor is small but well filled with articles of use and beauty, most of them made by the one spoken of, so I will say nothing more about that. I will try to tell how some of those things can be made by those who have no "John."

Wall-pockets can be made very nicely out of white "Bristol board." Cut them any shape you like, and pink them around the edge, then transfer some decalcomanie pictures on the front piece and one on the top of the back. For transferring on those use gum-arabic, trim the picture close to the gold, then wet it with the gum; have this in a wide-nosed bottle, dissolved in water, about as thick as glue, and apply to the picture; press it on with some weight for a few moments, then wet the paper over the picture till it slips off, then carefully varnish just the picture. Garlands of "autumn leaves" are very pretty for them; also moss roses and ferns. I often find boxes at the stores that make nice ones; some with watered paper that are very pretty. Some are a dark brown of this kind of paper. After they are cut in the shape desired, the edges can be covered with gilt paper, as the edges when cut are yellow.

Very pretty baskets are made of alspice (hanging baskets). Take a small wire, the size you want the top of your basket, string the kernels on so they will touch, join the ends. Then over the same way for a handle. String the rest of the alspice on thread and loop from the top as long as you want them; tie the bottom of the loops together, and finish with a tassel of the same.

Snow-baskets are made the same shape, only of white cloth cut in narrow strips and the edges raveled; wind the top wire and handle with the same.

Cigar-lighters make very pretty card-receivers. Point the ends of each one, cross them in squares—four each way—fasten where they cross with bright-colored wool. They are made in various shapes, to suit the taste; some have one at the bottom and one each side above, then one at the top. Large-nosed bottles or small glass cans filled with shells and little pebbles, with stray buttons of bright colors that have done service on children's clothes, and all such things as are found in every family, make a pretty ornament for a bracket or table. Some fill with alcohol after it is done to make them look bright. It is not necessary, as they look nicely without it.

A little time and taste will make almost any home more cheerful. If the room is poor or small it will look more home-like if only one little flower sets in the window.

An economical and wholesome preserve, cheaper than molasses, can be made out of any kind of canned fruit or tomatoes simply by adding to every two quarts of fruit one pound of sugar and boiling to a proper thickness; after which can precisely as when canning, using quart jars.

H. A. EARNHART.

OAKDALE GARDENS, PA.

## THOUGHTS ABOUT HOUSEKEEPING.

HOUSEKEEPING is not one of the lost arts, as those who daily deplore the "good old times" would have us suppose. And, though I am aware that too little attention is being paid to a thorough domestic education by the girls of to-day, I still venture to say that there are more well-kept and well-ordered homes now, in proportion to the population, than there were fifty or seventy-five years ago.

The immaculate order of those ancient households was owing in great part to the small amount of furniture and the absence of all those adornments which add so much grace and elegance to our modern homes.

These croakers would lead us to believe that the traditional grandmothers were capable of and accomplished much more than the women of the present time. They contend that the spinning, weaving, knitting, quilt, butter, and cheese making to which their time was given was more of a strain on their nerves and health than we could endure. I do not agree with this idea. The average housekeeper of to-day works more hours and accomplishes more than her ancestors. Think for a moment of the manifold duties of which they had no idea in the olden time. But, you will say, look at the labor-saving inventions that she has to help her. I admit this; but whenever we Yankees have a labor-saving machine we at once spend the time saved in that manner in doing some other work, instead of devoting it, as we should, to recreation and rest; and, so far as my experience goes, the greater number of these labor-savers make more work than they do.

Some patent machines offered for use in the household are what they claim to be, a help. One sees now and then a good washing-machine; but the best one I ever saw was a stont, willing Irishwoman whom I employed for years. Wringers are indeed a blessing, and save no end of sprained wrists, lame shoulders, and colds. The Welcome Carpet-Sweeper should also be in every family.

Have regular days for sweeping. If you go all over your house and put it in order once a week, you will be rid of one of the horrors attendant on unexpected company. Before beginning to sweep remove or cover all articles. Use damp Indian-meal, damp paper, or tea-leaves to keep the dust from flying; keep the windows closed till you are through, then open them to let the dust out.

House-cleaning is a bngbear to most of us, but it will be relieved of many of its terrors if you attack one room at a time and finish it, so far as is possible, before beginning another. Remove furniture, curtains, pictures, etc. Wipe the walls carefully from top to bottom in straight lines, using a dry, clean cloth; turn often to prevent soiling.

Use but little soap on paint; the less the better, as it eats out the oil, thus destroying the gloss. Rub soiled parts with bath-brick and use pulverized borax on the yellow portions. Wet but a small part at a time, and wipe dry before leaving it. Have the carpets put to air and whipped carefully, but by no means have it done with a blunt stick, as it will cut them.

H. MARIA GEORGE.

NEW YORK, NOVEMBER, 1878.

## DESCRIPTION OF ILLUSTRATIONS.

UPON first page is a sketch of a beautiful window garden of one of the subscribers of THE FLORAL CABINET. Around the lower part of the bay-window is a box, filled with earth, in which are growing many varieties of flowering plants. In the centre of the window are shelves with pots; from the edges of the ceiling above are drooped beautiful vines and hanging-baskets, and underneath are vases with plants of graceful habit. The picture-frames on either side are also covered with climbing vines which grow from little basins or pots suspended beneath. This sketch was received from one of our correspondents, but as the letter and description of it are lost, we trust it will be recognized by those who have seen it, and we wish to hear further respecting its beauty.

Upon page 4 is a pretty sketch of Pampas Grass Plumes, exhibited by B. K. Bliss & Sons. These plumes are becoming exceedingly ornamental for decorating the walls of rooms and tops of picture-frames, also for putting in vases.

## FAIRY BASKET.

I HAVE a handsome fairy basket, made of bleached cotton-flannel, which is attached to the ceiling over the centre-table, wall-basket pattern, I'll send in exchange for some other patterns; rabbit pattern, dog and elephant patterns; cone-basket large enough for cards; a small basket made of corn-husks; tidies worked upon white percale, with Turkey red floss in wreaths, with monogram in centre; crochet-tidy for a common chair; also handsome patterns for trimmings. I will exchange work, ideas, or patterns.

MINA SCHEFFER.

ANNAPAN, HENRY COUNTY, ILL.

## PUBLISHER'S ANNOUNCEMENTS.

## To Old Subscribers.

Every person who is now a Subscriber of THE FLORAL CABINET for this year, 1878, will be entitled to one of the Premiums (1 to 13) when he renews his Subscription for the next year, 1879.

Every Subscriber, old or new, from this time forward, as fast as he remits for the coming year, will be entitled to one of these Premiums. Subscriptions may be sent any time and begin any time.

## Premiums for Clubs.

In addition to giving each Subscriber a choice of one of the beautiful Premiums (1 to 13), there will be given to the Club Agent one of the following Premiums:

1. For Club of 2 to Monthly Edition, at \$1 30 each, or Club of 5 to Quarterly, at 50 cents each, Club Agent will get one of these books:

"How to Destroy Insects on Flowers and House-Plants";

"Williams's Designs for Needle-Work."

2. For Club of 3 to Monthly Edition, at \$1 30, or 7 to Quarterly, at 50 cents each, will be given Club Agent one of the following:

"Ladies' Guide to Needle-Work, Embroidery, etc." (paper covers);

"Every Woman Her Own Flower-Gardener" (paper covers);

"Fret-Sawing for Pleasure and Profit" (paper covers);

"Household Hints and Recipes" (paper covers).

3. For Club of 5 to Monthly, or 10 to Quarterly, Club Agent will get choice of any book in No. 2, bound in cloth.

4. For Club of 7 to Monthly, Agent will receive one year's subscription to Monthly, free, and choice of one Premium (1 to 13) extra. For Club of 7 to Quarterly, Agent will receive Quarterly free one year, with Premium also.

5. For Club of 10 to Monthly, agent will receive one paper free, and one book worth \$1 (named in Class 3).

6. For Club of 15 to Monthly, Agent will receive one paper free and one of the following books, worth \$1 50:

"Household Elegancies";

"Ladies' Fancy-Work";

"Window Gardening";

"Beautiful Homes";

"Evening Amusements."

There will be no other Premiums given to Clubs this winter than these for books.

## Value of the Premiums.

The Premiums given to every Subscriber are unusually good and valuable. The choice is very desirable, and it seems to us so splendid an offer should be accepted with eagerness. They are all practical, useful, and popular; a fine paper, with a splendid Premium, worth 50 cents to \$1, in addition, free, is so cheap no one should think twice.

## Quarterly.

The Quarterly CABINET is the same as the Monthly, but it is sent only once a quarter—the 1st of January, April, July, October. The cost is but 50 cents, and every Subscriber has a choice of one of the Premiums, 1 to 13, besides.

Every flower-lover can afford to take so fine an offer as this.

## WILLIAMS'S DESIGNS FOR NEEDLE-WORK, EMBROIDERY, Etc.

There will be issued from this office, on December 1, a series of beautiful designs for Borders, Corners, and Centres in making Tidies, etc., on Java Canvas, Holbein-Work, Worsted-Work, Burlap-Work, etc. These Designs are all new and remarkably pretty, and form a companion set of books to "Ladies' Guide to Needle-Work." Every lady should have them.

No. 1 contains nearly 25 Designs for Worsted-Work, Canvas-Work, Crochet-Work, etc. Price 30 cents each.

No. 2 contains nearly 25 Designs for work same as above, but with added Designs for Holbein-Work, Honeycomb Canvas, etc. Price 30 cents.

No. 3 contains Designs for Burlap Rugs, Mats, Home-made Carpets, etc. Price 30 cents.

They are printed in an exceedingly ornamental manner, and all our readers will do well to get one or more of them as an indispensable companion to their Fancy-Work Baskets.

## NEW BOOK FOR FALL, 1878.

## How to Destroy Insects on Flowers, House-Plants, etc.

This is a capital little book, invaluable to Window Gardeners and all lovers of flowers, giving complete directions how to overcome and destroy insects on their plants, both outdoors and indoors. It tells how to fertilize and stimulate the growth of all plants, and also gives the experiences of many cultivators who have been remarkably successful in keeping their plants healthy. The "Red Spider," "Aphis," "Green Fly," "Worms in Pots," "Rose-Slugs," "Rose-Bugs," "Snails," "Caterpillars," etc., etc., are fully described, with proper remedies how to overcome them. Also it contains practical advice "How to Destroy Insects in the Garden, on all Fruit-Trees and Vegetables," also to housekeepers about ridding their houses and rooms of all "Ants and House-Bugs." It will be published this month, and every flower-grower or gardener will do well to get it. Price 30 cents, post-paid.

## New and Beautiful Premiums

## TO EVERY YEARLY SUBSCRIBER

OF THE

## LADIES' FLORAL CABINET.

TO EVERY ONE HEREAFTER SUBSCRIBING FOR ONE YEAR TO "THE LADIES' FLORAL CABINET,"

AT \$1 30 FOR MONTHLY EDITION, ONE YEAR,  
OR 50 CENTS FOR QUARTERLY EDITION, ONE YEAR,

will be given your choice of any of the following beautiful Premiums, sent postage prepaid. Some of these Premiums are alone worth as much as the paper itself, and are all just what everybody needs. We specially recommend Premiums Nos. 2 and 6 as remarkably choice.

If you will get up a Club of Seven, for one year, to either edition, each member of the Club will receive a choice of one of these Premiums, and the Club Agent will receive, free, one Premium and also the paper, one year, free.

There will be published hereafter two editions of THE FLORAL CABINET, to accommodate all lovers of flowers and all purses. One edition will be published Monthly, at \$1 30 per year, each subscriber being entitled, free, to any of the Premiums named below; and a Quarterly Edition, at 50 Cents per year, with the privilege of the choice of same Premium, will be sent to any who cannot afford the higher price of the Monthly.

Hereafter, instead of spending large sums of money in Chromos, Engravings, etc., as Premiums, we will spend an equal amount in giving to each Subscriber a beautiful and useful Floral Premium, which will furnish not only pleasure to every Subscriber, but also ornament and utility.

Subscriptions may commence at any time this Fall, and Clubs may be made up from separate post-offices.

The Premiums of Bulbs and Flowers must be sent either before December 15 or after March 1.

## LIST OF PREMIUMS.

For full Description see Premium List in September CABINET.

- No. 1.—50 Cents' worth of Flower-Seeds. Postage free.
- No. 2.—One Bulb Gladiolus. (Worth \$1.) Postage free.
- No. 3.—Set of Five Tidy-Fasteners. Postage free.
- No. 4.—One Package of Household Dyes. Postage free.
- No. 5.—Three Patterns of Embroidery. Postage free.
- No. 6.—Hydrangea grandiflora. Postage 10c. extra.
- No. 7.—The last three months of 1878 free.
- No. 8.—New Scented Geranium, "Mrs. Taylor." Postage 10c. extra.
- No. 9.—Crassula perfoliata. Postage 10c. extra.
- No. 10.—Marshall Niel Rose. Postage 10c. extra.
- No. 11.—New Rose, "Duchess of Edinburgh." Postage 10c. extra.
- No. 12.—Set of Goodrich Hemmers and Dress-Binders for Sewing-Machines. Postage 5c. extra.
- No. 13.—Ladies' Bag and Children's Bundle or School-Bag. Postage free.

## PREMIUMS—WHEN TO BE SENT.

The papers are sent to Subscribers same week as subscription is received, but the Premium must necessarily be sent a little later—a week or two. Subscribers need not feel impatient at the lapse of time between receipt of paper and Premium. There are many thousands to be supplied, and the Premiums are sent from several greenhouses, etc. You will receive them without great delay, in time to use.

Remember that every Subscriber remitting his subscription for One Year to either edition of THE FLORAL CABINET is entitled to one of the above Premiums, free. Most of them are postage-free, but with a few a small sum is added to cover necessary postage.

In addition, any one getting Clubs of Seven will receive his paper free one year, and a Premium free also.

Address

HENRY T. WILLIAMS, Publisher,  
46 Beekman Street, New York City.

COVERING FOR A BALL.

THIS cover can be worked with very little trouble and slight expense. It is worked with black purse-

bright. Cover in the first place with a sort of a net, by winding the black purse-silk at regular intervals round the ball. The silk must, of course, be regularly drawn on the beginning of each thread;

trary, is fastened at the opposite crossing. The wool is drawn through the silk as in common darning stitch. Use a wool-needle. The cover is formed of several different stripes; each stripe has twelve

MERCY'S ERRAND.

silk and bright-colored fleecy wool or worsted; any odd ends of either will do, provided the color is where the threads cross each other must be hidden underneath. The end of each thread, on the contrary, is fastened at the opposite crossing. The wool is drawn through the silk as in common darning stitch. Use a wool-needle. The cover is formed of several different stripes; each stripe has twelve or fourteen rounds; each round must be drawn together as close as possible.

## ELLA'S IDEAS.

I HAVE visited Cousin Ella.

The visit was both pleasant and profitable, so I propose to "share the profits" with the readers of our dear CABINET. With such piles of treasures in the shape of new ideas as I carried home with me I can afford to be generous, you know.

In the first place, the welcome I received to Ella's nest of a home was perfection itself. Her style of entertaining, too, is delightful, making one feel perfectly at home, at ease, and at rest. She is not wealthy, you must know; only exquisitely tasteful, wonderfully practical, and supremely unselfish.

Her little parlor impresses one on first entrance as being extremely elegant, when in reality it is quite simply and very inexpensively furnished. I noted particularly the arrangement of her pictures, and as I am so many times puzzled as to the most effective method of effecting a change among my own brackets, pictures, etc., I began immediately on my arrival home to imitate some of Ella's picturesque groupings.

I first placed a large picture in the centre of one of the largest wall-spaces in my parlor. Then hung smaller ones on each side of, and one directly above, it. The three smaller pictures were harmonious in coloring and exactly similar in size and style of framing.

Next I grouped three gilt-framed landscapes in another space, and beneath them placed a bracket, on which was a snowy zephyr mat. On this I placed a vase of frosted grasses, made as follows:

Arrange the feathery, plummy varieties of grasses into tasteful bouquets, then dip in a basin of water; shake well, then whip lightly and evenly in a pan of flour. These directions sound common and "cheap," no doubt; but first try them, please, and be convinced that *for once* something exceedingly pretty can be made out of almost nothing.

My third group was similar to the second, only it was a floral one, the pictures being of richly-tinted autumn leaves, vines, and gaily-flecked mosses, dainty sprays of drooping fuchsias, lilies, and rosebuds. Beneath was placed a vase of pressed leaves and vines on a moss bracket.

I learned to make a number of dainty little articles of fancy work of Ella, whose home abounds in them, every one of which seems to be exactly in the right place, and to have a use and mission of its own.

A pretty trifle to hang from a drop-lamp or beneath a bracket is made as follows:

Cut from the selvage of a sheet of cardboard two strips the entire length, and fifty holes in width; cut them exactly in two in the middle; now you have four oblong pieces; point them at both ends by cutting along a row of holes from centre to outside, both ways; work stars all round the edge of each piece, and join with worsted, closing only one end, which will be found to form a square, and from the centre of which is suspended balls and wax beads.

Ornament each panel with an embossed picture or a worsted design, and suspend by a twisted cord with balls and beads. Mine is of cream-colored cardboard, worked in cardinal zephyr, ornamented with delicately-shaded pink and white embossed wreaths.

A small wall-pocket for letters, cards, photographs, etc., looks well under a group of pictures, or underneath a corner bracket. A lovely one of gray pebbled board is made by cutting a graceful pocket and back in imitation of large ones; pink or scallop all the edges; cut an oval piece from the centre of the pocket part, and pink the remaining edges; insert a photograph, gem chromo, tasteful fruit or flower piece, or an appropriate motto; fasten the pocket to the back by means of balls and cord of soft-colored wool or ribbon bows, and hang up with the same.

Ella's home is small, so she utilizes every inch of space. For her books she has hanging corner shelves, trimmed with little pointed lambrequins. To make them, she first cut a quantity of rings of pasteboard with a "gun-wad cutter." These she covered with scarlet wool, as you would work a button-hole; joined five of them in a row, then a row of four to it, then a row of three, then of two, then one; then fastened them to the shelves by driving a silver or fancy tack through the rings on to the edges.

Her ottomans are goods boxes of neat size, on rollers, with hinged lids, covered with reps, and finished with heavy cord and fringe. They serve as seats, as shoe-boxes in bedrooms, or as receptacles for old magazines and papers.

Her baby's high chair was made comfortable by cushioning the round back and bottom, so its little head never bumped against the hard frame.

That same little individual had its table-bib and mat of white rubber cloth, neatly bound, whereby many a grievous stain was saved its dainty dresses and Ella's snowy linen.

A number of Ella's lady friends called during my stay, and in returning these courtesies I caught glimpses of lovely home life which I am incited to reproduce in my own.

"Ella," I remarked one day, "I never saw so many girlish married women as among your friends. They all are as young and cheery as if they didn't have the regulation number of babies, housekeeping troubles, etc."

Her answer was, "Yes, I do think we enjoy ourselves in H—. We make it a point to do so. We make and receive calls and visits with our babies or not as is convenient, and enjoy comparing housekeeping and baby-tending experiences as fully as we formerly did those of fun and flirtation. I always, too, go to church in the morning, and Harry in the evening, if we can't leave baby. Most of the other ladies do the same, so it is by these means we keep interested in all around and in each other."

Mrs. R. A. H.

## PICTURE-FRAMES AND FANCY WORK.

WHAT music in the word Home! and it is the duty of every housekeeper to try and make home a pleasant place; and how many ways there are to improve the looks of our room at very little cost! How it changes the looks of a room to have a few plants, pictures, and the fancy articles that any one with a little time and taste can have! Most people that keep plants have slips to give away, and any one with a love for plants will soon learn to take care of them.

As this is not intended for a floral contribution, I shall only speak of plants as an ornament. For

those who cannot afford to buy pots for their plants a few boxes nicely painted or papered, with green moss from the woods to put in the top of the boxes over the dirt, will look almost as well.

What improves the looks of a room more than a few nice plants? And no house is well furnished without them. How many have plenty of pictures laid away very choice, year after year, that they would be glad to hang up if they were only framed.

Of all such I would ask, Why not frame some of them yourselves?

Of all kinds of home-made frames perhaps none are prettier than burr frames, which are better by having the burrs sewed on than by fastening them on with glue.

For preparing pine burrs for a frame put them in a pan of hot water and with an old knife scrape off the turpentine, and by having the scales soaked for a few minutes in warm water they can be sewed on and will not split.

The burrs of spruce-trees can be sewed on by passing the thread over the burrs and under the scales so it will not be seen. The shells of walnuts can be split in two parts and holes drilled in the sides with an awl, so they can be fastened on by a thread. The foundation of the frames must be of pasteboard.

Baskets can be made of burrs the same as frames, and are pretty lined with bright-colored silk and a plaiting of ribbon around the edge and on the under side of the handle. Spruce burrs fastened to a silk cord and suspended from each scallop at the top of the basket improves the looks.

Burr frames and baskets want to be well varnished, and mixing lampblack and varnish together and staining the rosettes at the corners of part of your frames will make a change.

Another way for making frames is to make your frame of pasteboard; have it cross at the corners; take wrapping-paper of any color, cut it in squares about one inch each way, fold it cornerways first, then fold it again, and it makes nice points to sew round each edge of a frame. Make rosettes of paper for the corners and sides, and round off the points in the shape of leaves to fill in between the rosettes. Finish with a coat of lampblack and varnish and after it is dry put on a coat of varnish.

If your picture is not too large you can frame it yourself by using pasteboard for the back and sewing the frame to it.

Baskets can be made of paper the same as burrs.

Rice frames are made by making a frame of pasteboard and covering it with a good coat of glue, then sprinkle rice over it as thick as possible.

They can be stained black with lampblack and varnished or painted any color you wish.

Small brackets made in this way are pretty.

A pretty hanging basket can be made by taking an old tin basin and making about four holes at the top. Then make a cover of pasteboard large enough so your basin will just set in it, sew burrs to the pasteboard and varnish well, then fasten to the basin by putting cords through the holes at the top of the basin, and through the pasteboard and hang it up. Fill the basin with dirt and put in a plant, and your basket will be nice enough for any room.

If you want a hanging basket for a room where you cannot keep plants one can be made by taking the crown of an old straw hat, cover the bottom with good strong cloth, put strips of cloth up the sides where the cords to hang it by are to be fastened on. Cover the bottom with some bright-colored cloth or tissue-paper, then cover the sides with strips of tissue-paper. Double the strips (which should be about two inches wide) twice, cut it across the strips very fine, leaving about one-eighth of an inch without being cut to sew it on. After it is cut fine crimp with a pair of scissors. Put a strip of white crimped paper at the bottom, and a strip of green above it, and a strip of white at the top. Hang it up by bright cords. Put green moss in the basket, and take evergreen vines from the woods, put them in a warm oven a few minutes to dry, and then twine them around the basket and over the top. Put a few paper flowers or everlastings in the top of the basket among the vines.

For the shelves of a whatnot, the pieces that come out of the heads of flour-barrels are very good, and by boring holes in the ends and slipping cords through and stringing spools on the cords between the shelves, and tacking pasteboard with burrs sewed on at the edges, no one would guess where the shelves came from.

A pretty rug can be made by using pieces of flannel and worsted and cutting them oval-shape, about two and one-half inches long and about one and one half inches wide in the widest place. Double the pieces lengthwise, and with a coarse thread gather it around the edge that is cut and fasten well. Cut a piece of coarse cloth the size and shape you want the rug, sew the pieces on by commencing at the outside. Lap one row over the other enough to cover the stitches. The centre can be finished by covering a large button with flannel and sewing it on.

Take a piece of pasteboard. Cut out two pieces in the shape of a heart. Have one piece about an inch larger all around than the other. Sew the edges of the two pieces together; fasten a loop at the top of the small piece to hang it up by. Sew burrs on the large piece. The burrs should be sewed on before the pieces are sewed together. After it is finished fill with dried grasses and everlasting flowers.

Let us all try and make home a pleasant place for our husbands and children, and if we succeed our lives are not all in vain.

AUNT DAISY.

#### FURNISHING.

THE recent discussions of household art, together with the vast object lesson so lately presented in Philadelphia, have already produced good results in awakening and training a popular taste for artistic effects and graceful forms in the furnishing and decoration of houses.

While books and current periodicals are filled with discussions and explanations of the many different and beautiful styles of house-furnishing which invite the attention of those whose purses are well filled, and who have only their tastes to consider, a

more modest but not less important field is waiting for him who shall invent a style at once beautiful and durable, yet so simple in ornamentation that the cost shall not be greater than that of the furniture usually found in houses of the middle class, and thus bring artistic furniture within the reach of that large class who are blessed with fine taste, but have only moderate means at their command.

It would seem that much might be done in this direction by merely altering the shape of the ordinary articles of furniture, or by adopting a different but not necessarily more expensive style of ornament. Certainly much might be gained, in comfort at least, by constructing chairs which shall be lower at the back than in front, thus allowing the occupant to slide against the back, which should be curved to conform to the natural curvature of the spine. This slight change would make comfortable seats of the penitential stools usually found in parlors, and make sitting a rest rather than the constant effort to obtain a comfortable position, which it becomes with most people when not constrained by politeness to ignore aching back and tired limbs; perhaps, too, it might do away with the elevation of the feet and tilting back of the chair practised by men in their struggles to gain a natural position in their seats. Yet how few chairs, not professedly easy, are made with any reference to this simple rule of comfort! And beauty need not be sacrificed, since there is nothing attractive in the ordinary shape of chairs which could not be as well secured in this altered shape.

There seems, too, to be a large field for improvement in the appearance of stoves, especially the immense sheet-iron cylinders which do duty in most houses. Their monumental appearance might be ameliorated by ornamental mouldings wrought in the sheet which forms the stove, instead of the dragons, angels, and shepherdesses which are attached to their sides without harmony or meaning.

Many directions have been published to enable housekeepers of taste to make many articles of furniture for themselves, some telling how entire rooms may be furnished, with but few pieces of solid furniture to serve as foundation. But these directions usually require such an amount of material in the making of a single piece of furniture that the cost is little less than that of similar articles if purchased of simple designs, and without the draperies which form the staple of home-made furniture, while they are never as substantial or durable as shop-made goods. Besides these wash-stands with draperies, these curtained beds and toilet-tables made of dry-goods boxes, with shelves inserted, and openings screened with chintz, all require time, patience, and skill in their construction, three things which the housekeeper of moderate means has many calls for. While if the skill in such matters prove to be wanting the result of her labors will only be a source of constant mortification and regret. Better plain furnishing, with time and patience for the wants of family life and the needs of culture, than rooms fitted with embroidered lambrequins and draped tables, at the expense of tired brains and hurried lives. These objections apply with equal force to the shell, cone, and leather-work frames, baskets, and similar objects which many women make who do not feel

that they can afford to purchase pictures or china of real merit to adorn their parlors. But such things, unless made by one endowed with talent worthy of a better cause, are clumsy and anything but ornamental. One good engraving or water-color chromo, framed in plainest walnut, will afford more real pleasure to its owner than walls covered with cheap prints and poor chromos, framed with shells, cones, or pebbles, and brackets loaded with home-made trinkets.

Plain furniture, with rich, warm colors in carpets and table-covers, with walls of delicate tints, may make an interior attractive to strangers and satisfying to the exacting taste of the owner. And for ornaments, pictures and beautiful china if possible, books certainly, and always growing plants—the luxury of the rich, the necessity of the poor, adding fresh beauty where art has already lavished it, supplying the place of other adornment if circumstances deny them, ever changing, ever more beautiful, and pleasing to every sense, nothing which art has given us can compare in fascination with these, nature's own ornaments, whether as home adornments or as an interesting and instructive study. A. E. P.

#### STRAW BRACKETS.

Use good-sized, smooth straws, of any kind of grain. Cut ten pieces four and a half inches in length, twenty pieces four inches in length, and twelve pieces three inches in length. Sew them side by side on a piece of cardboard two inches wide, in the following order: two three inches long, two four inches long, two four and a half inches long, two four inches long; repeat four times from X, ending the last group with two of the shortest lengths. There will be five groups when completed. In sewing them to the cardboard let both ends project equally over the cardboard; let the lines of stitches be about half an inch from the ends of the shortest straws, bend into a semicircular shape, and sew a back to it of pasteboard two inches wide and four and a half long. Now cover the stitches made by covering the front with the half a straw laid over them and fastened at each end to the back of the bracket. Make a rosette about two and half inches in diameter of straws split, using it as you would ribbon; sew in the front; take two straws sixteen inches long, cross them about three and a half inches from the smallest ends, and fasten with a rosette of straw similar to the one on the bracket; sew the other ends one to each side of the back of the bracket to hang up by. If desired, a bottom can be fitted to them. Place a bunch of leaves and grasses in them or lay a photograph on them. They are bright, beautiful, and cheap ornaments, of no trouble and soon made. JENNIE.

#### A PRETTY MAT.

Cut a circular mat of white cardboard; take raw cotton; card or pick it until fleecy; lay it on the cardboard around the edge in a rounded form, about one and a half inches high, leaving a space in the centre; when shaped evenly, slip off and spread the space to be covered with mangle; lay back into place; when dried, gum bits of bright scarlet or blue zephyr about on it. JENNIE.

## Household Art.

## MACRAMÉ LACE.

THE using of Macramé lace, and making it into various articles of home furniture-ornament, has become in America a very popular form of art-industry and a new kind of needlework for the ladies.

It has long been a favorite occupation with ladies in England, and should be better known in this country. The implements required for the making of Macramé lace are an oblong cushion of muslin or ticking, covered with red or blue cashmere, and filled with sand; two sizes of large pins, and a large ball of fine flax thread.

These balls weigh a pound each, and consist of thread of various sizes, from the thickness of a pin to that of a very thick and stout cord, also of a silver-gray or canvas color.

In lace-work this flax thread is not generally known, having been brought to notice mainly by the fashionable furore for crewel embroidery upon linen, and the necessity for a durable and effective finish of the same kind.

SAMPLE MACRAMÉ LACE FOR CHAIRS, MANTELS, ETC.

SPECIMEN MACRAMÉ LACE FOR LAMBREQUINS

The whole art of Macramé lace is in knotting the threads to form a pattern. One thread is held firmly over the other as leader, and each single thread is knotted twice on to it. When a leaf is worked from right to left, the leader is held in the left hand, and when a leaf is worked from left to right, the leader is held in the right hand. This is all there is to it; it is as easy as breathing. Yet it is astonishingly effective as decorative of curtains, chairs, lambrequins, tables, "Gypsy" tables, bureaus, and other articles, and can be utilized for mats, tidies, and bed-room sets.

Of course the method of making is not confined to linen threads of different colors and different degrees of fineness; it may be applied to wool or silk with equal readiness, and the finer the material the more exquisite and beautiful the lace, with its fringed edge, becomes; also, of course, the longer it takes to accomplish. It is an occupation which ladies can follow at odd moments at home, and is exceedingly simple.

## TO MAKE ALUM-CRYSTALS.

FORM a basket or vase of bonnet-wire, any fanciful shape. Wrap the wire neatly but not closely with nice white yarn, otherwise no crystals will adhere to the wire. Suspend the wire basket in a wooden vessel sufficiently large not to touch the article to be crystallized anywhere at all. Dissolve alun, to every quart of rain-water one pound. Have a sufficient quantity to cover the basket entirely. Make it scalding hot in a brass kettle, and then pour it over the wire basket in the wooden vessel. Be careful not to shake or move it, but let it stand over night. Examine it in the morning, and you will find a beautiful crystallized basket. Cool, frosty weather is the best time to crystallize. You can crystallize grasses in the same way, and by adding a little of Leamon's aniline dye of any shade it will color the crystal; so, by using different colors, you can have a bouquet of many colors.

## ARTIFICIAL CORAL.

MELT a quarter of a pound of beeswax in any flat vessel; put in the American vermilion, the powder, until the color suits you. Dip the article in this while hot, take it out and hold it in the air a moment to cool, then dip again and again until the wax has covered every part. Do not take the cloth from the wires, as it takes the wax better to leave it on.

## PEN-WIPER.

THE foundation of this pen-wiper consists of a round piece of cardboard an inch and three-quarters in diameter, on which are fastened two strips of black cloth an inch and a quarter wide, and pinked on one side. Cut of gray cloth a strip an inch and three-quarters wide, cut in points seven-eighths of an inch deep; trim with beads; gather it on the straight edge, and sew it on in curves.

THE best ketchup for family use, and one that will keep for years and improve with age: To half a bushel of tomatoes take one quart of vinegar, one pound of salt, quarter of a pound of pepper, two ounces of cayenne pepper, quarter of a pound of all-spice, six onions, one ounce of cloves, and two pounds of brown sugar; stir until it boils, then bottle and seal.

## Fireside Reading.

### DON'T TAKE IT TO HEART.

THERE'S many a trouble  
Would break like a bubble,  
And into the waters of Lethe depart,  
Did not we rehearse it,  
And tenderly nurse it,  
And give it a permanent place in  
the heart.

There's many a sorrow  
Would vanish to-morrow,  
Were we but willing to furnish  
the wings ;  
So sadly intruding,  
And quietly brooding,  
It hatches out all sorts of horri-  
ble things.

How welcome the seeming  
Of looks that are beaming,  
Whether one's wealthy or wheth-  
er one's poor !  
Eyes bright as a berry,  
Cheeks red as a cherry,  
The groan, and the curse, and  
the heartache can cure.

Resolved to be merry,  
All worry to ferry  
Across the famed waters that bid  
us forget,  
And no longer fearful,  
But happy and cheerful,  
We feel life has much that's  
worth living for yet.  
—GEORGINA C. CLARK.

### A SUCCESSFUL HOTEL KEEPER.

THERE is an interesting story of a king who was fond of children, and took great delight in playing with little children ; one day a courtier entered the king's presence unannounced and found the king playing and rollicking with his happy little ones upon the floor ; nothing abashed, the king looked up and asked of the courtier, "Are you a father?" The courtier replied, "I am!" "Then," said the king, "I will keep on with my play."

Now, we find in a Carson paper quite a complimentary notice of the proprietor of the famed "Ormsby House" at Carson City, and we feel it a pleasure to copy this pleasant compliment to Mr. Pantlind, who is, like the king, fond of children, and we will certainly crown him, for the happy little one's sake, "King of hotel keepers in that region of Washoe zephyrs and snow-storms."

Here is the notice we copy from the Carson paper :

#### "PANTLIND TO THE FRONT.

"Friend Pantlind, of the Ormsby House, besides being a live business man and enterprising citizen, is a great lover of children, and would walk fifty miles to do them a service or conduce to their plea-

sure. Some time ago he promised the scholars of the South Ward school (Miss Woods, teacher) a sleigh-ride the first time an opportunity afforded. He proved true to his word, for this afternoon he came out with a four-in-hand, with Hank Monk as piloter, and coasted the youngsters all over the city. The little ones were perfectly delighted, and filled the air with joyous shouts, and bid defiance to the storm-

"GO 'WAY."

king. Right in the centre of the happy throng stood Pant, just the biggest and the happiest boy of the lot. A man who loves children will do to tie to, and is bound to succeed in the journey of life. Woe to the man who speaks ill of Pant in the presence of the South Ward youngsters!"

Some one sought to comfort a mother who had lost her little boy by reminding her that he was then happy with the saints in bliss. "Oh! yes," cried the afflicted mother, "but Tommy always was a shy boy, and he's now among perfect strangers."

Toodles' notice of the death of his little friend is very affecting :

No more will taffy candy please him,  
No more will dysentery seize him,  
No more will paregoric ease him.

LITTLE MIKE.

### CRADLE SONG.

A MOTHER sang beside her little child,  
Who, knowing not the meaning of the strain,  
Still gazed on her with eyes wide open mild,  
And listened, pleased with cadence and refrain.  
"Only the pure in heart see God."  
Those were the words the singing mother said,  
As in the firelight laughing baby played.

From day to day this was her  
household hymn.

As shadows of the evening gath-  
ered there,  
As through the twilight showed  
the homestead dim,  
Her song wing-like did seem to  
cleave the air :  
"Only the pure in heart see  
God."

It floated up to some altar place,  
Where spirits gaze for aye upon  
God's face.

The mother's spirit passed into  
the boy,  
Grafting upon his soul her cra-  
dle words,  
As old birds teach their offspring  
to employ  
Their tuneful throats to imi-  
tate the birds :  
"Only the pure in heart see  
God."

As thrushes teach their young the  
thrush's lays,  
She taught her deathless one a  
hymn of praise.

It bore its peaceful harvest to the  
child ;  
In all the thoughtful after-  
years of life  
It often stilled the raging unrest  
wild  
That frets the spirit in our  
worldly strife :  
"Only the pure in heart see  
God."

It sometimes gave the wounded  
spirit rest,  
When heavily with many cares  
oppressed.

It ran for aye a cool, life-giving  
rill,

Sparkling and sweet and hidden in the heart,  
And sometimes seemed to overflow and fill  
His life ; sometimes it seemed to roll :

"Only the pure in heart see God."

A stream of brightness from a high, far throne,  
Whose beauty was for him alone.

A very little boy had one day done wrong, and he was sent, after maternal correction, to ask in secret the forgiveness of his Heavenly Father. His offence was passion. Anxious to hear what he would say, his mother followed to the door of the room. In lisping accents she heard him ask to be made better ; and then, with childlike simplicity, he added : "Lord, make ma's temper better, too."

## Housekeeping.

## HINTS AND HELPS.

I SUPPOSE many of the readers of THE CABINET have a number of steel engravings they would be glad to find some pretty way of using. I use all of mine, and even fine wood engravings, to transfer to china or glass. There is no end of the pretty things I have made by this method, and as it is easy and pleasant work, only requiring careful fingering, I will give a description of the way I ornament china. I had an old square platter that was too good to throw away, but not good enough to use on the table. This was for ever in my way and an eyesore to me, but I have now transformed it into "a thing of beauty, a joy for ever." The bottom of the dish I varnish with white varnish, allow this to become nearly dry, then lay the picture on it face down, carefully pressing and rubbing smooth, as an air-bubble would ruin your work. I next moisten the paper with a sponge, after the varnish has become perfectly dry. When the picture has soaked enough I press a dry napkin over it to absorb the moisture, then rub carefully with my finger; the paper rolls off and leaves the picture on the varnished plate. This is the nicest part of the work, as the paper must come off evenly, but at the same time you must be careful not to rub a hole through the picture. If the paper doesn't come off readily, and seems inclined to stick, moisten with a wet sponge; if too damp and pulpy, dry with a napkin. When the picture can be distinctly seen, give a coat of white varnish. If you understand drawing, retouch with India-ink or crayons. The sloping sides of the platter had a bias strip of velvet glued on, and it was then put in a walnut recess frame.

Soup and dinner-plates and saucers of stone-ware can be used in the same way. For wood the process is the same, but the last coat of varnish should be copal. Panels of hickory and holly are pretty, and can be put to many uses—sides of bookcases, work-boxes, base-boards in the hall, medallions for chamber sets, and so on. I made transparencies for my hall by transferring pictures of saints and angels on panes of common glass, with a border of mediæval design; these were painted in the transparent oil colors, the dress a deep blue and the ground in gold colors. They were much admired and well repaid me for the trouble I took to make them.

I have this winter been making a sofa-pillow and stand-cover of cretonne work. This work is very effective, and I think no description of it has been given in THE CABINET. For the cretonne I went to a furnishing upholsterer's shop, although the materials can be had at large dry-goods stores.

You will need three or four different pieces, a yard of each. Turk's satin is prettier than cloth for the foundation; I use a half-yard square for each pillow. Cut your designs out of the cretonne with a very sharp pair of scissors; then spread the satin on a table, and carefully arrange your leaves, flowers, and buds in some pretty pattern to suit yourself. This is the hardest part of the work, as no direction can be given. I had a large bird standing on a half-

wreath, at the bottom apple-blossoms, begonia-leaves, and forget-me-nots; the wreath on one side of blue morning-glories, with buds and flowers; on the other side an ivy wreath, with a butterfly just lighting on the top.

Be very careful in basting the cretonne on the satin not to gather or pucker it in the least; then go over the edge of the whole design with an even, light button-hole stitch of fine sewing-silk just matching the color of the leaf on which you are to work; cut out your basting-threads in tiny bits; lay the square face down on a flannel, cover with a damp towel, and press with a moderately hot iron. I had an octagon table for which I made a pretty cover by this work. The background was a reddish-brown satin; the design a heavy wreath of shaded green leaves and ferns and coral-colored double fuchsias; this was stitched tightly on the table, a heavy fringe tacked on the edge with gimp and small-headed nails.

I have a way of ornamenting with feathers which is showy and easy. My first experiment was a lounge-cover of quilted cherry-colored satin, a border of feathers three inches wide on the edge, and small bunches, tied with black satin ribbon, fastened about six inches apart all over the cover. The border was made by taking a strip of cloth the right width, and gluing the feathers across it in rows, lapping each row enough to cover the glued part. A sofa-pillow of blue silk has a border of pheasant feathers.

A screen for an ivy standing on the mantel was made of pasteboard, the border of peacock feathers, the centre filled in from the outside with white.

I burn wood in the sitting-room during the cold days of autumn, and I tried for a long time to think of some easy way to make a pretty, and at the same time a convenient, wood-box. At last I had an "idea." James was called on to saw me a board twenty-four inches long, but twelve wide, two pieces for the sides, in the form of a half-circle (the narrow ends are left open). These were put together, feet fastened on, and then stained with walnut stain. I steamed grape-vine until pliable, and made it into a loose braid of three strands. This made a border for the half-round side; the centre was filled in with a rustic pattern in grape-vine, and the whole given a coat of varnish, and behold a handsome black-walnut box.

I have only one closet in the house, and I studied for a long time how to make a closet for my room. At last James was again called in, the wall was measured from the corner out a little less than a yard each way, clothes-hooks put up, and a stout wire fastened to the top of the wall; a curtain of chintz, with rings at the top to slide over the wire, and I found I had a closet that, if not large and handsome, was immensely convenient, and which I would not do without for a good deal.

There is a small chamber over the parlor I had no use for. This I turned into a clothes-closet. Clothes-hooks were fastened to the wall on two sides, shelves to the third side. Here I hang all the clothes not in daily use; the shelves are for handboxes, quilts, blankets, and comfortables, and the extra trunks and valises go into the corner. This makes the most

convenient arrangement you could ask for. Don't hang your husband's coat up by the collar; cut a round stick as long as the back of the coat is wide; hang up by a stout string in the centre, and hang the coat over it; this keeps the back in shape and prevents its being pulled out of shape.

I have a cake I make in winter, when the hens won't lay and the cows stop giving milk, and think it is a most delightful cake. It can be kept for a number of weeks after baking, and still be moist and fresh. Take fat, salt pork, free from lean or rind, chopped so fine as to be like lard, one pound; pour boiling water on it, one-half pint; one pound of seeded and chopped raisins; citron shaved fine, one-quarter pound; two cups of sugar, one cup of molasses, one teaspoonful of saleratus rubbed fine and put into the molasses; mix all these together, and stir in sifted flour to make the consistency of common cake mixture; then stir in nutmegs and cloves, finely ground, one ounce each; cinnamon, fine, two ounces. Bake slowly, trying with a sliver while baking; when nothing adheres, it is done.

Last fall my sister Kate, who doesn't make over her clothes as I do, sent me a cashmere and an old black silk suit of hers, saying if I could do anything with them I was welcome to them. The cashmere was soiled, badly worn on the bottom of the flounce and skirt. I ripped the whole thing to pieces, and bought ten cents' worth of soap-bark at an herb-store. This was boiled in a quart of hot water; after steeping a while strained into a dish; I brushed off the loose dust on the pieces of cashmere, and sponged each piece thoroughly, folding as I proceeded; I then ironed each piece on the wrong side with a hot iron. The cashmere was a deep, fresh black, and looked as good as new. Grenadines are cleaned nicely this way. Even an occasional sponging of your dress (if you can't rip it apart) and ironing on the wrong side will keep it looking nice. I cut off about two inches that was worn around the bottom, pieced it down at the top, added fresh braid, linings, bows of ribbon, worked over the button-holes. The silk I ripped apart in the same way, but boiled a couple of black kid gloves in the soap-bark water. The bottom had a side-plaited flounce. I ripped this apart, cut off the part next to the bottom, which was worn, sponged with bark-mixture, and to get out the plaits I had to take a hot iron, put a wet cloth over the flat side (I held the iron in my lap by putting it on a book), press the silk on the iron, brushing at the same time with a clothes-brush; I succeeded in getting out the marks of the plaits that way. The velvet trimming was steamed over the iron in the same way (except, of course, the brushing). This was made up with fresh trimmings, and I had two suits that every one thought were new, and cost me just \$4.

I always buy some pretty but not expensive poplin or alpaca goods, and make them up for house dresses. It does save street suits so much. Even a twenty-five cent gray alpaca, neatly made, with a lace ruffle at your neck and wrists, bright bows of ribbons, your hair nicely arranged, and perhaps a coquettish apron of lawn, with knots of ribbon on the pockets, will be as becoming as a silk, and Henry will think, as he sits opposite at the tea-table, that he has the sweetest, prettiest wife in the world.

If you happen to spill ink on the marble table, take butter of antimony and oxalic acid, of each one ounce; mix with rain-water; stir in flour to make a paste; put it on the stain, and leave for several hours. Once will generally remove the stain.

These hints have been given in a rambling manner, but I hope they may be of use to some young housekeeper.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING

# ROSES

We deliver **STRONG POT ROSES** for Winter Bloom and Fall Planting, *safely by mail*, at all post-offices. Five Splendid Varieties, *your choice*, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5; 75 for \$10; 100 for \$13. Send for our **New Guide to Rose Culture**, and choose from over 500 Finest Sorts. Our Great Specialty is growing and distributing **ROSES**. **THE DINGEE & CONARD CO.** Rose-Growers, WEST GROVE, CHESTER CO., PA.

## WINTER FLOWERS

FOR PARLOR OR GREENHOUSE.

For \$1.00 we will send FREE BY MAIL either of the below named collections, ALL DISTINCT VARIETIES.

8 Tea Roses, or 8 Begonias, or 8 Carnations, or 8 Pinks  
8 Chrysanthemums, or 8 Heliotropes, or 8 Abutilons.  
8 Double Camellias, or 4 Azaleas, or 6 Bouvardias.  
8 Stellas or Eupatoriums, or 8 Fuchsias, or 8 Violets.  
12 Pansies, or 8 Forget-me-nots, or 4 Poinsettias.  
6 Ferns, or 8 Mosses, or 4 Marantas (for Wardian Cases  
4 Palms, or 4 Crotons, or 2 Dracenas, or 4 Begonias.  
12 Scarier Greenhouse Plants, or 10 Hyacinths.  
50 Snowdrops, or 12 Jonquils, or 20 Tulips, or 8 Lilies.  
8 Pearl Tuberoses, or 4 Lilies of the Valley, or 8 Oxalis.  
10 Roman Hyacinths, or 50 Crocus.

Or by EXPRESS, BUYER TO PAY CHARGES.  
Any 3 collections for \$2; 5 for \$3; 9 for \$4; or the full collection of 350 varieties of Plants and Bulbs—sufficient to stock a greenhouse and garden—for \$18, to which our book, "Gardening for Pleasure," and Catalogue (value 1.75) will be added.

## "DOMESTIC"

A \$10 Revolver for \$2.50.

THE ALEXIS.

With Russian Model Stock, full nickel silver plate, and hand engraved, 7 shot; uses the extra long Rifle cartridge, and will kill at 100 yards.

These Revolvers cost over \$8 apiece to make, and it is the greatest bargain ever offered in this country. They are equal to a Colt or Wesson in every particular, and superior in some. The barrel is octagonal and extremely long, and rifled deeply its entire length. The new model handle gives a firm grip and prevents throwing up. All parts are interchangeable and readily duplicated at any time. It is the most beautiful and accurate Revolver that has yet been made; elegantly shaped and designed, and made by the best workmen in the United States, and for self-defense is unequalled. Perfect satisfaction guaranteed or money cheerfully refunded. It can be sold for \$8 anywhere, and is cheap at that price. We will send it C. O. D. with privilege of examining at express office, to any point east of Iowa, on receipt of \$1, which will be deducted from the bill; or on receipt of cash in full will give free a box of long range cartridges, or will send by mail for 20 cents extra. Cleaning brush and rod go with every one in a nice box. Prices: Ebony stock, \$2.50; engraved Rubber stock, \$3; Ivory stock, \$2.75; and Pearl stock, \$4.50. This is the biggest and most extraordinary bargain we ever have or shall offer. Remember your money returned if it is not exactly as we state. This Revolver is all English steel, no cast-iron. The country is flooded with cheap, worthless Pistols. Buy a good one while you are about it. Orders filled promptly. **G. W. Turner & Ross, 93 Water Street, Boston, Mass.** This is just the weapon for Bankers and Police, self-defense, and target practice.

7 Shot.  
Hand Engraved.  
Rifled Barrel.  
Weight, 13 oz.

It is the most elegantly engraved and proportioned Revolver in the world. This engraving is just one-quarter the actual size; made to photograph, and exactly represents this superb weapon in shape and finish.

## TURKISH RUG PATTERNS.

SOMETHING NEW! You can make your own Rugs out of old rags and yarn at a very small expense (any one can make them), as they are stamped on Burlap, and when drawn in form a good imitation of the Turkish Rug. Great inducements and a permanent business. Agents Wanted Everywhere. Send for Circular, with stamp. **E. S. FROST & CO.**  
22 Tremont Row, Boston, Mass.

**\$1 FOR 25 CTS.**  
Seven new and wonderful articles at one-fourth the retail price. Examine the list:

- No. 1. Musical Pipe.—Made of metal, with bell resembling a human face. By filling with water, will imitate perfectly the notes of any bird.
- No. 2. Miniature Charm.—Suitable for neck, or watch chain. Five or gold dollar, yet has all of Lord's Prayer clearly engraved on it. New and beautiful. A perfect little gem.
- No. 3. Jureka Whistle.—Loudest and sweetest whistle made. Very useful for sportsmen to exchange signals at long distances.
- No. 4. Japanese Parasol.—Just imported. Prettiest L. J. novelty in the market. Fine colored in beautiful colors. Excellent gift to a lady.
- No. 5. Magic Spider.—Funniest thing out. A horrible looking spider, sure to make people jump out of their boots. A very clever and amusing.
- No. 6. Musical Wonder.—A new reed instrument, on which any tune may be played, or sound imitated, from the wail of a cat to a lurch and jolly show. Please everybody.
- No. 7. Golden Water-Pen. Produces clear, golden letters, by simply dipping in water. Lasts for months. Uncolored for card writing.

The above seven articles are shown in cuts, and will be sent next cabinet, postpaid, for 25 cts. At retail they would cost \$1. We make this reduction to obtain new names for our Full Catalogue. Postage stamps taken same as cash. Address,  
**Eureka Trick and Novelty Co.,**  
P. O. Box 4614. 39 Ann St., N. Y.  
This advertisement will not appear again.

## WHAT IS HEADACHE?

In nine cases out of ten the source of headache is not in the brain but in the stomach. Indigestion is the most frequent cause. The digestive organs being disordered, they derange the action of the liver, the bowels, the kidneys, and the nerves, and, the whole secretive and excretive machinery being as it were thrown out of gear, the brain suffers. Restore the natural tone of the stomach and bowels with a few doses of TARRANT'S SELTZER APERIENT, and headache arising from this cause is at once arrested. This delightful preparation is the best remedy for chronic and periodical headache at present known, and absolutely invaluable as a stomachic and gentle cathartic. SOLD BY ALL DRUGGISTS.

## MODEL CABINET.

A Beautiful and Instructive Present.

This Cabinet contains all the necessary Tools, with a beautiful Book of Instructions (Illustrated). A new avenue for employment of woman. Price, complete, No. 1, \$5; No. 2, \$3.75. A handsomely-illustrated Paper, showing progress of Amateurs and other Useful Information, mailed for stamp.

**G. C. LOEWENTHAL & CO., 722 Sansom St., Philadelphia, Pa.**

PIANO
AND
ORGAN

## Patent Sheet Music.

# PIANO & ORGAN PLAYING AT SIGHT.

Positively no previous knowledge of Music required to enable you to play tunes at once.  
One of the Greatest Inventions of the Age.

Pronounced by leading critics a complete revolution in the science and study of Instrumental Music. **OUR PATENT SHEET MUSIC** bears no resemblance to and **MUST NOT** be confused with the so-called **MUSICAL CHARTS**; on the contrary, it is an entirely new **Sight Method** which must be intelligible to all, and is the result of the untiring application of the eminent musician, **PROFESSOR HERMANN EITZLER**, who, after numerous attempts, has at last succeeded in perfecting a system by which any one, however obtuse or ignorant of the rudiments of music, can at once play **Ballads, Hymns and Accompaniments**, and in a very short time render with ease **Operatic and Dance Music** without the aid of a teacher.

**THE SIMPLICITY and LUCIDITY of the INSTRUCTIONS** which accompany it render this **PATENT SHEET MUSIC** adaptable to the use of people of all ages and classes. A Handsomely Bound and Beautifully Lithographed Portfolio containing full instructions for this method, and Six Dozens of Popular Music (in Patent Form), embracing **Songs, Melodies, Accompaniments and Words**, sent, prepaid, on receipt of **One Dollar**.

Society owes a debt of gratitude to Professor Eitzler, the result of whose efforts will promote musical knowledge, and enable old and young, rich and poor alike to acquire the most delightful of all accomplishments at a mere nominal expense.

**This method is destined to supersede all other methods owing to its wonderful simplicity.**

**AS AN EXTRA INDUCEMENT** to introduce our **PATENT SHEET MUSIC** into every household, we will, for the next 90 days, send, prepaid, as a special premium to any one ordering a Portfolio, a reprint of any one of the following **Beautiful Steel Engravings**, the original plates of which are of inestimable value:

Descent from the Cross, by... Rubens, 24 x 30	The Shepherd's Chief Mourner, by... Landseer, 10 x 24
Abraham Sending Hagar into the Wilderness, by... Dyke, 24 x 30	Burial of the Pet Bird, by... Bosch, 10 x 24
The Runaway Match, by... Kenzlbaur, 24 x 30	Christian Martyr, by... De La Roche, 10 x 24
Napoleon in Egypt, by... Gros, 24 x 30	Aurora, by... Hamon, 10 x 24

Steel Engravings of the above subjects readily sell in art stores for from \$4 to \$5 each, and it is due only to the fact of our having unexampled facilities for procuring these engravings in large quantities that we are enabled, for a short time, to make the above unprecedented offer.

**A BEAUTIFUL PORTFOLIO** as described above, and your choice from **EIGHT ENGRAVINGS** sent, prepaid, for \$1 in money or postage stamps. **REMEMBER** our premium offer is valid after 90 days from the date of this paper, and in no case will more than one engraving be sent to the same address.

**STENT & CO., Publishers, No. 9 Murray St., cor. Broadway, New-York.**

OR Cinnamon Vine.

This Beautiful Climber grows 15 or more feet in a Season, covered with Clusters of small white Flowers, which emit a Cinnamon Odor, filling the air of a whole garden with Fragrance. The Roots are edible, perfectly hardy, and grow to weigh several pounds each. Tubers planted in pots make pretty vines for the house during winter, and may be set in the garden in spring. Package of 15 Tubers sent by mail this month for 25c. Yearling Roots in April, 50c. each.

**L. W. GOODELL, Seed Grower, AMHERST, MASS.**

# IS YOUR LAMP BURNING?

1. Say, is your lamp burning, my brother?... I pray you look quickly and see;.... For if it were burning, then  
2. There are man-y and man-y a-round you,.. Who follow wher-ev-er you go;.... If you tho't that they walk'd in the  
3. There is man-y a lamp that is light-ed;... We behold them anear and a-far;.... But not man-y among them, my  
4. If once all the lamps that are lighted,... Should stead-i-ly blaze in a line,... Wide o-ver the land and the

sure-ly.... Some beams would fall bright up-on me... Straight, straight is the road, but I fal-ter... And  
shadow... Your lamp would burn brighter, I know. Up-on the dark mountains they stumble.. They are  
brother... Shine stead-i-ly on like a star... I think were they trimm'd night and morning, They would  
o-cean,.. What a gir-dle of glo-ry would shine! How all the dark pla-ces would brighten, How the

oft I fall out by the way;.... Then lift your lamp higher, my brother,.. Lest I should make fatal de-lay.  
bruised on the rocks, and they lie,.. With their white pleading faces turn'd upward To the clouds and the pi-ti-ful sky.  
nev-er burn down nor go out,.... Though from the four quarters of heaven, The winds were all blowing a-bout.  
mists would roll up and away!.... How the earth would laugh out in her gladness, To hail the mil-len-ni-al day.

## CHORUS.

Say, is your lamp burn-ing, my broth-er?... I pray you look quick-ly and see;....

For if it were burn-ing, then sure-ly,.... Some beams would fall bright up-on me.....

# THE LADIES' FLORAL CABINET

BY HENRY T. WILLIAMS.

NEW YORK, DECEMBER, 1878.

No. 84. PRICE 12 CENTS.

## PLANTS NEWLY POTTED.

AN old florist gives the following directions for taking up and potting plants: Plants removed from the open ground and placed in pots should not receive too much care at first. All they need at this season is to be left alone. Use only light, turfy loam, with a very little well-rotted manure, such as may be found in an old hotbed. Spread out the roots in a natural position, and never cram them into the pot in a jumbled mass. Press the soil in firmly, jarring the pots occasionally to assist in settling the contents. Water thoroughly at first, but very sparingly thereafter, until the plant shows signs of growth. Place in a cool, shady spot until it is evident all danger from removal is past; then expose them to the sun by gradual changes. A certain amount of common sense is needed to grow a variety of plants successfully. While the Calla Lily needs a copious supply of water during the growing season, the Cactus at this season lives on what it has stored away during the past summer. Rather err on the side of too little water than too much. Now is the time to trim in our plants that are to be used for winter decoration. Perform this with an eye to the future symmetry of the specimen, thinning out the dense growers and cutting back those inclined to be open.

## GREEN LICE.

I use quassia-tea for the green lice

It is very cheap; one can buy enough for five cents to last a long time. They were quite numerous on my plants until I commenced the practice of medi-

cine on them, and I am rejoiced to see my patients no more.

The entire cost of this, my bay-window, was eighteen dollars—rather more than I expected, but yet I

door, and a narrow moulding around the top of the room.

I think if more time was spent among the flowers in their care and cultivation, and less on fashion—that fickle goddess, who flies away and leaves us helplessly running a wild-goose chase after—and if more of the Johns in this wide world were like my John (am I partial?), then we might all be happier.

Long live the FLORAL CABINET, say I, for from that I have learned very many useful things, and it still improves with every number.

And although there may be nothing new or of any value to others in this little subject that I have written, yet be assured, flower friends, we have one bond of sympathy between us.

All of us who truly love flowers, for their own sake, will try and have a few of them if possible; and that word possible includes a great deal.

MRS. G. H. RIDOUT.

## THRIPS.

THESE lice-like insects are known by having long, narrow wings. They differ in color. The larvæ and pupæ are yellowish white; the perfect insects black, with dirty-white wings. They are destructive to azaleas, dahlias, phloxes, and verbenas. The same remedy is used as for aphides.

## WHITE ANTS

ARE working in some of the green-houses of the State. They burrow in the shelves, come up through the pots, and eat off the plants. The following remedies are suggested: A solution of carbolic-acid soap, or of kerosene, camphor, or turpentine, applied to the shelves, etc.

AN ELEGANT WINDOW GARDEN.

## Floral Contributions.

## MY FERN-CASE.

It is no costly Wardian case, but a very commonplace one made of five old window-sashes (relies of a remodelled house). The case stands three feet nine inches high, and is three feet three inches long and two feet five inches wide. This includes the framework and legs placed on casters—quite commodious, you see. The top part is put on with hinges for convenience in airing the plants, and one side sash lifts out, for convenience in arranging the plants. The zinc box at the bottom is six inches deep, and has two good-sized holes in it for drainage. In it is placed first a layer of bits of charcoal and broken pots, then rich earth plentifully mixed with iron filings, and anvil dust from the blacksmith's shop. This was my fern-case as it was when I began arranging it. In the centre the earth is rounded up a little, and in the middle of the mound so formed I planted a large glass fruit-stand that had a piece of the bottom broken off, and filled it with dirt, planted a kind of club moss in it, and right in the centre of the fruit-stand put a plain glass goblet with the bowl part down. The moss grows even more luxuriantly under the goblet than anywhere else, and the bottom part of the goblet supports a round globe with two gold fish in it. The globe comes nearly to the top of the case, and a small empty spool kept under the lid in day-time supplies plenty of fresh air for them, and at night I remove the globe and shut the lid down tight.

In one corner is a miniature turreted castle, made of thin pieces of wood, varnished and sanded to give it a granite appearance. On it are glued pieces of lichen and some of the delicate silvery-looking Florida moss, which makes it look "old, grim, and gray." Near by is a rustic bridge, placed as if leading up to the castle. One large and several small pieces of broken mirror make an excellent imitation of water. The earth is completely covered with *Lycopodium* and "Creeping Charlie," which drops over the edge of the glass and is reflected back from the "water." At one end of the bridge is planted a Partridgeberry vine, at the other a running fern. These are trained one along each side of the bridge.

A cluster of *Cyperus Alternifolius* and an Australian Tree Fern, placed near the castle, answer for "giants of the forest." In one corner hangs a basket made of a delicate sea-shell hung by scarlet cords. Just now the shell holds a wet sponge, a living ball of green, made by filling the sponge with wheat, which quickly germinated, and for some time it has been a beautiful thing; but when it is pretty no longer I shall remove the sponge and try a blue *Lobelia* in its place.

A *Smilax* vine is trained up one corner and along one side of the framework at the top. A tiny stump is completely covered with a little vine that I have no name for.

A *Pteris Argyrea* fern with its white striped leaves, two or three kinds of *Peperomias*, and the golden yellow leaves of the *Peristrophe Aurea*, give a pleasing variety in color, while that beautiful old stand-by, Maiden's-Hair Fern, and the different kinds of ferns,

fungus, and lichens so common to our woods, a Sword Fern that grows so tall it often has to be cut back, a running fern delicate and graceful as the Alleghany Vine, give sufficient variety in form. Besides these there are little clumps of wild violets that forget they are not in their own green wildwood, and put up their modest little faces for inspection, several *Begonias*, and a *Calla Lily* (dwarf).

Whenever a fern or anything else gets so tall or rank as to overshadow some other beauty, I cut it out, press it, and use it for some other purpose; for I think the main beauty of a fernery is in keeping it just full enough to suggest tropical luxuriance, but not full enough to be crowded.

Once a week I open the top and sprinkle everything with quite warm water, and once a month add a little ammonia to the water. Two or three snails and a little toad wander around at their own sweet will, seeking whom (what) they may devour, but I have never seen an insect of any kind. For those who only get into the woods—God's temple—but once in a life-time, or at most but once or twice a year, there is nothing that pays so well on the first investment as a fernery. If your purse permits an elegant Wardian case of walnut and plate glass, filled with rare tropical plants, be the happy possessor of one; but if less favored you may find many hours of delight and pleasure in one like mine, even though the frame be only painted pine and common window glass; but my fern-case I could not be without if it was of even far more humble structure than it is, for to me it is

"A joy for ever."

E. G. S.

MT. STERLING, ILL.

## MY BAY-WINDOW.

I HAVE many times wondered if we appreciate the many blessings and comforts which an All-wise and Bountiful Heavenly Father has graciously given unto us; and I am of the opinion that I, with a great many others, do not. (You see I am so selfish as to bring others in also.) And among many other blessings, and not the least, is a love for the beautiful flowers, and the privilege of possessing some of them, and health and ability to take care of them aright.

Well, about bay-windows, and mine in particular. My bay-window is a new treasure, which this winter has just brought about, after many years of wishing, hoping, and coaxing.

I have kept plants for the last ten years, usually having splendid plants and flowers in summer, but sickly, spindling things in winter, and a blossom was almost a miracle.

I knew my poor success was for want of proper air, sunlight, and knowledge of the needs of my plants.

When I saw other people's plants flourishing in nice bay-windows, and still other people with bay-windows or nice south windows, and plenty of room, who had no taste or desire for plants, sometimes I would almost rebel; and then would follow a season of coaxing and planning. (You see we could not afford to spend a great deal on one, and I wished to be economical.)

Well, this winter, as it was very mild and plea-

sant, my "John" (who is no John at all, nor a carpenter either, but—let me whisper it—just the best husband) concluded he would try and build one.

Our sitting-room has two windows facing the north with a box piazza in front, and one south window, which is in the southwest corner between the upright and wing.

Of course I thought I would like my plants where they might be seen from the street, but, as that could not be, I chose that south window, and they do us just as much good there as they would in the front windows.

It was necessary to build it very small, on account of a kitchen window in the wing and a bedroom window in the upright, but I thought a small place for plants was better than none, and I would try and limit my desires for plants to that place. But I don't know but it will be a difficult matter; my room is about five feet square.

Well, "John" laid a good thick wall firm and solid, and then went to work like any old experienced carpenter, for all that I could see. The sitting-room window is made into a door. The east side, which is next the kitchen, and what is left beside the door on the north side, also overhead, is ceiled with narrow ceiling, packed full with sawdust for warmth. The roof is a deck roof; the floor is laid double, with about five inches of sawdust packed in between. The upper floor is of ash, narrow boards, finished to imitate ash and walnut (I did that myself). I oiled every other board with hot boiled oil, and painted the others with burnt umber mixed with boiled oil. There are large windows on the south and west sides, each of four panes double-strength glass, 18x24 inches in size; there are fastenings on the windows, so they may be raised or lowered at pleasure for air. The woodwork is all painted with two coats of good white paint.

I have shelves, supported by iron brackets, on which to set my plants, also hooks for hanging-baskets.

The room is warmed by a large wood-burning stove, but the extra amount of room added does not seem to make any difference in regard to the heat.

We were puzzled for some time to know what kind of a door to have between the sitting-room and the plants. I thought a glass door would be just the thing, but knew that would be very much in the way, and so put up a roller curtain of thick painted cloth, light drab in color.

I lower this curtain when I sweep, as dust is house-plants' greatest enemy.

Over this thick curtain are thin white curtains, the same as at the other windows, trimmed with sprays of pressed and waxed autumn leaves.

In this little room I have fifty-eight plants, and still there's room for more. Some of my plants are small, and I like small plants best for winter. My collection consists of calla, abutilon, rose, farfugium, feverfew, salvia, eupatorium, hyacinths, different varieties of fuchsias, begonias, petunias, cacti, coleus, geraniums single and double, and many others.

I steam my plants quite often, I heat several stones or bricks very hot in the stove, take them out in an old wooden pail, set it in the room, pour on a quart of boiling water, and drop the curtain; the dampness is just what the plants like but the insects do not.

## Floral Experiences.

## LAWN AND HOUSE PLANTS.

It is always easy to speak when one's heart is in the subject, and still more easy to write, and all with a love for the beautiful will acknowledge their love for flowers. I wonder if there ever was a time in the primeval ages when flowers did not blossom in hidden nooks and grow in luxuriant beauty cultivated by the hand of man? I think my love for them became intensified when they repaid my care by so much blooming beauty. First last spring came the Violets, and they literally ran riot among the grass; when the snows had melted they opened their blue and white beauty like a monstrous bouquet; some which I had transplanted in clumps on the borders the previous year did not bloom until those in the grass were nearly gone, but they made a continuance of fragrance and were much larger. I had never had sufficient open ground for bedding plants, so I made a parterre in this way: First, I made four large round beds, leaving room for a walk around each outside of a neat sod edge; that left a piece diamond-shape in the centre, which I also made into a bed finished in the same manner as the others. You could walk from one bed to the other around the walk, which intersected beautifully. In the middle of the central bed I first planted a *Cladonia Esculentum*, then successive rows of hot-house plants, graduating them in height to the outer edge, where I placed a border of *Golden Perinthia*; this, a brilliant yellow, makes a most beautiful border. One of the round beds I filled with *Verbenas*, another with *Scarlet Geraniums*. As I had kept the most of them through the winter this bed did not cost me much, for by this time I found if I continued with hot-house plants I should find it very expensive; so in the third I planted *Phlox*. The seed soon came up, grew rapidly, and bloomed until late in the season. But in the fourth round bed, the last one, I was at a loss, when I thought of my dear, darling *Pansies*. I always plant the seed in the house, so as to have plenty of young blooming plants. These I now transplanted around the bed about two inches apart, and, by planting seed between the rows, I had a succession of beautiful eyes all summer, lavender, golden, white, to very black. But the golden border around the central bed made the rest look tame; it had begun to grow nicely, so I must experiment. I took off every little shoot of any size—some of them were so small it seemed absurd to expect them to root—and placed them in a shallow box filled with sand. At first they wilted and looked disconsolate, but by and by they lifted up their little heads, and lo! a tiny rootlet on almost every one. I soon had them out, and by persevering in this way, taking all the shoots, I had a golden wreath around every bed. By throwing some leaves over them they will live out-of-doors all winter, and start out as bright as ever when the sun warms them in the spring. In cultivating my plants I cultivated my taste for their refining influence, and determined to have plants all about me this winter, and I will tell you of my success. I have a bay-window having four sashes and a front

window, in my sitting-room, opening on to the piazza. I would have hanging baskets: the rustic ones are beautiful under a piazza, but I dislike them in the house. After a deal of exploring I found an idea. I procured two large wooden bowls at a trifling cost, and brought them home together with some white lead; searched out a lot of shells which I had gathered on the sea-shore, and, sorting them in lots, began my work. What a discouraging time I had! But I will only tell you how they looked when finished. On the bottom I put a large snail; then at a little distance a wreath of white roses, made of little clam-shells; at an equal distance a row of pansies of gold and dark silver shells; here and there a pretty scallop-shell; a row of smaller snails around the top; a row of scallop-shells above them, filling all in with little white clam-shells, the hollow side down, fitting neatly. The other bowl I covered nearly in the same manner, improving as I advanced before shell-ing by putting three holes at equal distance near the top, through which when finished I drew a crimson picture-cord, making large knots on the inside of the bowls, then, drawing all three together, made strong loops to hang them by. These are in the two side sashes, but not close against them. I filled them alike with two *Mountain-Snow*, two *Skeleton*, a *Lady Pollock*, and two *Rose Geraniums*; a *Begonia Rex* and some *Acclanthus*, for their color; *Vinea*; white-edged *Myrtle*, raised from a tiny slip, and dear old *Tradescantia* (how much it will endure! the vines reach almost to the floor). I then shelled two very small wooden bowls with more precision, arranging pink and white *Periwinkles* in rows, with small pink and white roses, little purple mussels, and dainty little clam-shells; hung them in the two middle windows real short, filling with vines and grasses only. I have trained Ivy around the window and across on to the arch, in quite an artistic manner. My baskets are a novelty and success; every one goes in ecstasies, the green looks so bright over the white shells. I have scarlet *Geraniums* on two brackets, and on side ones *Smilax*, raised from a small slip; it was a long time before it took root, but it did, and is now a luxuriant silver green. On a shelf placed across are the most of my plants: two *Saffronia Roses*, have bloomed well; a red *Lily*, on which I have just discovered buds; a white-edged *Allysim*, which requires shade; an *Air-plant*. I was the recipient of a bouquet, in which was a large, curious leaf; it remained for more than a week with the flowers in water; rearranging them, I put the leaf in earth; it did not fade nor wither. How I wanted to pull it up and see what it was doing; but in a few days lo! a tiny green leaf, and now I have what I am told is a beautiful air-plant, that will bear beautiful clusters of little bells. I have a *Wax-plant*, but it is so slow, nearly a year before a sign of growth in a cutting a gardener gave me; but the flower is beautiful, and—a curious fact—if it remains uncut will reopen the next season. My *Callas* have bloomed well. I now have two lilies and a bud in one pot. *Bonvardias* have done well with me. As soon as they stop blooming, cut them back; they will start out, and bloom again. On one side of the bay-window stands a large winged *Cactus*, resting now, which had over forty flowers on at one time. They are easily raised

from a little piece. Opposite is a *Century-plant* over fifteen years old. I have raised a number from little shoots in the side; taken and reset, grow rapidly; it has furnished many of my friends with plants. Now I will tell you how I fancied my pots. Giving them several coats of white lead till perfectly smooth and white, I worked putty smooth and thin; cut a number of oak-leaves and veined them. Placed a large stem around the top of each pot in a wavy line, a leaf in each curve, painting vine and leaves with Chinese Vermilion; doing the saucers in the same manner. I have pots inexpensive, and not to be ashamed of. In the front window I have a *Jardinière*, a beautiful article at a trifling expense. I had a little old-fashioned table with three legs; procuring a wooden bowl sixty-two inches circumference, I secured it firmly on to the top of the table, having made several holes for surplus water to escape; filled it with wood's earth and sand, then with plants. I will tell you what it contains, as they seem to agree with like treatment. *Geraniums*, *Mountain-snow*, *Skeleton*, *Rose*, *General Grant*, and *Happy Thought*, which seems to smile on you, and one or two shades of green, nameless to me; three *Rex Begonias*, one coral and one a pet to which I was never formally introduced (they all bloom); *Allysim*; *Pampas Grass* and another variety, feathery, bearing coral trumpets; two *Primulas*, one house *Caladium*, and two *Ivies*, which are wound in and out the legs down over the lambrequin; for I have a lambrequin of cloth in graceful points, worked in applique and then put on around the top edge of the bowl with gimp, effectually concealing the bowl and shelf. All wonder how it is made, for the proportions are so correct no one thinks of the bowl behind those birds which seem to pick at the grass and flowers hanging by their sprays. I think my success partly due to my mode of watering, as I use water almost hot freely nearly every day.

V. L.

## BARK OR SCALE LICE.

NEARLY as common and quite as destructive as aphides are scale-lice and mealy-bugs. The scale insects are active a few days after hatching, when they fasten to the plants by their beaks, and become covered with a waxy scale secreted from the body. The female never leaves this scale, and soon becomes immovable; under this scale many eggs are deposited. The mealy-bug gets into every possible crevice. The all-important remedy is not to allow these insects to get a foothold. When thoroughly established, the case is either hopeless or involves extreme labor. Washing is surest and best. Every plant must be thoroughly washed, as well as the wood-work of the greenhouse. An English gardener spent six weeks with two men in cleansing five houses, but he reported that it was the best-spent labor he ever employed. When once extirpated, the insects are thoroughly banished, unless introduced again by infested plants.

"My Dear Boy, never defer until to-morrow what can be done to-day." "Then, mother," replied the urchin, "let's eat that plum-pudding to-night."

## Floral Hints.

## HOME-MADE PROPAGATING BOX.

THE CABINET for November has a most excellent article on the advantages of using the cold frame to start seed and cuttings in early spring. As many ladies, like myself, are deprived of this privilege from fear of taking cold, etc., I venture to give my experience in making and using a propagating box in the house. The expense is trifling, and any one who can use a hammer, nails, and small saw can make one. Will here say that mine has been a perfect success, and will continue its use as long as I am able to cultivate flowers. It consists of three wooden boxes, a galvanized iron pan, and a low coal-oil lamp. Two of the boxes are 2 feet wide by three feet long, the third a common soap-box. Have the larger boxes, which I shall number as 1 and 2, about eight inches high in the front by 18 in the back; this gives the necessary slope for light. Nail a strip of lath on the outside edge of both ends and the front, projecting one-fourth of an inch higher than the edge of box; this is to keep the glass from slipping off when placed on the box. Common

window-glass will answer, taking measure for same after the box is finished. It need not fit tightly, and may be in three or four panes, but must be of a width or length to reach from back to front. Glass can be tilted at the back to give air when needed. Have several nail or gimlet holes in bottom of each for drainage. Use clean river sand three or four inches deep in No. 1; water it well, and see that it settles evenly; No. 2 will not require it deeper than two inches; this finishes the two large boxes. For the smaller, or No. 3, remove the top; have four holes the size of a silver quarter made in the sides opposite each other; these to give air to the lamp. Remove one side—to be replaced with hinges and a button to fasten it—this to use as a door in placing and removing the lamp. Let this door be at the back of the box for greater convenience. Remove the lamp when the heat is too great, and *always* at night, covering the entire arrangement with blankets if very cold weather. Have the pan made at the tinner's, 4 inches deep, of a size to fit the opening in top of box No. 3, with a flange an inch wide all around the top edge; to hold it in place. This pan is to be kept two-thirds full of water, the lamp, sit-

ting directly under it, heats it quite to boiling heat; this furnishes the necessary "bottom heat."

Box No. 1 is to be placed directly on top of this pan, and is now ready for the cuttings. Box No. 2 is to be arranged just the same as to the glass, etc., but will not require heat. Each must be elevated to a level with the window-sill, placing the front toward the light. No. 1 must be *constantly* shaded, and kept quite wet, using a very fine rose to the watering-pot to avoid disturbing the cuttings, as they must be as firm in the sand as you can make them; they need not reach far *into* it, merely enough to cover the eye or end placed in; if *very* small, use broom-straws, bent double, to hold them in place. Place varieties of one kind in separate rows, as some

table seed, I use shallow cigar-boxes, pierce holes all through the bottom, using a compost of leaf-mould, garden soil, and sand, equal parts. Water each box well with *hot* water, let it settle awhile, then sprinkle a light layer of clear sand evenly over it, place the seed evenly, and, if possible, each one separately, sprinkle enough leaf-mould and sand over them to merely cover them, water slightly again with *warm* water, place doubled flannel, wrung out of *hot* water, over each box, set boxes on the sand in box No. 1, give air and water as needed. But they will require *very* little water, and as soon as the germ breaks the soil remove the flannel. Pot in smallest size, several to each pot; as soon as the second or true leaves appear, the same kind of soil as in the seed-boxes.

Calceolaria, Primula, Begonia, Cyclamen, and many other fine green-house seed can be started and successfully grown in this way; the first and third named being merely sprinkled on the soil *without* any further covering. I started and raised from large blooming plants, last spring, some four hundred, and hundreds of fine plants from seed. Hope to do even better this year, as I have had a small cold frame made, where I can remove my plants as soon as they are potted the second time. I hope the readers of the CABINET will suc-

ceed in understanding my description, and try the plan for themselves. They will be astonished with their success, especially the newly potted little cuttings in full bloom in box No. 2. Of course the buds were in the cuttings, and developed as they rooted. I always remove the bloom, and pinch the ends of all off, to induce side growth and stocky plants.

Now, will some one oblige *me*, with probably many others, in giving their experience, plant, cost, and manner of earing for a pit to grow roses, etc.?

NEWPORT, KY.

S. C.

## A TEAR.

FROM Heaven dropped a tear, which thought to be  
For ever lost within the sea.  
A shell, enclosing it, said: "Have no fear,  
For thou shalt be my pearl, O tear!  
Fear not the mighty waves; but trust to me  
To bear thee through them in security.  
Oh! thou, my joy, of all my joys the best,  
Thou heavenly tear within my breast.  
The pearliest of thy tears thou'st given to me,  
O Heaven! to guard and keep for thee."

FAVORITE RUSTIC SEAT OF WILLIAM CULLEN BRYANT.

kinds root sooner than others; this will make it easier when potting. It will be necessary to be supplied with a hundred or more small pots of sizes 2, 3, and 4 inches. In potting the cuttings use smallest size pot first; when this is filled with roots repot to 3-inch pots, and so on to 4 and even 5, always placing the newly-potted plants in box No. 2, shading at each potting or repotting for a day or more; also keep them watered evenly and regularly, using the fine rose, as above. I use whitening mixed to a cream paste with quite blue indigo water, to paint the under side of glass of box No. 1, but not so blue as to make it *dark*—about like light blue tissue-paper.

With regard to size and amount of foliage of cutting, the whole question lies here: provided you can place cutting in such condition of shade and atmospheric moisture as to force the leaves to absorb as much as they perspire. The larger the cutting and the more foliage it has, the stronger the plant will be. If these conditions are not to be had, the more foliage the more the juices will be lost, and the plant will damp off. This is not so quickly seen in a succulent plant, as geranium, etc., as in the rose or any woody stem plant. If desired to start flower or vege-

## Miscellaneous.

## HOW I MADE MY PARLOR PRETTY AT SMALL EXPENSE.

I ALWAYS loved a pretty parlor to ask my friends into—for with us Southern people that is still the custom, even in country towns. Before I left my father's home I had been accustomed to a pretty parlor, and now, when I was to take charge of a home of my own, how could I, on the small allowance my husband could give me, start about it?

My parlor was on the north side of the house, which gave it a cold, uncheerful appearance, and I wished to overcome that difficulty as far as possible. To add to the gloominess, my carpet was a dark, dull brown on the right side, not a thread of any bright color to add to the cheerfulness. My piano-cover was gray, and of course did not match at all with the carpet, and my two large chairs, which with the exception of a centre-table completed the furnishing, were, as one of the writers in the CABINET has called it, that dismal black haircloth. I grew desperate over its appearance, and determined to make a change somehow.

First of all I discovered that the wrong side of my carpet (it was two-ply) was lighter than the right side, and I turned that. I then decided to dispense with that gray piano-cover, but was not able to purchase an expensive one in its place. After some deliberation, my mind was decided as to what I should do. Went to a store, bought ten yards of the best quality of seal-brown canton flannel I could find, one half yard of double-width lady's cloth (scarlet), and one ounce each of seal-brown, scarlet, buff, and green single zephyr. Then I was ready for work.

Divided my canton flannel into three equal lengths, sewed them up on the machine, and pressed the seams open. Next cut the scarlet flannel into strips about three inches wide, and pinked out on each side. Then basted these strips on the canton flannel cover, seven inches from the edge. Then commenced to work with the zephyr. Made a figure by first making two lines diagonally crossing in the centre with the brown zephyr; then used the green on one side of the brown, and the buff on the other, and crossed the figure in the centre with the scarlet.

The next figure was a cross, using the zephyr in the same order as in the first one. The space between was about three inches. Made a point-russe stitch between each scallop in the scarlet flannel,

and it was done. I was delighted with the result, and many who saw it exclaimed, "How pretty!" One gentleman said: "It is the prettiest one I ever saw." It looks like a handsome felt cover, and the expense almost nothing.

I had a considerable amount of the zephyr left from the piano-cover. I had also in the house a piece of white railroad canvas. This I first worked in squares about four inches wide with the brown.

one of the green along the length, and finished with a scalloped edge, made by a row of each of the colors.

For my other large chair I crocheted three strips of black, one longer than the others, and all pointed at one end; finished with a scalloped edge as in the first one, and worked a vine of green with red flowers on two of the strips, and buff flowers on the centre one; joined the three together the longest in the centre, and put a tassel made of all the colors in each point. Both tidies have been very much admired, and require very little time or material in making them.

I also made two foot-stools, the foundations of which were old round wooden boxes which the rats had eaten so as to make unfit for service in any other way. I took some of the same brown flannel, and worked a figure in chain-stitch all over; then made a cushion of stout drill, to fit the cover of the box after it was stuffed with bran so as to make it firm. Fitted the flannel cover on the cushion, and tacked firmly on the top. Took a straight piece of flannel to fit round the rim, and tacked it on, hiding the tacks with a large cord made of the scarlet and buff. Covered the box with a piece of the flannel, tacked as tightly as possible, and another cord about an inch from the bottom.

I wanted a centre piece for my table, so I took a block about five inches square, and bored an inch hole in it. Took the top branch of a Norway spruce, and fitted in the hole in the block; made it firm by pouring plaster-of-paris around it. I then glued on bits of lichens, wood-moss, and florist's moss on the branches of the little tree till I had it covered. Covered the base completely with florist's moss, stuck in tiny white artificial flowers and grasses, and here and there bits of fern and small pebbles. Then placed a deer under this miniature tree, which has in the top a real little nest and three tiny eggs, with a red and black bird just in the act of flying off the nest.

By this time my parlor was looking much more cheerful for having the bright scarlet here and there about it, and I took care to have that the predominant color; my pictures all hung with scarlet cords, and decorated with the long gray moss and scarlet sumac leaves.

Space forbids that I should speak of smaller decorations which add much to the pretty aspect of my little parlor, but I have said enough to show that no one need give up in despair because they cannot have just what they would like. I attribute all my success and love of adding to home adornment in a great measure to the dear FLORAL CABINET.

HOMEBOY.

A FLORAL PICTURE.

I will say here that eight-fold worsted should be used in working this canvas. I then worked a cross in each square, making a row of crosses with the scarlet, buff, and green alternating; finished off with a fringe made of all the colors. This I used to cover the back of one of those haircloth chairs to hide a worn place. Fastened it on with safety-pins, on which I had previously tied little tufts of the worsted so as to completely hide the pin; and it never worries me by falling off, as tidies generally do. The arms of this same chair were worn, and I wanted to hide them, so I crocheted strips of black long enough to fit the arms, and about three inches wide, then worked a star of the scarlet, one of the buff, and

## Our Homes.

## BIRCH-BARK BASKETS, ETC.

"THE day is cold, and dark and dreary;  
It rains, and the winds are never weary;  
The vine—"

"There, there, Annie! don't give us any more of that dolorous song. Mr. Longfellow (much as I love his sweet songs), when he wrote that, must have been laboring under a fit of November blues. And the air you sing it to is such a mournful wail; a more fitting accompaniment could not be found. The day is indeed dark and dreary enough—one can hardly tolerate it; so please don't immortalize it in song."

The song ceased, and as Annie turned a disconsolate look on her sister she exclaimed:

"O Carrie! isn't it dreadful? Summer is gone, and gloomy winter will soon be here. Look at the desolation without! Our beautiful hanging-baskets, trailing vines, and summer decorations prostrate, and our dear flowers all too soon must bow to the Frost King. The winter will be so long and cheerless without them!"

"Girls!" I called from my seat in the corner, "with all your abundance of home comfort, how can the thought of winter bring with it such gloom?"

"Why, the flowers, auntie! the dear flowers; how can we live without them?"

"But," said I, "instead of packing away your choice plants in the cellar, as I saw you doing yesterday, why not have a window garden, and play perpetual summer?"

"Oh!" sighed Annie, "we've tried that to our grief; the treacherous wood-fires, you know, will not ensure our plants, and the first thing one knows old Boreas creeps in at some crack and every tender shrub must succumb to his icy breath. Many is the time when my tears have almost frozen over the limpid remains of last night's treasures. I will never try it again with no other security than a wood-fire; and papa's numerous wood-lots furnish a life-long despair of ever seeing a ton of coal on these premises," and Annie sighed again.

"I was not aware of your trials in this quarter, Annie, but, with the poet when discoursing of the tender passion, I will say: 'Better to have loved and lost than never to have loved at all.' If I had such resources as this paper opens to you (holding up the FLORAL CABINET I had been perusing) I would never despair of adorning my rooms with rare beauties from the winter woods and hillsides that would make me forget my flowers for a few months. Have you examined this last number? It is just a rich feast to an artistic taste, and is ever a delight the year round. Only read here of the choice bits that winter gives, that will compare favorably with summer's floral offerings. You get the idea from these pages that a ramble over the hills and through the woods, with a little display of taste in arranging your trophies, will brighten your room amazingly. The CABINET tells of mosses, bright-tinted leaves, green ferns, ornamental grasses, etc., and you have not gathered one handful of the beauties yet."

Annie yawned.

"Mosses are grave, and I never supposed much could be done with them in the way of winter decoration."

"Mosses are beautiful," I contended; "I never

looked upon any piece of fancy work of my own creation with so much satisfaction as my moss work."

"Do give us a description of some of your handiwork in that line, auntie," said Annie, just beginning to wake up to the subject.

"Well!" said I, "I at first conceived the idea of making a moss picture for a fair. My first step was to take a thin piece of board, to which I fastened a piece of drawing-paper, making a smooth white surface. I then traced the outlines of a landscape with a lead-pencil. First was a cottage. The roof I covered with a piece of white-oak bark cut with a sharp penknife just the shape and size of the roof I had outlined. I chose a piece of bark as near the color of ordinary roofing as possible, gluing it to the surface. I then took the moss or lichen that clings to oak wood, somewhat resembling a dried oak leaf. The wrong side of this is of light color and has an appearance like stone, so with this I covered my cottage. The blinds were cut from green leaves pressed and dried, and the doors were of the same material as the leaves, all glued on in their respective places. The smoke from the chimney was composed of small particles of the heads of what is sometimes called 'pussy-grass,' which is just smoke color. Beside the house stood a tree, the foliage of which was composed of bits of pressed tansy, and the trunk of the tree was a bit of a twig, the shape and size I fancied, split through the centre, and the flat side glued to the surface, making a good representation. From the smooth bark I cut some fine rails, with which I manufactured a fence and surrounded the house. Another rail fence in front of this helped to form a road, along which a farm-wagon was drawn by a demure-looking black horse. The wagon was loaded with bags of grain, and the driver in attendance was represented as just in the act of letting down the bars at the side of the road to allow the team a passage through to a little grist-mill that stood on a hill just at the right of the road. Horse, team, and driver were cut from a smooth moss taken from oak wood. The moss in some way resembles india-rubber, one side quite black, the other a lighter shade. The mill was of stone like the house. A clothes-line was stretched across the yard, upon which were hung garments shaped with scissors from the petals of pressed flowers of different colors, among which the most prominent was what was supposed to be a red flannel shirt, cut from the petal of a peony. The washerwoman stood beside her basket of birch bark, in the act of fastening some article to the line. I can remember now the exact poise of her head, which was made from one of the pressed stamens of a lobelia flower, and was a good representation. I covered the ground with different-colored mosses sprinkled with flowers, and over the whole scene flew a flock of blackbirds, cut from a leathery kind of black moss. When completed, I made a frame, covered it with beech-nuts, which fitted closely together on the surface, and, with a glass over the picture, it made a pretty and novel appearance. I sent it to an agricultural fair, and it took a premium."

"Well, auntie, your description is quite exciting. I forthwith place myself under your tuition, and we will see what mosses will do as a winter decoration for my room."

The next day dawned bright and unusually beautiful for the season. When the sun had dried off the moisture, we started, Carrie, Annie, and myself, each equipped with a basket and an old case-knife. Our first discovery was a large rock covered with what I had heard termed rock-cresses, although I do not know that to be the correct name. It is a kind of lichen, circular in form and each one perfect in itself, adhering closely to the rock. The color is two or three shades of rich drab, and, when woven into a piece of

ornamental work, resembles bead work. The general appearance is that of a rosette. We inserted our knives under the thin edges, and took them off flake by flake and laid them in our baskets. Over the rock stood an old oak-tree that might have been a centenarian. Its branches hung with bearded moss yards in length. This had its place in my mind's programme, and we gathered an abundance of it; but before I had satisfied myself in quantity the girls had bounded down the bank to the brookside, and were calling me to come and gather the beautiful green moss that lay like patches of velvet along the bank. They were surprised when I rejected it, and turned to scrape some old dry moss from a fence that ran down to the water's edge.

"Why, auntie, don't you want the lovely velvet moss?" was the surprised question.

I explained that for the work I intended it would not do, but that a patch laid on a plate, and kept moist, was a very pretty winter ornament, and furnished a dish of standing green that was a delight; but nothing but dry mosses would do for manufacturing what I intended.

"Here," said I, "is the little green cup-moss, the bright coral and pink variety, and here is a bright fungus of a deep orange color growing on an old stump."

In an hour our baskets were filled with these woodland trophies and we turned our feet homeward.

"Now to work," was my first exclamation as we entered the house. "First, Carrie, bring me the little round, light stand from the attic that grandma used so many years ago. We will ornament it and give it the most honored corner of the parlor." Carrie laughed a little derisive kind of a laugh, but at the same time tipped away on the mission. A few moments later and we were busily at work gluing on moss in its varied shades round the edge of the stand, and down the standard of the same. Then we draped the long bearded moss around the edge so that it hung so low as nearly to conceal the standard. The centre of the top was also covered with moss laid on as smoothly as possible, and, unless one has tried this way of decorating, it can hardly be imagined what a pretty rural ornament can be made. Upon the stand we placed the globe of gold fish, and the girls fairly danced round it in admiration. A hanging-basket was next constructed for the window. Any common basket will answer this purpose, covered with prettily-arranged moss, remembering to drape the bearded moss from the edge and give a tasselled appearance. Some handsome grasses were placed in this, and the bright-hued leaves after they had been pressed and dried, directions for doing which may be found in the CABINET, the never-failing source for instruction in manufacturing and decorating in every line conceivable. Some of the grasses with fine drooping heads were wet and drawn through a plate of wheat flour, then shaken well and put with other varieties; they have a pretty appearance. The basket was a success, and we next commenced on a picture-frame. We cut it from pasteboard, oval in shape, and covered it with our beautiful varieties of moss. It was a beauty. The frame required a colored picture, and so a bright bouquet was selected surrounded by a black mat. Next we made a bracket of pasteboard, covered as before with moss; the rock-cresses working in admirably for the portion of the bracket we might call the lambrequin. We placed this just below the picture, and on it laid a humming-bird's nest, and our moss work was completed.

I must say that the room, that looked pleasant before, was now beautiful in its winter adorning, and our moss work never failed to call forth exclamations of admiration from every visitor. Try it and enjoy the beautiful effect.

MAUD.

# THE Ladies' Floral Cabinet AND PICTORIAL HOME COMPANION.

The Handsomest Illustrated Journal of Household Art, Flowers, and Home Literature in America.

PUBLISHED MONTHLY. Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window-Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

**\$66** a week in your own town. Terms and \$5 outfit free.

H. HALLETT & CO., Portland, Me.

**\$5 to \$20** per day at home. Samples worth \$5 free. Address STINSON & CO., Portland, Me.

## OUR DAILY MAIL-BAG.

A few extracts from its Contents.

"The AGENTS' HERALD stands in the same position to active Agents that 'Webster's Unabridged' does to the public."

"The HERALD is the largest, handsomest, spiciest, most extensively circulated, and best patronized paper of its kind; all others being little insignificant pamphlets. Your exposure of 'Swindlers' saved me \$20."

"The Agent who do 't take the HERALD and have his card inserted in the Agents' Directory, will soon find himself so far behind that the fastest mail-train won't help him to catch up. I find it indispensable."

"The HERALD is fully alive to the interests of the Agency business and can justly be styled the 'General Commanding' of the Great Army of Agents in America. I gladly send \$1 for your valuable paper, and 50 cents to have my card inserted in the Agents' Directory."

## ACTIVE GIVEN EMPLOYMENT AGENTS GOOD EVERYWHERE.

Selling OVER 1,000 different articles being advertised in AGENTS' HERALD. Invest no money in Agents' Goods until you have sent 10 CENTS for a copy and seen the

## Many Hard Times Offers

of over 200 responsible advertisers in the HERALD wanting Agents. Scores of rare offers to Beginners and others out of employment. Description of some things you have never heard of before, and other information worth many dollars. Humbugs, Frauds, and Swindlers exposed. EVERY WIDE-AWAKE AGENT should at once place himself in direct communication with all firms everywhere who want Agents, by sending his permanent address for insertion in the only Agents' Directory published in the World. **GOOD AGENTS WANTED.** Grand outfit, including Circulars, terms, and a beautiful 10 x 14 Engraving of the SMITHOGRAPH sample card and full particulars of the AGENTS' DIRECTORY and sample copy of the BIG No. of the CHRISTMAS AGENTS' HERALD, all for 10 cents. One-cent stamps taken. **YEARLY SUBSCRIPTION, \$1.** We cannot afford to give the paper away, so don't ask us. Address in haste,

Agents' Publishing Co.,

717 Sansom Street, Philadelphia, Pa.

**100** Scrap Pictures, 10c. 1. 100 Transfer, 10c. 1. 20 Floral Motto Cards, 10c. 1. 10 Perforated Mottoes, 10c. 1. 2 Chromo Mottoes, 10c. 1. 4 Fine 6x8 Chromos, 10c. 1. 1 Floral Surprise, 10c. 1. All for 50c., postpaid! **AGENTS WANTED.** Circulars, 3c.; with samples, 10c. 1. Stamps taken. J. W. FRIZZELL, Baltimore, Md., Headquarters for Pictures, Mottoes, Frames, etc.

**25** CHROMO CARDS, Cupids, Mottoes, Flowers, etc. No two alike. With name, 10c. NASSAU CARD CO., Nassau, N. Y.

**65** MIXED CARDS, with name, 10c. and stamp. Agent's Outfit, 10c. L. C. COE & CO., Bristol, Ct.

## New Book for Fall, 1878.

### WILLIAMS'S DESIGNS

FOR

## Needle-Work, Embroidery,

ETC.

There was issued from this office, on December 1, a series of beautiful designs for Borders, Corners, and Centres in making Tidies, on Java Canvas, Holbein Work, Worsted-Work, Burlap Work, etc. These Designs are all new and remarkably pretty, and form a companion set of books to "Ladies' Guide to Needle-Work." Every lady should have them.

No. 1 contains nearly 25 Designs for Worsted-Work, Canvas-Work, Crochet-Work, etc. Price 30 cents each.

No. 2 contains nearly 25 Designs for work same as above, but with added Designs for Holbein-Work, Honeycomb Canvas, etc. Price 30 cents.

No. 3 contains Designs for Burlap Rugs, Mats, Home-made Carpets, etc. Price 30 cents.

"They are printed in an exceedingly ornamental manner, and all our readers will do well to get one or more of them as an indispensable companion to their Fancy-Work Baskets."

## HOW TO DESTROY INSECTS

ON

## Flowers, House-Plants,

ETC.

This is a capital little book, invaluable to Window-Gardeners and all lovers of flowers, giving complete directions how to overcome and destroy insects on their plants, both outdoors and indoors. It tells how to fertilize and stimulate the growth of all plants, and also gives the experience of many cultivators who have been remarkably successful in keeping their plants healthy. The "Red Spider," "Aphis," "Green Fly," "Worms in Pots," "Rose-Slugs," "Rose-Bugs," "Snails," "Caterpillars," etc., are fully described, with proper remedies how to overcome them. Also, it contains practical advice "How to Destroy Insects in the Garden, on all Fruit-Trees and Vegetables"; also to housekeepers about ridding their houses and rooms of all "Ants and House-Bugs." Price 30 cents, post-paid.

## Beautiful Homes.

Devoted to Housefurnishing. Everything relating to the picturesque furnishing of bedroom, hall, parlor, sitting-room, how to beautifully arrange all the rooms of the house, is described. Carpets, Wash-Stands, Wall-Paper, the Living-Room, the Parlor Bedrooms, Halls, Umbrella-Stands, Door Mottoes, Toilet and Dressing Tables, Curtains, Lambrequins, Screens, the Library, Cabinets, Etageres, the Dining Room, Window-Screens and Blinds, Mantels, Chairs, Rugs, Ottomans, Tables and Stands, Sofas, Lounges, Foot Stools, Cushions, Afghans, Baskets, Racks, Tidies, Miscellaneous Conveniences, etc., etc. Contains over 300 pages, 350 Illustrations. Vol. IV., WILLIAMS'S HOUSEHOLD SERIES. Price \$1.50, by mail, post-paid; gilt, \$2.

**ANY LADY** or Gent that sends us their address will receive something of great value, free, by mail. Only about 200 left. M. YOUNG, 175 Greenwich St., New York.

**GOLD.** Any worker can make \$12 a day at home. Costly outfit free. Address TRUE & CO., Augusta, Me.

**25** FANCY CARDS, Snowflake, Oriental, etc., in 25 styles, with name, 10c. J. B. HUETED, Nassau, N. Y.

**50** CARDS, BASKET, FLOWER, etc., no two alike, with name, and a Pretty Finger Ring, only 13c. NATIONAL CARD CO., Northford, Ct.

**60** New-Style CARDS, Gold Border, Chromo, Motto, etc., name Gold and Jet, 10c. STAR CARD CO., Clintonville, Conn.

**75** Beautiful Christmas and New Year's Cards, Original Designs, no two alike, 15c. 1c. postage-stamps taken. H. THOMAS & CO., P. O. Box 1637, Philadelphia, Pa.

**MAMMARIAL BALM** restores and develops the bust. Warranted sure and safe. Price \$1. NEW ENGLAND MEDICAL INSTITUTE, 24 Tremont Row, Boston, Mass.

**60** CHROMO AND PERFUMED CARDS, no three alike, name in Gold and Jet, 10c. CLINTON BROS., Clintonville, Ct.

## TO LADIES OF ARTISTIC TASTES.

The Engraver's

### MODEL CABINET.

A Beautiful and Instructive Present.

This Cabinet contains all the necessary Tools, with a beautiful Book of Instructions (Illustrated). A new avenue for employment of woman. Price, complete, No. 1, \$5; No. 2, \$3.75. A handsomely-illustrated Paper, showing progress of Amateurs and other Useful Information, mailed for stamp.

G. C. LOEWENTHAL & CO., 722 Sansom St., Philadelphia, Pa.

## Music Teachers will Do Well

To use for Piano scholars MASON'S PIANO-FORTE TECHNIQUE (\$2.50), a book of sterling merit, with about 500 Technical Exercises, which may be expanded to many thousands if desired. Admirably prepared by Wm. Mason, assisted by W. S. B. Matthews.

Have you read the last Musical Record? Five cents each.

For Organ scholars, CLARKE'S HARMONIC SCHOOL FOR THE ORGAN (\$3). The newest and the very best Organ School. Teaches composition as well as playing. By Wm. H. Clarke.

Subscribe for the Musical Record. \$2 per year.

For Thoroughbass Scholars, JOHNSON'S NEW METHOD FOR THOROUGH-BASS (\$1). The simplest and best method to teach Chord-playing in Hymn Times, Glee, Part-Songs, etc. Ask for the New Method.

312 pages of music per year in the Musical Record.

For Singing Classes, ONWARD! Singing-School Book, by L. O. Emerson, \$7.50 per doz., and JOHNSON'S METHOD FOR SINGING CLASSES, \$5 per doz., are splendid books, differing in price and contents, but accomplishing the same excellent result in diverse ways. Examine both.

Ask at news-stand for Musical Record. Any book mailed post-free for retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 843 Broadway, New York.

## World's ONLY Manufacturer of

### WHEEL CHAIRS

Exclusively—All Styles and Sizes, for Invalids and Cripples.

Self-propulsion by means of hands only, in and out doors. Comfort, durability, and ease of movement unequalled. Patentee and maker of the "Rolling Chairs" pushed about at the Centennial. Send stamp for Illustrated Catalogue, and mention THE FLORAL CABINET.

HERBERT S. SMITH, 32 Platt Street, New York.

will bring you, by first mail, prepaid, 12 EVER-BLOOMING ROSES. Strong Pot-Plants, labelled, suitable for immediate flowering. Your own selection from our assortment of over 100 Sorts. To all who order to amount of \$3.00 we add gratis the Magnificent New Chromo Trade-Duchess of Edinburgh. Send for Catalogue. Address Innisfallen Greenhouses, Springfield, Ohio.

Bliss's Illustrated Hand-book, for the Farm and Garden, and Catalogue of Garden, Field, and Flower Seeds, Fertilizers, Implements, etc. New edition now in press, upwards of 100 pages, beautifully illustrated, will be ready for distribution January 1. E. K. BLISS & SONS, Seed and Horticultural Warehouse, 34 Barclay Street, New York. P. O. Box 4129.

**LADIES PURCHASING CORSETS** Should examine Madam FOY'S IMPROVED CORSET SKIRT SUPPORTER. It will be found in every particular superior to the old style, and combining more desirable qualities than any other corset in the market. For sale by all leading Jobbers and Retailers. Manufactured by FOY & HARMON, New Haven, Conn.

## SMITHOGRAPHY.

### A BEAUTIFUL PRESENT.

Probably no invention has created such a sensation, or met with the approval of the press and public so much as this Beautiful and Fascinating Art. It is so simple that children only 8 years old have learned from the printed instructions. Maps, Engravings, Photographs, Letters, Music, Monograms, Embroidery, Patterns, etc., may be accurately enlarged to any size. Complete Outfit for S'ADI G. PAINTING, AND CRAYONING, together with the instrument, by mail, only \$1.25. Instrument alone, 25 Cents. Many who ordered Outfits a few months ago are coining money fast by teaching the Art of enlarging Photographs. Over 100,000 sold during the Centennial. Buy no instrument unless stamped "Smithograph Manufacturing Co." Circulars and full particulars free. AGENTS WANTED.

Smithograph Manufacturing Co., or Agents' Publishing Co., 717 Sansom Street, Philadelphia, Pa.

NEW YORK, DECEMBER, 1878.

## DESCRIPTION OF ILLUSTRATIONS.

UPON page 1 is a delightful sketch of a window garden, sent us by one of our subscribers from Milford, N. H. It is of remarkable beauty, the flowers and vines being extremely luxuriant. We would be glad to hear more from the fair lady, unknown to us, who has sent so beautiful a sketch.

Upon page 4 is a sketch of the rustic seat, bridge, and grounds at the country house of the poet, William Cullen Bryant, at Roslyn, L. I.

Upon page 5 is a pretty group of butterflies, flowering vines, etc., arranged in a charming picture-frame.

Upon page 9 is a scene of childhood's joys: a little child in a humble home is eating her bread and throwing the crumbs to the doves and pigeons, who are coming in flocks with perfect freedom and familiarity.

Upon page 12 are several suggestions in household ornaments—a vase placed beside a picture-frame contains climbing vines, whose tendrils creep all around, and make the whole more charming.

Our ladies will at sight see the wall pockets and bags, and know how to knit or embroider them.

## HYACINTHUS CANDICANS.

THIS really excellent garden plant has been in magnificent bloom in our nursery this summer, and was admired during a long period daily by the numerous visitors to our establishment. We had a large bed of the pure white-flowering Hyacinth, edged by a broad border of Gladiolus Brenchleyensis, which was particularly admired. A most splendid effect has been obtained by this combination. The pure white color of the Hyacinth makes the most striking

contrast with the dark red tint of the Gladiolus, and this grows just the height to enable the Hyacinth to exceed it by nearly the whole length of the flower-spike. For this purpose it is advisable to select Hyacinthus Candicans, first size bulbs, and Gladiolus Brenchleyensis, second size bulbs. We consider Hyacinthus Candicans, which flowers during a period of several weeks in July and August, one of the best ornamental plants for gardens and parks, and can especially recommend the above-described arrangement. The flowers of this Hyacinth are very suitable for bouquet-making.

The Hyacinthus Candicans was shown by our firm at the Centennial Exhibition, Philadelphia, 1876, and the grand prize medal with diploma awarded "for very perfect display of Gladiolus Brenchleyensis [of which a very large bed was planted] and fine flowered plants of Hyacinthus Candicans, a new ornamental Hyacinth of stately growth, producing large white flowers," etc. This Hyacinth is treated in the same way as the Gladiolus: it is taken out of the ground in autumn, stored during winter in a dry place, safe from frost, and planted in spring.—Contributed to Case's Botanical Index.

## A MURDEROUS SEA-FLOWER.

ONE of the exquisite wonders of the sea is called the Opelet, and is about as large as the German Aster, with a great many long petals of a light-green color, glossy as satin, and each one tipped with rose color. These lovely petals do not lie quietly in their places, but wave about in the water, while the Opelet clings to a rock. How innocent and lovely it looks on its rocky bed! Who would suspect that it would eat anything grosser than dew or sunlight? But these beautiful waving arms, as you call them, have use besides looking pretty. They have to provide for a large, open mouth, which is hidden down deep among them—so hidden that one can scarcely find it. Well do they perform their duty, for the instant a foolish little fish touches one of the rosy tips, he is struck with poison as fatal to him as lightning. He immediately becomes numb, and in a moment stops struggling, and then the other arms wrap themselves around him, and he is drawn into the huge, greedy mouth, and is seen no more. Then the lovely arms uncloset and wave again in the water.

## LILIUM THUNBERGIANUM BATE-MANAI.

THIS is a new lily, very distinct and beautiful in bloom, of a rich orange apricot color, with the extraordinarily fine form of Liliun Elegans var Armeniæum; later in flower, and growing four feet high, bearing from six to ten flowers on a stem.

It is a first-class lily for autumn decoration, a charming companion for the varieties of Speciosum and Tigrinum, none of which possess the peculiar color of this charming novelty.

A Remarkable Rose-Bush adorns the cottage of Mrs. S. A. Randall, of Santa Barbara, California. It was planted in 1858, and is of the Lamarque variety—one of the most beautiful of the white roses. Imagine a bouquet of white roses twenty-five feet high and twenty-two feet across, beautifully rounded, with a blossoming surface of four hundred square feet, with four thousand full-blown roses and twenty thousand buds!

## PUBLISHER'S ANNOUNCEMENTS.

## Renew! Renew!

Most Subscriptions expire with this Number, and all of 1878 are to be renewed. We wish all abundant happiness, and promise that THE FLORAL CABINET shall be as good as IT CAN BE for time to come, and you all know how good it has been in the past. It will never "grow less," but "go on to perfection."

## Regret.

We regret our printer delayed the paper so much last month. Our work was so far done that on the 12th we were all ready to hand our paper to our readers; but something happened to the printer too provoking to here describe, and we had to wait patiently till "light appeared." Such an accident cannot occur again, as we exceedingly desire every Subscriber to receive his paper as early as possible.

## One Hundred Papers at Club Rates.

Club Subscriptions will be received at our Office at following prices from all Subscribers who wish to club them with THE FLORAL CABINET. Remit regular price for FLORAL CABINET, and then add one or more papers of following list, at the prices named in second column.

Those who desire may remit full prices named in the first column, and we will give in addition the following Premiums; but no Premiums can be given to those who pay Club prices in second column.

## PREMIUMS.

To every one paying full publishers' price (first column) for any paper named in following list there will be given, free, postage prepaid, a choice of one of the following attractive articles:

1. Quarterly Edition of THE LADIES' FLORAL CABINET, free, one year, including one Floral Premium (1 to 13).
  2. Book, "How to Destroy Insects on House-Plants."
  3. Book, "Household Hints and Recipes."
  4. Book, "Every Woman Her Own Flower Gardener."
  5. Book, "Fret-Sawing for Pleasure and Profit."
- To any one remitting Publishers' prices for Five Journals of this list will be given, free, postage paid, one of the following Books:
1. "Household Elegancies."
  2. "Window Gardening."
  3. "Ladies' Fancy-Work."
  4. "Beautiful Homes."
  5. "Evening Amusements."

HENRY T. WILLIAMS, PUBLISHER, 46 Beekman St., New York City.

MILK JEWELRY.

A NEW industry has been started in Mansfield, Massachusetts. It is no less than the manufacture

the shop it undergoes a wonderful change, and receives the name of American coral. The secret in making it up is carefully guarded, but it is certain that it has to be heated very hot, during which col-

Mamma (who had been quietly watching certain surreptitious proceedings): "Willie, who helped you to that cake?"

Willie (promptly): "Hebben, mamma."

COTTAGE SCENE—CHILD FEEDING THE BIRDS.

of jewelry out of sour milk. This seems a strange anomaly, but it is a fact. The milk comes in the shape of curd from the butter and cheese-making counties in New York, and looks upon its arrival a great deal like popped corn; but before it leaves

oring matter is introduced, followed by a very heavy pressure. Some of it is colored black and called jet, while some appears as celluloid. It makes very handsome jewelry, and is made into all kinds and styles known in the trade.

Mamma (sternly): "Sh-sh-sh, you naughty boy! How dare you tell such stories?"

Willie: "'Taint my fault if it is a 'tory, ma. Didn't pa tell beggar man zat hebben helped zhose zat helped zemselves?"

## Housekeeping.

## SOME HINTS FOR HOUSEKEEPERS.

IN the first place, I wanted five yards of picture cord, and I knew it would cost eight cents a yard, and I only had fifty cents in my pocket; so in a disconsolate mood I sat down to rid out my sewing-box, which is a cheese-box trimmed and lined with green paper muslin. In this I keep my cut-out sewing and mending. Of course I have a smaller box for thread, thimble, scissors, etc., and a still smaller one for buttons, hooks, and eyes. These are two long, flat cigar-boxes, papered with buff paper muslin, and decorated by my map pencil reserved from school-girl days, one end of which is red and the other blue. As I assorted my sewing I found a long-forgotten ball of scarlet yarn such as children's stockings are knit with. Now, if this were thick enough it is just the color. I remembered helping my husband twist some sack strings, so after supper I asked him to help me twist some cord, and soon had in my possession six yards of nice strong cord at a cost of about three cents for the whole. The yarn costs twelve cents per bunch. The next day I purchased a bunch of green yarn, and now am prepared to furnish all the cord and tassels we will need for the next three years.

We have two chromos, of rather dark appearance, in heavy walnut frames without gilt moulding. I have been thinking for some time of some way to brighten them, and yesterday I decided. Boiled a little starch paste, brought out the pictures, dusted carefully, then pasted a strip of white paper scarcely one fourth of an inch wide on the chromo next the frame, then on the frame, joining carefully to the white paper gilt-paper about three-fourths of an inch wide, extending it out over the frame. A photographed family group, also in a heavy walnut frame, was brightened in the same way. Without an actual trial you cannot imagine how much a picture may be improved by this method. With us a sheet of gilt paper twelve by fourteen inches costs ten cents. I've hung all the pictures in the parlor with green cord, and a bunch of ferns at the nail; in the sitting-room with scarlet cord and autumn leaves. I made an easel frame for a photograph to stand on the parlor table. Yesterday while I was pasting I had a small piece of blue-black paper, which I cut in strips and bound a piece of pasteboard, square except at the top, which was oval; in the centre I cut an oblong aperture large enough to admit the picture, bound the opening with gilt paper one-fourth of an inch wide, then with the black paper fastened the photo and glass on the back with a bit of tissue paper, put a standard behind it, and "twas done," and compares favorably with one for which I paid fifty cents several years ago.

I wanted a vase for my bouquet on the parlor table, but those large enough cost too much for my limited means, so I set my wits to work to invent one. When I want anything very bad and cannot get it, I am often reminded of a boy in the story of "Theo," who wanted a cutlass to play pirate with, while Theo wanted to go to London; but as their parents were

poor they could not have their wish. Theo, of course, cried, but the boy said, "Pooh! crying—that's just like a girl. When a boy wants a thing he can't get, he makes something out of wood that looks just like it, or else pitches in and does without it." So when I "can't get" an article, I make something out of "wood" or some other material that looks like it, or do without. But about my vase: I cut two pieces of pasteboard in the shape of a vase, sewed the edges together, fastened in a bottom, put in some small stones to make it steady, covered it neatly with buff cloth, fastened on a bunch of green ferns, put over it a covering of thin barred lace, and it was complete. Of course the ferns should have been glued on and two or three coats of varnish applied; but glue and varnish are articles I have never been fortunate enough to possess. My bureau is furnished with a toilet set made in the same way, of buff cloth (scraps of my window-shades), with a bunch of ferns in the centre of the mats, pincushions, hair-pin box, etc., then a covering of lace fastened on each article with tiny green bows. No one can tell that the buff cloth is not silk or velvet, and the ferns embroidered on, unless by very close examination. Of course I would prefer the real article, but where one is obliged to count even the pennies an imitation will answer as well for the "pretties."

Two corners of our parlor contained bouquets of dried grasses, everlastings, etc. (not alike by any means), the third had a two-shelved walnut bracket of books, while the fourth was empty. I pondered a long time what to fill it with; at last I received an inspiration one day while busy over the wash-tub, which I proceeded to carry out the first leisure afternoon. I took my last summer's hat, which was white chip, and with it made a handled basket, filled it with ferns and gay zephyr flowers of all shades and colors, and hung it in the vacant corner; had some lovely ferns about a foot and a half long, some a bright green, the others a golden bronze; fastened them in the edge of the basket, letting them droop down. Every one admires the fern basket more than anything in the parlor. I press my ferns in a large country atlas, gather them any time in the year; for we have many kinds which remain fresh and green all winter. Fred brought me a handful from the woods the other day which have been covered with snow for several weeks. I use the dainty creations everywhere, in bedroom, parlor, kitchen, over curtains, under and over picture-frames, in bouquets and to ornament all kinds of fancy work. Do any of you know how useful the pretty moss which we call fern moss can be made. It grows in sheets, on old logs especially, where the woods are swampy; each separate stem is like a miniature fern. We have been making frames for pictures and mottoes in the sitting-room. Fred makes the frames of plastering lath, while I sew the moss on pasteboard, then tack it on the frames. Our corner book-case Fred made of two boards sawed to fit the corner, and a straight edge in front, one smaller than the other, with holes bored in the corners and hung up with scarlet cord; then I made lambrequins of brown paper, the lower one with one point in the centre, the upper with points at the sides, sewed on moss, tacked them fast, put a small bunch of moss on the nail where they were

hung, stuck in three waving ferns, and it looks pretty and woodsy. Crosses and anchors are pretty made of this moss, also wreaths; a few scarlet berries mixed with it look well. I have been wishing this moss was strong enough for door-mats. Wouldn't it be lovely? And that brings me to rugs. I will tell you how I made two: for a foundation I took a pair of Fred's old pants—the cloth was dark gray—cleaned and darned them nicely, made them as long as the doors are wide, and about fifteen inches wide, for the first one. Had some black and scarlet plaid braid from an old dress; set one row around the mat about half an inch from the edge, first clipping off the square corners, another row an inch inside of that. With chalk printed in large letters the word "Welcome" in the centre of the mat; sewed on the letters with braid; for a border took a long strip of the cloth, cut it in three-cornered notches, then a strip of scarlet flannel, cut it the same way, only half an inch smaller; laid the flannel on the cloth, fastened both to the mat, lined it, and it was finished. For the other mat bound the edge two inches wide with brown cloth; cut out one large rabbit and two small ones from the brown cloth; put the large one in the centre of the mat, the small ones across the lower corners with their heads toward the large one; cut out about a dozen leaves after a beech leaf, laid them on in groups and singly to fill the vacant places, sewed all down securely, sewed black eyes on for all the rabbits; also made two rabbits of white canton flannel, stuffed them with bran, lined their ears and made their eyes of pink silk, placed them on a green sea-foam mat, and they look 'cute as life. If any of the CABINET readers would like the pattern for these rabbits, which can also be enlarged for a rug, and send their address and five cents to me, I will send it to them. Last fall when we brought our wood-box in the house it looked so shabby on the new rag carpet that I soon had it nicely papered inside and out. But I found that to keep it nice it must be newly papered every two weeks at least, so I sent Fred to the store for two yards of paper muslin, dark gray or brown; he soon returned with the gray, which I tacked to the box with "silver" headed carpet-tacks, and now as spring days are drawing on it still holds out. I made a common lamp-mat, to take the place of an elaborate one which dare not be spoiled, of a square of green flannel lined with paper muslin, with white zephyr chain-stitched a striped border half an inch from the edge. Worked my husband's initials in the centre, also with white zephyr; it is soiled now, but I can soon make another. I close these many items, hoping they will benefit some of the many CABINET readers as much as I have been benefited by its pages, knowing also that even the humblest can take at least one hint. And now one word to the writers: let us have some more letters to the young housekeepers as we had in 1875 and '76. I am only a beginner, and in reading over the old numbers of the CABINET have found several letters which seemed to be especially written by some dear old friend for my especial benefit. This is only my second year of housekeeping, so I read everything on the subject I can find, for I intend to belong to the class of "splendid housekeepers." MOLLIE C. HARPST.

BENTON RIDGE, HANCOCK CO., O.

## Household Art.

## PICTURE-FRAMES AND FANCY ARTICLES.

MANY different styles of picture-frames have been described in the FLORAL CABINET, and I have made them in various ways, but I prefer a frame made of moulding to any other; and they can be made very cheaply in the way that we make them. We buy the moulding, of whatever style or width we wish, several feet at a time, and make up the frames at home. It requires some practice to do this work nicely, but it can be done with care, and I never think now of getting pictures framed in any other way. The cost is not more than half what it would be to buy frames ready made. For large pictures I get thin board for the backs, but for small ones I use pasteboard. A glass-cutter is very useful in framing small pictures, as larger glasses that have been broken can be utilized for them. I always prefer to have a glass over a picture, to protect them from flies and dust. I have framed some small pictures lately with brown walnut-colored paper. This is very easy, and may be done in a few minutes. I have the glass, picture, and a piece of pasteboard all cut the same size. I sew two loops of tape to the back of the pasteboard in the proper places to pass a cord through to hang it by. Next I place the picture, glass, and pasteboard in their relative positions, and glue a strip of new muslin, an inch or more in width, carefully over the edges of the pieces, fastening them securely together. I let it dry a little; then, having the brown paper cut into strips the proper width to cover the edge and lay an inch wide around the picture, I paste it on carefully. After it is thoroughly dry I give it two coats of Demar varnish, about two days apart. These picture-frames look very neat. If the picture has no margin to allow for what will be covered by the paper, the glass can be cut an inch larger all round than the picture, and the picture secured in place by fastening it to the pasteboard back with a little paste. None but light pictures, or those with a white margin, should be framed with anything so dark as this, as they look too dull.

I have made frames of straws and splints, first binding the glass, picture, and back together in the way I have described. I follow the same rule with regard to light and dark pictures; in framing large ones with moulding, selecting gilt moulding for dark pictures, and black or walnut for light ones. The width of the moulding must always depend on the size of the picture, being selected wide or narrow according as the picture is large or small. This depends somewhat, too, on the character of the picture, landscapes or photographs requiring a heavier frame than a picture composed of flowers and foliage.

I have lately seen a beautiful photograph frame made of black perforated card and embroidered with yellow floss silk. It was five and a half inches wide and nine and a half inches long in the middle, the sides being two inches shorter at the top. The middle piece is five inches long and three and a half wide. It is embroidered around the opening with single stitch, and a scroll pattern is worked in each corner with the same stitch. It is fastened to the larger piece on three sides, the top being left open to put the picture in. After the embroidery is finished it is cut out all around the edge in the row of holes outside of those that are worked. As the frame is very light, a pin is sufficient to fasten it to the wall.

A tidy and cushion that I have just been making for a large rocking-chair have been much admired. The foundation for both was knit of scarlet wool, Afghan stitch. The cushion has square corners, but is rounded in front the same shape as the chair seat. The tidy is octagon shape. The cushion was embroidered with a pattern of lilies, and a strip three inches wide was knit of scarlet wool and embroidered with the Roman key pattern in black, to put around it. This is joined to the cushion at top and bottom with black. The tidy was worked with a pattern of honeysuckles, crocheted around the edge with black, and a black fringe looped in.

Crocheting has almost superseded knitting, but for some uses, as for wrist-warmers, I prefer the old-fashioned stitch. A necklace that I knit last winter has proved very soft and warm in wearing. I knit it of brown chinchilla zephyr, on bone needles, with the stitch called patent knitting, which is the softest of any way of knitting that I know of. I will describe the stitch, as it may not be as well known as it was in the days of our grandmothers. Have an even number of stitches; for the necklace I speak of I used thirty-six stitches. Put the wool before the needle, and take up the first stitch as for seam stitch, and slip off without knitting. Then, still keeping the wool before the needle, take up the next stitch and knit it with the loop that is made by the wool round the needle, making a double stitch, as one stitch in ordinary knitting. Bring the wool forward again, and continue as before, every two stitches being knit the same way. I knit the necklace just a yard long, and finished the ends with nine crocheted rows of the same shade of plain brown zephyr, and looped in a fringe of chinchilla.

Some years ago there came into my possession a half yard of handsome Brussels carpet. I kept it for some time and considered whether to make a mat a chair-seat, or a pair of stools of it, and finally decided that I did not need any of these, but that I did need a satchel, and the piece of carpet was just the size to make one. I got drilling to line it with, and, after cutting it to fit, I added a piece on one side for a pocket. I fastened a strip of thin wood at top and bottom, between the outside and the lining, to stiffen it and keep it in shape; the top piece I made one inch wide, and the bottom one three inches. Four large brass-headed nails, such as are used in trunks, were driven into the bottom piece from the outside, and the nails flattened on the inside. This makes a flat, substantial bottom to the satchel. In fastening the pieces in place for the top and bottom I allowed about four inches over, on one side, for a flap, so that it should fasten on the front side. A piece of morocco was sewed into each side, which was three inches wide at the bottom and sloped off before reaching the top, to give the bag a proper shape, as I had only the straight piece of carpet to work with. The seams and edges were all finished with a narrow crimson cord; crimson-covered buttons were put on the front, and loops of the cord to fasten it with. A heavier cord, doubled three times, and twisted so as to make a solid round cord, was fastened securely at the upper corners for a handle. So, with only a few cents expense, I had a handsome satchel, both useful and ornamental when anything larger than a cabba is needed in travelling.

I made a pincushion this winter for a wedding present, which was pronounced beautiful. It was made of blue velvet and ornamented with clear and chalk beads. The cushion was made just a quarter of a yard square, as it was intended to stand on a bureau. The design was partly copied from an old magazine, and part I arranged myself. In the centre I made a cluster of flowers, a rose, made wholly of clear beads, with leaves of chalk beads, and two

or three smaller flowers. In each corner I made a large flower, and run a simple pattern of small flowers and leaves from one of these to another. The middle design I drew on tissue paper and tacked on. For the flowers that were to be made of clear beads I cut white paper the exact size and shape that the flower was to be, and tacked it in place, and covered with the beads. The leaves and stems were made entirely of chalk beads. After the bead-work was finished I cut a stout bag the same size and stuffed it tightly with bran, and put the outside on, making the under side of blue chintz. The seam was covered with chalk beads sewed slanting-wise across the seam, three at a time, and a deep fringe was made of alternate loops of clear and chalk beads, looped into each other.

AMARANTH.

## HOME ORNAMENTS.

AMONG a little group of pictures is a bracket, which is easily made. Get strong pasteboard, mark upon it a pattern from any bracket, cut it out with a sharp knife, sew the pieces together, and then paint to imitate dark wood. Above the same group is an anchor made of autumn leaves, which I gathered in the golden October days, and pressed with a moderately hot iron on which beeswax had been rubbed, and then fastened on to a pasteboard foundation cut in the form of an anchor.

A neat frame for an engraving or photograph is made by taking a glass the size of the picture you wish to frame, and pasting around the edges a strip of black glazed paper, any width you wish, binding the glass and picture together. Before framing make a loop on each side of the picture with a needle and strong thread, by which to hang it.

A little gem may be made by taking a pasteboard box, about a foot square and two inches deep; line with black velvet; arrange in it a bouquet of skeletonized leaves. Get a mat and glass to fit over the box; paste on the sides black paper, allowing a strip about half an inch in width to come over the glass, thus forming a frame and keeping the glass in its place.

The Tradescantia I consider invaluable, it patiently endures so much ill treatment, and flourishes almost anywhere you put it. I have vases of it on brackets scattered all over the room, and bottles of water, in which it is growing, hanging behind a number of the pictures.

A pretty ornament for a bracket is a cross made of wood, fastened to a block for a foundation, and the whole covered with the gray lichen. Arrange autumn leaves, ferns, and the scarlet berry of the bitter-sweet around the base, and a vine made of tiny leaves and the berries over the arms of the cross.

We are all fond of rocking-chairs, and so have them in abundance. On one is a tidy similar to the daisy tidy, only it is made of black calico. Cut circular pieces of black calico about three inches in diameter; turn in the edges, and gather with a strong thread; draw it as tight as possible, and fasten. Make within the gathers several short loops of scarlet zephyr, then cut them. You will now have a black wheel with a scarlet tuft in the centre. Make eighty-one of these, sew them together, and finish with a border of scarlet.

Take a piece of perforated card-board, about five inches long and four inches wide. Work a border around the edge of scarlet zephyr, and within the border the words "Scratch my Back." Cut a piece of sandpaper the same size as the card-board, and bind them together with narrow scarlet ribbon. Make a cord of the zephyr, and fasten it to two of the corners, and hang beneath your match-safe, and you will have a pretty little arrangement on which to strike your matches.

## Household Elegancies.

## CORNER SHELVES WITH CONE BORDER.

MATERIALS, fir-cones, acorns, chestnuts, and two flat pieces of wood, pasteboard, marble-paper, glue, and brown cord. These hanging shelves consists of two flat pieces of wood cut in a rectangular form, having two straight sides, and rounded off in the point. The upper surface of each shelf is covered with brown marble-paper, which also must be gummed over each edge. Thick pasteboard must be glued on the front edge, rounded with quite a point in the front; then cover with marble-paper. When the glue is quite dry, and holes are bored in the back, middle, and in each corner of the sides, commence the cone-work as follows: Procure some very large, well-grown fir-cones, and take off the brown scales and cut them so they all measure a third of an inch in length; the first line is placed round the outer edge of the pasteboard, the scales extending a little beyond; fasten firmly with glue—the first and second lines are arranged according to taste—then fasten on pieces of shells, of fir-cones, acorns, or anything fancy may dictate on the border, until the design fancy dictates is complete. Some use small acorns and cones, and merely put them on in a scroll form. We think that it is prettier not to have the borders alike, as there is too much exactness. The under shelf has, in the middle, large cones on both sides, single chestnuts, with beach-nut shells be-

tween them like pretty flowers. Each separate part must be well glued. Select very fine and even cones for tassels—two with which to hang it by, and one from each point. When the whole is finished and quite dry, take a fine brush and paint the work all over with nice furniture varnish.

FLORAL DECORATIONS FOR PICTURE FRAME.

## TAPER-HOLDERS.

TAKE a piece of perforated cardboard six inches square; work the edge with split zephyr in button-hole stitch; take one space, then two, then three, then four; reverse the number of stitches, which will form a pointed scallop. Work any pretty vine or pattern you like inside the scallops; paste a bright scrap-picture in the centre of each; sew the two edges together with zephyr, so as to form a cornucopia; take a piece of silver lining-paper five and three-quarter inches square, wrap around your hand in the same form; slip in the holder; finish with cord and tassel in front and at the top point to hang by.

Another I made which I think pretty, odd, and durable. Not being able to draw a boot, I cut the picture of one from an old shoe-box, enlarged it some, and used it as my pattern. By it I cut two

pieces of cardboard; I made a break in each from the top, through the middle of the leg, to about one and a half inches from the sole, then straight across to the end of the toe, and back diagonally to the top of the heel. This is to give a rounded appearance to the article when finished, and must be done before they are covered. Now cut from silk, or any cloth you choose to use, a piece a seam larger; baste nicely

each to place; turn over the seam; cut another reaching only to the ankle for a lining; baste to place; overseam the top edges only of each piece; baste a narrow piping of black cloth from the heel to the toe on one piece only; cover the heel with black cloth, both pieces; on one piece only work in chain-stitch a row of scallops to represent side-lacing; tack a common jet bead in the centre of each scallop to imitate a button; lay the two pieces together, and overseam all around except where the piping runs across the bottom of the boot; sew it through and through (the piping imitates the sole of the boot). Now fill the foot of the boot with raw cotton or bits of cloth, to give a round appearance; tack a loop of narrow ribbon to the top at the back to hang up by; fill with tapers. Mine measures, the foot six inches long, the length of leg seven inches. JENNIE.

## NEEDLE-BOOK.

MATERIALS, white cardboard, pink silk paper, white flannel, and narrow pink ribbon. This needle-book is cut in two pieces of white cardboard, exactly similar in size. The one I intend to describe is oval in shape. Cut in small scallops round the edge, then take a needle (about a five in number) and prick at even distance all round the edge, and then take a darning-needle and prick another row; then take the five needle and prick round again; then put a small scroll pattern in the middle,

and prick that all round with the darning-needle. When both covers are pricked they are lined with pink paper. Cut the leaves for the needle-book out of the white flannel, pink all round, and fasten to the cover; tie the covers together with pink ribbon, very narrow. These are very pretty for fairs.

HOME-MADE WALL-POCKET.

EMBROIDERED WALL-POCKET.

## Hireside Reading.

### MY LITTLE WIFE AND I.

We are travelling o'er life's road together,  
My little wife and I;  
We are happy in fair and stormy weather,  
My little wife and I.

The reason why is very plain,  
There's nothing queer about it:  
We never give each other pain  
When we can do without it.

We have toiled o'er many a road  
most dreary,  
My little wife and I;  
But our hearts were light when our  
feet were weary,  
My little wife and I.

The reason why we journeyed on,  
Since hand-in-hand we started:  
We ne'er had seen the battle won  
By those who were faint-heart-  
ed.

Though our home be plain, that  
never teases  
My little wife and I;  
Though a humble cot, right well it  
pleases  
My little wife and I.

The reason why we are content:  
We do not fear to labor,  
And though in toil our time is  
spent,  
We envy not our neighbor.

We never dream of ill for the mor-  
row,  
My little wife and I;  
But take what may come, be it joy  
or sorrow,  
My little wife and I.

The reason why we do not fret,  
And you'd do well to try it:  
We ne'er have found a person yet  
That was a gainer by it.

—C. H. C., in *Domestic Monthly*.

### WALL-POCKET.

I WANTED a paper-holder, or wall-pocket, strong enough to hold a pretty good supply of papers, and not, like some of our neighbors', only made to look at. I had a handkerchief-box about twelve inches square, with a pretty chromo on the centre of the cover; sewed the box together at the bottom of the chromo through the narrow side pieces, which I left over both the lid and the box; made holes in the sides at equal distances from each other; took scarlet, began at the bottom, laced the sides together, letting the top spread apart three or four inches; tied the cord and attached tassels to the ends of the cord; hung it up with four long cords and two tassels. Another I

made of two pieces of pasteboard twelve by eighteen inches, two triangular pieces twelve inches long, three wide at the top and the other sloped to a point. Covered all the pieces with gray paper muslin; threaded a darning needle with scarlet yarn, and cross-stitched the pieces together; in the centre of the front tacked the chromo "Autumn Leaves" which I received with the CABINET two years ago; hung it to the wall with cord and tassels.

LEARNING WISDOM.

### LET THEM HEAR IT.

"I THINK my boy has a genius for music," said a mother, "but I never let him know I think so. I dread to see a child grow conceited. And Kitty is really pretty, you know, but I never let her guess we do not think her plain. I believe that to be my duty. We mustn't make young people think too much of themselves."

Now, I doubt whether that mother was quite right; although, of course, when people, young or old, think

too much of themselves they are very provoking; there is no doubt of that. A woman who obstinately will believe herself pretty and attractive is a constant aggravation to those dear friends of hers who desire that she shall think herself at least comparatively plain and unpleasing; while nothing is more unendurable to most men than another man who thinks himself peculiarly brilliant. But whatever one does some one will be dissatisfied, and, in my

humble opinion, it is better to think too much than too little of one's self. The best gift a fairy godmother could give a child would be the power of being perfectly self-contented. As a general thing, those who really have much to be proud of are by no means the most entirely contented with themselves; but ah! how much happier is the dunce who thinks himself a genius than the genius who doubts his own powers; the ugly woman who believes herself a beauty than the beauty who thinks herself plain. And to be happy is so much!

I doubt if the old-fashioned style of refraining from all praise and never alluding to a beauty or a grace, while all faults of mind and person were pointed out and commented on, was a good thing; it made sensitive people too wretched. For my part I should do everything I justly and reasonably could to make a boy satisfied with himself. I should teach a girl to dress becomingly, to be graceful, and to feel that there was no reason why love or admiration should not be hers. Many plain old maids are plain old maids simply because it was impressed upon their minds in early youth that they were hopelessly unattractive; and you and I have seen women set down as homely who have suddenly brightened up and somehow made themselves handsome after the years when most people fade. A little hope had crept into their hearts with a word of compliment or a becoming dress, and changed their lives completely.

As for a man, he will never do anything until he thinks he *can* do it. He will not make efforts that he fancies will be failures. Praise the boy for whatever he does well. Praise is so sweet, and to some it is the only incentive to effort. You have no hesitation in finding fault, and if blame is needed, don't restrain it; but if you have a word of praise to give, remember that it may lend its sunshine to all the years that are to come, and *let your children hear it*—not whisper it behind their backs.—*Mary Kyle Dallas in New York Ledger.*

# THE LADIES' **Home** **Journal**

By HENRY T. WILLIAMS.

NEW YORK, MARCH, 1879.

No. 87. PRICE 12 CENTS.

## DESIGN FOR FLOWER-GARDEN.

This flower-garden occupies the yard between two houses, the six walks running up to the summer-house, and entering each by a separate door. The summer-house is made of lattice-work, and covered

Near the ends of the middle walks are racks with choice vases, and between them and the pointed beds are long, narrow beds containing Phlox, Candy-tuft, and Verbenas and Salvias. The fountain in the front has a figure holding out two Lilies, from which come jets of water. Around the edge of the fountain

## LAMP-SHADES.

I HAVE before me a pair of perforated lamp-shades. Cut the shades of white cardboard (an old shade serving for pattern); after getting a true shape lay it upon a smooth lapboard; then at regular intervals

DESIGN FOR A FLOWER GARDEN.

with Trumpet-vine and Honeysuckle. The flower-beds are laid out according to the design, each having a large foliage plant at each end, such as Century Plants, Cannas, etc. The beds contain rows of Dusty Miller, dark red Coleus, and light green arranged in fancy designs. The urns near the four corners of the yard contain vines of Wandering Jew, Parlor Ivy, and Begonias. The urns are earthenware.

are pots containing water-plants. In front of the fountain is a small bed, almost a semicircle, containing Pansies. Near the four corners of the yard are small Arbor Vitæ.

**Flies.**—Flies do not in general injure house-plants, but any fly, friendly or deadly, may be removed by liberally sprinkling weakened ammonia-water.

place some pretty pattern (I used embroidery patterns); then with a good-sized needle prick the whole design before removing the pattern; then make up with the rough side out. I paste them in shape, then wire and bind the edges with glazed paper, cut quite narrow and pinked on each edge. When placed upon the lamp, every part of the design shows beautifully.

## Floral Contributions.

## IMPROVING A HOME.

THERE could hardly have been found a more unpromising condition of house and grounds out of which to make a beautiful home than that with which we began ten years ago. The place had been rented for several years and the ground was worked down very poor. Fences were down, gates off their hinges, a bush thicket grew almost to the door, and the out-buildings were very poor and insufficient. The house was not old, but appeared so; was roughly weather-boarded, and coated with a yellow wash. We were upwards of half a dozen in family, of which the larger half were children. We had not money to spare for improvements, but were obliged to depend wholly on our own labor and ingenuity for every advancement in this respect. But this place was destined to be our home, and we meant it should before long have a homelike look. There were some natural advantages in the situation of the house; it stood a nice distance from the road, near enough to be enlivened with the continual travel, but far enough from it to escape all dust and noise, and elevated enough to be always dry. A lawn had been laid out from the house to the road, but it was surrounded with a rough, stumpy thorn hedge, and nothing was growing on it but grass, and but little of that. A fine old tree stood at the bottom of the lawn, and under its shade was a spring from which all the water must be carried for household use. Another stately old tree, the oldest inhabitant of the neighborhood, stood nearer the house, but it and the lawn were both shut away from the house by a high white-washed paling fence. Another smaller tree stood in the yard, but directly before the front door. A large garden was laid out at the south side of the house, and this was also shut off by a high fence. The road-way to the back buildings runs by the north side of the house (the house faces to the east). The first year after it came into our possession we built a neat porch along the front, which was straight and bare, and had the tree cut down and the stump cut entirely away, which stood in front of the door, and another tree planted opposite the large one which stood near the house. Around this second tree a drive was afterwards made. After this improvements came slowly, but gradually and a little at a time we have evolved order out of chaos. The hedge around the lawn gave way to a neat board fence at one side, and at the bottom and at the other side a trellis of grape-vines separates it from a field adjoining. A well was made and a good pump put in, within a few steps of the kitchen door, and the spring at the bottom of the lawn was filled with rubbish and stones in the bottom, and earth filled in on top. For some years we cultivated our flowers in borders around the front yard. Along the porch we always planted vines and run them to the top with cords. Outside of these vines we planted our dahlias. On each side of the porch steps a climbing monthly rose was planted, and trellises made of two light posts with wire fastened across were put up to run them on. At the corner posts woodbines were

planted. A grape-vine was planted at the southern corner of the house and trained over the whole south side, being fastened in place with iron staples. The lawn was ploughed up and cultivated for some years, and then sowed with grass. Half a dozen evergreens of different kinds were planted about on it. A rustic seat was made of cedar limbs and set under the large tree near the house, and the paling fence surrounding the house was all removed, except a few feet at the back of the house, where it joined the garden, which was left to shut out the chickens. This made the house to open directly to the lawn in front and to the garden on the south side. Then we moved all our flowers to the south side of the house, and to the garden, except those that were planted by the porch. We have always made choice of Madeira vines for our climbers; they are such neat vines and rapid growers, and late in the season the whole air is sweet with their bloom. The roots are taken up before danger of freezing and can be kept as easily as potatoes. We have Cypress vines, Morning-glories, and other climbers in the garden, but the Madeira vine keeps its place in front. A Wistaria is growing over a trellis near the border fence of the lawn, a few feet from the house. On the south side of the house the whole ground is given over to flower-beds, flowering shrubs, beds of bulbs, which later in the season are brilliant with double Portulacas, Phlox, Lady-slippers, Geraniums, etc. Further off are round beds having a centre of Ricinus, or a ring of Cypress or Ipomeas, or made wholly of Cannas or Dahlias; Lilies, Peonias, and other perennials have their appropriate places where they need not be disturbed. Our flower-beds have gradually encroached upon the garden, while the garden-truck has been from year to year consigned to the fields, planted in long rows, and cultivated with horse, instead of man or (woman) labor. I have mentioned our filling up the spring; but the ground all around it was wet and collected water, and after awhile we dug out a small pond in the corner of the fence, making a neat sloping bank, and planted water-lilies in it, and a willow-tree on the edge. The pond is always full of water and the lilies bloom beautifully all summer.

So far I have spoken only of out-door improvements, and these were for the most part planned and executed by the women of the family. Perhaps a few hints of some of the indoor improvements may not be out of place. Most of these were of woman's planning also, and it seems to me that the planning of houses, the arrangement of rooms and closets, is work that belongs especially to women, and that they, as a general thing, are more capable of doing it than men. They know better what they want, and how to economize space and arrange stairways and cupboards, pantries and shelves, so as to be most convenient and save the most steps.

The house as originally built had three rooms on the ground-floor, parlor, sitting-room and kitchen, all in a row and all opening on the front porch. When we were ready to build, we tore away the kitchen and moved it back of the house and rebuilt it as a wood-house. We extended two rooms back from the sitting-room, one to be used as a dining-room and the other as a kitchen. Then we built a wide

porch along the whole north side. The pump stands on it, within a few feet of the kitchen door. In the old plan a narrow, crooked stairway went up from the sitting-room, and this was the only one in the house. We tore this entirely out, making a window where it had been below, and a closet in the room above. A wide, straight stair was built between the old and new rooms, and a window made at the top, which was furnished at the top with a white muslin shade. A narrow stairway was also built to go up from the kitchen. We papered all the other rooms and stairways, but left the dining-room and kitchen walls to be painted. All the wood-work in the house with these exceptions was painted white, and the wall-papers selected were all light, with the borders the color that we wished to be the prevailing color in the room. Thus, the parlor border is crimson; the sitting-room green; the best bedroom crimson; another bedroom green; and another one pink. We are all dark, so we cannot indulge in blue rooms. The wood-work of the dining-room was a handsomely grained wood, so it was simply oiled with two coats of linseed-oil and varnished. The walls and ceiling were painted with umber. The kitchen was painted, doors, floor, and wood-work with ochre, and the walls and ceiling with umber. A large closet was made in the kitchen under the stairway; a meal-chest was built inside, with different compartments for flour, meal, etc. Along one side of the kitchen, near the ceiling, a narrow strip of wood was nailed, which was set with hooks for the hats, coats, and other belongings of the men-folks which were in every-day use. When remodelling the sitting-room we built a bookcase on each side of the chimney. They reach to the ceiling, a cupboard being made in the lower part of each, with a separate door from the bookcase, which has glass doors. Over our front door there was a transom-light made of three small panes of glass. I had the glass taken out and the dividing sash cut away, and procured a glass the size to fill the whole. This I drew a pretty design on, and painted the whole glass outside of the pattern with scarlet lake; the design was left clear.

I have tried to tell you how unpromising the situation was to begin with, and how improvements were made. Now almost every visitor says, What a beautiful home you have! AMARANTH.

## MY EXPERIENCE IN PLANT-CULTURE.

I ALWAYS recognized the necessity of showering my plants, and nothing pleased me more than their refreshed appearance after having been treated to their weekly bath; so, every Saturday morning I used to remove them to the lawn, when the weather would permit, or to the kitchen when too cold, place them in a large tub, fill the tin watering-can with tepid water, and swing that heavy weight over the plants till they were thoroughly showered; then carry them back to their quarters to remain during the next week. Thus, fairly tired, I could not help wishing that dust would not collect on them, and that their good health did not depend so much upon the amount of water sprinkled upon their surfaces, and would almost resolve not to make such a martyr of

myself for those plants; but, of course, when the week rolled round, and they seemed to beseech me to give them their bath, I would forget my wishes and resolves, and begin with vigor that which invariably ended in fatigue.

Year by year my number of plants increased, for, besides my old favorites, I always delighted, as every one does, in something new; so that, instead of the meagre collection with which I started, my two-year-old bay-window, which, by the way, is a large one, contains more than a hundred plants. It finally became obvious that something must be done to prevent the necessity of carrying so many plants to and from the window to receive their bath. Looking over the Floral Catalogues, I saw advertisements of plant-sprinklers of various sorts, and I finally decided to purchase the *Elastic* plant-sprinkler, and accordingly sent for it. It was somewhat smaller than I had imagined it would be, but, notwithstanding that, I am perfectly satisfied with it. Indeed, I consider it quite indispensable for the purpose. My plants now get daily showers instead of weekly ones, for every morning, after I have given water to the soil in each jar, I collapse the sprinkler in part of a pail of tepid water which has been previously brought into the window, and as soon as it fills, which it does rapidly, the plants are treated to a miniature rain-storm of a mild nature. I usually fill the sprinkler five or six times in succession. The window is filled with a spray which washes the air and gives it the proper amount of moisture. The plants appear beautiful in the morning sun, dripping from both the upper and under sides of every leaf and stem, and thus they always present a fresh, clean appearance. The red spider never appears among my plants, owing to the moist atmosphere occasioned by the daily showers. The aphid has not appeared upon any plant except a pot of Verbenas. As soon as I discovered its presence, I immersed the pot, plant and all, in a large pail of quite warm water and allowed it to remain under water fifteen or twenty minutes, until every insect was drowned. I repeated the process two days later, and have not seen an aphid since. I believe this is the very best way to free a plant which has become infested with insects. Verbenas, Roses, and German Ivy are peculiarly subject to the attacks of the aphid, but my rose-bush and German Ivy have escaped its attack since the advent of the sprinkler.

I believe this shower is fully as beneficial to plants in hanging baskets as immersion is. My Murrandia, Kenilworth Ivy, Othonna, Lobelias, Oxalis, Tradescantias, Smilax, and Madeira vines, climbers and trailers, never looked better. The showering which used to be such drudgery is now mere play and a pastime, since I have the conveniences to work with. The water which falls upon the oil-cloth and wood-work can be easily removed with a clean cloth. I intend that the inside woodwork of the window shall be repainted every summer.

Those beautiful and oftentimes large English Ivies which we frequently see, when covered with dust are truly objects of pity. The larger they are the more work it generally is to keep them clean, unless one uses a patent carpet-sweeper. I consider this one of the indispensables, as it confines the dust to

itself during the process of sweeping, and prevents its smothering the plants. My English Ivy is in the bay-window, and no plant appears to enjoy its daily showers more than it does. I would rather expend four dollars and a half in a carpet-sweeper and plant-sprinkler than in all the fancy-painted flower-pots that sum would buy. I believe that unpainted flower-pots are better for the plants.

My Heliotrope has blossomed constantly ever since last fall. Not a day has passed this winter without at least half a dozen varieties of my plants being in blossom, and usually many more, though none have been so constant as the Heliotrope. Those which have rewarded me with blossoms during the winter are Ageratum, Abutilon, Cuphea, Chinese Primroses, Oxalis, Cyclamen, Calla Lily, Lobelia, Sweet Alyssum, Ten Weeks Stock, Othonna, Pinks, Virginian Stock, Hyacinth, and two Geraniums. All these are in blossom at present, and now several other Geraniums, Begonias, Fuchsias, a Pelargonium, single and double Petunias, and Verbenas are in bud and coming into blossom, to add their color and fragrance to the others. Several yards of Madeira vine are twined and festooned about my window. The root grows in my window-garden box, where it flourishes much better than it does in a jar. I cut down the vine every summer. My three varieties of single Petunia and all the varieties of Tradescantia grow in the same box, and, like the Madeira Vine, flourish better there than anywhere else. I have found by experience that Geraniums will not blossom in the box until May or June, as the roots could not be sufficiently bound in that large amount of soil, so I grow them in four and five inch jars, and they blossom nicely from the last of January till they are removed to the flower-beds. I have one clump of thirteen Geraniums growing in a rustic pail, and they make a fine appearance.

I raised my Primroses from seed. I was careful not to allow any water to touch the leaflets while they were small, and during that period they were kept under glass. I have never given them any stimulants whatever, and they are fine specimens. I give my other plants, including the English Ivy and Cacti, a stimulant once a week. Sometimes I put two or three drops of ammonia into their shower bath. One week I give them weak soot tea, another week a weak solution of hen manure and water. Fuchsias and Verbenas rejoice in this, and both require a very rich soil. Heliotrope does not like this fertilizer. Another fertilizer that I use and like very much is composed of sulphate of ammonia, white sugar, saltpetre, and water. The directions for making it can be found in Mr. Williams' book on "Window Gardening," and also in *THE CABINET* of January, 1877.

All my plants have charcoal drainage. With all my care in giving them light, air, good soil, drainage, and other nourishment, all essential, still I regard nothing of more importance than the daily showers they receive. Clean foliage, clean pots, and clean saucers are as essential to the well-being of plants as clean skin and clean clothing to persons.

Last March I received a bulb of the "Pearl Tuberosa." After planting it in rich soil in a five-inch pot, and pouring warm water on the soil, I covered it with a small goblet and placed it upon a cast-iron

shelf surrounding the stove-pipe, so that the bulb might have bottom heat. As I had the shelf removed from the kitchen stove to the sitting-room coal-stove the heat was constant. While the shelf remained on the coal-stove I made use of it in starting slips, seeds, and small Cactus plants, keeping all under glass. The soil surrounding the Tuberosa bulb was kept continually moist. In less than a week the bulb had sprouted, and it became necessary to substitute a large goblet for the small one, as the leaves were beginning to crowd against the glass. In a day or two after it was necessary to substitute a quart glass can for the large goblet, and finally a two-quart can. In a very few days the leaves were so large and long it was necessary to remove the glass covering, and place the plant in the window. There it continued to grow rapidly. It was placed in the garden in June, and before the middle of July it supported a spike of magnificent double blossoms.

A bulb of the same kind which I treated the year previous, without giving continuous bottom heat and moisture, did not reward me with blossoms until the first of October last year, and then it developed into single blossoms. I had it carefully taken out of the open ground while it was in bud (fearing it would be killed with frost if allowed to remain longer in the ground) and brought into the bay-window, where it blossomed for some time. If Tuberosa bulbs are properly treated in the start they are sure to reward you for any extra care you may bestow upon them.

It is not so much what we do not know about plants and their needs, as it is the little things we neglect to do, that materially affects our management.

E. S. P.

**Hints for the Garden.**—I think my favorites among all the flowers are the Pansies; they have such queer faces, that seem to nod and wink at you in a very mysterious way, as if they had some important secrets to tell. If planted at the same time as other annuals they will blossom freely in the fall, and live under the snow all winter, waking up bright and early in the spring, ready to bloom all summer. My treatment of Pansies is much the same as for other plants, save that I use a great deal of leaf-mould about them; the decaying soil of the woods seems just suited to their wants.

If there is a shady corner in the garden you may plant there *Whitlavia*, with its delicate purple and white bells, and lovely *Nemophilas*, for these plants cannot bear the direct rays of the sun; if the corner is damp and shady enough you may have a little fernery. Go to the woods and take up all kinds of ferns and mosses, set them carefully, give them a thorough sprinkling, and they will grow without further care. I would not wonder if soon you preferred this cool, green bit of the forest to the brilliant flower-pots.

Hanging baskets should be started in July or August. The best drooping basket plant that I know of is *Nepeta Glecoma*, or Gill-over-the-ground.

My basket last year was filled with this, *Coliseum* Ivy, *Tradescantia*, and *Lobelia*, with Madeira vines to climb up the handles. It was not started till September; but in April the vines of *Nepeta* had grown eight feet in length, and trailed on the floor.

## Moral Arduities.

## A CHAPTER FROM DOLLY'S EXPERIENCE.

WHILE sitting one day with my friend Dolly, looking at some of the beautiful catalogues which had been sent to her from different florists, she asked me if she had ever told me about her early experience with catalogues. As I answered in the negative, and begged her to do so, she complied with my wishes; said Dolly: My first catalogue was quite a contrast to the beautiful ones in which you are so much interested; it might have had some more than a dozen leaves, without a single picture to assist the imagination as to how all those plants with those hard names would look if they were actually growing; but I studied it faithfully, and sent for a dollar's worth of seeds; they arrived in due course of time, and, with the exception of one variety, were consigned to the tender mercies of the open ground, where they may be still; I have never seen anything of them since they were sown. On the paper containing Cineraria seed were minute directions for planting, or they would doubtless have also reposed in the bosom of Mother Earth. I was directed to fill pots half-full of broken charcoal, then put on a layer of coarse lumps of earth, and over this a layer of soil made very fine mixed with silver sand, then water with a fine rose and sprinkle on the seed with little or no soil over them, and keep from the direct rays of the sun. I obeyed orders to the letter, and soon had quite an array of tiny plants. These too must be kept from the sun through the middle of the day; so every morning about nine o'clock they were taken into the house, to remain till late in the afternoon, when they were put out to be refreshed by the evening air. They grew very well until one unlucky Sunday in my haste to get ready for church, I forgot to bring them into the house, and when I came home in the afternoon there lay the cherished plants in a state of *flatness* beyond description. There were a few which had been shaded by the edges of the boxes; these revived so far that from three boxes I saved enough to fill a small one. These grew bravely for awhile, but one Sunday, a few weeks later, the same scene was enacted with variations. This time but three plants were left; I put these in separate pots, and am ashamed to say that two of these soon met a fate similar to that of their unfortunate companions. The sole survivor of this numerous family, notwithstanding its lonely situation and the persevering efforts of countless green flies to destroy it, seemed determined to become an ornament to society, when one day as I was holding it rather carelessly, trying to dislodge some of the green flies which had taken refuge among the buds with which it was then covered, it slipped from my hand to the floor, breaking the large main stalk of buds from the plant. I began to think the fates had decreed that I should not see a Cineraria blossom, but I kept the poor thing until the side shoots bloomed, and the flowers were so pretty and so fragrant that I determined to try again; so I planted some more seeds, hoping that my past experience might be of some use to me. I kept my se-

cond family of plants under the shade of a grape-vine, so they escaped the fiery trials of their predecessors; but, either because they were kept in too dark a place or from some other cause, they were subjected to a new infliction, which came in the shape of thrips. But what are thrips? said I. I have had an intimate acquaintance with the green fly and can sympathize with you in your trials in that direction, but this new insect I know nothing of. "Where ignorance is bliss, 'tis folly to be wise," said Dolly; but if you really wish to become acquainted with the thrip, I do not know as I can describe it better than to say that it is less than the sixteenth of an inch in length, and about the size of the point of a cambric needle. They meandered around in the beautiful purple wool with which the under side of the leaves were covered; when once ensconced in their woolly retreat it was almost impossible to rout them without taking off all the wool too, and one might nearly as well do that as to leave it for the home of the thrip, for they will make it their hunting-ground until it is all gone, then start for a younger leaf. If I had been as well acquainted then with the virtue of tobacco-smoke as I am now, they would not have wandered at their own sweet will seeking what they might devour, and finding it too. The green flies of the previous summer were, in comparison to the thrips, as child's play to the work of strong men. The poor plants looked when they were brought into the house in the fall as if they had seen trouble; they survived till one night in mid-winter when they were left in the window, and the next morning were stiff with cold; only two lived; they bloomed enough to show me that they were entirely different in color from the one I had first. You doubtless think that by this time my enthusiasm was somewhat cooled; but I had no idea of giving up, so behold me the following spring armed with more seeds, determined to succeed this time. These I kept in a cold frame where they did not see the mid-day sun, and nearly every week gave them a dose of tobacco-smoke, for by this time I had become a thorough convert to the merits of that medicine. By the latter part of November they were nearly all large, thrifty plants; all but three of the smaller ones were still in the cold frame (as it was so much easier to smoke them there) covered with carpets at night; the weather had been very mild for that time of the year, when one night without a note of warning the mercury went down a long way below the freezing point. I went out in the morning hoping that some of my plants might have escaped, but they had all turned to stones or to something as hard; by the time I had carried them all into the cellar I must say that if my ardor for raising Cinerarias was not somewhat chilled, my hands and feet were, and I was inclined to think I might own that I was defeated; but the three small ones that had been brought into the house blossomed so beautifully and were such an improvement on those I had grown before, that I could not help thinking that I should keep on until my efforts were crowned with success; so do not be surprised to hear that I am trying again. I am biding my time, gathering up my strength after my numerous defeats. As I saved one in the first trial, and in the second two survived, and the last time I had three, so perhaps if

I have the perseverance of Bruce's spider and try seven times, I may be rewarded at the last by seven plants; and as seven is the perfect number, so perhaps the plants will have become nearly perfect by that time. If eternal vigilance is the price of liberty, I may almost say that it is the price to be paid for strong, healthy Cinerarias. Meanwhile I had not neglected the catalogues which came to me year after year, but kept on trying something new every summer, sometimes being successful and sometimes failing entirely. One day I happened to see "Gloxinia; superb genus, stove plant, producing a profusion of beautiful flowers; to be grown in sandy peat." I was so stupid that I did not know what a stove plant was, but I thought it could not be very difficult to manage a bulb, so decided to send for some; but instead of the large package of bulbs which I expected to see, there came in its place a little insignificant paper of something that looked more like dust than like anything that would ever grow. My first impulse was to throw it away, as it did not seem possible that those atoms could ever grow to be bulbs large enough to blossom during my lifetime, but curiosity got the better of impatience; so I put a pinch of the dust in a flower-pot, and after waiting for what seemed to me a reasonable length of time for it to come up and seeing no signs of life, I stirred up the earth and put in another pinch. The stirring helped the first seeds up in a short time, and the second pinch soon came crowding after, so that I was like the "old woman who lived in a shoe," I had so many plants that I did not know what to do with them. I soon put them out-doors to *harden*, where they remained exposed to all the changes of the weather until fall. I had been giving them away through the summer to all who wished for them; but few seemed to be attracted by them, as they presented such an uninteresting appearance, so I still had quite a stock on hand; I stowed them all around in all sorts of unsuitable places; some in a box of verbenas in a cool room, some in the cellar, three I kept in a warm room; these grew very little until the days began to lengthen, when they seemed to wake up to a sense of the responsibility resting on them as the representatives of the "superb genus," and by the last of May they had grown to be very pretty plants. I was still determined to persevere in the hardening process, so put one out-of-doors about this time, intending to have the others follow soon; but going to a greenhouse I made some enquiries about Gloxinias, and was told by the florist that they should never be put out-of-doors. He was surprised to hear that any of mine had survived such rough treatment; said he only kept a few as ornaments to his greenhouse instead of for sale, as not one person in one hundred would take care of them properly. Of course I was one of the ninety and nine, as I had just proved to him by telling how I had abused mine; but I took the rebuke as meekly as I could, determined to become the one-hundredth soon. The plant that had been banished from the sitting-room was restored to its place, and in a few weeks they all blossomed; they were all different and all lovely. The florist had told me that he allowed the plants to rest in winter, but did not tell me that they disappeared entirely; so as the weather grew cold, and the leaves on two of

my plants began to curl and turn black on the edges, I thought they were going to die. Soon there was nothing left in the pots above the soil; but I did not throw that away, and the next spring was delighted to see tiny red shoots coming to the light. I then repotted the bulbs and they grew rapidly, making much more beautiful plants than the one which, instead of dying off, stood bolt upright all winter, growing very little until about the time the bulbs started. It is better to leave only one shoot to grow, as they will crowd each other if there are more; but if I have a strong bulb, I leave three or four until they are large enough to make cuttings, which root readily, almost always blossoming the same summer that they are taken off. As I did not plant all my seeds the first summer, I thought I would try again. This time I kept them in the house, gave them plenty of sunlight and was very successful, having several new shades. I think that out of that paper of seeds were raised ten or twelve varieties. The people who despised Gloxinias the summer before were glad to pay for them now, and the seedsmen at least were benefited by my success, for a great many who saw the plants sent for seeds forthwith; but I sometimes think that the florist told the truth when he said not one person in a hundred would take care of Gloxinias; for, said Dolly, it seems to be almost impossible to teach people that with a little care it is much easier to raise these "stove bulbs" than cabbages; for those the gray worm lies in wait for by night and the green worm devours them by day, while the Gloxinia is singularly free from insects. If a green fly happens to fall on to one from another plant it does not thrive, and a little tobacco-smoke will soon dispose of a stray thrip, if one should find its way to a plant, as it sometimes will if it is kept in too much shade. It is amusing to hear of the different ways that people will take to spoil their plants. One woman, planting her seeds in March, put the young seedlings on the roof of the wood-house one sunny day early in April to enjoy the fresh air, leaving them out all night; they had such a surfeit of fresh air that they never recovered; another, thinking the pot in which I had put the plants too small, procured a keg or half-barrel, in which she placed it, and set it out-of-doors so that it might have room; a third, who was told particularly to keep hers in the house, could not help thinking that a gentle shower would prove beneficial to it, so set it out in what ended in a violent hail-storm; the fourth set hers in the open ground, and, as it did not do well, took it up and cut a slice from the bulb to see if it was sound. But, if time and patience did not fail me, I might go on to fifteenthly with all the absurd plans of which I have heard, but I must already have nearly worn you out by telling you so many of my own haps and mishaps, so will spare you further details. But how long will a bulb live, said I? You must ask some one who has grown them longer than I have, said Dolly. I still have one of my original three, which has bloomed for nine successive summers, and you can see it now, strong and healthy, preparing for its tenth. That large one with leaves like elephant's ears has bloomed seven summers and is already budded again, and I have little doubt that thirty or more plants have been raised from those two alone. I thanked Dolly

for the information which she had given me, and went home fully determined to profit by her experience and send for some seeds of the two varieties of plants, which seemed to require such different treatment.

CARRY COWSLIP.

#### LOVE FOR HOUSE PLANTS.

ANY one, in order to succeed with house plants, must have a natural love for them, or else must have some powerful incentive to spur them to give time enough to the plants; for, say what you will, they do require lots of care to look and do well. Truly, they will live through hosts of neglect that would surely end the life of any pet; consequently many more ladies try to have plants than any other pet, for this reason, though if any one told them so it would raise their "disposition" more than I would care to.

I will, however, make one exception, in favor of the much-abused cat. What well-regulated family is without a cat, or two cats? and what could take the place of it, and stand as much and as meekly? The children monopolize it, put it through all manner of trials and tortures under the pretence of playing with it, and the only word of reproof, "Be careful or it will scratch you." It makes every ugly fibre of my nature stand on end to see them so abused. I see your lip curl and "Old Maid" ready to say; but you are wrong, I care no more for the cat than anything that has life.

But, leaving cats till some future time, will tell of my luck in cultivating plants. I had very handsome flower-beds last summer, but will first speak of house plants. When I first began to take the whole care of my plants, found they did not flourish as well as when an older hand had the principal charge, so I read various books on the subject. All had good ideas, yet many were difficult to accomplish by one whose time was taken by household cares, but after a number of years' practice my plants do very finely.

Callas used to all go to foliage, with not a single blossom. I tried various methods without gaining what I wished, until after much talking with a friend, whose Callas always (it seemed) were in bloom, found what she did. So for two years I tipped my Calla out of its tub every fall, and filled the tub a third full of the "compost" I found in the hen-house; then filled it up with soil from the garden, then watered it with very warm water; those winters it was constantly in bloom. This last fall I did not pay any attention to it besides watering, and it is a poor-looking object. Shall give it next fall the potting it had before; it more than repays in flowers the trouble.

Next come Geraniums. Nearly every one has good luck with these. I find the smaller the pot the greater number of buds you have. I think it is so with all flowering plants, but makes quite as much difference with Geraniums as any. An acquaintance has the most flourishing ones I ever saw; it is a real treat to see them; great green leaves, some with those dark circles on them, but not a flower; she uses large pots.

In the CABINET I saw that Cacti require the sun. I am passionately fond of them, and have several varieties. One—I do not know its name,

but called Leopard Cactus—grows similar to a pine-apple; the leaves, I will call them, are thick and striped width-ways, with first a dark stripe of green, then one of light green; it is very handsome; the blossom is not much, it resembles a pink Oxalis blossom. This Cactus will not bear the sun, but requires the shade; the sun wilts it and turns the plant a faded yellow.

If a lady cultivates plants because her neighbor does, I would recommend her to have an assortment of Geraniums, a box of Ten Weeks Stocks, Oxalis, and Lantana, and, if she cares for a vine, a Madeira; these any one can care for and have a good show of flowers. For curiosity the Cacti family will take the lead; such delight as it is when they blossom, for nearly all of them bear wonderful flowers.

Many speak of having trouble with the red spider, but it never has annoyed mine, although I am in constant warfare with the green lice. How I prize the ends of cigars that I chance to find; how sorry I always am to find them so small; but none are so little but I regard them as worth the bother of picking up; then with a little lamp, that burns the old-fashioned lamp-oil, lighted, sit down by the flower-stand and burn the cigar-ends under it. It is positively gratifying to see the little green pests, as the smoke ascends, quiver, drop, and die. I find this to be the only way I can get rid of them, no amount of showering will accomplish it.

Mentioning flower-stands, must tell you about mine. It has a standard of iron—"three-footed," I believe, it is called—out of which a steel rod about four feet high rises, on top of which is a bracket for one pot, then there are eighteen arms that slip on this rod, each ending in a bracket—there are three sizes of them, six of each size; they all turn round on the rod, so that I can have any one to the window without moving the stand. It looks almost like a tree when it is filled with plants; it is very ornamental.

On one of the lowest brackets is a Jerusalem Cherry-Tree in fruit; it has been all winter, makes a lovely show; on the top bracket is a Skeleton Geranium, whose delicate light-green leaves towering above the plants below form a pleasant contrast.

MRS. A. E. HARRINGTON.

**A Chinese Dish.**—When our party of six had seated themselves at the centre-table my attention was attracted by a covered dish, something unusual at a Chinese meal. On a certain signal the cover was removed, and presently the face of the table was covered with juvenile crabs, which made their exodus from the dish with all possible rapidity. The crabs had been thrown into a plate of vinegar just as the company sat down—this making them lively. The sport of the infant crabs was soon checked by each guest seizing which he could, crushing it between his teeth, and swallowing the whole morsel without ceremony. Determined to do as the Chinese did, I tried this novelty with two, and succeeded, finding the shell soft and gelatinous, for they were but a day or two old. But the third resolved to take vengeance, and gave my lower lip a nip so sharp and severe as to make me relinquish my hold, and also to desist from further similar experiments.—*Life in China.*

## Hints for the Garden.

## HOW TO HAVE A FLOWER-GARDEN.

IN the first place, let us suppose that the spot intended for your garden lies on the side of the house most sunny and sheltered. Having, then, this desirable situation, take a horse and plough and break the ground deeply and thoroughly. When you have broken it up by ploughing in one direction, haul in what coarse manure—such as chips, corn-cobs, leaves, and unrotted stable accumulations—you can procure and afford, scatter broadcast over the ground, and with a long, diamond-pointed scoter or a narrow turning plough, plough it in, ploughing this, the second time, crosswise the former ploughing. This operation gives what the farmer calls “body” to the land, and is absolutely prerequisite to first-rate success at flower-growing. Your soil having been thus completely broken and pulverized, scatter lighter fertilizers—fine particles of stable manure, leached ashes, and guano, if convenient—over the whole, and with a short-toothed harrow mix it with the surface. Nature, you observe, always lays her richest soil on the surface. Be sure that for the foregoing you use a horse and a plough. Discard the spade and fork as a failure. Being now possessed of a soil capable of developing the most perfect flower for fulness of size and vigor of appearance, and of a location where the sun, that great painter of nature, may lay on those living colors which only himself can make and mix, you will next proceed to lay off the walks. This second feature of your work will not require less taste than ingenuity. Your walks may be either straight or curved. It is a principle of philosophy, you know, that curvilinear and round figures possess more ease and grace, and therefore more beauty, than angular and straight forms. But in this matter of arranging your walks be governed by the size and shape of your garden. If your garden be very small, perhaps a single broad, straight walk leading from your door to your gate might be all-sufficient. Anything less or more might destroy the effect altogether. If, on the other hand, your garden be large or of ordinary dimensions only, let your walks be straight or curved according to the situation of the most prominent objects you design for the decoration of your beds. For instance: if you design having a rockery or a summer-house, decide on its location, and from the front door of your dwelling (the most eligible point for such a purpose) determine the course of your roads. If, from the point where you stand, it is your decision that a straight walk would more naturally lead to the rockery and past it on to some other part of the garden which it might be desired to render accessible, then by all means let *that* walk be straight. But if a curved walk would more easily reach those conspicuous objects, then, in that event, emphatically let your walk be curved. When the *gate* stands directly in front of the *door* of your dwelling, the walk connecting these two points (gate and door) should unquestionably be straight, as a “straight line is the shortest distance between two points,” and this chief or “front walk” serves more for

usefulness than for ornamentation. In this active American country of ours, where every man is a business man, the effect is ill to have his approach from the street to his door obstructed by a great clump of shrubs or a broad bed of tiny annuals, to avoid which he must follow a needlessly lengthened and meandering walk. Besides, if your friends or acquaintances, less familiar than yourself with the arrangement of your garden, should choose to call after tea for an hour's pleasant confab, the evening's enjoyment might be lessened no little to have those visitors tell you that they attained your door only after a long and embarrassing wandering over and through your bushes and briars; or (as the case may be) your ardor toward those friends might possibly be sadly abated, to go out the next morning and find the mat of delicate grasses and tender bloomers lying just in front of your door all ruthlessly trampled under foot. Such a state of things might irresistibly provoke the coarse and unwomanly expression of “See where that ugly fellow and his uglier wife put their elephant feet last night, right down on my poor little Pansies; I wish they had put off their coming until daytime,” etc., etc. Now, for the foregoing and other reasons which might be seasonably mentioned, let your front walk be “straight as an arrow,” and not only straight but broad also—the king's highway of your garden. Having determined as to the *course* of your several walks, whether straight or curved, the next immediate labor is to dig them out or throw them up, as your fancy may dictate; for either plan the spade, heretofore rejected, must now be called into service; the hoe is a poor implement for such an undertaking. This part of the work must not be indifferently done, having one section of the walk broader and another narrower, but every inch of it must be done by rule. If a dug-out walk be preferred, throw out the dirt evenly and to a uniform depth of about three inches its entire length. If a raised walk be chosen, throw up the dirt to the height of three inches, evenly and uniformly. The *width* of your minor walks should be in proportion to their respective lengths, in no case less than three feet, however. Of the *number* of walks needful to traverse and distinguish your garden your own taste must judge; some writers urge the importance of having but few walks, and I think, myself, that many gardens are shamefully disfigured by a multiplicity of pig-paths and Indian trails indiscriminately threading them. Perhaps it might be well to have each half or division of your garden (made by your Broadway) subdivided by but a single walk, allowing either to the one on the right or on the left a short branch-road leading to some favorite shrub or arbor of vine that could not otherwise be naturally approached. But on this point no definite rule can be laid down; the size and shape of your garden, together with a cultured taste, must govern. If your garden is large enough, and your pleasure suggests, you may have an hundred walks, keeping constantly in mind the nature and habits of the bushes and plants you intend cultivating, and never forgetting the important truth that *tender* plants cannot endure our long, hot summers if the soil be too greatly drained. Yes, you may have as many walks as you please, for, after all, you have made your

garden more for your own than for anybody else's entertainment. Assuming your garden to be at last laid off, and that, too, in accord with a happy and healthful taste, you will now *border* your walks, and consider what to plant generally, where to plant it, when to plant it, and how to plant it. To treat each of these heads separately and minutely were to overreach the office of this article. But to your borders: Have done with box, and border with some hardy perennial, low-growing grass—whatever kind is best adapted to your climate. Your grass once established, you have beautiful, substantial edgings of green distinguishing the different divisions of your garden, and not rough, unsightly rows of box, fencing off each bed as a garden of itself. The grass, too, will hold the borders firmly to their places, thereby securing for all time the tidy and distinctive character of your walks.

Now what shall you plant? Anything you want and can afford; the soil is ready. But if you would have the prettiest effect, do not crowd your ground. Put out only the *best* plants. Place on one bed the showy Tritoma; on another the magnificent Pampas Grass. In some half-shaded spot put the Dragon Tree; and in still another, not less shaded, plant the Caladium. Put in the centre of *this* bed an improved variety of the Canna; while in the centre of *that* division you may set an ever-blooming Rose of fine variety. On the most conspicuous corners of the several beds group free-flowering Geraniums of hardy habits. Nearest the door (particularly if the door faces the east) you may have a small plat of mixed grasses to relieve the reflection of the summer sun. In some partly sequestered nook have a rich bed of Pansies, apparently placed there by accident. The bloomers you design for cut-flowers should grow near the walks. If there are trees in your garden (there ought not to be many) adorn the surface about their bases with shallow-rooted shade-loving plants. The preceding directions for planting are not intended to be followed literally, but humbly to illustrate a general plan for an ordinary garden. With your soil prepared and your walks arranged you may set out what shrubs and plants you like, taking care to avoid a crowded appearance; this much done, subscribe to some meritorious, first-class work on flowers and floral subjects, and you cannot fail of success.

MRS. ELBA H.

“I shouldn't think there would be such a word as ‘breakfast,’” remarked a young linguist to his mother the other morning. “Why not, dear?” asked she. “Because, ma,” replied the boy, “it ain't natural. Things never break-fast—they break-loose.” There was a sad bewilderment of expression in the face of that mother as she gazed speechlessly upon her precious son.

There is a precocious six-year-old boy who is wonderful on spelling and definition. The other day his teacher asked him to spell “matrimony.” “M-a-t-r-i-m-o-n-y,” said the youngster promptly. “Now define it,” said the teacher. “Well,” replied the boy, “I don't know exactly what it means, but I know mother's got enough of it.”

### Nymphaea Flava

(Lutern)—Beautiful Yellow Water-Lily. By mail, carefully packed, for 50c. each, or 3 for \$1.00. Descriptive catalogues free.

ARNOLD PUTZ, Florist, P.O. box 677, Jacksonville, Fla.

## VICK'S FLORAL GUIDE

A beautiful work of 100 PAGES, ONE COLORED FLOWER-PLATE, AND 300 ILLUSTRATIONS, with Descriptions of the best Flowers and Vegetables, and how to grow them. All for a FIVE-CENT STAMP. In English or German.

The Flower and Vegetable Garden, 175 Pages, Six Colored Plates, and many hundred Engravings. For 50 cents in paper covers; \$1 in elegant cloth. In German or English.

Vick's Illustrated Monthly Magazine—32 Pages, a Colored Plate in every number, and many fine Engravings. Price, \$1 25 a year; five copies for \$5.

Vick's Seeds are the best in the world. Send FIVE-CENT STAMP for a FLORAL GUIDE, containing List and Prices, and plenty of information.

Address **JAMES VICK**  
Rochester, N. Y.

## BEAUTIFUL FLOWERS A GREEN-HOUSE AT YOUR DOOR

We will send free by mail, and guarantee their safe arrival in Good Condition, our choice

12 ROSES	12 sorts, \$1.20
20 VERBENAS	20 " .75
15 Basket or Bedding Plants	15 " .50
10 GERANIUMS	10 " .40
10 CARNATIONS	10 " .30
10 Tuberoses, all Pearl, large and double	10 " .50
10 Gladioli, all Flowering	10 " .40
2 Camellias, Japonicas and 2 Azaleas	2 " .50

Hundreds of others—NEW AND RARE!  
For your choice of varieties, see our 80-page Catalogue, free to all. We also offer an immense stock of Fruit and Ornamental Trees, Evergreens, Small Fruits, Shrubs, etc. Catalogue with Colored Plate, 10c.

6 Hardy Flowering Shrubs	6 sorts, \$1.00
10 Currant Bushes	10 " .50
25 Raspberry Plants	25 " .40
80 Strawberry Plants	80 " .30
8 Grape Vines	8 " .25

50 Svt. Chestnut or 50 Catalpa Trees, \$1.26th Year. 15 Greenhouses: 400 Acres.  
**STORRS, HARRISON & CO.,** Palmsville, O.

### BOWKER'S AMMONIATED

## Food for Flowers.

Send two ten-cent pieces wrapped and enclosed in a letter for trial package, sufficient for twenty plants for three months, including a little book on "How to Make House Plants Bloom," by Professor Maynard, of the Massachusetts Agricultural College. **BOWKER FERTILIZER CO.,** 48 Chatham St., Boston; 3 Park Place, New York.

FOR artistic pen and ink work and family marking nothing is equal to Payson's Indelible Ink, with a common pen, without a preparation. Sold by all druggists and stationers. Send stamp for samples of decorative work with Payson's Ink to F. A. WHITING, Dunellen, N. J.

**MAMMARIAL BALM** restores and develops the bust. Warranted sure and safe. Price \$1. **NEW ENGLAND MEDICAL INSTITUTE,** 24 Tremont Row, Boston, Mass.

## BUTTER-WORKER.

The most effective, simple, and convenient yet invented. Works 30 lbs. in less than 5 minutes, thoroughly working out butter-milk and mixing in the salt. AGENTS

WANTED. Send for circular. **A. H. REID,** 6 N. Eighteenth St., Philadelphia, Pa.

The publishers of *Farm and Fireside*, Springfield, Ohio, give 1 year's subscription to their valuable and interesting paper, and send one dollar's worth of any kind of

## SEEDS FREE

by mail, post-paid, to any address, on receipt of one dollar. You can select exact seeds wanted, from catalogue of D. M. Ferry & Co. If you have not got it, be sure to send to us for their handsome 150 page catalogue, it is mailed free to all. And be convinced we furnish our subscribers with seeds at lower prices than they can buy elsewhere, and also give Farm and Fireside 1 year without additional cost. Farm and Fireside is a great favorite everywhere, suitable alike to the home circle in city, town, or country. The old, the young, and all are delighted with it.

**LIBERAL SEED OFFERS.**—We give Farm and Fireside 1 year, and 50 cents worth of Seeds, for 75 cents; \$2.00 worth of Seeds, and F. & F. 1 year, for \$1.50; \$3.00 worth of Seeds, and F. & F. 1 year, for \$2. A club of 6 to one address, at price of 5.

**SEED PREMIUMS.**—To any one sending 4 subscribers, we give 50 cents worth of Seeds; for 7 subscribers we give \$1 worth of Seeds; for 10 subscribers, \$1.50 worth; for 12 subscribers, \$2 worth; and for 15 subscribers, \$3 worth of Seeds.

Liberal premiums and cash commission given to AGENTS. SAMPLE COPIES, Premium List, and Catalogue of Seeds free to all. All Seeds are sent by mail, post-paid, direct from Seed House, at lowest catalogue prices, but address all orders to **FARM AND FIRESIDE, Springfield, Ohio.**

## Bulbs a Specialty.

I offer the following Collections of Choice Bulbs, from the celebrated Allen Bulb Farm, at Greatly Reduced Rates for Strictly First-Class Varieties. Sent free by mail upon receipt of price.

- |   |        |
|---|--------|
| 10 Choice Named Gladiolus, in 10 sorts, | \$1.00 |
| 10 Extra Fine Seedling " "              | 1.00   |
| 15 " Mixed " "                          | 1.00   |
| 4 Choice Lilies, including the Auratum, | 1.00   |
| 12 Extra Fine Double Tuberoses,         | 1.00   |
| 20 " Pearl " "                          | 1.00   |
| 5 Dahlias, in 5 sorts,                  | 1.00   |
| 1 Amaryllis Johnsonii,                  | 1.00   |
| 12 Tigridias, assorted,                 | 1.00   |
- Address **C. H. ALLEN, Queens, N. Y.**

## HOW TO MAKE HOUSE Plants Bloom.

Send for a little book on cultivating house plants by S. T. Maynard, Professor of Horticulture in the Massachusetts Agricultural College. Mailed FREE to any address by W. H. BOWKER & CO., Manufacturers. Bowker's Ammoniated Food for Flowers and the Celebrated Stockbridge Manures. 43 CHATHAM ST., BOSTON; 3 PARK PLACE, NEW YORK.

50 Perfumed Chromo and Snowflake cards in elegant case, name in Gold, 10c.  
**DAVIDS & CO.,** Northford, Ct.

**GOLD.** Any worker can make \$12 a day at home. Costly outfit free. Address **TRUE & CO.,** Augusta, Me.

25 FANCY CARDS, Snowflake, Oriental, etc., in 25 styles, with name, 10c.  
**J. B. HUESTED, Nassau, N. Y.**

25 CHROMO CARDS, Cupids, Mottoes, Flowers, etc. No two alike. With name, 10c.  
**NASSAU CARD CO., Nassau, N. Y.**

50 New-Style CARDS, Gold Border, Chromo, Motto, etc., name Gold, 10c.  
**STAR CARD CO.,** Clintonville, Conn.

50 Gold, Silver, Lace, Diamond, Lily, Rosebud, etc., Cards. Your name neatly printed on them all, only 10c.  
**STAR PRINTING CO.,** Northford, Conn.

60 CHROMO AND PERFUMED CARDS, no three alike, name in Gold and Jet, 10c.  
**CLINTON BROS.,** Clintonville, Ct.

\$66 a week in your own town. Terms and \$5 outfit free.  
**H. HALLETT & CO.,** Portland, Me.

\$5 to \$20 per day at home. Samples worth \$5 free. Address **STINSON & CO.,** Portland, Me.

25 ALL CHROMO CARDS, CUPIDS, MOTTOES, FLOWERS, with name, 10 cents.  
**NASSAU CARD CO., Nassau, N. Y.**

\$77 a Month and expenses guaranteed to Agents. Outfit free.

## Strawberry Plants.

**E. P. ROE** has an immense stock of the coming new strawberries—Crescent Seedling, Forest Rose, Sharpless, Prouty's Seedling, Great American, and all the standard kinds. He has also the best stock in the country of the two great Raspberries—Cuthbert and Pride of Hudson, and all the leading varieties. His family list of small fruit plants is the best and most liberal ever offered.

**\$15 WORTH OF PLANTS for \$5.** Descriptive catalogue free to all. Address **E. P. ROE,** Cornwall-on-Hudson, N. Y.

## Seeds, Plants, Etc.

All kinds of Flower and Vegetable Seeds at five cents per paper. Our half-dime papers of choice seeds are the best in the world, and are planted by thousands in all parts of America. Send for beautiful Illustrated

Catalogue, FREE. Bulbs and Plants at extremely low prices. The following sent by mail, post-paid (remit currency or postage-stamps): Four beautiful Lilies, different sorts, named, 50 cents. Nine Gladiolus, nine splendid sorts, named, 55 cents. Twelve choice mixed Gladiolus, 50 cents. Twelve Double Tuberoses, 80 cents. All fine large bulbs.

**JOHN LEWIS CHILDS,** Queens, N. Y.

## SEEDS,

Flower and Vegetable. All the finest kinds, unequalled in quality. Packets well filled with fresh seeds, sure to grow and give satisfaction. New Catalogue for 1879 just out, and will be mailed free. Send for it.

**E. WYMAN, Jr.,** Seedsman, Rockford, Ill.

## BOWDITCH'S FLOWER SEEDS.

For \$1 you buy \$1 10 worth of Seeds or Plants.

3	3 45	Seeds or Plants.
5	6 00	Seeds or Plants.
10	12 50	Seeds or Plants.
20	26 00	Seeds or Plants.

My New Catalogue for 1879 is the best and most comprehensive work issued. It contains numerous ENGRAVINGS, illustrating thousands of the best FLOWERS and VEGETABLES, and also descriptions of all the BEAUTIFUL PLANTS. Mailed for a 3-cent stamp. To customers free. Seeds or Plants by Express or Mail. (Safety guaranteed.)

**WM. E. BOWDITCH, 645 Warren St., Boston, Mass.**

## ROSES

6 for \$1, 14 for \$2, post-paid. Bedding and Greenhouse Plants by mail. Catalogue free.  
**J. T. PHILLIPS & SON,** West Grove, Chester Co., Pa.

2,000,999 Strawberry, Raspberry, Blackberry, Currant, Grape-Vines, Asparagus Roots, Peach-trees.

100 SELECTED VARIETIES. Genuine stock. Quality best. Prices lowest. Send for free Catalogue to **JOHN S. COLLINS,** Moorestown, New Jersey.

## 10 Varieties of Fresh Imported FLOWER SEEDS,

FOR 20 cts., in separate packets, postage prepaid. Large Illustrated Seed Catalogue for 1879 Mailed Free to All.

**BENSON, MAULE & CO.,** 223 Church Street, Philadelphia, Pa.

**PAYSON'S** Indelible Ink, used without a preparation, with a common pen, is the best for artistic decoration of Handkerchiefs, Napkins, etc.

30 Elegant Cards, all Chromos, Name in gold and jet, 10 cents.  
**GLOBE CARD CO.,** Northford, Ct.

50 Perfumed, Gilt Edge, and Chromo Cards in elegant case, name in gold, 10c.  
**ATLANTIC CARD CO.,** East Wallingford, Ct.

## JOHN SAUL'S Catalogue of New, Rare, and Beautiful Plants

Will be ready in February, with a colored plate. Many new and beautiful plants are offered, among Dracenas, Crotons, and other fine foliage plants, with a rich collection of Greenhouse and Hot-house Plants, Bedding Plants, new and choice Roses, Dahlias, etc. Well grown and at low prices. Free to all my customers; to others 10 cents. A plain copy free.

**JOHN SAUL, Washington, D. C.**

## WHITE POND LILIES

Are easily grown, and will bloom finely in tubs and artificial ponds. We will send strong roots, dug fresh from the ponds, by mail, post-paid, for 25 cents each, \$2 a dozen. Circulars, with directions for planting, free.

**J. A. VAUGHAN & CO.,** Curver, Plymouth Co., Mass.

ESTABLISHED IN 1845.

186 pages, beautifully illustrated. Indispensable to all interested in gardening. Mailed to all applicants enclosing 6 cents; regular customers supplied free. Address

**B. K. BLISS & SONS,** P. O. Box 4,129. 34 Barclay St., New York City.

## GEO. P. ROWELL & CO.

10 SPRUCE STREET, (Printing House Sq., opp. the Tribune Building.)  
**NEWSPAPER ADVERTISING BUREAU.**

NEW YORK AGENTS FOR ALL NEWSPAPERS in the United States and Canada.

ADVERTISEMENTS FORWARDED DAILY (as received) to every section, from Newfoundland to Texas, and from Florida to British Columbia. Also to all New York City Dailies and Weeklies.

Eight Thousand Newspapers kept regularly on file for inspection by advertisers, including all the great dailies from Boston to San Francisco, from Montreal to Galveston.

Publishers of *American Newspaper Directory*.

## ROSES

By mail, post-paid, (on own roots) 25 cents apiece, \$2.00 per dozen, \$12.00 per hundred. Large plants (budded or on own roots) per express at purchaser's expense, 50 cents apiece, \$4.00 per dozen. The most select collection in America. Send for Catalogue, with colored plate, 10c; plain, free.

**ELLWANGER & BARRY, Rochester, N. Y.**

**My Annual Catalogue of Vegetable and Flower Seed for 1879,** rich in engravings, from original photographs, will be sent free to all who apply. Customers of last season need not write for it. I offer one of the largest collections of Vegetable Seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. Printed directions for cultivation on each package. All seed warranted to be both fresh and true to name; so far that, should it prove otherwise, I will refund the order gratis. The original introducer of the Hubbard Squash, Pinney's Melon, Marblehead Cabbages, Mexican Corn, and scores of other vegetables, I invite the patronage of all who are anxious to have their seed directly from the grower, fresh, true, and of the very best strain. *New vegetables a specialty.*  
**JAMES J. H. GREGORY, Marblehead, Mass.**

NEW YORK, MARCH, 1879.

## FLORAL GOSSIP.

WE have an alcove opening from our parlor, which is anything but lovely, until ornamented. It is about six feet square and the full height of the room, being of good height. It is not in a sunny position, so I could not hope to keep plants blooming within it. In the first place, I placed two ornamental brackets half way up the wall and put flower-pots on them, having Maurandia vine around the edge to droop over, and Parlor Ivy in the centre of each pot, the latter being trained to form an archway over the opening into our alcove. From the centre of this archway was suspended a hanging basket, with a profusion of Kenilworth Ivy drooping around it. This forms a sort of frame for the picture which is back of it. In each corner, at the back of the alcove, is a bracket holding an ornamental box containing German Ivy, which is gracefully festooned around the sides, and entwines a cross in one corner and an anchor in the other, which are suspended above the boxes containing the plants. This cross and anchor are cut from strong pasteboard, and are then covered with green Silk Moss and French moss, and Everlasting flowers, so there is no fear of their colors fading. These bright-hued Everlastings give a cheerful color to my otherwise too sombre nook. I choose the small Immortelles and flowers of that description instead of coarser and more gaudy ones. The cross and anchor are each about eighteen inches high. Then I had a strong wire frame made about four feet high, which is set in the centre of the alcove at the back. This has branches from the main standard. The upper branches are the shortest, and end with a receptacle, in which is set a pair of tall crystal vases, filled with sprays of French moss, and tiny Everlasting flowers. The wire frame is covered

with Silk moss, which is tied in place, the rows of moss overlapping the preceding fastening. The next branches are below these, and two tiny hanging baskets are suspended by gilt chains from them. These are filled with the finest drooping moss that I could find at the florist's. The next branches, and the lowest, support two large pink-lined conch shells, filled with the daintiest sea mosses that can be found. Against the centre of this ornament leans a harp, made of Moss and Immortelles. The strings are of silver guitar strings.

All of these ornaments are movable and can be changed about at will, so that an entirely different effect can be produced by placing them in different positions.

There are two other places for vases in the front of the main ornament. These also are filled with Everlastings and Moss, with which some of the smoke from the Smoke Plant is mingled. Two large winter bouquets are placed in Parian vases, on either side of this ornament. These are made up of dried grasses, Smoke Plant, Everlastings, Moss and glass cherries, plums, grapes and currants. The grasses are the beautiful ornamental grasses with which we are all familiar. Mingling Mosses with the Everlastings helps to remove the stiffness which is their greatest defect. The graceful sprays of Moss twine about them, and soften and hide their severe uprightness. This same ornament can be used for a dining table ornament, in case of a large party. For such a place the Everlasting flowers could all be removed and the crystal vases filled with cut flowers, the hanging baskets taken from the chains, and double cut glass bouquet holders substituted, filled with fresh bouquets, and the lower branches have flat dishes, in which are arranged cut flowers suitable for the purpose, instead of the shells and sea grass, and moss. To give it a graceful and effective appearance there should be a mat of green for it to rest upon, on the table. This would be nice with the edges formed in geometrical figures, of shallow dishes made on purpose for such uses, and filled with fine flowers.

In another and sunnier part of our family parlor stands an urn five feet across. This was purchased and planted for the lawn last spring, and was an attractive ornament to it through the summer and autumn, until the approach of cold weather, when we had it moved to the house. This could be accomplished, as there were double doors leading to the parlor.

In this urn there is a thrifty Rose Geranium, which yields its well-known delightful fragrance at the slightest touch. A Balm Geranium contests its laurels closely. There is a Grape Geranium three feet high, and crowned with the brightest hued, delicately formed flowers that can be imagined. Two Calla Lilies are almost ready to unfold their creamy spathes. Two or three Lantanas are loaded with flowers.

Three varieties of Roses are bearing lovely flowers and more exquisite buds. Several Primroses near the outer edge are loaded with bright blossoms. A Smilax runs hither and thither, calling upon its more upright brothers and sisters for support. Drooping over the outer edge of the urn, there is Kenilworth Ivy, Maurandia vine, Oxalis, two varieties of Lycopodium, and double Lobelia with its dainty blue flowers.

## SPLENDID BOOKS GIVEN AWAY,

WITH

### Flower Seeds, Plants, etc.

To any of our subscribers desiring to club together for desirable Seeds, Plants, and any of our Books we will make the following

### SPECIAL OFFERS.

#### OFFER NO. 1.

For \$1 will be sent \$1 worth of Seeds or Plants, and in addition free choice of one Premium—No. 1, 2, or 3.

#### OFFER NO. 2.

For \$1 50 will be sent \$1 50 worth of Seeds or Plants, and choice of one of Premiums Nos. 4, 5, and 6.

#### OFFER NO. 3.

For \$2 will be sent \$2 worth of Seeds or Plants, and also choice of Premium No. 7.

#### OFFER NO. 4.

For \$3 will be sent \$3 worth of Seeds or Plants; also free choice of Premium No. 8.

#### OFFER NO. 5.

For \$5 will be sent \$5 worth of Seeds or Plants; also free choice of Premiums of Books to the value of \$2 50.

#### OFFER NO. 6.

For \$10 will be sent \$10 worth of Seeds or Plants; also free choice of Premiums to value of \$5.

Our offers of Seeds are based upon Catalogue of B. K. Bliss & Sons, who will fill our orders; but should any other dealer be preferred the sender has privilege of choosing his seedsman—any seedsman in the country. The money is to be forwarded to us with order, which is forwarded to seedsman with order from us to deliver to subscriber.

This order includes only Flower Seeds, Vegetable Seeds, and Plants; does not include implements or other materials in Seed Catalogues.

### List of Premiums.

1. Book.—How to Destroy Insects on Flowers and House Plants. Price 30 cts.
2. Book.—Williams' Designs for Needlework.
3. Quarterly, one year, "Ladies' Floral Cabinet."
4. Book.—Ladies' Guide to Needlework.
5. Book.—Every Woman Her Own Flower-Gardener.
6. Six months' subscription "Ladies' Floral Cabinet."
7. Any book, price \$1, in my Catalogue.
8. Choice of books. Price \$1 50 each.

Household Elegancies.  
Window Gardening.  
Ladies' Fancy Work.  
Beautiful Homes.  
Evening Amusements.

These are splendid offers. All who desire good books improve them. Address

HENRY T. WILLIAMS, Publisher,  
46 Beekman Street, New York.

## The Ladies' Floral Cabinet

AND

### PICTORIAL HOME COMPANION.

The Handsomest Illustrated Journal of Household Art, Flowers, and Home Literature in America.

#### PUBLISHED MONTHLY.

Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window-Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

#### SUBSCRIPTION TERMS, 1879.

\$1 30 per year, Monthly Edition, with Premium.  
65 cents, six months, without Premiums.  
50 cents, Quarterly Edition, one year, with Premium.  
These terms include postage prepaid on Paper, which is paid by the publisher.  
1 00 for cover to volume, mailed, postage paid.  
1 50 for portable binder and music portfolio, mailed, postage paid.  
Terms for Chromos, Agents' Outfits, etc.  
25 cts. for agents' outfit of paper and chromo. Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.  
Advertising Rates—50 cents per agate line of space, or \$7 per inch. Address HENRY T. WILLIAMS, PUBLISHER,  
P. O. Box 2445. Office, 46 Beekman St., N. Y.

## Floral Hints.

### HOW TO GROW CARNATIONS.

IN point of value as winter-flowering plants the Carnation excels all others, so far as my experience goes, for utility and profit, the floret being of such a nature as to be capable of being shipped long distances; also its odor and color are so desirable to the bouquet maker, being rated with first-class flowers; these, together with their productiveness of bloom, hardihood, and ready demand, make them one of our very best commercial winter-flowering plants. Their cultivation is very simple. They are easily rooted from cuttings from the small side-shoots (when only about two inches in length) any time from October to April. As the plant is almost hardy, it may be planted out in the open ground any time in April or May; for if it has been properly hardened off previous to setting out it will stand a smart freeze uninjured.

I plant them in beds of four rows each, one foot apart, and the same distance between the plants, with two-foot alleys between the beds, where they remain with frequent mellowings of the soil throughout the season, keeping them entirely free from weeds until October, when they are removed into a light, sunny greenhouse, where they are bedded upon the benches in six inches of rich soil, and ten inches each way between the plants; they are then thoroughly watered, and the house shaded by a coat of whitewash upon the roof, which is allowed to remain about a month, when it should be removed. They should be kept at a temperature of from fifty to sixty degrees at night, and from fifteen to twenty degrees warmer by day, with plenty of air, and watered only when the ground begins to show signs of dryness, as they will not bear too much water, and are very impatient of a wet, sodden soil, in which even large plants will damp off.

The ground in which the young plants are set in the spring should be entirely free from standing water, and of rather a loamy, upland nature. All through the summer they will push up flower-stalks, which must be broken off within some five inches of the ground, which gives them a bushy and strong constitution, the more capable to stand the exhaustion of their winter blooming. This tripping process is of the highest importance, and must be continued at intervals of every three or four weeks until the 1st or 15th of September.

Observation and experience have led me to believe that much of the cause of failure to bloom the Carnation properly in winter is the want of sufficient light and a moderately moist atmosphere, at the same time keeping the soil moderately dry. When necessarily exposed to a dry atmosphere its injury can be somewhat obviated by keeping the soil quite wet. I always stake up my Carnation plants that are blooming in winter.

Among the best new varieties which I have grown are the following:

*Lydia*.—This is a well-established standard fancy Carnation, and no collection is complete without it.

Have grown it the past two years, and judges pronounce it one of the most handsome Pinks. It is of

NEW PERPETUAL-BLOOMING CARNATION "LORD CLYDE."

robust, always healthy growth, bearing flowers from two and one-half to three inches in diameter; clove fragrance; intensely double; of a rich, rosy orange

PERPETUAL-BLOOMING CARNATION "LYDIA."

color, blotched and flecked with carmine. The cut is an exact representation of this lovely Carnation.

*Lord Clyde*.—This beautiful Pink, which I offered for the first time last season, has proved to be one of the most valuable winter bloomers. It is of remarkably robust growth, like its parent the *Edwardsii*, but of a more dwarf, low-flowering habit; florets quite double, never bursting, with a strong clove fragrance; heavily notched or laced. The groundwork of the flower is white, thickly striped with carmine and a frequent blotch of maroon; very floriferous, each stem bearing from six to eight florets. (See cut.)

CHAS. F. STARR.

AVONDALE, PA.

### HINTS ON BOUQUET-MAKING.

Now a few words in regard to making bouquets, for of course every one who has a garden will desire to cut the flowers for home decoration.

The arrangement of flowers is an art, as every one must acknowledge who has seen the crushed, crowded masses sometimes called bouquets.

The essentials are plenty of white flowers and green leaves; it is well to cultivate flowers specially for this purpose. The double white Feverfew is one of the best for bouquet-making; also white Drummond Phlox, double white Balsam, and white Dianthus are very good. Now for green. Asparagus is best, I think. I grow a few roots specially for their foliage. Rose Geranium leaves are very good, while for large baskets and bouquets the plummy tops of carrots are fine.

Now we want something to give grace and lightness to our bouquets, and Gypsophila Paniculata is just the thing; it cannot be surpassed.

A spray of Cypress Vine, or Mountain Fringe, to twine and droop is an addition. Having arranged green leaves and white flowers very loosely, fill in with others; but discretion must be used, as sometimes a single flower will spoil the whole effect. Here each one must use her own taste and judgment, and learn by experience which colors harmonize best. Be careful and avoid crowding, using as few colors and flowers as possible, with plenty of green and white.

I once saw a lovely bouquet; it was in a black lava vase, and consisted of a half-opened blush rose, and a bud with a few of its own green leaves; that was all, anything more would have spoiled it.

Another pretty combination was a bunch of Mignonette and Sweet Pea blossoms, surrounded by Gypsophila. A cluster of Tropæolums of different colors, together with their own leaves, was another pretty bouquet.

The tasteful combinations of flowers are almost infinite, and with a little practice any one can become quite skilful in making floral ornaments.

In conclusion, I would say it is only necessary to have a love for flowers and gardening, and, though you may sometimes fail, in the end you will be sure to succeed, and feel amply repaid for your labor.

LORA LEE.

FORGE VILLAGE, MASS.

## Hints in Housekeeping.

## INGENUITY IN HOUSEKEEPING.

WHEN we first went to housekeeping, in the far-off West, ingenuity and taste, to a large degree, had to supply the lack of means in our little prairie home. The only house we could get had the regulation "double parlors"—two small, square rooms with folding, or rather sliding, doors between. Back of these was a small room which had apparently been used for a bedroom.

Now, I know that many hold the idea that for persons of moderate means small rooms are much the easiest. But my theory had always been that a large room could be made to look just as cosy as a small one, provided it were of the right shape. Accordingly, I had the partition between the two parlors taken out, making a long, narrow room, such as I desired. The sliding doors were put between this new room and the small one back, which was fitted up for my husband's study. Over these doors, which were usually rolled back into the partition, I hung curtains of cretonne, which, when privacy in the study was not desired, were looped back. Opposite this door in the study was a window, on either side of which were the bookcases—filling all the space on that side of the room. This window I filled with plants in pots and hanging baskets, which could just be seen from the parlor through the parted curtains. At the extreme end of the parlor, fronting the street, was a bay-window, which also added to the idea of *distance*, without detracting from that look of *cosiness* so much sought after. This I filled with plants, in pots, on brackets, in hanging baskets, and on a rustic stand of home manufacture.

The carpet had a dark cream ground, with dark brown leaves, mostly ferns, scattered over it, with just the merest touch of scarlet here and there. A bright border added much to its appearance. I succeeded in finding some cretonne which matched the carpet very well, both in color and design—of which I bought a quantity. At the furniture store I purchased a lounge and two easy-chairs—one a "patent rocker"—which were all upholstered with the exception of the outside covering, which I put on myself, using the cretonne. These, with the addition of two or three camp-chairs, which were among my wedding presents, completed this part of the furniture of the room. My curtains were of Nottingham lace, procured from a New York house for \$2.50 a window. Over these were lace lambrequins lined with scarlet cambric.

There was no fire-place in the room, so I had an imitation mantel put up between the two windows on one side, and made a temporary lambrequin for it of the cretonne. When time permits me I intend making a handsome one in applique work. On the mantel I placed bouquets of Florida grass, pressed ferns, and autumn leaves, in vases made of old stone beer bottles, painted a creamy white, ornamented with the embossed pictures so much used now, and then varnished. If I ever get near a pottery I shall have some vases made to order in some of the lovely Oriental shapes. A couple of easels made of wood-

splints, a card-receiver, and a pair of bronze candlesticks also found a place on the mantel.

In one corner of the room was a shelf with lambrequin in applique work; on it a cross covered with gray moss, and vine of wax autumn leaves. In another corner a bracket held a pot of ivy, which twined about the pictures near by and sent out its luxuriant foliage to festoon and adorn the walls beyond. Under one of the pictures was a wall-pocket made of half an old tin dipper, fastened against a back piece of pine, the whole covered with moss and lichens, then filled with earth, and in it planted ferns and trailing vines. Up some of the picture cords I fastened pressed ferns, and around the brackets were also pressed ferns and autumn leaves. Behind other pictures I hung bottles of water containing *Tradescantia* and other vines, which drooped about the pictures or found their way up the cords. In one of the windows was a hanging-basket which may be new to some. It was composed of a species of fungus found on old rotten logs—sometimes called "touch-wood." Three large pieces formed the sides, and three smaller ones the bottom. I filled it with some of the fine shavings which came round our furniture, and placed over the top a moss which dries and retains its color perfectly, filling with the moss also the crevices formed by the irregular-shaped pieces of fungus. In it I placed pressed ferns, which looked as though they were growing there, and you cannot tell until you have seen one what a pretty thing it is.

I had nothing to hold my music, and did not feel able to buy a stand, so my husband and myself improvised one. He procured some large canes (which grow abundantly near here), and by crossing these in various ways a handsome standard was made. A pine board was fastened on for a top, and covered with common coffee-sacking or burlaps. I took a strip of this same material, some seven or eight inches in width, embroidered on it in cross stitch a simple but showy border in two shades of scarlet German-town wool, fringed it on the edge to the depth of about two inches, and fastened around the stand for a lambrequin. The cost was but a few cents, and the stand is really more ornamental than one for which I would have to pay three or four dollars at the furniture store.

I will not weary you with a description of the other articles in the room, but pass on for a glance at the bedroom. The carpet was a light one, mostly scarlet and white. The curtains were of unbleached muslin, with a band of "turkey red" calico a little way from the front edge and across the bottom. The lambrequins of the same material, ornamented with a vine of ivy-leaves cut from the calico, edged with a fringe of the "turkey-red" cut with the scissors, as one would fringe a strip of paper. A table-cover was made in the same style, with an extra group of leaves in each corner. Two "barrel-chairs," an "hour-glass" stand, and trunk were covered with red and white chintz. With the toilet-mats for washstand and bureau of Java canvas, embroidered with scarlet split zephyr, the hair-pin cushion, match-safe, glove and handkerchief boxes, and other ornaments of perforated cardboard and wood-splints, the room looked very inviting.

On the floor of the guest chamber I put some

straw matting, relieved by two or three rugs made of burlaps, embroidered with blue wool. The washstand and dressing-table were made of dry-goods boxes, covered with curtains of white swiss over blue cambric. Hair-pin cushion and other fancy articles were of silver cardboard. Curtains at the windows of white swiss edged with a fluted ruffle; lambrequins of the same over blue cambric. On a shelf in one corner was a lambrequin of white drilling, ornamented with spatter-work. An "hour-glass stand," covered to match the washstand and dressing-table, a "barrel-chair" covered with part of an old blue worsted dress, with white lace tidy, a trunk and ottoman covered with the same material, and a few pictures and mottoes of perforated cardboard embroidered with blue zephyr, completed the furniture of the room.

I must mention just one more article, which, for want of room in the bedroom, found a place in the dining-room. It is a lounge made out of an ordinary packing-box, some six feet in length, with castors at the corners, and lid on hinges, cushioned and covered with an old green dress. It is so very useful for laying in good dresses, which one likes neither to fold nor to hang up.

HANNAH FORD.

## PICTURE FRAMES.

A RUSTIC frame, not at all common or common-looking, we made of black walnuts. Secure the nuts in a vise, and with a fine saw divide into sections of about an eighth of an inch thick; then have made an oval frame two and a half inches wide (if made of light wood, cover with dark paper or muslin, as glue will not adhere to a painted surface); then glue a row of the pieces evenly around the outer edge, and another around the inner edge, slightly projecting beyond the edge (the space between fill with broken pieces); then follow with two other rows nearer the centre of the frame, partly covering the first two; then finish with one row. This makes a very handsome frame either oiled or varnished.

Another frame was made in prison and presented to me by a keeper's wife; the mat is a half-inch black-walnut board sawed an oval the usual size; the centre of this is sawed out, oval top and straight across the bottom, for an album-sized photograph or small picture; this inner edge is cut in small points to give a nice finish; then a pattern was traced and left in low relief, while the whole groundwork was stamped with a nail. I think a fret-saw design would be just the thing; trace this upon the wood, as for sawing, but instead go over all the parts that were to be *sawed away* with a nail and small hammer, giving a slight blow, enough to depress and roughen the whole groundwork; this will leave the design *raised* and *smooth*. If there are leaves, they can be veined in the same way or cut with a knife. And now for the frame or outer edge; this is composed of pieces of the same kind of wood about three inches in length, one-half inch in width, one-eighth inch thick, cut in points on the ends and sides. In the centre of each piece is cut a slit an inch in length and wide enough to slip one of the others through; a shoulder is left at one end of the slit to keep them in place; the wood is thinned down from the shoulder toward each end, and joined by slipping one piece through another, keeping the shoulder ends all the time in one direction. When the wreath is long enough it is joined and the last piece secured with glue, then slipped over the edge of the mat (which must be bevelled to receive it) and fastened with a nail or two on the back; narrow strips are glued on the back to hold the glass; when varnished it is very handsome.

## The Household.

## HINTS FOR THE HOUSEHOLD.

BY MAUDE LEYHAD.

I HAVE been thinking for a long time that I should like to give a few grains of the wisdom gained by experience to those inexperienced ones who are stuck in the terrible "Slough of Despond" of housework. But there are so many things to tell, it is hard to arrange them methodically and condense them within the prescribed limits of this article; but I will do the best I can, and as spring with its attendant evil of house-cleaning is already upon us, perhaps it is as well to begin with that.

The less a woman really knows about housework the more she will undertake to do at once. Every room in the house must be in a state of confusion; carpets up, furniture in disorder, floors wet and slippery, while the mistress herself goes about a "damp, moist, unpleasant body," her nerves as disordered as her house; and this state of things continues for a week or more, when things gradually return to their ordinary routine, and the spring cleaning is over; but the mistress has expended energy and vitality enough in that one week to carry her safely and smoothly through six months of the year. Perhaps two-thirds of the women in these hard times cannot afford to hire any one to help them, and it is for these women that these hints are intended; and if they serve to lighten the labors of one overworked housemother I shall feel amply repaid.

It is best to begin with the cellar. See that the walls and floor are thoroughly swept; all boxes and stray bits of wood should be split up and put with the kindlings, and, if you can spare the money, lay in your year's supply of coal. You thus get rid of the dust and much of the sweeping that bringing coal in small quantities always necessitates. After sweeping and dusting, the walls should be whitewashed. If you cannot afford to hire this done, you can do it yourself at a trifling expense. The whitewash can be had ready for use at any paint-shop, and most of them will allow you the use of a brush. And whitewashing the cellar walls requires no more skill than washing windows; of course whitewashing the walls of a room is very different, but still a smart woman can do this, and even paint and paper her rooms at a slight expense, if she wishes.

After the cellar is in order, begin with the attics or upper rooms of the house, taking one at a time, and don't try to do all that in one day. Go at your work leisurely, and don't over-exert yourself trying to do a certain amount of work in one day. Be sure and cover your hands with a pair of old buckskin or kid gloves, to keep out dust and dirt and to keep the hands soft. If one is poor there is no reason why their hands should be discolored, rough, and hard, when a little care will keep them white and soft as the daintiest lady's in the land. Then with a clean, old silk handkerchief slightly moistened go over every article of furniture, and then carry it to another room. Dust and remove pictures and mirrors; then with a long-handled duster remove all the dust from the walls; then, beginning at the outer edge of the carpet, sweep carefully toward the centre, sweeping

slowly to avoid raising a dust; go over the carpet in this way four or five times, always sweeping toward the centre; by this time your carpet is ready to take up. To do this pull the tacks out carefully, being careful not to break the heads, as the points will be apt to be troublesome in relaying the carpet and in washing the paint. For carpet-beating take a bright, windy day, and beat with long, flexible sticks till no dust will rise from the carpet.

Next in order comes the washing of doors, casings, etc. To do this put a small quantity of whiting into a dish, and have ready a piece of soft flannel and some clear warm water. Wet the flannel, squeeze it dry, dip it in the whiting, and rub the paint up and down till it is clean. Wash off with clean cold water, and when nearly dry finish it with a piece of soft leather. Be careful and not touch the paper with the wet flannel. If windows are washed in alcohol and then rubbed dry with a piece of chamois skin, their appearance is much improved; and a small quantity carefully used will go a great way. Next wash the floor thoroughly, sifting powdered camphor in all cracks and crevices as a preventive against moths. Then relay your carpet, bring back your furniture and pictures and your room is ready for use.

Proceed in this way with the whole house, taking the sitting-room and kitchen last, and almost before you know it your spring cleaning is over, and you as fresh and vigorous as when it was begun.

And while I am speaking of cleaning perhaps it is well to mention *dish-washing*. In large families the tired mother usually puts this upon the older children, and I know from experience what a heavy burden this seems to them, and I recollect a lady's telling me that this was so disagreeable to her as a child that she was in the habit of breaking the largest cooking dishes to save washing them, especially if anything happened to stick to them. I think even this most disagreeable of all household tasks may be lightened, and even become almost a pleasure, if one goes rightly to work. Have ready a large pan filled with very hot soap-suds, and into this put the plates, one by one, as they are scraped clean of crumbs and fragments; the large ones first and small ones at the top, after this cups, saucers, and bowls emptied of all slops, and other dishes as your pan will hold. Be sure that all are covered with the boiling water, let them soak in this water while you remove the food from the table and tidy the dining-room. By this time the water has cooled sufficiently to allow you to put your hands into it with comfort. Place a dish-drainer (this is made by nailing slats at regular distances on two pieces of wood, about a foot and a half apart, and looks something like an old-fashioned gridiron) in the sink at the right of your pan, and on this pile the dishes as you wash them. Have ready some boiling water and pour over them, leaving them while you rub the knives, which may be made very bright by mixing soft-soap and Bristol brick, and rubbing with a cork. Wash all glass in hot soap-suds, rinsing in hot water and polishing with a soft dry cloth. By this time your dishes are ready to be taken from the drainer and you will find them perfectly dry, with a polish no amount of wiping could give them. All that remains is to place them in the

closet. Kettles and greasy dishes can be easily cleansed by using a small quantity of ammonia, and, after washing, dry them on the stove instead of wiping.

So much for what I call the drudgery of housework; and now a few words about cooking. I used to think cooking came by instinct, and when the right time came any one could cook; but I have grown wiser, for, unexpectedly thrown on my own resources in the cooking line, I was told that one might perform a war dance on the crust of my pies without making any impression on them. My biscuits I was advised to dispose of to the government for cannon-balls (it was in "war time"), and I found, much to my surprise, that I could not even cook meat and potatoes as they should be cooked. I was only an inexperienced girl just from school, where I had spent the last four years of my life, when my mother was suddenly called away by the sickness of my grandmother, leaving me with the sole charge of the house and the younger children.

Of course I was delighted at the thought of "keeping house," and I looked round my little kingdom as the hack drove away and would not have changed places with Victoria on her throne. Before the first week had passed I would have changed with the poorest peasant in her dominions, and thought his hut, with its sodden floor and a diet of "praties," paradise compared to the life I must lead till my mother's return.

But hard as these weeks were, I have sometimes thought that in the end they were the most profitable ones of my life, for I realized my own ignorance in a way I never could have done had mother been at home all the time, and when she came home I was eager to learn. I hope I improved the lessons I then received, and have grown wiser since then; but I presume there are hundreds of inexperienced housekeepers who know no more about so simple a thing as preparing vegetables for the table than I did, and perhaps these hints will be welcome to them.

Few people know how to properly cook a steak. While nearly all admit that broiling is the best way to cook it, there are but few busy housewives who are willing to spend the few minutes extra time it requires. Now, if we must have our steak fried let this be done in the best manner. Place your frying-pan on a bed of hot coals, and let it remain till quite hot. Then on the hot, dry pan place your steak, well peppered, turning it three times in as many minutes. Then dust lightly with salt; put a lump of butter on each piece. Put on a hot platter and send to the table. In this way your steak is as nice as when broiled, and with no more trouble than the ordinary frying.

And now with one more recipe my paper is done. If at any time you must have a "picked-up dinner" I think nothing tastes better than sandwiches, especially if they are prepared by the following recipe, taken from an old book several years ago. Add a tablespoonful chopped pickle to a quarter of a pound of chopped ham, a teaspoonful of mustard, and a sprinkle of cayenne. Place about six ounces of butter in a dish on the stove and stir till creamy. Then stir in your ham. Cut any cold meat you may have in the house very thin, and put on bread, then spread with the hot ham dressing, put two slices together and cut in halves.

## Our Homes.

## MAKING HOME ATTRACTIVE.

WE had been keeping house several years and keeping it rather plainly, so I told John one day I intended to get up some home-made elegancies myself this winter and make our home a little more attractive.

He said for his part he thought he had about as attractive a home as any of the farmers around; "for not one of them can beat my Durhams, Berkshires, or Southdowns."

"Oh! I mean," said I, "to add a few rather inexpensive ornaments to our rooms; it always gives an air of elegance and refinement."

Said John: "I don't care about such airs; they will do for city folks; and besides I always looked on such gewgaws as tomfoolery; but just do as you please; it's nothing to me; for you women folks, I suppose, feel as proud over such things as I do over my stock."

I had been reading of the rage for pottery decoration, so I thought I would try my hand on that first.

I obtained some jars of good form in the style of the old Egyptian and Greek urns and vases, and painted their surface a pale color. Having several to decorate, I had as many different colors—sea-green, friars-gray, pale blue, blue-gray, and buff. I got the embossed pictures sold at fancy stores, and after selecting such designs as are suited to the shape of the jar, arranged them in good taste over the surface. One of my prettiest was made of various kinds—a few children's heads, small sprays of flowers, birds, beetles, and butterflies, and little pictures of all kinds; I pasted them upon the pot with muelage, letting the vines and leaves of the flowers intertwine so that they almost became one; while the butterflies, birds, heads, etc., were placed irregularly one here and another there.

I took great care in pasting the edges down, securely pressing them with a soft cloth. After allowing all to dry, then with a large brush gave the entire surface a coat of Demar varnish, going all over the jar with bold strokes, but never touching any part a second time while wet; when dry gave a second coat. I made beautiful jars by painting the entire surface bright red and decorating with silhouette pictures, touched up with a little gold around the edge; also a band of gold around the jar where fancy dictated.

I also made some very handsome vases and jardinières in imitation of Wedgwood ware. I will here give a few hints. The color should be blue-gray, or Pallissy gray-green, sheet-lace note-paper with embossed figures, such as is used for valentines. Lay a little fine raw cotton or tissue-paper under each figure, which should be gummed on to the surface and varnished with Demar varnish. When one once begins there is no end to the different designs that suggest themselves.

Having found an old three-legged centre-table in the attic, I at once set to work to turn it into a

beautiful ornament for my parlor. I sandpapered and rubbed until I had it very smooth, then painted it jet black and left it to dry. When dry, I varnished it and rubbed it until it shone like ebony, then put

PATTERN FOR CARD-BOARD CROSS.

some ornaments made of leather on the legs and centre piece, which I painted black, and varnished, and

CARD-BOARD CROSS ON VELVET.

med on, and a lambrequin of black satin hung gracefully from the edge and ornamented with cretonne embroidery. My coal-vase I made of a high, square box with the front corners cut off. The lid sloped downward as a desk-lid. I tacked moulding on the edges and around the lid, painted the whole black, varnished, and polished; then transferred some decalcomanic pictures of winter and home scenes on the front, lid, and ends.

Having a little knowledge of sketching and painting, I thought I would turn my attention to making and coloring chromo photographs. I removed photos from the cardboard, immersing them in hot water, and when the paste was sufficiently softened separated them carefully to prevent injury to the print. Having removed all the paste from the print, cut it a trifle smaller than the glass on which it is to be mounted, laying it between folds of blotting-paper until nearly dry. Having prepared some tragacanth paste, I coated the face of the print and concave surface of the glass with it. I lay the print on the glass, being careful to remove all air-bubbles and excess of paste with the fingers, working from the centre; after which, place several thicknesses of heavy paper on the print and work it quickly down with a moulding tool; when thoroughly dry it is ready to render transparent. Placing a cake of spermaceti in a tin tray, I set the latter in a vessel containing hot water, and when melted immersed the glass-mounted print and let it remain until the picture became transparent. Having removed it, let it drain and when cold rub off with a cloth.

The colors I now applied directly on the print to the eyes, lips, jewelry, or parts that require no blending. I pasted narrow strips of cardboard to the concave edge on the top, bottom, and sides. Then lay another glass of same size with a convex surface to the concave side of the first. On the clear glass paint hair, complexion, drapery, and background. Tragacanth paste is made by simply simmering the gum in hot water.

I made a pretty pair of lamp-mats from the ravelings of Brussels carpet; also a handsome rug. Cut the carpet into narrow strips and ravel out. With knitting cotton knit one row, then one row of the ravelled carpet, taking two or three threads a finger length long and knitting it in the middle, leaving the ends all the same length on one side, knit in strips and sew together.

I have also made a beautiful carpet for my dining-room out of two or three old ingrain ones. Having washed the carpets clean, I then cut them in strips half a finger length wide, ravelled out each edge, then sewed the strips together and wound in balls; had it woven as rag carpet, and when finished, to my surprise, found I had a Chenie Brussels.

MRS. A. B. INGHAM.

RIPLEY, OHIO.

## AIR-CASTLE.

OUR air-castle we made of silver cardboard worked with two colors of blue worsted, then finished with tassels of small white glass and chalk beads, such as were used for collars years ago. T. M. M.

## The Household.

## SOME NEW IDEAS ON FURNISHING.

DEAR NIECE: I am glad to hear you have concluded to exchange the boarding-house for a comfortable home of your own; and I want to give you my advice about a few things before you undertake it, as one who has never tried it has a good deal to learn in going to housekeeping.

You seem to be worried and sorely perplexed because the house your husband has selected has one room which you will have to use for both sitting-room and parlor, and it is about this room that I wish to speak. As your room is large, I think it will be an advantage to a small family like yours, and with your limited means, to have it all in one. When I began to keep house I thought, too, that a parlor was indispensable; and although we had a cosy, handsome sitting-room, which was good enough in which to receive any of our guests, I could not rest until your uncle bought parlor furniture for a room which we needed more as a bedroom, and had bedroom furniture for; although he had to go beyond his means to do it. I hope there are not many young people as foolish as I was. I never enjoyed that parlor; we did not use it except when we had company, and do what I would, it would have the stiff, company look, and my friends always seemed to enjoy themselves better in the little sitting-room.

A parlor is a necessity where there are grown young people in the family, or their means warrant them in entertaining a great deal of company. Such a room is much more easily kept in order if the furniture belonging to each department be kept by itself. For instance, near one of your windows place your machine, your sewing-stand, or basket, or whatever you use in that capacity, your low chair, and one for the machine. And here let me tell you, I use one of those large, deep sewing-baskets, and have no need of a stand, as it is lined with bright silk, and, standing on the floor by the machine, forms a handsome little piece of furniture, and holds all the unfinished sewing any one ought to have around at a time. Machines now have so many drawers and boxes they hold everything else needed for sewing work.

Your library, or parlor part of the room, should contain a table, sofa, an easy chair or two, a fancy paper-holder, your bookcase, or shelves, as the case may be, and your organ and music stand. Your table need not be marble-topped or polished mahogany of some intricate design, to add to the elegant appearance of your room, as I know you could not afford anything of that kind; but it should be round, and covered with a warm-colored cloth to match the surroundings. Some designs have been given in THE FLORAL CABINET of home-made ones that would be quite as handsome as any you could afford to buy. Your sofa need not be a costly article; you can have

some earpenter make you a frame which you can cover and stuff with your own hands; or one of the cottage lounges well dressed, with a large, square pillow at each end, covered to match the rest of it, looks very well. It is most economical in the end to buy the regular furniture rep for lounge-covers, as it always looks well and never wears out. A nice, cheap way to fix the pillows is to cover them with plain calico or cambric of the desired color, put a heavy cord around the edges, a tassel at each corner, and for the side you have out knit a square worsted tidy, large enough to nearly cover it, and fasten it on cornerwise. The pillows can then be turned over when in use, and can be kept nice a long time. The tidies for the two should be different patterns, but the same colors.

Put whatever articles of furniture the children may have in a corner appropriated to their use, and let them be required to keep that part of the room in

THE LAST SONG OF WINTER.

order. Children cannot begin too early to save mamma's steps, where, as in your case, she has all her own work to do. Just as much as older ones, these little men and women need something on which to seat their guests. Too many small chairs are apt to be in the way, but small wooden boxes, fitted with lids with leather hinges, and covered with ingrain carpet or some stout rep goods, are always handy, as they can be used for footstools, and as receptacles for the children's toys or picture-books. If a small sofa frame is made, so that the seat is a lid that can be raised, and the whole covered and stuffed, it will do as well as these boxes. Their small chairs should always be furnished with tidies, and quite small girls can be taught to make them, with spatter-work on linen, or with two colors of dress braid, cut in equal lengths and pinned on a pillow so they can be woven together in the form of a checkered square. All the ends must be fastened, and a fringe of zephyr put on or a border crocheted.

I want to tell you how to make several nice pictures for this room. Gather a number of ferns of different varieties, clover, ivy, and geranium leaves, sprays of blackberry vine, oak, and maple leaves, and any others you may think would be nice, and bleach them to a pure white by immersing them in a solution of chloride of lime, one cupful of lime to a half-gallon of soft water being about the strength required. Have the solution in a glass jar, so you can tell when they are white enough; it will take several days, some longer than others. When white, take out and lay in a book until wanted for use. They look lovely, arranged in the form of a wreath or bouquet, on black velvet and framed in a deep frame.

A pretty companion picture for this is made by arranging brilliant autumn leaves, which have been carefully pressed, in the same form on white velvet, and framing to match. The leaves and ferns must be fastened to the velvet with mucilage in some places, and some stitches with white thread taken across the stems where they will not show.

Some of our magazines give colored title-pages which form handsome mats for bunches of pressed flowers. For example, I have just made a picture out of the beautiful plate in the January number of the *Demorest*. I covered the centre, which contained the title of the book, with a bouquet of pressed pansies and ferns, and framed the whole, and you would be delighted with it. A pretty cross to put on a bracket, is made by tying candle-wicking on a plain wooden cross, so as to leave ends all over it, and crystallizing this as you would grasses; cover the foundation with dried moss, and trail a delicate pressed vine over it.

Your children can make small brackets for their part of the room, by getting the triangular pieces of gilt moulding that come out of the corners when frames are made, tacking two together and fastening on a little shelf, covered with gold paper. One or two of these looks well, but do not have too many of any one kind of ornaments unless you want your room to look like a fancy store.

Such a room papered, carpeted, and curtained nicely, which you can afford since you do not have to furnish a separate parlor, will be elegant enough in which to receive any of your guests, and you will find it much easier to entertain them than it would be in a room set apart for that purpose. Then, besides, you will have a beautiful room for yourself and your children to live in, and in which to receive your husband when he comes home from his daily toil. We should always remember that beautiful surroundings have a refining influence on our families, and look to their interests first.

I meant to tell you some things in regard to your dining-room, but my letter is too long already, and I'll have to leave it till the next time.

AUNT MOLLIE.

## Household Elegancies.

## INEXPENSIVE HOUSEHOLD ORNAMENTS.

"How many pretty things we could have if we were only rich!" remarked a friend the other day. That is very true, but how few there are who belong to that class; and must we who have little to spend for the bright, fancy articles that we love so well, and which go so far toward making home beautiful, do without them? No indeed! We will set our brains and our hands to work to decorate our homes with our own handiwork, and we will be surprised at our success. Let me describe to you some of my fancy articles which are inexpensive and easily made. To make a button-hook holder cut two pieces of cardboard (mine is of fine silver cardboard) the shape of a lady's button boot; on one piece work with any bright-colored worsted little scallops to represent button piece of the shoe; work a dot in each scallop for the buttons, sew the two pieces neatly together with worsted, hang with a little worsted cord, at each end of which fasten a tiny ball of worsted, and it is complete; the top of the boot holds the button-hook and must be cut about an inch shorter than the hook. Very pretty splint baskets for dried grasses, pressed ferns, and leaves are made in this way: Procure a bunch of splints from any fancy store (if you get the very long ones cut them in half). I prefer the brown or black-walnut ones for this purpose, though the white ones are very pretty; weave them in and out, not closely but leaving little open squares; make two square pieces the same size. For the front of the basket soak one of the pieces in water until it can be easily bent; then bend one corner down to the centre and tie with a bow of blue ribbon; wherever the splints cross each other tie with blue single zephyr, crossing it on the top and fastening it underneath; now tie the three unbent corners of the front to three corners of the back with bows of blue ribbon, and fasten splints to hang it by. For a larger and more durable one, for papers, weave the splints closely, make the two squares the same size, and fasten the two opposite corners of one square to the centre of the two opposite sides of the other; let each remaining opposite corner project beyond the centre of each remaining opposite side. Tack bright-colored autumn leaves, that have been pressed and varnished, on the centre of the front, and at each corner a little bow of worsted cord with balls; hang with cord and balls. Another pretty paper-holder is made like this: cut back, front, and pointed side pieces of black bristol board, and in any fanciful shape; pink the edges and decorate with autumn leaves and pressed ferns; some prefer scrap pictures, but I think there is nothing so beautiful as the delicate ferns, and bright, lovely leaves of nature.

To make a pretty hair-receiver cut a piece of cardboard eight inches long by four inches wide, and another six inches long by four inches wide; in the centre of the smaller piece work (lengthwise) initials; sew the ends of this piece to the sides of the other, at one end; make a little silk bag, color to match the

letters, line with tarlatan, and sew in at the bottom of the two pieces; plait ribbon to match around the whole. I wonder if any of the readers of the CABINET have ever made crystallized baskets; the crystals are always liable to break off, and require great care in their preservation, but it is well worth the attention you give them, if you succeed in making a perfect basket. First take copper wire and form the basket; cover it by winding it with woollen yarn; take a pound of alum, if it is a small basket, or a quantity proportionate to the size of the article to be crystallized. Put the alum in sufficient water to cover the basket, boil it, and put it in some vessel large enough to hold the basket, hung by a string, so that the water will completely cover it; set it aside until the water is cold, and the alum will then be gathered upon the basket. Grasses, evergreens, mosses, or a crooked twig, wrapped with loose wool or cotton, and tied on with worsted, are very beautiful crystallized in the same manner. Bright yellow crystals may be produced by boiling gamboge or saffron in the solution, and purple ones by a similar use of logwood; the color, of course, being more or less deep according to the quantity used. Sulphate of copper will also produce beautiful blue crystals, but great care is necessary in using it. It is the best way to strain the solution through muslin before using it, to have the crystals very pure and clear.

## CORAL FRAME.

VERY pretty imitations of coral can be made by using the little gnarled twigs of old apple-trees. We have for a small chromo of a boating scene with a black mat a frame about two inches wide; upon this we arranged the twigs nearest resembling branching coral, from two to three inches long; then glued them fast, and with a tiny, soft brush painted the frame black. When dry we gave the twigs a coat of vermilion mixed with varnish and turpentine. After this became dry, varnished the whole. The frame is nearly covered, the twigs branching and interlacing in every direction. I have seen brackets made in the same way and painted black. They were very handsome.

## THE CHIEF IDOL.

THE idol in the market stands,  
Wrought deftly by the graver's hands,  
And visible to every eye.  
Yet doth a truer idol lie  
That monarch's cruel heart within,  
And fashioned out of his great sin.  
SELF is the name by which they call  
That idol—type of idols all.—*From the Arabic.*

Five of the sweetest words in the English language begin with H, which is only a breath: Heart, Hope, Home, Happiness, and Heaven. Heart is a hope place, and home is a heart place, and that man sadly mistaketh who would exchange the happiness of home for anything short of heaven.

**Black Ants on Peonies.**—Sprinkle guano on them or about their haunts

## CORNER WHATNOT.

My sister has just completed a whatnot of cone-work; she has four shelves, ranging in size from thirteen to sixteen inches on the straight edges, rounding out in the centre several inches; around this front edge is securely nailed a heavy piece of cardboard, five inches deep at the centre, narrowing towards the ends, where they slightly round (the shelves being first painted some dark color) these form the ground for the raised work. Two or three rows of pine cones, pulled apart and cut of equal length, are glued evenly all around, the first row extending a little beyond the edge; then in the centre and widest part of each is placed a group of cones cut in half, and from these, in each direction toward the ends, is filled with acorns, black walnuts, butternuts, pecans, Brazil nuts, and horse-chestnuts, peach, plum, tamarand pits, and all kinds of seeds and nuts; a great many acorns can be used with good effect, also beechnuts, and the burrs of sweet-gum; in fact, on four shelves there will be room for quite a display of ingenuity and good taste. My sister has made of hers quite a cabinet of curiosities, having grouped there the collections of many years, it is hung with heavy scarlet cord from the three corners, the lowest shelf coming to within two feet of the floor. At the centre of each ornamental piece hangs a nicely-shaped cone, giving it a tassel-like finish. Give all a good coat of varnish, and you have a "thing of beauty." The same shape can be used for leather-work or shells.

## JAPANESE VASE.

WISHING something to hold our dried grasses, we looked the premises over and came across an old urn-shaped teapot that had been off duty for years and consigned to the stone heap. This we rescued, and by well-directed blows soon relieved it of its nose; then filled the holes all smoothly with putty, and left to dry. Then, with a piece of pine board, bracket-saw, and knife, fashioned a mate to the handle. This when finished was also puttied where the spout had been. When sufficiently hard it received a coat of paint—the upper and lower part and handles black—coach-black mixed with varnish, and turpentine to dry quickly. Then, after drying, the centre was painted ultramarine blue; also quickly drying. To preserve a nice shape, where the colors joined we cut a paper the desired shape and laid over the dry paint and touched carefully with the other color. After all was thoroughly dry it was varnished, and when that became tacky, ornamented with embossed pictures, butterflies, birds, and small pictures until pretty well covered; then received another coat of varnish and was ready for use. It will be very pretty for cut flowers when summer comes.

**Worms in Pots.**—The French *Journal d'Agriculture Pratique* states that worms can always be got rid of by using for the plants water to which a tenth part of grated horse-chestnut has been added. Under this treatment it is said the worms must either fly or die.

### Marblehead Mammoth Cabbage.

There being a good deal of seed in the market raised from very poor stock, which must fail to give satisfaction, having been the original introducer of the Giant Cabbage, which, when raised from the right strain of seed under proper cultivation, has been grown to weigh over 60 pounds to a single plant, and sixty tons to the acre, I now offer to the public seed that has been raised by myself, with peculiar care, all of it from extra large, extra solid heads. The Marblehead Mammoth is not only the largest, but is one of the most crisp and sweetest of all varieties of the cabbage family, as will be seen by extracts of letters to be found in my Seed Catalogue, where my customers state that they have raised cabbages from my seed that have weighed 40, 45, and 50 pounds each. Full instructions for cultivation sent with every parcel of seed. Seed per pound, \$5; per ounce, 50 cts.; per half-ounce, 25 cts. My large Seed Catalogues sent free to all applicants. JAMES J. H. GREGORY, Marblehead, Mass.

**FLOWER SEEDS** at half price; choicest and best. 50 cts. per doz. VERBENAS—50 fine named sorts 50 cts. per dozen. Catalogues free. D. C. MCGRAW, Riverside Gardens, Binghamton, N. Y.

**VALUABLE INFORMATION FOR THE FARMER.** Next to the system of rotation in crops, the most important discovery yet made in Agriculture. Without any outlay of money, an increase of from 25 to 50 per cent. can be obtained in the crop of MARKETABLE

**POTATOES** Proved by two years' experience. Costs nothing but time during Winter or early Spring to prepare the seed. Full directions sent for \$1, payable after trial, at maturity of crop. ISAIAH T. CLYMER, Quakertown, Bucks Co., Pa.

**Reid's Floral Tribute.**

The most beautiful and complete Seed and Bulb Catalogue published. 60 Enriched Colored Plates, Engraved Cover in Gold. Describes 1000 sorts Flowers & Vegetables. Price, 25 Cents. All ordering the book are registered and the price refunded on first order for Seeds, &c., to the amount of \$1. WM. H. REID, Name this paper. Rochester, N. Y.

**RIDGE'S FOOD FOR INFANTS AND INVALIDS**

Has received the most unqualified testimony from physicians, matrons, and mothers of the highest character and responsibility in this and other countries.

**The Extraordinary Success**

that this food has attained in this country (the sales of which aggregate as much as all other foods combined) is due to its intrinsic merit, containing as it does all the elements essential to growth and repair either in the infant or invalid. It has been demonstrated that multitudes of infants have been slowly starving at a period of infancy when development and growth are so remarkably active because of inability of mothers to furnish the necessary nutriment on account of overtaxing the nervous system, and by prolonged lactation, thus lowering the standard of health in both.

**RIDGE'S FOOD FOR INFANTS AND INVALIDS**

Is no new, untried preparation, but has been in use for thirty years, and the price places it within the reach of all. WOOLRICH & CO. on every label.

**TARRANT'S SELTZER APERIENT.**

We offer choice varieties of this most remarkable new fruit, imported direct from Japan.

Ironclad Apples, Sharpless Seedling Strawberry, Gregg Raspberry, Snyder Blackberry (ironclad).

The largest stock of SHADE TREES in the United States. Choice assortment of Fruit and Ornamental Trees and Shrubs.

**ROSES, FLOWERS, PLANTS.** Many striking NOVELTIES. Send for new Catalogues. Address

**BAIRD & TUTTLE, Agents** BLOOMINGTON NURSERY, ILL.

## WHAT IS HEADACHE?

In nine cases out of ten the source of headache is not in the brain but in the stomach. Indigestion is the most frequent cause. The digestive organs being disordered, they derange the action of the liver, the bowels, the kidneys, and the nerves, and the whole secretive and excretive machinery being as it were thrown out of gear, the brain suffers. Restore the natural tone of the stomach and bowels with a few doses of TARRANT'S SELTZER APERIENT, and headache arising from this cause is at once arrested. This delightful preparation is the best remedy for chronic and periodical headache at present known, and absolutely invaluable as a stomachic and gentle cathartic. SOLD BY ALL DRUGGISTS.

**COLGATE & CO'S EXTRACT WHITE ROSE**

For the Handkerchief.

**Beautiful Ever-Blooming CARNATION PINKS**

Assorted varieties. In colors of White, Carmine, Rose, Variegated, and Yellow. All labeled. Strong, healthy well-rooted plants. Sent safely by mail to any post-office. 6 for 50c.; 14 for \$1. Extra Choice Fancy Varieties, 4 for 50c.; 8 for \$1. **PEARL TUBEROSE** Flowering Bulbs. By mail: 2 for 13c.; 4 for 25c.; 17 for \$1. **LILY OF THE VALLEY** I will mail 3 flowering plants for 15c. Illustrated Catalogue, giving practical information about flowers, free. CHAS. T. STARR, Avondale, Chester Co., Pa.

**THE TAMPICO BUSTS** now used in **DR. WARNER'S HEALTH CORSET** and Skirt Supporter are the greatest improvement ever made in Corsets. They are as soft as velvet, very flexible and contain no bones. Price by mail \$1.50. Nursing Corset, \$1.75. **THE FLEXIBLE HIP CORSET.** (120 Bones) fits with perfect ease and is warranted not to break over the hips. Price, \$1.25. For Sale by All leading Merchants. **WARNER BROS.,** 351 Broadway, New York.

**SPLENDID OVER 1200 FLOWERS** Distinct Varieties

All strong Plants, each labeled, delivered safely by mail. Largest assortment. Low prices. In business 25 years. Guarantee satisfaction. Stock comprises all desirable varieties. Only mature plants sent. Our new Illustrated Hand-Book, sent free, contains name and description of each plant, with instructions for successful cultivation. Do not purchase Plants elsewhere before sending for our new HAND-BOOK. Every lover of flowers should have it. Every buyer of cheap plants should have it. Every one wanting new and choice plants should send for our Hand-Book. HOOPES, BROTHER & THOMAS, CHERRY HILL NURSERIES, West Chester, Pa.

**FREE TO ALL D.M. FERRY & CO'S ILLUSTRATED SEED DESCRIPTIVE PRICED ANNUAL for 1879**

Will be mailed FREE to all applicants. It contains 2 colored plates, 500 engravings, about 150 pages, and full descriptions, prices and directions for planting over 1200 varieties of Vegetable and Flower Seeds, Plants, Roses, Etc. Invaluable to all. Send for it. Address D. M. FERRY & CO. Detroit Mich.

**THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES**

THE BEST IN THE WORLD. We deliver Strong Pot Plants, suitable for immediate bloom, safely by mail, at all post-offices. 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5; 75 for \$10; 100 for \$13. Our Great Specialty is growing and distributing these beautiful Roses. Send for our NEW GUIDE TO ROSE CULTURE—50 pages, elegantly illustrated, and choose from over 500 finest sorts. THE DINGEE & CONARD CO., Rose-Growers, West Grove, Chester Co., Pa.

# THE LADIES' HOME GAZETTE

BY HENRY T. WILLIAMS.

NEW YORK, APRIL, 1879.

No. 88. PRICE 12 CENTS.

## THE WHITE WATER-LILY.

If lovers of flowers only knew how easily the fragrant white water-lily, *Nymphaea odorata*, could be cultivated, we are quite sure these lilies would be grown far more than other less fragrant and beautiful flowers that take more time and trouble to cultivate. These lilies once planted in a pond or small stream (they will bloom more profusely in shallow water) that does not entirely dry up in summer, will need no further care, and will increase from year to year. People who have not the facilities for growing them in ponds and streams can have their lily gardens in tubs and aquariums, where they can admire and gather the most fragrant and beautiful flower that grows on land or water.

*In Tubs.*—For a tub take a strong barrel, free from tar, oil, or salt; saw it in two; fill this one-third

FIG. 1. FLOWER-POT STAND.

FIG. 2. WIRE FLOWER-STAND.

full with fine black garden soil, or meadow mud if handy; plant the roots in this mixture, covering them two inches deep; add water gently so as not to disturb the roots, until the tub is full. This is the only care needed—always keep the tub full of water. Set this on a brick or board platform in any place you desire. The tubs with their contents should be placed in a cellar during the winter, kept from frost, and not allowed to entirely dry up.

*For Ponds and Streams.*—Tie a stone close to the roots, large enough to sink it; drop this into the pond or stream where you wish them to grow.

*For Aquariums.*—Put in five inches of fine black loam, cover the roots one inch deep in this, and sift on fine sand enough to entirely cover the loam.—*B. Mann, in Gardener's Monthly.*

## WINDOW PLANTS.

WERE we required to furnish a list of ten plants for window culture during winter, our choice would be as below: 1. Rose Geranium; 2. Zonale Geranium; 3. Variegated Geranium, Mrs. Pollock; 4. Fuchsia; 5. Heliotrope; 6. Calla Lily; 7. Carnation Pink; 8. Ivy Geraniums; 9. Tradescantia, or Wandering Jew; 10. Begonia Rex. We can hardly see where we could diminish this list, which offers many varieties and plants of a hardy nature, a thrifty growth, and pleasing appearance, yet we would desire to add many, as the Double Geraniums, the Oleander, Panicum Variegatum, Cyclamen, and Tea-Rose, etc.—*Scientific Farmer.*

## Floral Contributions.

## THE BEST HARDY ROSES

For General Cultivation, and How to Grow Them.

*A Paper read before the Western N. Y. Horticultural Society.*

BY HENRY B. ELLWANGER.

THIS is a query put by many interested devotees of Rose culture annually, and one in which all who love floriculture in any of its many forms have a never-failing interest.

As we are each year adding new sorts to our list of varieties, and are also making some occasional discoveries and improvements in propagation and cultivation, it follows that our selection of kinds and our treatment in culture will vary somewhat from year to year, as new varieties appear to take the places of old favorites, and we have knowledge of improved methods for the care of them. Reversing the order of our heading, we will first offer a few brief suggestions regarding the general culture suitable for hardy Roses, and afterwards at some greater length consider what varieties can most satisfactorily be grown by the general public.

The first requisite is the selection and preparation of a suitable place for planting. This is very important, as all that follows depends upon the care used in this first step.

To begin with, then, choose the best place you have in the garden, a place where you can offer sufficient protection by means of hedges or board fences from bleak, sweeping winds. When fences are used, their general ugliness can be most appropriately clothed by Roses themselves. A warm, sunny position is also requisite; if so situated that there is an exposure to the morning sun and the hot rays during the afternoon are in part or wholly shaded, all the better, but a certain amount of sunlight is as essential to a Rose's welfare as to our own, though many of us do not show our appreciation of the blessings of sunlight as gratefully as do our Roses. Besides scattering them through our gardens, Roses may be made very effective planted in borders about our lawns, either individually or in groups, and also planted in beds on the lawn. When the latter is done, we may with great advantage depart from the usual custom of growing the plants in bush-form and resort to what is termed the pegging-down system.

In this case the mode of procedure is quite simple. Having planted our Roses—for this purpose those on their own roots are preferable—we allow them to grow the first season in the usual way; the following autumn or spring the short and weak shoots are entirely cut away, and the long ones carefully bent down and fastened to the ground by means of pegs, or where more convenient or preferred they may be tied to stakes. Occasionally it happens there is a hard, stiff shoot which will crack or break near the ground, but if the bark on the under side continues

whole this is generally of no consequence, as flowers will be produced as well as though the shoot were uninjured.

Every year the pegging down must be repeated, the old shoots being cut away and the new ones which have come up during the summer laid down in their place. The great advantage of this system over the ordinary practice of growing in bush-form is the immense quantity of flowers produced, thus giving a magnificent appearance on the lawn and affording all the flowers desired for household use.

*Soil.*—Roses will do well in any ordinary garden soil that is free from standing water and well drained. Where there is too much clay, the soil can easily be made sufficiently friable by the application of wood and coal ashes, lime, stable manure, etc. Where, on the other hand, a soil is sandy or too light we need to bring clay, muck, leaf-mould, etc., to obtain sufficient body.

*Pruning* is best done during November or March, though to secure a good second crop of flowers in the autumn it is also necessary to prune immediately after the first flowering is over with.

*Manures.*—In regard to this important portion of cultural operations, we would say that there must be a generous application if we expect a generous yield of flowers. When Roses are planted in the spring, if the soil is ordinarily rich, it will be better not to dig in much manure about the roots, but rather apply it as a surface-dressing. This will at once be nourishing, keeping the roots cool, and prevent suffering from the droughts of summer. The following autumn, say in November, after the Roses have been planted, there should again be applied as a mulching a free application of stable manure, which may be dug in the next March. We find cow manure the best fertilizer, on the whole, that we have tried, though all kinds of stable manure are excellent, as are also bonedust, soot, guano, etc. For full directions regarding this and kindred objects we refer to the several excellent works on Roses.

With these few cultural hints, we proceed to a consideration of what are the best hardy Roses for general cultivation. We mean by this a list for beginners in Rose culture and the general public, naming those varieties that are most certain to succeed, and which will give the most generous return in profusion of flower, fragrance, and beauty. A perfect Rose, therefore, for general cultivation, should excel in the following particulars, and in the order named:

First, beauty of color, as that which first attracts us to a Rose.

Second, beauty of form, without which our eye cannot rest long, but wanders on, seeking a combination of the two in one flower.

Third, fragrance. Deprived of this no Rose can be perfect. Who ever yet saw a beautiful Rose without wishing to inhale its odors? Gratification in this matter is oftentimes far more pleasing to us than the mere sight of beauty.

Fourth, profusion and continuity of bloom. We like our good things in abundance, poured out to us with generosity, that we may have to distribute and carry our pleasure to friends.

Fifth, vigor and healthfulness of growth, that will produce strength of plant thriving with a moder-

ate degree of care and attention, and that will endure the extremes of summer's heat and winter's cold.

Let us consider at some greater length these several qualities essential to a perfect Rose.

*First.* As regards color, we like something decided and pronounced, or else of great delicacy and softness, and withal as durable as possible. The varieties differ very greatly in this respect. For example, Pins IX., a well-known old Rose of splendid habit, very seldom is seen of a clear color; the sun fades it almost immediately after the flowers expand, and a dirty shade of rose is produced, anything but pleasing. La Reine, Giant of Battles, and others are likewise affected, though in less degree. Some, like Abel Grand and General Jacqueminot, are quite permanent, lasting oftentimes till the petals wilt and fall. Above all things, therefore, we want our colors pure and steadfast.

*Form.*—In form, the Rose shows almost as much diversity as in color. We have globular, eup-shaped, imbricated, and quartered Roses, besides many modifications of these forms. The globular Rose, as shown in Alfred Colomb, is the finest of them all, but the others are very pleasing in their variety, and we should not wish to be confined to the one type. The quartered or flat form is the most objectionable, though there are very many lovely Roses of quartered or flat shape, such as Caroline de Sansal, Baronne Prévost, etc., which are large, full, and even symmetrical. Shirley Hibberd, in his excellent work on Roses, places form before color. This may be right in an exhibition box of Roses, but not as judged from our standpoint. However, it shows the very great importance of excellence in form, without which a Rose cannot stand very high in the scale.

*Fragrance.*—Did one ever think what we should lose were our Roses deprived of their sweet odors? Why, there would at once be a vacant throne, with no Rose to hold a queenly sceptre, and the strife of Dahlia, Camellia, Lily, Gladiolus, and Rhododendron for supremacy would have no check, no limitation. Among all the delightful perfumes exhaled by the Lily, Heliotrope, Daphne, Jasminum, etc., none yield such delicate, sweet-scented odors as La France and Louis Van Houtte give us; they are alike supreme in beauty and fragrance.

*Profusion and continuity of bloom.*—This is also a very important feature, as is ably set forth by W. D. Prior in an article on "Autumn Roses," which appeared in the *Gardener's Chronicle*, September 21, 1878. He says:

"One of the most important points in which all Roses of comparatively recent introduction should be carefully watched is that of the habit of free autumnal bloom. Until this has been well established, the title of even the finest varieties to rank as perpetuals is incomplete. There is the greater necessity for this vigilance because true perpetuity is the chief claim to superiority that our modern Roses are able to advance over some of their summer predecessors, which in form, color, vigor of growth, and hardiness are quite their equals, being surpassed only in the valuable property of having more than one season of bloom. Another reason for impartial examination as to this quality is that so many novelties receiving certificates when exhibited at the meetings of socie-

ties, or which attract the commendations of adepts at exhibitions, ultimately turn out lamentably shy in autumn—mere summer roses in fact, yielding, it may be, under peculiar circumstances, a flower or two in the latter part of the year. It unfortunately happens that not a few even of the established favorites are capricious and unreliable in the essential feature which gives a name to the class to which they are held to belong. Let any one walk through a large collection of Roses from the end of August till the time for lifting arrives, and he will be struck at beholding row upon row of healthy-looking trees utterly destitute of the vestige of a flower. In other cases a bloom here or there may be seen, but nothing in quantity to justify the title of perpetual, while others will be found yielding flowers till the frost cuts them off. These last are the kinds most valuable for the purposes of the general Rose public, in contradistinction to the limited class concerned with exhibition; hence the necessity of ascertaining the trustworthy autumnal blooms every year."

There is no doubt we have altogether too many kinds of so-called Hybrid Perpetuals, which, though excelling in many other qualities, are lamentably deficient in this; they are perpetual in name only, and do not yield a sufficient number of flowers; they, therefore, should give place to true perpetual varieties.

*Vigor and healthfulness of growth.*—Last, and scarcely least, we look for a strong constitution.

Varieties subject to mildew, like Caroline de Sansal, Prince Camille de Rohan, etc., have our commiseration as well as our regard; while weak or slow-growing varieties, like General Washington, Giant of Battles, La France, etc., we unfavorably contrast with the exuberant, healthful growths of such sorts as John Hopper, General Jacqueminot, Baronne Prévost, etc.

With these preliminary remarks, we submit a table placing in order of merit the best hardy Roses for general cultivation. With the single exception of Climbing Jules Margottin, we have not contemplated the admission of new varieties of the past four years. Some of them, no doubt, will be worthy a place in the list, but it takes time to thoroughly test a Rose, and we wish to make this list as thoroughly reliable and as nearly perfect as it is possible for such a list to be.

We have selected the following means of determining the comparative merits of different varieties. Taking the five qualities named in the order of their importance, we assigned the following number of points to each: Color, twenty-four; form, twenty-two; fragrance, twenty; freedom of bloom, eighteen; vigor and healthfulness of growth, sixteen; making a total of one hundred points for each Rose.

Where two or more varieties resemble one another, we have only retained the superior sort as a contestant; thus Ferdinand de Lesseps and Maurice Bernardin are thrown out as being somewhat similar, but inferior to Charles Lefebvre.

This gives a list, therefore, of quite distinct sorts, those which are nearest alike being Alfred Colomb and Mme. Victor Verdier at the head, and they are sufficiently dissimilar to make both essential, even in a very limited collection.

We have given the shade of color in case any one should desire to select from this list with reference to having but a few sorts quite distinct from each other in tint, but, as already mentioned, Roses vary almost in form as in color, and we may have two kinds, of precisely the same shade, yet strongly differing in every other respect, and therefore entirely distinct. The list runs as follows:

	Color.	Form.	Fragrance.	Freedom and continuity of bloom.	Vigor and healthfulness of growth.	Total.
Maximum number of points...	24	22	20	18	16	100
Alfred Colomb, crimson.....	24	22	19	15	13	92
Mme. Victor Verdier, crimson ..	24	22	19	14	11	90
John Hopper, carmine-rose ....	24	20	14	16	16	90
General Jacqueminot, velvety crimson.....	24	16	17	17	16	90
Countess Cécile de Chabillant, pink.....	23	22	17	13	14	89
Abel Grand, glossy rose.....	23	20	15	16	15	89
Marie Baumann, carmine-crimson.	24	22	18	14	10	88
Charles Lefebvre, deep crimson.	24	21	16	14	13	88
François Michelin, carmine-rose	24	11	15	15	13	88
La France, silvery rose.....	24	22	20	18	3	87
Marguerite de St. Amande, bright rose.....	24	20	12	16	15	87
Climbing Jules Margottin, carmine-pink.....	24	19	14	14	16	87
Duke of Edinburgh, bright crimson.....	24	17	15	15	15	86
Baronne Prévost, rose.....	23	14	17	16	16	86
Louis Van Houtte, maroon.....	24	21	20	14	6	85
Paul Neyron, rose.....	22	19	13	15	16	85
Anne de Diesbach, carmine.....	24	16	12	14	15	81
Mme. Boll, carmine-rose.....	24	21	12	8	15	80
Prince Camille de Rohan, dark crimson.....	24	18	14	12	10	78
Countess of Oxford, carmine-red	24	22	4	14	13	77
Caroline de Sansal, rosy-flesh...	23	15	12	14	13	77
Mme. Alfred de Rougemont, white.....	20	16	14	18	9	77
Peach-Blossom, pink.....	22	16	10	12	13	73
Coquette des Blanchés, white ..	23	10	8	18	12	71
General Washington, reddish crimson.....	20	18	4	17	8	67
Marquise de Castellane, carmine-red ..	24	19	2	9	10	64
Baroness Rothschild, silvery pink.....	24	21	2	12	4	63
La Reine, rose.....	15	12	10	12	14	63
Etienné Lévy, carmine red.....	24	20	2	10	6	62
Mlle. Eugénie Verdier, silvery rose.....	24	20	2	8	7	61

A list of this kind would not be complete without mention of some summer Roses. Though blossoming only once a year, some of them, notably the Mosses, are so beautiful as to be essential to a Rose garden of any size or pretensions. We name the following as the best: For climbers, Bennett's Seedling, Baltimore Belle, and Queen of the Prairies. We have also a new race of climbing Hy. Perpetuals, which promise to be valuable but are not fully proved. Among non-climbers, the most desirable are Persian Yellow, Mme. Hardy, Mme. Plantier, and the following: Moss Roses, Crested, Common Moss, Countess of Murinais, and Salet; the latter, though less beautiful than the others, blooms freely in autumn and would be quite valuable for that quality alone.

The selection or mode of electing varieties to a position in the above list is, of course, arbitrarily done, but it has been carefully, and we may say laboriously, compiled; and though judges would differ more or less in the relative estimation of the different qualities which go to make up a perfect Rose, and the number of points which should be variously assigned, we nevertheless think it will be a serviceable guide. As will be seen from the table, we have no Rose which may be called perfect; our choicest sorts, excelling in some qualities, fall short in others; thus Alfred Colomb, which heads the list with ninety-two points out of a possible one hundred, is less fragrant than La France, more coy of its blooms than Coquette des

Blanches, and does not have the lusty vigor of growth possessed by Baronne Prévost, but, for the five qualities combined, no sort altogether equals it, though Mme. Victor Verdier is a sister variety of nigh equal worth. Honest John Hopper, always steadfast and true, comes third. Victor Verdier bears him much resemblance in color and general appearance, but has neither the fragrance nor vigor of constitution to be counted a rival.

General Jacqueminot, notwithstanding a lack of fulness and rotund form, is now one of our oldest, most generally known, and also best Roses for general cultivation. Clad in his rich crimson livery, he is still prepared to lead the van.

Countess Cécile de Chabillant, possibly from the length of name, is a variety too much neglected and lost sight of. The flowers are not large but most beautiful, and are models of symmetry and grace. Let no one overlook her claims.

Abel Grand is another neglected, or at least not well-known, variety of the highest excellence, especially valuable in the fall of the year, when competitors otherwise equally meritorious are devoid of even a semblance of bloom.

Marie Baumann! How difficult to depict her charms. Original and exquisite in all her features, she claims a choice position in every garden. There is no more beautiful variety than this in the entire list.

Charles Lefebvre is an improved Jacqueminot in form, and possibly color, though somewhat inferior in other qualities. Only within a year or two have we in this country learned to appreciate this noble Rose.

François Michelin, a comparatively new sort, is rapidly gaining favor. It is a seedling from La Reine, bearing some resemblance to that well-known sort, but decidedly superior in color and form. Following this is La France, the sweetest of all Roses; compelled to choose one variety, this should be ours. It is not only the most fragrant, but, with the exception of those Hybrid Noisettes, Madame Alfred de Rougemont and Coquette des Blanchés, will yield more flowers during the year than any other sort named. It flowers so profusely that its growth is checked, every eye sending forth a flower-shoot; it is, alas! not very hardy, being the most tender on the list, but though the tops are killed it will start out again in the spring from the roots, the same as the Hybrid Noisettes.

Marguerite de St. Amande is a worthy companion of Abel Grand, furnishing a generous supply of autumn flowers.

Climbing Jules Margottin, besides being of more vigorous growth, seems, if anything, more beautiful than the old sort, from which it is a sport. It is well worth growing for its buds alone.

Duke of Edinburgh, is a bright-colored Jacqueminot, which is saying all that is necessary.

Baronne Prévost, one of the best of the flat type, is a worthy companion of General Jacqueminot, and a model of vigor and health. It is the oldest variety known, having been sent out in 1842.

Louis Van Houtte, like La France, is but half hardy, and is also worthy of extra care. No other sort so nearly approaches La France in fragrance, and when planted in a bed together the deep, vel-

vety maroon of the one contrasts most beautifully with the delicate silvery rose of the other.

Paul Neyron is the largest variety known, and although its size detracts from our notions of a refined Rose, it is nevertheless a noble sort for any garden.

Anne de Diesbach, a true carmine, has its rivals of the same shade, but her pure, lovely color has never yet been equalled by any of them.

Madame Boll is almost worth growing for its large, lustrous foliage, but the blooms correspond in size and quality, only are too seldom seen after the June blossoming is over.

Prinee Camille de Rohan is a superb, very dark sort, very well known.

Countess of Oxford (a splendid earmine red, of the Victor Verdier type), like François Michelin, is rapidly becoming popular, its chief defect being a want of fragrance, which it lacks in common with all the Victor Verdier race, such as Captain Christy, Etienne Levet, Lyonnais, Madame George Schwartz, Madame Marie Finger, Mlle. Eugenie Verdier, President Thiers, etc.

Caroline de Sansal is a well-known, justly popular sort.

Madame Alfred de Rougemont and Coquette des Blanches are, all things considered, the best white perpetuums we have.

Peach Blossom, a comparatively new sort, seems to improve each year, and gives a new shade of color very desirable.

General Washington is one of the most widely disseminated varieties in this country, but it does not reach the maximum number of points in any quality. In color it is sometimes grand, but generally it has somewhat of a faded appearance, being quickly affected by the sun, and seldom is seen truly pure. The same may be said respecting form, sometimes superb, but generally seen with some defect, either a green centre or irregular and not symmetrical. Of fragrance it is almost entirely devoid. It ranks very high as a free bloomer, but, like La France, this is at the expense of growth.

Marquise de Castellane does not always open well, but gives many large carmine-rose blooms of globular shape that are truly superb.

Baroness Rothschild has exquisite cup-shaped flowers entirely distinct from all others. It is, unfortunately, of stubby, short-jointed growth, and can only be propagated by budding or grafting. This will always tend to make it somewhat scarce.

La Reine is another well-known old Rose which we cannot yet afford to discard, though now surpassed by so many finer varieties.

Etienne Levet, another of the newer sort, somewhat resembling Countess of Oxford, is rapidly finding favor, and had it but fragrance would be assigned a higher position.

Mlle. Eugenie Verdier, the last of the list, is certainly one of the most delicately beautiful colored varieties we have, but here again the lack of fragrance deprives it of a higher position.

#### FLOWERS IN A HOSPITAL.

I MUST tell you about my Verbena mound. The invention was all my own, but as I never had it patented you are welcome to it. I had four hexagon

pipe, and how they did bloom! hundreds of blossoms displaying themselves all summer to the best possible advantage. My long beds also gave me great satisfaction; the Balsams, Nasturtiums, Ageratum, Sweet Alyssum, Candytuft, and a host of others blossomed in profusion. My Phlox Drummondii and Pansies were more beautiful than ever, while in a special bed Zonale Geraniums, Fuchsias, Feverfew, and Heliotrope held themselves in readiness to make more aristocratic contributions. Of Roses, too, I had quite a variety. What wonder was it that with such wealth about me I became ambitious of giving; and many a basketful of buds and blossoms found its way to the Surgical Institute.

How eager the welcome they received there! How warm the appreciation! Never can I forget the smile that lighted up the pale face of one sweet girl, who was not expected to recover, when I gave her a handful of Rosebuds and Pansies. She pressed them to her lips, then laid them on the pillow beside her, and turned her face toward them, as if in their mute loveliness she found sympathy and companionship. "Oh! they do me so much good," said another; "they remind me of God's love." One young man, who had not been able to move for months, said: "You bring in your flowers all the sunshine I ever get." Another poor fellow, who had just recovered his eye-sight through an operation, asked to have his bandage removed just a little that he might see the flowers; "for," said he, "I have not seen any for such a long time."

Always a great lover of flowers as I had been, never did I know their worth till that summer. Never did I realize as then the fulness of enjoyment they could confer, or the truths of the greater blessedness of giving. My only trouble was that I never

could quite supply the demand, although my daughter and I distributed thirteen hundred bouquets, by actual count, during the summer. Since then, I am happy to say, a regular Flower Mission has been established in Indianapolis, and the blessed work is carried on in a systematic manner. And though I now live in a small place where there are no hospitals or surgical institutes to visit, yet I do not intend to allow myself to be shut off entirely from all such loving deeds, and I have just received, in answer to a letter of enquiry, a most hearty response from the president of the Flower Mission in St. Louis stating how great their need of contributions there, and how much good could be done with the basket of flowers which I expect to send this summer every week.

MRS. M. L. NUTTING.

GROUP OF NEW CINERARIAS.

frames made of plank a foot wide, of graduating sizes. The largest frame was three feet each side, the smallest not quite a foot. The largest frame placed on the ground was filled with prepared soil. Then I took a piece of stove-pipe three feet long and punched it full of holes (don't laugh till I get through), and stuck it up in the centre of the bed. Then the frame next in size was placed on the filled one, and secured from sagging by cross-pieces. This also was filled, and so with the next two; no soil, of course, being thrown into the pipe, the top of which came level with the top of the smallest frame, and was concealed by a large vase containing a scarlet Geranium. The frames were then painted green, and Verbenas set out in the step-like beds. Every evening during the summer I had several pails of water poured into the

## Floral Experiences.

### SOMETHING ABOUT MY FLOWERS.

THEY are beautiful. All who see them testify to that. Their home for the winter is a large bay-window facing the south, with side lights east and west. Early in the fall all the plants needing it are repotted in soil suited to each one's need. They are then placed in a cool chamber to gradually accustom them to indoor life. By the middle of October they are all snugly ensconced in their winter quarters, and from that time are a constant source of pleasure.

My Geraniums are all young plants. I started slips last May of such as I wanted for winter blooming. All buds were remorselessly nipped out through the summer, and by the time they were wanted for the house they were fine, shapely plants. A Master Christine, Madame Rendatler, Jean Sisley, and Marie Lemoine thus treated have given an abundance of flowers this winter. For foliage Geraniums I keep a plain and a variegated Rose, a Mountain of Snow, and a Black Douglas. The last I think fully as pretty as Madame Pollock, and it does better in the house.

The Primroses are also young plants, all raised from seed sown in May except the double white one. They were first picked out in two-inch pots, transferred to larger as they needed it, and now are all in six-inch pots; and never before have I had such large blooms as now. For soil I used mostly leaf-mould and a little silver sand. The Cyclamen, now five years old, has a bulb as large around as a silver half-dollar. It is in a seven-inch pot and has not been shifted for two years. At one time this winter it had over fifty flowers, besides the buds.

My Stevia is now one mass of feathery white flowers. Last spring a friend received one from the greenhouse, and, accidentally breaking off the top, sent it to me; not thinking it would grow, I stuck it down by the edge of a pot and thought no more of it. When next I looked at it I was surprised to find it growing; and since then it has taken constant pinching to keep it from growing out of reach. It is now a most beautiful plant.

My Heliotrope, a large plant now nearly three years old, has several large trusses of its fragrant flowers on it now. Last summer I cut it closely back, and by September it was covered with a fresh young growth. A little after Christmas it commene-

ed to bloom, and has not been without flowers since. It is in a ten-inch pot filled with the best of mould, and is given the highest, sunniest situation in the window. An old German lady of whom I got my slip told me, "He like rich food, you must feed him well." And I find it is so. Occasionally I give it a little soot tea.

Of all so-called winter blooming Fuchsias, the Speciosa is the only one that blooms abundantly for me. I have now a large plant of this in a ten-inch pot, and it has had hundreds of flowers on it this winter. The Carl Halt has bloomed only occasionally, but is so pretty when it does, one cannot find

five Callas; one being in the centre, the others equidistant about the edge. From these I have had twenty flowers since early in the fall. One lily, not yet one year old, has given three flowers. Their saucer is filled with boiling water every morning, and they are given water warm to the hand as they need it. In the summer they are stood out on the cistern-box, east of the house, and given only enough water to keep from dying out entirely.

But the crowning glory of my flowers this winter were two large vases filled, one with Verbenas, the other with Petunias. They stood in south windows on either side of the bay-window. The Verbenas, of all colors, were covered with flowers since January. The Petunias, plain, striped, and blotched, seemed trying to outdo them. At one time I counted over eighty blooms on the Petunias, and I think they averaged about that for three or four weeks. The plants of both kinds were started from slips in August in saucers of damp sand, and from these transplanted to the vases in which they were to grow; and how they grew! Careful watching, sprinkling, and smoking kept down the green lice that will trouble Verbenas, and their abundant bloom amply repaid all trouble. I shall never more winter old plants of either Verbenas or Petunias; they are, truly, more trouble than they are worth.

Of three hanging baskets I will only describe one; and here let me say this is one of the most delightful ways of growing plants. Just in front of the window hangs a large wire basket, having in the centre a pink Oxalis; climbing up the wires by which it is hung is the graceful Maurandia vine, hanging by the leafy stems to everything it can take hold of; drooping over the sides of the basket are Lobelia and Kenilworth Ivy, now full of little blue

and lilac flowers—the last like miniature Snapdragon blossoms.

All of these plants, with many others, are thoroughly sprinkled every Tuesday morning. If any signs of insects are discovered, they are removed to a little room off the kitchen and given up to tobacco-smoke for a while; then sprinkled good and returned to their places. I rarely have this to do, however. Plants from a greenhouse are always kept from the others till I am sure that they are not infected. All my plants are watered as early in the morning as possible, if they need it. Never water a plant unless it does need it, and then water thoroughly, using water warm to the hand.

MRS. W. B. VAN DE WALL.

LANCASTER, WIS.

PLANT OF NEW CALCEOLARIAS.

any fault with it. All other Fuchsias spend the winter in the cellar. I bring them up about the last of March, and in a few weeks they are covering themselves with fresh green leaves, making ready for their summer work. This winter among my new plants I have had Mahernia Odorata and a Hogarth Bouvardia; they have bloomed profusely since the 1st of February. I am delighted with Mahernia, its delicately-perfumed blossom and graceful foliage making it a valuable acquisition to my window.

Late last fall I took from my garden a root of Dicentra Spectabilis (Bleeding-heart) and planted it in an eight-inch pot filled with rich earth. It soon began to grow, and by Christmas was filled with its delicate pink flowers.

In a large pot, holding about half a bushel, I have

## Floral Hints.

## WINTER FLOWERS.

NATURALLY the first enquiry of every true flower-lover, or at least every window-gardener, would be: How can I get flowers to bloom during the long, dreary winter months? what will they be? and what kind of soil will they like? To such, I would say, take THE FLORAL CABINET, for therein you learn all this and much more; but at the same time study the nature of each plant, and learn, too, by experience. Strictly observe three things: Your plants must have plenty of moisture, air, and good food to thrive well. Now prepare your soil; for most of plants good garden-soil, leaf-mould, and a small portion of sand does well. For Calla Lily I use well-rotted chip-manure alone, or sometimes put in leaf-mould, while for Cactus there must be more sand used. Those who are so situated that they cannot take care of many plants during winter would, of course, want those that were the least trouble and at the same time the most sure to bloom. To such I would recommend Calla Lily, Oxalis, and Chrysanthemum. I am sure these three cannot fail to bloom if properly treated. They have always bloomed for me when treated in the following manner: About the last of May or first of June I set my Calla and Oxalis under a tree out in the yard and let them rest (by watering only enough to keep them from drying completely up) until the first of September. I then shake them out and re-pot in good rich soil and set in the shade a few days, giving but little water until after they have started to grow, after which there is little danger of giving the Calla too much. During winter I water the Calla with almost boiling hot water, taking care not to let it touch the stalks. In fact, I never water any of my plants with cold water, as it retards their growth. The Chrysanthemum I let grow out in the garden until August, when I lift it carefully and pot in the usual way (I do this after sunset), taking care not to cramp the roots in an unnatural position, yet using as small a pot as can accommodate it. Water well and set in the shade a week or two, after which bring it gradually to the sunlight, though never set it out in the heat of the day. After it is done blooming I set it out in the garden to there remain until I want it again. By following my plan of treatment with above-named plants I think any one, though poorly situated, may have flowers all winter. There are many other finer plants that we can have bloom in winter, but I recommend these three because they are less trouble than any I ever kept, and sure to bloom, and cost so little that they are within the reach of the poor. There is many a poor mother who would love to have such things (if she had the room) to brighten her dreary, cramped home, but she feels that it is impossible, for during the short winter days her time for each duty is quite limited. But perhaps she can have summer flowers. They are the simplest and least expensive ornament of the homestead, imparting an air of taste and comfort, and awakening dreams of beauty, especially in the minds of children, that will never entirely fade from the

memory, but will linger as reminiscences of home, and as oft-recurring incentives to strive after a better life. Those who cultivate summer flowers alone would best choose annuals, as they are the cheapest and produce the desired effect the quickest. Some annuals, too, are deemed absolutely indispensable, such as Zinnia, Phlox Drummondii, Petunia, etc. Most annuals should be planted about the first of May, or when all danger of frost is over. As a general rule, seed planted three times their own diameter germinate readily. In planting, great care should be taken in regard to harmony of color, height, and period of flowering, as we all know what a fearful effect would be produced by no taste being exercised. Keeping a garden clear from weeds, too, all will agree, adds as much to its appearance as arrangement. It has been said that a garden is an evidence of one's character. In the picture of the sluggard we read: "I passed by his garden and saw the wild brier. The thorn and the thistle grew higher."

LELIA MERRIT.

CALHOUN, HENRY CO., MO.

## FLORAL GOSSIP.

THE various Geraniums and Fuchsias which had given our urn so gay an appearance through the summer were taken up and stored in the cellar, for a resting-spell to continue through the winter, and their places were filled before the removal to the house with a Begonia Rex, another Begonia having bright green leaves spotted with white, which are sometimes in the year almost a gold color, a Camphor Plant which is still in bloom, and a small Century Plant which we pet as complacently as though we expected to live to see it bloom. These plants are not very uncommon ones, and though I have before me the image of an impertinent miss who once declared to me with a disdainful toss of her head that she never kept any common flowers, I must still declare that I would sooner have thrifty, healthy, common plants, than sickly, scraggy, uncommon ones, with unpronounceable names, hailing from no one knows where. I have quite a respect for novelties, and count a goodly number among my plants, but I think some of the good old plants full as beautiful, and we know how much we can depend upon them. For instance, there were no plants in our collection that produced more loveliness than our large Oleanders this year, a double pink and single white. They blossomed from the first of June until after hard frosts. They were then covered with buds, but on being transferred to the cellar they dropped off. They are taking a winter's rest, and I presume will be as handsome as ever next year. I have a beautiful Dwarf Palmetto which was sent me by a friend in Texas. It is very attractive, and every one who sees it remarks upon its beauty.

I also have a singular plant which I raised from seed. The lady who gave me the seed says it is a Black Pepper tree. It has beautiful fern-like leaves, and a spicy fragrance arises from its leaves upon being touched. It grows quite fast, but mine is not a year old yet, and has never blossomed.

Our plants are all furnished with good drainage.

We usually place charcoal on the bottom of the dish, then fill up with the best soil we can get. Water freely. But it is necessary to study the nature of flowers, as some plants require more water than others. Then in a warm, dry time they need it much more frequently and copiously than in a cool time, when the water does not evaporate so freely. In the winter the greatest difficulty seems to be to keep the plants at a uniform temperature. They are apt to get too warm in the daytime and too cool at night, and great precaution must be taken to guard against this, or certainly no blossoms need be expected. I have made a comforter to hang up over the window near which my urn stands. Instead of using batting to stuff it with, I used old papers, putting in at least a dozen layers, then tacking it to keep them in their places. This I hope will contest Jack Frost's right to enter.

I certainly do not approve of doctoring either people or plants when they are well: but, in direct opposition to this theory, I have taken to putting a large spoonful of ammonia in the water I use for them once a week, and I am very much pleased with the result. The very best thing usually, after plants are properly potted, is to water them and *let them alone*. There are a great many killed by too great and injudicious care. Perhaps, as I have had considerable experience in preparing and exhibiting cut flowers, and have had good success, a description of some of my exhibits may be of benefit to others.

Last June there was a fair held near here, and I made a lovely floral ornament of Moss Rose buds, green Moss, and Roses. The moss was arranged in a large shallow box, twenty inches by eighteen, and one inch deep. This was a perfectly flat sheet of green. A cross, as large as would conveniently lie in this box, was made of Moss Rose buds, and at the crossing a bunch of full-blown Roses. The cross was formed by sticking the stems of the buds in damp sand, which was concealed by the moss. The flowers were raised above the moss. I raised a great many Moss Roses, and think there is nothing lovelier than the buds.

I once saw a floral ornament in the shape of a star, six feet across, composed of stalks of bright Gladiolus. It was showy, but not at all artistic or of delicate design or workmanship, as such an article should be to be admired.

For hand bouquets, small flowers, rose-buds of all descriptions, perfumed foliage, and tasteful arrangement are necessary. A very pretty pair, which gained a red ribbon, were formed of a creamy-white Rose-bud, rather large in the centre, surrounded with blue Ageratums, then a row of Candytuft, and then Moss Rose buds with a border of small Rose Geranium leaves.

Later in the fall I made them of a Tuberosc for the centre, then Verbenas and Lemon Verbenas, with the border of Geranium leaves, before putting in the bouquet papers. Hand bouquets should be nearly flat, that is across the top, only slightly raised towards the centre. Scarlet Salvia and Geranium blossoms were often used. White flowers are always beautiful, but delicate-colored flowers, with a dash of bright scarlet and just a tiny bit of yellow, brighten up a bouquet wonderfully.

**RIDGE'S FOOD**  
FOR INFANTS AND INVALIDS

Has received the most unqualified testimony from physicians, matrons, and mothers of the highest character and responsibility in this and other countries.

**The Extraordinary Success**

that this food has attained in this country (the sales of which aggregate as much as all other foods combined) is due to its intrinsic merit, containing as it does all the elements essential to growth and repair either in the infant or invalid. It has been demonstrated that multitudes of infants have been slowly starving at a period of infancy when development and growth are so remarkably active because of inability of mothers to furnish the necessary nutriment on account of overtaxing the nervous system, and by prolonged lactation, thus lowering the standard of health in both.

**RIDGE'S FOOD**  
FOR INFANTS AND INVALIDS

Is no new, untried preparation, but has been in use for thirty years, and the price places it within the reach of all.

**Ladies Purchasing CORSETS**

SHOULD EXAMINE  
Madam Foy's Improved CORSET

**SKIRT SUPPORTER**  
For Health, Comfort, and Elegance of Form, it has no rival, and is really the most perfect Skirt-Supporting Corset made. For sale by all leading dealers. Manufactured by  
**FOY & HARMON,**  
New Haven, Conn.

**FLOWER SEEDS** at half price; choicest and best. 5ct. pkts. for 24 cts., 10ct. pkts. for 50 cts., etc. VERBENAS—50 fine named sorts 50 cts. per dozen. Catalogues free.  
D. C. MCGRAW, Riverside Gardens, Binghamton, N. Y.

**WHITE POND LILIES**

Are easily grown, and will bloom finely in tubs and artificial ponds. We will send strong roots, dug fresh from the ponds, by mail, post-paid, for 25 cents each, \$2 a dozen. Circulars, with directions for planting, free.

**J. A. VAUGHAN & CO.,**  
Carver, Plymouth Co., Mass.

**TREES ROSES SHRUBS**

The largest and most complete stock of Fruit and Ornamental Trees in the U.S. Priced Catalogues sent as follows: No. 1, Fruits, with colored plate, 15 cts.; plain, 10 cts. No. 2, Ornamental Trees, etc., with plate, 25c.; plain, 15c. No. 3, Greenhouse, Free. No. 4, Wholesale, Free, and No. 5, Catalogue of Roses, with plate, 10c.; plain, Free. Address,  
**ELLWANGER & BARRY, Rochester, N. Y.**

**ZIMMERMAN**  
FRUIT AND VEGETABLE  
**DRYER & BAKE OVEN**  
Over 11,000 in use.  
The BEST in the Market,  
Made entirely of Galvanized Iron  
**AGENTS WANTED.**  
Send for Circular. Address  
**ZIMMERMAN FRUIT DRYER CO.,**  
Cincinnati, Ohio.

**THE TAMPICO BUSTS**  
now used in  
**DR. WARNER'S HEALTH CORSET**  
and Skirt Supporter are the greatest improvement ever made in Corsets. They are soft as velvet, very flexible and contain no bones. Price by mail \$1.50. Nursing Corset, \$1.75.  
**THE FLEXIBLE HIP CORSET,**  
(120 Bones) fits with perfect ease and is warranted not to break over the hips.  
Price, \$1.25.  
For Sale by All leading Merchants.  
**WARNER BROS.,**  
351 Broadway, New York.

NEW YORK, APRIL, 1879.

## ILLUSTRATIONS OF THE MONTH.

UPON page 1 are several engravings of very attractive wire flower-stands, suitable for parlors, windows, halls, piazzas, and conservatories, made by C. Hennecke & Co., of Milwaukee, Wis. The size of Fig. 1 is 6 feet 6 inches high and 3 feet 10 inches wide, and the length of the shelves is 3 feet 3 inches.

Fig. 2 is 7 feet high, 3 feet 6 inches long, and shelves 1 foot 6 inches wide.

Fig. 3 is 6 feet 6 inches high, 2 feet 6 inches wide, and 3 feet 10 inches long.

Upon pages 4 and 5 is an engraving of some extra beautiful flowering specimens of *Calceolaria Hybrida* and *Cineraria Hybrida*, grown by Mr. W. C. Wilson, florist, of Astoria, Long Island, and also of New York City.

Upon page 9 is a sketch of a crystal self-acting fountain, made by C. Hennecke & Co., of Milwaukee, Wis.

It can be started in a moment, and will run from one-half hour to three or four hours. It may be used in parlor or greenhouse, as it can be moved at pleasure from room to room; also it can be used as a perfume fountain.

The inside of the pedestal forms a round tube four inches in diameter, extending to the base. The glass basin is a continuation of this tube upwards. In this a weighted valve moves up and down like that of a pump. When raised up and allowed to descend by its own weight it forces up all the liquid in the tube under it through a small pipe to the jet, and, falling into the basin again, keeps the liquid at the same height.

The fountain being filled, it requires no attention, except to raise the valves, until the water or other liquid requires changing.

In the small fountains the valve is raised by the pipe itself; in the larger sizes by the two handles connected with the chains.

The fountain basins are flint-glass; the tulip for the jet of milk-white glass, and the bouquet-holder and other ornaments are either bronze or bronzed. The fountains are emptied, when necessary, by a siphon which accompanies each fountain. Any of the fountains may be used either for fish or a cologne fountain, as individual tastes may dictate; but if cologne is used it should be pure, as, if mixed with water, it forms a milk-white liquid that will soon gum and so impair the working of the valves. The fountains can also be made of any color to match the furniture of any room.

## LIST OF PLANTS FOR ROCK-WORK.

AMONG the most useful plants for this purpose are the Saxifragas, of which a list of over fifty distinct kinds might be given. We content ourselves with only a few of the best: *S. Aizoon* forms clumps, leaves gray, with white edges; *S. Andrewsii* has green leaves notched with white; *S. Circulata* has leaves frosted over with white dots; *S. Ligulata* has broad leaves; *S. Longifolia* forms a rosette, with serrate and dark-green leaves curving from the crown; *S. Pectinata* has very small and frost-like leaves; *S. Pyramidalis* is quite large, and the white flower-plumes are often two feet high; *S. Atropurpurea* has, as its name indicates, purplish leaves.

The Sedums form another class of rock-work plants. *S. Brevifolium* is grayish, white, and red; *S. Corsicum* is light green; *S. Glaucium* is of a bluish-green tint, and one of the most effective; *S. Farinosum* is a light, glaucous green, becoming almost white towards the tips; *S. Multiceps* has small, round heads.

The Echeverias are all suitable for this purpose; we must note as of value the following: *E. Atropurpurea*, with purplish-red, narrow leaves; *E. Californica*, with narrow glaucous leaves and an unilateral cyme of yellow flowers; *E. Metallica*, with large, massive, recurved leaves, forming a perfect rosette; *E. Glauca* has grayish leaves, and is of dwarf habit; *E. Gibbiflora* has wedge-shaped mucronate leaves, and flowers of red and yellow; *E. Lurida* is stemless and the leaves are narrow, channelled, glaucous, tinged with purple.

The Sempervirens must not be neglected. *S. Tabulaeforme* grows with the utmost regularity, forming a perfect circle and flat across the top; *S. Arborescens* turns dark when grown out-doors and grows two feet high; *S. Californicum* is a bright green with black points; *S. Montanum* grows close and thick, and is neatly imbricated.

All the above-mentioned plants are good bedders, all are suited to a dry climate and should become popular.

## ONION LILY.

In the October number of the FLORAL CABINET a correspondent asks about the "Onion Lily," and says, "Cannot Mr. Williams tell us what it is." In your answer you say you "presume it is the hardy

perennial called Blackberry Lily." Please allow a subscriber to differ from you and give a description of a plant I have called by that name. I have a so-called Onion Lily or Sea Onion. I do not know the botanical name. The bulb is almost entirely out of the ground, and of a smooth, glossy green, about four inches in diameter. The leaves are not usually more than eight or ten in number, about two inches in width, and from five to seven feet in length, of the same glossy green as the bulb. When allowed to bloom (which should never be, as it softens the bulb and destroys its beauty) the flower-stalk is about three feet in height, the flowers borne on the top in spike form, small, white, star-shaped, somewhat resembling the flower of the Garden Onion.

## SPLENDID BOOKS GIVEN AWAY,

WITH

## Flower Seeds, Plants, etc.

To any of our subscribers desiring to club together for desirable Seeds, Plants, and any of our Books we will make the following

## SPECIAL OFFERS.

## OFFER NO. 1.

For \$1 will be sent \$1 worth of Seeds or Plants, and in addition free choice of one Premium—No. 1, 2, or 3.

## OFFER NO. 2.

For \$1 50 will be sent \$1 50 worth of Seeds or Plants, and choice of one of Premiums Nos. 4, 5, and 6.

## OFFER NO. 3.

For \$2 will be sent \$2 worth of Seeds or Plants, and also choice of Premium No. 7.

## OFFER NO. 4.

For \$3 will be sent \$3 worth of Seeds or Plants; also free choice of Premium No. 8.

## OFFER NO. 5.

For \$5 will be sent \$5 worth of Seeds or Plants; also free choice of Premiums of Books to the value of \$2 50.

## OFFER NO. 6.

For \$10 will be sent \$10 worth of Seeds or Plants; also free choice of Premiums to value of \$5.

Our offers of Seeds are based upon Catalogue of B. K. Bliss & Sons, who will fill our orders; but should any other dealer be preferred the sender has privilege of choosing his seedsman—any seedsman in the country.

The money is to be forwarded to us with order, which is forwarded to seedsman with order from us to deliver to subscriber.

This order includes only Flower Seeds, Vegetable Seeds, and Plants; does not include implements or other materials in Seed Catalogues.

## List of Premiums.

1. Book.—How to Destroy Insects on Flowers and House Plants. Price 30 cts.
2. Book.—Williams' Designs for Needlework.
3. Quarterly, one year, "Ladies' Floral Cabinet."
4. Book.—Ladies' Guide to Needlework.
5. Book.—Every Woman Her Own Flower-Gardener.
6. Six months' subscription "Ladies' Floral Cabinet."
7. Any book, price \$1, in my Catalogue.
8. Choice of books. Price \$1 50 each.

Household Elegancies.  
Window Gardening.  
Ladies' Fancy Work.  
Beautiful Homes.  
Evening Amusements.

These are splendid offers. All who desire good books improve them. Address

HENRY T. WILLIAMS, Publisher,  
46 Beekman Street, New York.

## Hints for the Garden.

### AMATEUR GARDENING.

THE ground is white with snow, and the world lies in all the dreariness of mid-winter. Indoors is the blaze of an open fire; the embers glow with incandescent heat, and from the consuming coals above leap tongues of flame that I endow with attributes of speech. They tell of a forest that flourished centuries ago, a forest that changed into carbon, which Nature hid away in her bosom for ages, until she relinquished it to give light and warmth to her human children. There are green and growing plants in the windows; they are a pleasant contrast to the snow; many of the passers-by glance in at them, and their faces brighten. A hanging basket stretches long sprays and tendrils of foliage toward the desk on which I write. I look up at it well pleased, for it has been admired and praised by so many that I have in a manner fallen in love with it myself. It is of drab earthen-ware, rustic in pattern, and holds about a gallon of earth. Its growth is luxuriant enough to blockade the window during the summer months, so from June until September it hung in the grape-arbor; then I removed the contents, not only root and branch, but also the earth in which the plants were growing. After giving the basket a thorough washing, both inside and out, I refilled it with fresh, rich earth, and started it anew. By each of the three long wires whereby it hangs suspended in mid-air climbs up a species of English Ivy, more delicate in foliage but just as hardy as the large-leaved, glossy kind. In the centre an *Angustifolia Variegata Aurea* stretches out six sturdy arms, covered with green and golden yellow foliage. It pined through the summer, and did but little good; now it is in the perfection of strength and beauty. On one side flourishes a red-stemmed, green-leaved *Begonia*, and on the other a crow-foot *Cactus* exalts itself above the *Lycopodium* that clothes the basket with a carpet of living green. Around the edges the variegated green and white *Wandering Jew* alternates with *Sweet Alyssum* and *Kenilworth Ivy* in producing a most graceful and delicate drapery. If I do say it myself, that basket would be a credit to even a professional florist.

We belong individually to that large and rapidly increasing class who are blessed with a large amount of taste and a limited amount of means to gratify it. That is, we cannot afford to spend money at random, and are inclined to cogitate ways and means of investing the moderate sum set aside for things beautiful and ornamental to the very best advantage. A friend came in a few days ago and was admiring our flowers. "I always look at your windows as I go

by," she said; "I recollect one winter you took your flowers down cellar and kept them there. Every time I passed the house it seemed to me there was something lacking."

And yet those windows have been made refreshing to the eye at very little expense. We use no pots for growing plants but the common red earthen-ware of medium size. As they are not pretty to look at, we have a few expanding willow pot-covers, of the size that costs fifteen or twenty cents each, and may

with equal portions of moist sand and charcoal, and a *Lycopodium* of medium size planted therein. The box was then measured, and a glass shade about four times as long as it was wide procured to sit inside of it. The *Lycopodium* stretched itself as though inhaling its native air, and set steadily to work to fill the shade with its green feathery frondage. The whole affair did not cost over a dollar, and the effect is really charming; besides, it takes care of itself, and does not require watering oftener than once a month, owing to the moisture that condenses inside the glass.

A friend presented us a pair of plaster of Paris flower-pots in the form of vases. They were provided with stationary saucers, and just fitted our window. One was pure white and the other a delicate cream color. They looked so exceedingly clean we feared too intimate contact with earth would defile them, so we set common pots, containing healthy plants, in each, and to a casual observer they seemed to grow there. By that means we have frequent changes, and insert only plants that are thrifty. A scarlet *Verbena* just now stretches its green arms in one, while an *Oxalis Floribunda* overflows the other.

Early in February I prepare a shallow wooden box, not too heavy for me to carry around, bore some holes for drainage, and fill with earth that has been thoroughly heated; but as I don't want a hot-bed I use no manure or fertilizer of any kind. In this box I make drills an inch apart, and plant seeds of *Pansies*, *Candytuft*, and *Nemophila*. On bright days I set the box in the sunshine in a room without a fire, being careful to cover at night or when there is danger of frost. By this means the flowers I allude to come to perfection in the early spring. Seeds of the same kind planted in a hot-bed do not germinate nearly so well. The spring recalls me to a joyous communion with outdoor nature. The beds and borders are ready and waiting for my willing and busy hands.

I find that if when both monthly and annual roses have been pruned in the spring they are thoroughly washed with whale-oil soap-suds, they are not nearly so liable to suffer from insects. I try to plant a little of almost everything, but must confess that *Pansies*, *Candytuft*, *Nemophilas*, *White Lavias*, *China Asters*, and *Verbenas* are my favorite annuals, not to mention *Mignonette* and *Sweet Alyssum*, which grow like weeds here and there among the borders.

It is to me a source of the most exquisite pleasure to brood over my seeds, as it were, and to take cognizance of their earliest growth, that I may protect them from the extremes of cold and heat. I have my reward in a superabundance of bloom and fragrance. Many of my buds and blossoms go forth to gladden the hearts of others, who love flowers just as dearly as I do, but have not the same leisure time to attend to them.

L. G. PATTERSON.

CRYSTAL FOUNTAIN FOR THE PARLOR.

be procured in brown and white, green and white, and red and white colors. In one window a silver-margined English Ivy twines around a green wire and wooden cross, that cost but a trifle and is really beautiful.

We had a tinner make a round tin box, something larger than a collar-box, with three supports to raise it some half an inch above the window-sill; no outlet for drainage. This was painted green, and filled

## The Household.

## NOTES FROM A FAMILY SITTING-ROOM.

THE FLORAL CABINET is a welcome guest in a certain old-fashioned house that has neither a brown-stone front nor plate-glass windows, but that is, in the truest and best sense of the word, a comfortable and pleasant home.

Many newspapers and books are scattered here and there over the premises; to be sure a substantial bookcase is the legitimate receptacle of the latter, but its contents overflowed long ago.

An intermixture of works in prose and poetry, on religion and politics, fashion and floral topics, bears witness of different tastes, and of that kindly toleration which must be exercised where one person has an individual liking for that in which another may see no beauty or use whatever.

In the sitting-room a little bird swings to and fro in his gilded cage. Just now he is looking out upon, and no doubt longing to make a more intimate acquaintance with, the vines that lend to his window a touch of the vanished summer.

To the writer he is different from all other birds, dearer and more familiar than all the rest of his feathered tribe. He has always been tenderly cared for. Some day his little life will probably come to an end in the claws of some ferocious cat; but such an end to his existence will cause lamentation and heartfelt sorrow.

This same sitting-room has a cosy and homelike appearance. It points to neither formality nor disorder, and is hardly suggestive of either poverty or riches. The carpet is ingrain and of Eastlake design. There is in it a blending of scarlet and oak and wood colors and brown. It asserts its cheerfulness by night as well as by day. It is a blessing to have a carpet that lights up well.

There are chairs of several designs. One is large enough for a "sleepy hollow," another a pretty modern cane-seat ladies' rocking-chair, another a folding-chair, with a pattern of green and white on the scarlet ground-work of the Brussels carpet that forms the seat and back.

But let me not omit mentioning what was an old-fashioned splint-bottomed rocking-chair, which by reason of time and use fell into the hands of a colored man, who offered to reseat it with *corn-shucks* for a moderate compensation. He returned the chair with a much more durable seat than the one it had been furnished with in its first estate, and its appearance was also a good deal more satisfactory to the eye. That was nine years ago. It has been in constant use ever since, and still there is no sign of its wearing out.

Here and there are tidies of home manufacture. These are made of white thread or knitting-cotton, some of them in square, others in wheel crochet. One wants a tidy that will wash, in a sitting-room. Ours are for use as well as for show, and the material of which they are constructed is so easily washed that it is possible to see a head lean against them a dozen times a day without fear and without reproach.

Two rustic frames, made of gnarled and twisted grape-vine branches and roots, are hanging on the wall. They are varnished so as to show the natural color of the wood, and were the gift of a friend, who fashioned them himself. In one is a basket of cherries and in the other a bunch of the broad leaves and delicate blooms of the lily of the valley. A large picture of "Apple Gathering" hangs in the centre of the wall; on either side of it a little bracket supports a Parian vase that is just now filled with a winter bouquet.

Over the clock that ticks on the mantel is one of Prang's chromos in a somewhat elaborate frame. The gray tints in the cross rather tone down and soften the coloring of the moss rosebuds, pinks, pomegranates, and nasturtium leaves that, in vividness of hue and variety of form, are near akin to nature.

A motto tells ever more the comforting assurance that "The Lord will Provide," and several family pictures are hung in various places, while last, but not least, an engraving of "Erin Farewell" turns a beautiful, sad, pathetic face away from home and country.

A sewing-machine occasionally lends us the "music" of its voice. It is a Singer.

A large home-made rug before the hearth bears witness of dresses whose form and substance came to a worthy end in long strips for the rug-needle, that reproduced them in new and geometrical patterns.

A bright fire blazes in the grate. The coals throw a glow of condensed cheerfulness into the room.

Sometimes those same coals are of practical use in making toast. For that purpose wood may as well hide its diminished head.

And now let me turn from the extension table with its scarlet and black cover, the lounge of black-walnut and Brussels, the lamps, match-boxes, and other et ceteras, to the last article I shall mention in the room. It is the desk on which this document is written. It sits in a cat-a-cornered nook by one of the windows. It is a costly little affair, to its owner a sanctum, and a place for almost everything; so that it would put to the blush the miscellaneous collections of the pockets of half-a-dozen of the average boys of the period. On its top shelf a bust of Psyche raises its pure head and shoulders from the mass of flower-like petals, whose pedestal is hidden in a mossy mat of autumn colors, while on either side a clear glass bouquet-holder sits, engraven with fronds of fern. Ah! home, sweet home. Thou art a very sanctuary of cheerfulness and calm. Within thy sweet seclusion is peace of mind, and love that knows not any shadow of turning. Dear reader, if your home is not so sweet and pleasant to you as the one of which you catch a casual glimpse upon these pages, let me urge you to take heed of the parting admonition: Make it so.

L. G. PATTERSON.

It was at the Battle of Edge Hill that Sir Jacob Astley made his remarkable prayer: "O Lord! thou knowest how busy I must be this day: if I forget thee, do not thou forget me. March on, boys."

## HOUSE DECORATION.

I CANNOT hope to say anything new on the subject of house decoration, and yet I would offer a few suggestions that may prove acceptable to some one, more especially to those whose means are limited and their income small. An ingenious and tasteful woman cannot afford nor will she be content to live without fancy articles about her, when so many can be made so cheaply. She may not have means to purchase rare and costly ornaments that her more wealthy neighbor or friend may have, but yet with a little skill she need not relinquish all hope of gratifying her taste or love of the beautiful. Nothing adds more to the cheerfulness of a room than a window garden filled with nice plants. With a little care any one may succeed with Geraniums, Fuchsias, and Begonias. No one plant is more easily cultivated than the Geranium, both single and double sorts. They thrive under the most common culture, only needing air, sunshine, and water judiciously used, and they will repay you with an abundance of bloom, and make cheerful the dreary days of winter. And then the wreathing vines add a grace and elegance to pictures, curtains, and walls that nothing else can do, and there are few things more suitable for decorating our homes in winter than the beautiful trailing moss and running vine mixed with the brightly tinted autumn leaves. With a little taste in arranging them about your rooms, they will add loveliness and grace even to what was lovely without them.

And then a Wardian case filled with Coleus plants, exquisite Ferns, and lovely moss is a very beautiful object; it does not need the sun and will thrive even at a north window, and all the care it requires is a sprinkling of water once in four or five weeks. The result will be a perfect mass of green, of graceful Ferns mingled with the beautiful foliage of the Coleus plants.

Pictures most certainly should adorn our walls, and beautiful mottoes may be made in spatter-work. Select a few graceful and delicate ferns; take a piece of cardboard, a tooth-brush, a piece of wire screen, some india-ink, and small pins, or needles. Arrange your ferns on the cardboard and fasten them with pins; put a little water in a saucer, and rub the ink until it becomes the desired shade; then hold the screen parallel with the ferns, and after just touching the brush to the ink, rub it carefully across the screen; continue the process till it becomes very dark. When the ink is perfectly dry remove the pins and take off the ferns, when the form will appear. Brackets may be made and covered with handsome lambrequins in appliqué or worsted work, and for variety a shelf may be made. Cover the top with red opera flannel; work on canvas a strip about two inches wide, in some handsome pattern, with scarlet and white. Get at the furniture store scarlet fringe to finish it, and tack the whole with fancy tacks. It is very handsome, and an ornament to a room. Many pleasing ornaments can be made for the decoration of our rooms with very little trouble, and when done make the whole combination delightful.

MRS. E. D. ALLEN.

RUTLAND, JEFFERSON CO., N.Y.

## Household Elegancies.

### MARCIA GRAHAM'S HOME.

ONE evening last October Frank came home and said: "I've good news for you, Nell: I have to start for St. Louis to-morrow morning, and shall be gone a week."

I looked at him rather blankly, I suppose, and was just going to say reproachfully, "O Frank!" when I saw a twinkle in his eye, and waited for further developments. For you see we had been married only a few months, and though I knew perfectly well that his business was liable to call him away at any time, he never had been obliged to leave me before.

"Perhaps, my dear Mrs. Allan," he continued, "you are not aware of the fact that the Chicago, Alton, and St. Louis Railroad goes through —, and that you—"

"Can go and see Marcia," I interrupted, springing up and clapping my hands in a very school-girlish fashion. "Isn't that splendid! Why, Frank, I'm almost willing to have you go away."

That you may understand the sudden change in my mental atmosphere, I shall have to tell you that Marcia was one of my very dearest friends. We had been schoolmates, had graduated in the same class, and then had taught together a year. Soon after I went East to study music, and Marcia married Ralph Graham. After two years' absence I came home to be married, and the Fates, or something else, had kept us from seeing each other till now.

So, perhaps, you can imagine something of my feelings as I stood at her door the next afternoon, half trembling lest I should not seem the same to her or she to me; and something of her surprise when she answered my tap. Her warm welcome assured me that I had not lost my place in her heart, and I was not long in finding that she was the same bright, earnest, loving Marcia of old, with the added grace of wife and motherhood.

Her home was just like herself, cheery and bright, and everywhere showing the mark of refined taste, though you could see there was nothing expensive in it. Indeed, Marcia assured me that two hundred dollars would cover everything they had bought, for she had her organ and sewing-machine before she married, and her silver were all wedding presents. I do not intend giving a full description of all her rooms, and just how they were furnished, but I found so many ideas and hints in the *ornamental* part that I should like to share them with the "members of the CABINET."

One of the first things that attracted my attention in her sitting-room was a gray cross, twined with autumn leaves, on a bracket over the organ.

"Where did you get such a lovely marble cross?" I exclaimed.

"Oh!" laughed Marcia, "I made it. That is only spatter-work. I got the idea from the FLORAL CABINET, and I think myself that it is pretty."

For the benefit of those who, like myself, did not take the CABINET last year, I will explain that the cross was made of wood an inch square and about eighteen inches high, with the arm twelve inches

long. This was smoothly covered with white paper, and then spattered to imitate granite. Leaves were clustered around the base, and by the aid of wire twined gracefully around the cross. I thought it prettier than any wax cross and leaves I had ever seen, and certainly it is much easier made. But the bracket—the lambrequin to the bracket, I mean—was even prettier than the cross. It was made of heavy white bristol-board. The design, which was Marcia's own, was cut from paper, then laid over the lambrequin, so that only the design was spattered at first. Afterward the paper was removed and the rest spattered. In this manner the design was much darker than the rest of the lambrequin.

Marcia's husband made the shelf. The lambrequin was tacked to it; and then a strip of cardboard the width of the gimp, and spattered very dark, was pasted over the tacks. If any of you should make the cross, be sure and make a bracket to match.

On a small table near by was a bound volume of "CABINETS." The covers were of heavy gray bristol-board, spattered with scarlet, leaving the words "LADIES' FLORAL CABINET," and the border of ferns, gray. The edges were bound with scarlet ribbon and the covers tied together with the same. Marcia said she used Leamon's scarlet dye for this (idea No. 2 from the CABINET), but thought she should use sepia for the next volume.

"While we're talking of spatter-work," said she, "here's something else," and she opened a roll of cardboard.

"Quo Deus vocat!" O Marcia! our class motto," I exclaimed. "How came you ever to think of such a thing? I've always wanted it in some shape or other, but didn't know how it was to be done." The letters were made of tiny ferns and afterward outlined with a brush and India ink, for Marcia was a bit of an artist. For ornament she used the Hartford Trailing Fern and some fine grasses.

Before I came home she helped me make the motto for myself (only I took the translation, "Whither God Calls"), and I can testify to the immense superiority of a small piece of sieve over the old fine-comb method.

There were several very pretty vases in the room; some vines growing in them, others holding ferns, leaves, and grasses. Marcia called my attention to one, a delicate sea-green, standing in a moss mat, and asked how I liked it.

"It is very pretty indeed," I answered; "but why do you ask?"

"Because you might not admire it so much if you knew that I made it out of a lamp chimney"; and then I noticed for the first time that its shape *was* that of the scalloped-top chimney. I presume you all know the kind I mean. Her method of making it was much simpler than any I had ever heard of. On the outside she gummed a spray of trailing Arbutus (decalcomania) and bands of gilt paper; and then with a rather broad brush painted the inside. She used oil-paint—such as comes in tubes—mixing white with the green. The vase was set over a wide-mouthed bottle, and had a Madeira vine growing in it. She had made a white and blue one in the same manner, and these were in the bed-rooms.

She did not have plants in the house, though she is passionately fond of them; for she could not very well keep them out of reach of little Robbie, just running around. But at the windows she had shells with Tradescantia growing in water, and the same behind the pictures. There was a bouquet of dried grasses, the prettiest I ever saw, that I must tell you about. A few stalks of feather-grass had been wet and lightly sprinkled with flour, then a few more were sprinkled with flour mixed with vermilion powder. These were arranged lightly in a vase with other dried grasses, and you've no idea how they brightened the bouquet.

Marcia said she detested colored grass as a general thing, and shouldn't have used the vermilion if she had had bright autumn leaves to have given a little color to the bouquet. It is worth telling (if everybody doesn't already know it) that in order to give a light, natural appearance to a bouquet of grasses, ferns, or leaves, the vase must be filled with sand.

In the dining-room was a quaint old secretary that had been in the Graham family a great many years. This Marcia had made into "a thing of beauty" as well as "Centennial" interest. In the upper part were doors with a great many panes of glass, twice as long as wide. Behind each pane she had fastened pictures on tinted paper—some of them her own water-colors, the rest of them decalcomania—and the result was panel-pictures.

I asked her how she kept her furniture looking so bright and fresh. She said that about twice a year she used a varnish, made very thin with turpentine, so that it would dry quickly, on articles that had been varnished. On those that were oiled she rubbed with a soft cloth equal parts of linseed oil and turpentine.

There was a novel rag-bag in the corner of the dining-room, near the sewing-machine. She said she had no closet to keep a rag-bag in, except in the bedroom. So she was of necessity obliged to invent one. It was a three-cornered affair, larger at the top than bottom, and about three feet high. It was made of heavy pasteboard, the front and lid covered with brown cambrie, and bound with scarlet braid.

Her paper-holder was very easily made, yet quite as pretty as more elaborate ones. She took the cover of an old atlas, covered it with brown velvet paper, on the front gummed an embossed medallion picture, then with a large awl made half a dozen holes in the ends of both sides. Through these she knecd scarlet cord, fastened the same to the back to hang it by, and the holder was done.

I should like to tell you of her dainty bedroom furnishings, and her contrivances for lessening and saving work, but they will have to wait for another time.

One thing that made Marcia's house so pleasant to look at was that there was no over-ornamentation. It did not look, as I have seen some houses, as if a fancy store had been emptied into it. She showed me half a dozen pictures and a number of fancy articles that she had put away because she had no place for them without crowding. Happy are those who have the taste and the tact to make their homes as refined and attractive as was Marcia's.

Mrs. E. P. A.

## MELANGE.

## BINDING FLORAL CABINETS.

OF course we will send them to a good establishment to be elegantly bound, if we can. If we cannot, we will bind them ourselves, and elegantly too. It is not so difficult as some might think.

The first requisite is two sheets of heavy cardboard of the right size. On one side of each we will spread boiled flour paste evenly, using but little; then lay on old, lustreless black silk, and with a soft cloth press and rub it perfectly smooth, folding the edges over on to the under side of the cardboard and pasting them down. When this is thoroughly dry, we will cover the other side of each piece with marbled paper, which should reach nearly, not quite, to the edge. Then arrange THE CABINETS in order, and with an awl make a row of holes an inch apart along the back edge, half an inch from it, and with a darning-needle and strong thread sew all together; laying the papers on the edge of the table for convenience' sake, and passing the needle down through one hole, up through the next, and so on till the last one, then back to the beginning in the same way. Now we want some good glue; with a brush apply some

THREAD PICTURE-FRAME.

along the back edge of one cover on the paper side, and lay on a sheet of marbled paper for fly-leaf, more glue, and fasten on the frontispiece—the lovely "Glee Maiden," perhaps; then the title-page and index in the same way. Apply more glue, and lay the cover carefully in position on the papers. Turn the whole over and place the other cover with fly-leaf in the same way. Now put Webster's Unabridged on the top, and let it remain so all day or over-night; then we will do the back. For this we want a strip of strong cloth—unbleached cotton is best; cover one side with glue and press it down smoothly over the back of our book, turning the edges under neatly at the ends, and letting it lap three-fourths of an inch on the covers. Along the edge of it, on each cover, paste a narrow strip of gilt paper. Then take a strip

of heavy brown paper exactly as long as the covers, and exactly wide enough to cover the back and reach to within a line's breadth of the outer edge of the gilt strips; also a strip of black corded silk some larger than the brown paper; paste the two together, turning the edges of the silk under the paper and making the whole very smooth and neat; let it dry, then glue it in place on the back of our book, put-

EXAMPLES OF PAINTING ON POTTERY.

ting the glue only on the parts which lap over the cover, none on the back itself. It is best to do one side and let it dry before doing the other one. Now we will ornament our work; we will paint in lovely illuminated letters on the first cover "FLORAL CABINET," and below the figures "1877"; on the other cover a golden cornucopia overflowing with flowers and trailing vines. The back we will divide into sections with lines of gold paper, and paint a dainty little floral figure in each. If we cannot paint, we can use decalcomania; cutting simple letters and figures from gold paper, pasting them in place, and surrounding them with a lovely wreath. For the title-page we will take one of the green covers which THE CABINET wore several times last year, and with a sharp penknife cut out the letters of the heading, LADIES' FLORAL CABINET; then placing that part from which we have cut the letters across the middle of a sheet of cream-tinted paper, we will spatter them with black ink, doing the finishing touches, the fine lines around the letters, etc., with a pen when the spattering is dry.

Now our CABINETS are bound handsomely and

EASTER EGG ON ARTIFICIAL FLOWER.

durably, and in a manner well befitting them, earnest teachers as they are of just such art as we have used in a manner which makes them a greater ornament

than ever to our table, and which will ensure for them a most respectful and careful handling when we send them on a mission for good among our friends and neighbors.

When slippers have become a bore a

## SLIPPER-CASE

will be found a very acceptable gift to a masculine friend. Make it of heavy cardboard covered with velvet, broadcloth, or any plain material, and ornamented with braiding and appliqué or any kind of embroidering; or cover with pretty paper with bindings of gold paper or some contrasting color, and ornament with pictures, designs of pressed flowers, leaves, etc., or spatterwork.

## MENDING KID GLOVES.

Any one can sew up a rip in a glove if only they have enough patience, but to mend a tear so that it will look well and wear well is quite another thing. We have recently learned an admirable and very easy way of doing this.

Work a fine button-hole stitch all around the rent, then draw the edges together, putting the needle back and forth through the button-hole stitches, not into the kid at all.

EVA MAY.

## CORNER BRACKET.

I ALSO sawed some pretty brackets and a fancy back

THREAD PICTURE-FRAME.

to a corner bracket, for which we made a lambrequin of black cloth cut in deep points; one in the centre, and a half on each side, the straight edges coming next the wall; back of these, and coming between the points and nearly as low, are scarlet points; the edges are all pinked; then from a braiding pattern we cut vines and leaves of scarlet opera flannel, and glued around the upper part of the lambrequin next the shelf. To the space between this and the points, and even on the points, we glued other bright colors cut in fancy shapes. Some white merino and purple Irish poplin help to make it gay. Some of the leaves are veined with bright-colored silk chain-stitched through. This is quite quickly made and very pretty. On this we have a Japanese vase.

## Household Topics.

### ITALIAN OR DIAPHANIC PAINTING ON GLASS.

I HAVE always been passionately fond of paintings. Pictures of landscapes, flowers, and forms have always been my delight. But very unfortunately I had never been able to draw even a straight line. It was always with much jealous longing, and much sighing for impossible things, that I have watched my friends' tasteful pencil sketches, and the more talented ones painting bright bits of scenery on canvas. But finally my wish was, in a measure, gratified. A few years ago a lady and gentleman called at our house, and offered to give me instructions in the art of painting on glass. I demurred at first, knowing my incapacity for such things; but they quickly informed me that all the talent required was taste exercised in blending the colors harmoniously, and judgment in mixing the paints. I finally consented, with many misgivings, to take lessons from them, and have never had reason to regret it. The pictures, of course, are not to be compared with fine oil-paintings, but, executed with taste and skill, are an ornament to any room, and awaken universal admiration. Thinking some of the readers of the FLORAL CABINET might have the same longing desire, without the means of gratifying it, I have concluded to send such directions as, if correctly followed, cannot fail to give pleasure.

First, after having selected and thoroughly cleansed a glass of proper size for the picture you wish to paint, cut off the margin to the size of your glass. Then lay your picture in clean cold water until it sinks, after which remove it and lay it between dry papers to dry the surface. Then varnish your glass on the crowning side with a coat of Demar varnish very evenly, and let dry until it is just tacky, then lay your glass with varnish on your picture, in the position you wish it to appear on the glass; then turn it over and lay on dry papers, and with a cloth rub thoroughly from the centre each way; then turn the face of your picture up and hold to a front light, still keeping the wet paper covered with the dry, and rub till that sweaty look disappears, then set it away to dry from twelve to twenty-four hours; then by thoroughly wetting the paper you can roll it off quite clean, and when dried varnish again with a coat of Demar varnish diluted about one-fourth with spirits of turpentine, and if the paper is off clean enough it will become quite clear. It is then ready to paint.

#### FOR A LANDSCAPE.

Paint your foliage first; for this take light chrome yellow; add Prussian blue enough to produce the shade of green desired; then for earth take white and add raw sienna enough to produce a yellowish brown color; for distant mountains still lighter, and for rocks and trunks of trees a shade darker by adding a little Vandyke brown; for water take white and a very little blue; for sky take white and add a little scarlet lake and paint across the lower part of the horizon; as you go up add more white, then add very blue to the white; as you near the top a little deeper blue and finish to

or crimson lake, and add very little blue and white; for gold yellow use Italian pink or yellow lake, and lay foil at the back; also lay foil at the back of crimson lake whenever used clear; for hair take white and add raw sienna and Vandyke brown; make lighter or darker with more or less of the brown; paint eyebrows the same as the hair; for eyes, first touch the spot on the sight with white, then add the least touch of blue to the white and paint the white of the eye; then the part indicating the color of the eye to your fancy; for lips use scarlet and white; for flesh-color take white and add a little scarlet lake and Naples yellow, flush with the scarlet, and blend with the finger. Mix all your colors with the diluted Demar varnish, the same as you varnish your picture with the last time, and cover thoroughly each part with its appropriate colors, and it will be finished.

#### LIST OF COLORS NEEDED.

The paints come in tubes, with the exception of white, and consist of the following colors: ivory black, Prussian blue, burnt umber, Vandyke brown, emerald green, Naples yellow, light chrome yellow, chrome orange, Italian pink or yellow lake, raw sienna, burnt sienna, scarlet lake, and crimson lake.

The pictures to be painted, uncolored wood-cuts, and should have no glaze on them.

EMMA A. REFSNYDER.

### TO WASH FLANNELS.

A CORRESPONDENT of the *Boston Journal of Chemistry* says: "I will give a little of my experience in washing flannels. I was taught to wash flannels in hot water, but it is a great mistake. In Italy my flannels came home from the wash soft and white. I learned that the Italian women washed them in cold water. Many a time I have watched them kneeling in a box, which had one end taken out, to keep them out of the mud, by the banks of a stream, washing in the running water, and drying on the bank or gravel without boiling; and I never had wash-

ing done better, and flannels never half so well. I have tried it since, and find the secret of nice, soft flannels to be the washing of them in cold or luke-warm water, and plenty of stretching before hanging out. Many recipes say, Don't rub soap on flannels; but you can rub soap on to the advantage of the flannels, if you will rinse it out afterwards and use no hot water about them—not forgetting to stretch the threads in both directions before drying. Flannels so cared for will never become stiff, shrunken, or yellow.

LIFE'S MORNING AND EVENING—SUNSHINE AND SHADOW.

the top; then cloud with ivory black and blend with the finger.

#### FOR FIGURES.

Paint all drapery and surroundings first. For drapery green use emerald green; for buff use Naples yellow; for bright yellow use light chrome yellow; for orange use chrome orange; for bright red use scarlet lake; for pink take either scarlet lake or crimson lake; add white in proportion to the depth of color desired, the same with blue, which never use clear; for brown take burnt umber and add Naples yellow; for purple take either scarlet

## Hints in Housekeeping.

## USEFUL RECIPES.

**Patten Honey.**—Take 4 pounds of sugar, one-half pint of water, 2 teaspoonfuls of alum; boil 5 minutes; strain; then add 1 teaspoonful of flavoring composed of 3 drops oil of rose in 1 gill of alcohol, and it is fit for use.

**Puffs.**—One quart of milk, 6 eggs, 16 tablespoonfuls of flour, and a little salt; bake in small tins or cups.

**Sponge Cake.**—Four eggs, one and one-half cups of sugar, 1 teaspoonful of butter, 2 tablespoonfuls of sweet milk, 2 teaspoonfuls of baking powder, and one-half cup of corn-starch; finish with flour; do not make it stiff.

**Cocoanut Cake.**—Two cups of sugar, one-half cup of butter, the yolks of 4 eggs and 1 whole one, beaten until very light; add one-half cup of sweet milk, one-half cup of corn-starch; finish with flour; bake in jelly tins. Beat the 4 whites to a stiff froth, add 1 cup of sugar, 4 tablespoonfuls of corn-starch, spread layers, and sprinkle plentiful with cocoanut.

**Jelly Roll.**—One cup of sweet milk, 1 tablespoonful of butter, 4 eggs beat separately, 2 teaspoonfuls of baking powder, one and one-half of sugar, two and one-half cups of flour; bake in a square pan, roll, spread, and roll while hot.

**Sponge Ginger Cookies.**—One cup of butter, one-half cup of sugar, 1 tablespoonful of soda, 1 tablespoonful of ginger, 2 cups of molasses, 2 eggs. Rolled and cut like cookies.

**Steamed Pudding.**—One quart of flour, 1 cup of raisins, 1 of currants, 1 cup of chopped suet, one-half cup of molasses, one-half cup of sugar, 1 teaspoon of soda, 2 cups sweet milk, a little salt; mix and steam three hours. Served with sauce.

**Elderberry Pie.**—Two cups of berries, 1 teacup of sugar, 1 tablespoonful of vinegar, 2 tablespoonfuls of water, 1 tablespoonful flour. Baked with two crusts.

**Omelettes.**—Six eggs, yolks and whites beaten separately, 1 tablespoonful sugar, flour, with lemon. Bake fifteen minutes.

**Chicken Salad.**—One common-sized chicken, 2 hard-boiled eggs, 1 pint of fine-chopped cabbage, 3 pickles, 2 bunches of celery chopped fine, all chopped separately very fine; add salt and pepper, then mix well together, and make in little balls, and it is ready for the table.

**Black Cake.**—One pound of butter, 1 pound of sugar, 1 pound of citron, 1 pound of figs, 4 pounds of currants, 1 pound of raisins, 1 cup of molasses, 1 cup

of brandy, 3 nutmegs, 1 tablespoonful of cloves, 1 of cinnamon, 1 of mace, 1 ounce of charcoal, 8 eggs.

**Cocoanut Pie.**—Grate one cocoanut; add 1 pint of sweet milk, 3 eggs, 1 cup of sugar, a little salt; add the cocoa milk first. For two pies. Baked without a top crust.

**Pie Crust.**—One and one-half cup of lard, 1 cup of sweet milk, 1 teaspoonful of baking powder, salt one-half teaspoonful; stir the baking powder and lard in the flour first.

**Mince Pie.**—Five pounds of beef well boiled, 3 pounds of chopped suet, 3 pounds of raisins, 2 pounds of citron, 1 tablespoonful of lemon, 2 of cinnamon, 4 nutmegs, 1 teaspoonful of ginger, 1 of salt, 4 pounds of currants, 6 pounds of sugar, 12 apples, one-half pound of butter.

**Artificial Oysters.**—One pint of grated sweet corn, one-half cup of sweet milk, 1 teaspoonful of salt, one-half teaspoon of pepper, 2 cups of flour, 3 eggs. Beat well and fry like griddle-cakes.

**Christmas Plum Pudding.**—One pound of raisins, 1 pound of currants, three-quarter pound of citron, 6 eggs, 1 teaspoonful ginger, one-half of nutmeg, 1 gill of whiskey, 1 small loaf of baker's bread, 3 ounces of sugar. Boil from three to four hours, and do not let it stop boiling. Do not tie too close. It is to be eaten with a brandy sauce.

**How to Can Corn.**—To each quart of corn add 1 small teaspoonful of tartaric acid; boil 15 minutes and seal; when prepared for the table add to each quart 1 small teaspoonful of soda.

**A Dish of Snow.**—Select very juicy apples, pare and core, and stew them in clear water till soft; then pulp them through a sieve, and sweeten to taste with powdered sugar. Spread this when cold in a deep glass dish. To every apple allow the white of one egg; beat these whites with powdered sugar to a stiff froth, and pile it high upon the top of the apples. Any flavoring preferred may be used in the apples and snow.

**Cookies.**—Two cups of sugar, 1 of butter, one-half cup of sweet milk, 2 teaspoonfuls of baking powder. They are very good.

**Lemon Pie.**—One tablespoon of corn-starch, one cup of boiling water, 1 cup of sugar, 1 egg well beaten, the grated peel and juice of 1 lemon; baked between two crusts.

**Crullers.**—Four tablespoons of butter, 1 cup sugar, one-half cup of sweet milk, 2 eggs, 1 and one-half teaspoon of baking powder, one half of a nutmeg.

**Fruit Cake.**—One cup of butter, 2 cups sugar, one-half cup of brandy, one-half cup of milk, 1 pound raisins, 1 pound currants, one-half pound of citron, 2 teaspoonfuls of baking powder, one-half cup of

molasses; sift flour over the fruit, and rub them in it to prevent them from settling while baking, and use your own judgment about the flour. It is very good.

**Spiced Cherries.**—One gallon of seeded cherries, 4 pounds of sugar, 1 pint of vinegar, 1 ounce of cinnamon, 1 ounce of mace, one-half ounce of cloves, one-half of allspice; cook slightly, then seal them.

**Rusks.**—One quart of bread sponge, 1 cup of sugar, one-half cup butter; make in a stiff, soft dough. When very light roll about an inch thick. Cut and let them rise again, then bake.

**Buns.**—One cup of butter, 1 cup of sugar, one-half cup of yeast, one-half pint of sweet milk; make it stiff with flour; add allspice and nutmeg, let rise and bake.

**How to Cook Cranberries.**—One teacup of cold water to 1 quart of cranberries; after cooking 10 minutes add 2 cups of sugar. Cook ten minutes longer. Stir while cooking, then mould; you will find them very nice indeed.

**Marble Cake.**—*For the white part.*—One-half cup of butter, 3 cups of white sugar, 4 cups of flour, one-half cup of sweet milk, 2 full teaspoonfuls of baking powder, the whites of 8 eggs; flavor with lemon.

*For the dark part.*—One-third cup of butter, 2 cups of brown sugar, 1 cup of molasses, 1 cup of milk, 2 teaspoonfuls of baking powder, 2 cups of flour, yolks of 8 eggs. Spices of all kinds. First a layer of the dark, then a layer of the white, and finish with the dark.

**Corn-Starch Cake.**—One cup sugar, one-half cup of butter, 5 eggs, 1 and one-half cup of flour, one-half cup of sweet milk, 2 teaspoonfuls of baking powder.

**Crystallizing Flowers and Grasses.**—Put 18 ounces of alum into a quart of water, keeping the same proportion for a greater or less quantity, in close, tinned vessel over a moderate fire, stirring it frequently with a wooden spoon. When the solution is completed, it must be poured in a deep glazed jar; as it cools, the subjects intended to be crystallized should be suspended in it by a piece of thread or twine from a stick laid across the mouth of the jar, where they must remain for twenty-four hours. When taken out they are to be hung up in a shady place to dry. Then arrange as you like.

**A Recipe for Removing Grease.**—Scrape a small cake of soap in a quart of cold water. When dissolved add 2 ounces of spirits of ammonia, 1 teaspoonful of saltpetre. Shake them well in bottles, and cork tightly. Wet the places to be cleaned well with the eradicator, rubbing briskly with a sponge or brush; rinse with cold water.

**Pudding Sauce.**—Four ounces of butter, 6 ounces of sugar, 1 nutmeg.

## BUTTER-WORKER.

The most effective, simple, and convenient yet invented. Works 30 lbs. in less than 5 minutes, thoroughly working out butter-milk and mixing in the salt. AGENTS WANTED. Send for circular. **A. H. REID,** 6 N. Eighteenth St., Philadelphia, Pa.

## BEAUTIFUL FLOWERS A GREEN-HOUSE AT YOUR DOOR.

My New Catalogue for 1879 is the best and most comprehensive work issued. It contains numerous ENGRAVINGS, illustrating thousands of the best FLOWERS and VEGETABLES, and also descriptions of all the BEAUTIFUL PLANTS. Mailed for a 3-cent stamp. To customers free. Seeds or Plants by Express or Mail. (Safety guaranteed.)

**WM. E. BOWDITCH,** 645 Warren St., Boston, Mass.

## ROSES

6 for \$1, 14 for \$2, post-paid. Bedding and Greenhouse Plants by mail. Catalogue free. **J. T. PHILLIPS & SON,** West Grove, Chester Co., Pa.

2,000,999 Strawberry, Raspberry, Blackberry, Currant, Grape-Vines, Asparagus Roots, Peach-trees.

100 SELECTED VARIETIES. Genuine stock. Quality best. Prices lowest. Send for free Catalogue to **JOHN S. COLLINS,** Moorestown, New Jersey.

## NEW, RARE, OR CHOICE.

To Farmers and Gardeners.—I offer the following NEW, RARE, or EXTRA CHOICE Vegetable Seed, postage paid by me:

**Marblehead Early Sweet Corn.**—Decidedly the earliest of all varieties of sweet corn. Per package, 15 cents.

**Egyptian Sweet Corn.**—Decidedly the sweetest of all varieties of white sweet corn. Per package, 10 cents; per pound, 35 cents.

**Marblehead Mammoth Sweet Corn.**—The largest of all varieties, and the earliest of the extra large kinds. Per package, 15 cents; per pint, 35 cts.

**Longfellow's Yellow Field Corn.**—Kernels and ears extra large, not suited to the South. Per package, 10 cents; per quart, 55 cents.

**Early Amber Sugar Cane.**—Samples of the sugar, and full instructions for cultivation and making of sugar, sent with each lot. Per quarter pound, 16 cents; per pound, 45 cents.

**Bastian's Early Blood Turnip Beet.**—The best of the early; a great acquisition. Per ounce, 12 cents; per pound, \$1.25.

**Hancock Early Pens.**—The best cropper, and purest of all the extra early sorts. Per package, 10 cents; per quart, 60 cents.

**Tailby's Cucumber.**—Large, very handsome, and very prolific. A prize for any garden. Per package, 15 cents; per ounce, 35 cents.

**Marblehead Champion Pole Beans.**—15 cents per package. The earliest of all varieties.

**Kentucky Wonder Beans.**—15 cents per package. Compared with scores of varieties, they have proved the most prolific.

**Butman Squash.**—20 cents per ounce; 10 cents per package.

**Marblehead Squash.**—20 cents per ounce; 10 cents per package.

**Hubbard Squash.**—20 cents per ounce. As the original introducer of these three splendid winter varieties, I offer seed grown specially for purity.

**Cocoanut Squash.**—10 cents per package; 30 cents per ounce. Excellent in quality and an elegant ornament for the parlor. Very prolific.

**Danvers Carrot.**—\$1.50 per pound, 15 cents per ounce. Forty tons have been raised to the acre.

**Sil's Melon.**—A canteloupe; sweet, spicy, delicious. Per ounce, 20 cents.

**Vick's Early.**—20 cents per ounce; 10 cents per package. The best of all the early watermelons.

**Excelsior Melon.**—25 cents per ounce; 10 cents per package. Has been raised in Massachusetts to weigh 75 lbs. Quality excellent.

**White Egg Turnip.**—The new American turnip. Early, large, and of excellent quality. Per ounce, 15 cents.

My Seed Catalogue, treating of all the above varieties in detail, and an immense collection of Vegetable and Flower Seed, will be sent free to all who write for it. **J. J. H. GREGORY,** Marblehead, Mass.

Beautiful **FLOWERS** At Every Home Delivered Safely by Mail. **HENRY S. RUPP,** Shiremanstown, Camb. Co., Pa. **CUMBERLAND NURSERIES.** Send for Catalogue.

ESTABLISHED IN 1845.

136 pages, beautifully illustrated. Indispensable to all interested in gardening. Mailed to all applicants enclosing 6 cents; regular customers supplied free. Address

**B. K. BLISS & SONS,** P. O. Box 4,129, 34 Barclay St., New York City.

## GEO. P. ROWELL & CO.

# THE LADIES' FAVORITE

By HENRY T. WILLIAMS.

NEW YORK, MAY, 1879.

No. 89. PRICE 12 CENTS.

## THE FROST FLOWERS OF RUSSIA.

A CORRESPONDENT describes an extraordinary frost flower of Russia, which has been produced, it is said, in Boston in a temperature of artificial cold. This wonderful plant, or rather flower, is found only on the northern boundaries of Siberia, where the snow is eternal. It was discovered in 1863 by Count Swinskoff, the eminent Russian botanist, who was ennobled by the czar for his discovery. Bursting from the frozen snow on the first day of the year, it grows to the height of three feet, and flowers on the third day, remains in flower twenty-four hours, and then dissolves itself into its original element—stem, leaves, and flowers being of the finest snow.

MANTEL SHELL FLOWER-STAND.

The stalk is one inch in diameter; the leaves—three in number—in the broadest part are one inch and a half in width, and are covered with infinitesimal cones of snow; they grow only on one side of the stalk, to the north, curving gracefully in the same direction. The flower, when fully expanded, is in shape a perfect star; the petals are three inches in length, half an inch wide in the broadest parts, and tapering sharply to the point. These are also interlaced one with the other in a beautiful manner, forming the most delicate basket of frost-work, the

most wonderful. The anthers are five in number, and on the third day after the birth of the flower of snow are to be seen on the extremities thereof, trembling and glittering like diamonds, the seeds of this wonderful flower, about as large as a pin's head

PARLOR AQUARIUM.

The old botanist says, when he first beheld the flower, "I was dumb with astonishment; filled with wonderment, which gave way to joy the most ecstatic

on beholding this wonderful phenomenon of snow—to see this flower springing from the snowy desert, born of its own composite atoms. I touched the stem of one lightly, but it fell at my touch, and a morsel of snow only remained in my hand." Gathering some flowers in snow in order to preserve the little diamond-like seeds, he hied to St. Petersburg with, to him, the greatest prize of his life-time. All through the year they were kept in snow, and on the first day of the year following the court of St. Petersburg were delighted with the bursting forth of the wonderful frost flower.

## A DRY PATH FOR GARDENS.

"A GOOD dry path may be made in the following

SHELL FLOWER-STAND FOR MANTEL.

manner," says a recent writer: "After removing three or four inches of the surface soil put in a layer of broken stones or bricks, road-metal size, and fill in the interstices with smaller stones and sand mixed with as much coal-tar as will moisten it and no more. It should then be rolled. In three or four days give a coating, one-eighth of an inch thick, of sand and coal-tar, made as dry as possible, and roll again, first sprinkling the surface with dry sand to prevent the mixture from adhering to the roller. In ten days it will be fit for use."

## Floral Experiences.

### SUGGESTIONS ON THE CULTURE OF FLOWERS.

WHEN one, with a view to selection, looks over any one of the beautiful flower catalogues that are now obtainable on every side, it must be with the feeling that Mrs. Stowe once said it gave her—a sensation of “exasperated bewilderment,” not being able to make any choice where all were so beautiful and seemed to have so many advantages. If one who has a knowledge of flowers feels thus, how puzzled must be the novice who is just starting out to cultivate a few flowers, with perhaps but little room and little cash!

These remarks are given as the result of experience and observation, and are especially addressed to the consideration of those who have but limited means and opportunities. It is the general peculiarity of flower books and catalogues that they seem addressed to those who, if they have not the purse of Fortunatus, must at least have good “long pockets.”

In a garden intended for flowers alone the beds may be laid out and planted according to individual preference; there is no absolute rule for such things, but due regard should be paid to the requirements of the plants as to sunlight, shade, shelter, etc., and observe care in planting so as to avoid all inharmonious mixture of colors. Do not plant tall varieties in front of low ones, nor leave running vines without support. All the peculiarities of each plant as to color, height, duration of bloom, etc., are described in the larger catalogues at comprehensive length.

Portulacas, Pansies, Fuchsias, Ice Plants, and a few others need to be slightly shaded from the mid-day sun; plant beside taller-growing plants, so placed that they will intercept the vivid sunlight, or beside a lattice fence; a tree or a board fence makes too much shade.

Most of the more common flowers delight in all the sunshine they can get, and will do well with pretty much the same general cultivation. Give them rich, light, open soil; keep clear of weeds and do not let them suffer for water, but remember that the rain does not come every day, and you will see that flowers do not need watering nearly so often as many people think. Remember, too, that rain-water in the growing season is *never cold*, so never give flowers water that will chill them. Water that has stood in the sunshine all day is of the proper temperature, and the best time to water flowers is late in the evening or very early in the morning; never water when the sun is hot upon them. A weekly watering about the roots with good strong soapsuds is of great benefit to almost all growing plants, but be careful of its use on the leaves of delicate, soft-wooded ones; I once completely killed a fine lemon-scented and a nutmeg scented Geranium by being too liberal with soapsuds.

Roses, especially the finer kinds, require special culture. Give them a warm, sheltered spot, and bear in mind that you cannot make the soil too rich for them. The Rose is a rank feeder and sends down

its roots sometimes more than two feet, so the soil cannot be made too deep. Use a compost of leaf-mould, well-rotted stable-manure, bone-flour, and good garden-soil. Dig a hole two feet deep for each bush, or, if you prefer them in groups, a hole the size you wish the bed to be, and fill it with the compost well pressed in but not too hardly packed. Plant carefully and firmly a fraction deeper than they grew in the pot, water freely, and shade from the sun for several days. They will scarcely fail to thrive if care is taken to keep them free of bugs and slugs. Any one wishing to grow Roses to any extent must be provided with some one of the good books on rose-growing; the directions for pruning, pinching, etc., take too much space for this article. Some prefer to grow their own Roses from cuttings, but I have found it better to get good strong plants from reliable florists, for though I have tried about every plan of which I ever heard or read, I have never succeeded in growing Roses from cuttings.

In the hope to be of help to some of modest means, I will make a few suggestions as to the beauty and profit that may be evolved from the possibilities of a ten-by-twelve backyard in a city, even New York. The first requisite is the soil; almost any market gardener will haul two or three barrels of good garden earth for a small compensation. From the florist's can be cheaply obtained a half-bushel of leaf-mould or peat-soil, and a few pounds of bone-flour; a gallon or two of silver sand would also be a good addition. When these are obtained they must be well mixed together; then there is a compost in which almost anything will grow nicely. Property-owners will not allow the displacement of many bricks or flags, and as there is so little ground-space the flower-beds, instead of being laid out, must be built *up*, as are the New York houses.

When you are sure of your soil, provide a lot of rough boxes of different sizes, some nail and small cracker kegs, a bundle of laths, a pound of lathing nails, and a pound or two of eight and ten-penny nails. If you haven't them and do not wish to buy, borrow a rule, a saw, and a hatchet; get your materials out in the yard and go to work. You will be surprised, when once begun, how ideas will come to you and things shape themselves to your eye. Almost any girl can do all the work for herself; perhaps at the cost of some mashed fingers and a few scratches, but these will feel good when they get done hurting, and it will be so pleasant, when the summer fills your little garden with odor and loveliness, to feel that your own hands were the instruments which helped you to so much comfort and pleasure. One of your boxes should be a big, rough packing-case, say four feet long, three feet wide, and twenty-seven inches, or perhaps three feet, high. Divide the height into three equal parts, draw a line with the rule and a pencil, and saw the box into three parts; there will be one box with a bottom and two without. The loose top of the case will make one bottom, odd bits the other. Now knock off one end and one side of each of the bottomless boxes and saw sixteen inches off the length and eight inches off the width of one, and two feet off the length and sixteen inches off the width of the other; nail the corners up into shape again and nail on the bottoms. Now

you will have three trays, say nine inches deep; one four feet by three feet in size, one thirty-two by twenty-eight inches, the other one sixteen inches shorter and eight inches narrower than that. Set your largest tray on the bricks and nail it firmly to the fence. Saw one of your other boxes down to the height of nine inches and set it down in the one you have fixed; let it be as nearly as you can the size of the box that is to rest upon it; you will save much soil thereby. Set the second-size tray on this and nail it firmly to the box and fence. Fix a smaller box in the same way and nail the smallest tray to that and the fence. Now you have two three-sided flower borders each eight inches wide, and one the whole square of your smallest tray. With two cheese-boxes, a nail-keg cut in halves, and a halved cracker-keg, you may make two round pyramids to stand in the corners of the yard. You may make more if you like, and with larger and more boxes make them higher. You will soon be inventing additions and improvements. Fill your trays with the prepared soil and plant your flowers. If you can afford pot-flowers you have but to get them from the florist and set them in the trays in the order that best pleases your fancy; but if you must economize, get flower seeds and sow them thinly and very shallow where you wish them to stand. As the soil is so shallow you cannot grow large plants. The smaller plants are more sweet and beautiful. Along the edge of the bottom tray plant Abonia of both colors, inside Sweet Alyssum. In the second tray, Lobelia Erinus. In the top plant Pansies, Portulacas, China Pinks, or Verbenas; in any case using the mixed seed. When your plants bloom, as they will continuously through the summer, you will have a pyramid with a border of white and rosy lilac at the bottom, next tier deep blue, and the top, if Pinks, Portulacas, or Verbenas, all shades of red; if Pansies, a mosaic of velvet browns, purples, and yellows. The round pyramids should be different. One may have narrow-striped Tradescantia in the bottom, second tier Sedum Carnem, at the top Saxifraga Sarmen-tosa. These are not easily grown from seed, but can be had at any florist's for a few cents each. In the other plant at bottom mixed Portulacas, second tier Mignonette, at the top Drummond's Phlox, dwarf mixed, or pink Oxalis.

Most flowers do best to be sown where they are to grow, but there are but few varieties that may not be successfully transplanted, with proper care. Some time may be gained, if you have a warm room in which to keep them by sowing the different seeds in a box and placing them at first near the fire heat and then in a window with warm exposure. The little seedlings are extremely tender and must be shaded from too hot sunlight and be gently and carefully watered. I think I have named no flower in this article than such as bear transplanting.

With the hope that my suggestions may be the incentive to some tired, homesick soul to create for itself a little brightness amid the city's waste, I am,

A SINCERE FRIEND OF THE CABINET.

As a general rule, *moisture* is death to insects which infest conservatory and window plants.

## Floral Contributions.

## HINTS ON FLORICULTURE.

We will now consider the flowers that make our homes attractive.

You have never cultivated a garden or bed of flowers even, and yet you love these beautiful gifts of Nature, and wish to see the bright, dainty darlings scattered all around you; but though I shall endeavor to give you as many practical hints as my limited space will allow, *experience* is the only source through which you can attain *real* success. Flowers are classed as perennials, biennials, and annuals; and these are hardy, half-hardy, and tender. Hardy varieties can be sown from the middle of April to the middle of May, half-hardy from the first to the last of May, and tender varieties from the last week in May to the middle of June. The sowing will depend upon the earliness of the season, some springs being more favorable to early planting than others; but you can forward many plants by sowing the seed in shallow boxes, or any convenient receptacle for soil, and keeping them in the house until the earth is warm and the weather suitable for transplanting. I find that a mixture of garden-loam two parts, leaf-mould two parts, and sharp sand one part makes a good soil in which to plant seeds in the house; if the loam is heavy add more sand and mould. Sow evenly and thinly, that the plants may not crowd each other. Cover according to size of seed, the finest very slightly; some requiring to be sown upon the surface and pressed into the soil by a slight pressure. Keep your seeds warm and moist—not wet. The best way, perhaps, to secure a uniform heat and moisture is to keep them covered with wet flannel, paper, or glass. Do not allow the flannel or paper to become dry while germinating, removing as soon as they begin to appear. Give them all the sunshine possible and plenty of fresh air. Should they begin to crowd each other, thin out and transplant to other boxes, as you must have strong plants, otherwise they would become drawn and prove unsatisfactory. For transplanting choose a cloudy day—a damp one is better, if not positively wet, or evening is a good time; press them firmly in the soil, and water with water from which the chill has been taken. Protect from sun a couple of days. Some plants require planting where they are to remain, as they do not transplant well. Perennial Peas, Sweet Peas, Delphiniums, Euphorbias, Lupini, Poppies, and Candytuft, all object to removal. As regards your beds, cut them any shape you fancy, provided they are not so wide that you cannot reach the centre conveniently when working them; but the soil must be light and rich, and deeply dug. Observe the same rule for sowing seeds as in the house, as nearly as possible. Keep them covered from the sun and drying winds by newspapers fastened at edges; and Rhubarb and Burdock leaves have only to be used to be appreciated. In arranging your flowers consider adaptation to location, and avoid bringing together colors that do not harmonize. Those beds farthest from the walks may contain the taller flowers, and those of medium height of brilliant colors, which include the

tall varieties of Asters, Balsams, Celosias, some varieties of Dianthus, Antirrhinums, Petunias, Delphiniums, Lychnis, Salvias, Zinnias, etc., while in the beds near them and the house you may plant Abro-nias, Alyssum, Candytuft, Mignonette, Pansies, Portulaca, Stocks, Verbenas, Saponaria, Gypsophila Muralis, and Lobelia Erinus. Nearly all I have mentioned commence blooming early and continue through the whole summer until late autumn. It will be better to plant mixed beds of the same varieties, except where you desire masses of color or ribbon-beds. The larger varieties should be planted ten or twelve inches apart each way, and the smaller ones six. Asters and Balsams require a very rich soil, good cultivation, plenty of moisture, and partial shade to secure the finest flowers, though they will blossom under a great deal of neglect. Celosias are from one to three feet high, of many brilliant shades, commencing to bloom early and continuing to grow in beauty until destroyed by frost. To me Pansies seem almost human, and their bright little faces will look their gratitude the whole season, if you will give them a shady nook near the house where only the morning sun can smile upon them. Give them a rich soil and a plentiful supply of water, soap-suds, and weak liquid manure. Stocks are better with similar treatment, minus the suds. Dianthus and Phlox Drummondii rejoice in the sun, also Portulacas and Verbenas with a generous admixture of sand in the soil. Sweet Alyssum, Gypsophila Muralis, and Lobelia Erinus are especially adapted to small beds, edging and ribboning and unexcelled for vases and baskets where fine trailers are desired. Remove all fading flowers, except those saved for seed, leaving only one or two, which should be of the first and most perfect blooms. The forming of seed exhausts the vitality of the plants, thus shortening their season of bloom. Dahlias and Gladioli are very ornamental with a shrubby background. The exquisite beauty of Lilies renders them important to the smallest collection. Plant six or eight inches deep in rich loam, well mixed with leaf-mould or any vegetable manure; but avoid all animal fertilizers. They do best in half-shade. Ricinus, Zea (Maize), Euphorbia, and Amaranthus in variety are fine for foliage-beds, bordered with some constant-blooming trailer. The Amaranthus is also fine for centre of vases. The annual climbers are so beautiful, and cover our porches and windows with such exquisite festoons and graceful draperies, that to omit them would be to leave our gardens unfinished and our dwellings unadorned—Morning-glories, that smile so sweetly upon the early morning and climb and race up the slender cords and ramble along the eaves in tangled luxuriance; and Cyprus-vine, exquisite in flower and foliage. It loves the sun, and is suitable for porch and vase. Pour boiling water upon the seeds and let them stand over-night. Plant in warm soil. Tropæolums are excellent for porches, and unexcelled in brilliancy of flower. Sweet Peas require early and deep planting. Can be grown in clumps upon common pea-brush and are useful for screens, while in beauty and fragrance they vie with the Stock and Carnation. For a dainty bouquet nothing is sweeter than a few Pea blossoms, with sprays of Mignonette and Sweet Alyssum. If you would de-

rive the greatest pleasure from your flowers, cultivate thoroughly. Early morning is the best time to stir the soil, as the roots absorb the dew, giving health and vigor to the plants. Never work soil when heavy with moisture. In watering it is better to wait till evening, that your flowers may receive the full benefit.

MRS. L. D. HORTON.

BUNDYSBURG, GEauga CO., O.

## LICHENS.

THE heading of this article suggests something perhaps very uninteresting, but while all classes of flowers receive their share of praise, from the gaudy Cactus and queenly Roses and Lilies even to the more unpretending varieties of vines and trailing plants, we hear nothing of the unpretending Lichens.

Leaving the showy garden-border or conservatory with their rich display of exotics, let me beg you, my reader, to go forth with me into the woods on a damp morning in October or November. Low-hung clouds which have been weeping the night through are being lifted by a gentle breeze, and mist and rain-drops are mantling and trembling yet among low patches of copse-wood. Here then, just under a spray shaken by the robin's flight and brightened by a fall of scarlet berries, springs up a little flower-garden, quite complete in richness and variety. Mosses in many colors, from that of greenest velvet texture to the curled and crisped varieties in shades of dark green, light brown, and dusky red, emboss and embroider earth's brown bosom, and are fantastically dotted with what resembles a light fall of snow (though the snow, in these milder latitudes of the Middle States, is yet in the store-houses of far northern clouds).

See the old gray rock fence, where a rough pile has fallen away from its moorings, and who will fail to admire it, all beflowered and embroidered with lovely crisp and curling forms, round and oblong rosettes in delicate shades of pale green and drab, reminding one of the soft contrasts in the dress of a modern belle? But we will leave the humbler tribe of Lichens to speak of those which we once saw in an August woodland walk after a shower. Beneath a brown and gnarled oak stump was a gorgeous display of brilliant orange scarlet blossoms displaying their great fleshy and leathery leaves, and looking almost luminous with color as a broad beam of sunlight shot across them.

Again, beneath a neighboring cedar we saw with delight a great bunch of the same species, rejoicing in color of palest cream, and ruffled and crimped as tastily as was the crisp silk hat of Lucia, our village bride; so lovely was the pale cream tint of her hat and its graceful plume, and also the contrast with her soft dark eyes, that our village beauty must have gotten the idea from "under the cedar." Perhaps the reader may exclaim: "What, is all this written about nothing but a fungus?" But when we consider how they spangle the woods in the dreary time of winter with strangely grotesque and beautiful forms, we may really regard them as valuable acquisitions to Nature's floral kingdom.

HANS HATHAWAY.

## Floral Hints.

## FLOWER-GARDENING AS A MEDICINE.

OBSERVING that you wish all articles to contain "really useful information which will be a help and benefit to others," I have thought I might contribute more to this result by giving my own experience than by writing an abstract article on some particular branch of floriculture.

Last spring, being completely prostrated with a severe attack of diphtheria, I was obliged to give up all household employment, and my eyes being so affected that I could neither read nor sew, it seemed as though I had been cast back from the "valley of the shadow of death" (Ps. xxiii. 4) almost helpless and useless, too weak even to be as thankful as I should have been for the little life remaining. Medical treatment alone seemed unavailing, and I was utterly unable to endure the fatigue necessary to a change of scene. Company and talking with sympathizing friends left me more prostrate than ever. Indeed, all the stereotyped prescriptions for debility and loss of health seemed in vain.

Suddenly my husband, who is a minister, became deeply interested in floriculture. He, who hitherto had given no attention whatever to such things, began enquiring of me concerning the habits and culture of our finest plants and flowers. All hours which could possibly be spared from his own work were employed in perusing catalogues, guides, etc., and in transforming into a flower-garden a neglected corner of the lawn. And as he seemed to find it absolutely necessary that I should be near to advise in the forming of beds, sowing of seed, setting of plants, etc., by means of cushions, robes, and shawls the wheelbarrow was for the time being transformed into an impromptu lounge, and I lay in the warm spring sunshine part of each bright day, as he said, "playing overseer." Gradually the pure air, the fresh-turned sod, and warm sunlight—blessed means in the hands of our "Great Physician"—seemed to tone up the weakened nerves and arouse the failing energies, and I slowly began to realize that my dear husband's new-found interest in floriculture was to try the effect of its use as a remedial agent in restoring a dearly-loved wife to health and animation. Can you wonder, then, that the little new-found strength was used in co-operating with him in the use of the means and in seeking the blessing? Soon languor gave way to returning energy and listlessness to awakened interest, and how I enjoyed those bright spring days in the garden, helping to plan and make rustic vases, beds, etc. One of these—a Calla vase—proved such a success that I think I must describe it, together with some of our other economical arrangements, for the benefit of those who, like ourselves, may be much limited in means. We covered the half of a cracker-keg with alternate halves of peeled and unpeeled hickory and maple

limbs, placed perpendicularly upon it, ornamenting it with wild grape-vine, and placed it upon a tripod of ornamental grape-vine work. This we filled with Callas, Fuchsias, Ivies, etc., and placed in partial shade, and by watering it freely every morning we were soon repaid by luxuriance of growth and profusion of bloom that were lovely to look upon.

Our beds, some eight or ten in number, averaging fifteen feet in length and seven in width, were raised about fifteen inches to secure the proper drainage and depth of soil, and were neatly sodded, with paths about eighteen inches wide between. The soil, a heavy sod, being enriched with leaf-mould from the woods, well-rotted manure, spent ashes, etc., was rich and friable, giving promise of a great return. How anxiously I watched for the springing seed, and

ERYNGIUM LEAVENWORTHII.

how earnestly I worked, as strength would permit, at weeding, watering, and trimming the sodded borders of the beds, which was done by means of a grass-hook and a pair of sheep-shears. And as one bed after another burst forth in a gorgeous display of Phlox, Petunia, Verbena, Geranium, Pansy, Aster, etc., how I enjoyed wandering through the paths, filling baskets and vases for my own rooms and those of my friends and neighbors. It is a pleasure so pure and delightful that it never seems to pall, and in giving thanks to the Giver of all good I cannot but be grateful that he put it into the heart of my husband to use it as a remedial agent.

We both became so "enthused," as "that husband

of mine" says, with the work that as the chill approach of winter began to rob us of our treasures, he insisted on investing in a larger collection of house plants, that we might secure some of the pleasure for the long winter days. Our arrangement and method of treating these has been as follows:

First, then, we brought in our Calla stand, our pet and pride, substituting Begonias for the Fuchsias, that they might rest, and placed it upon a platform of our own planning and construction, which is a little less than four feet long, and about two feet three inches wide, with a raised edge of about one-half inch, jointed, put together water-tight with white lead, and painted. Around the foot of the vase we have placed Geraniums, Roses, Fuchsias, Primroses, and other plants, in pots with their saucers, so that all can be showered together, and the water left standing on the platform if desired for the purpose of giving moisture to the atmosphere. The platform being furnished with No. 7 plate casters, the whole arrangement can be easily moved near the fire on cold nights with one hand. This fills one window, and, in our estimation, few florists can exhibit anything more magnificent.

The other window has a southern aspect, and is occupied by a half-round plant-stand four feet in diameter, with four graduated steps, stained walnut and varnished, also our own work. On this is placed a set of three-inch bracket casters, and although crowded with heavy pots of flourishing plants, I can move it with perfect ease wherever desired. Under it I have placed a pretty bright piece of oil-cloth, so that we can shower all together with a fine rose watering-can without having to make any change. There are some thirty or more plants of Geraniums, Fuchsias, Roses, Bonvardias, Carnations, Abutilons, etc., making one mass of beauty from the floor to the top step. We place those that require the most heat on the upper steps, and having fastened a small thermometer to the back of the stand, we can tell when the room is heated to the degree required, which we allow to range from sixty to seventy during the day, and from forty to fifty at night. By dampening the broom frequently in sweeping the carpet, and by a slight showering every day, we are enabled to keep them bright and clean. In addition to the regular showering, we give a thorough watering occasionally, but only when the soil seems to need it. The only insect with which we have had any trouble is the aphid, which we have so far been able to control by dipping the plants badly infested with them in a strong tobacco tea, and, where there were but few, brushing them off with a small camel's-hair brush dipped in water.

It is an old proverb that "no excellence is attained without great labor," but let me impress upon you the value of having large-sized casters upon all vases and flower-stands for the house, so that all can be moved together easily, by means of which an immense amount of labor may be saved which is so often uselessly expended in moving pots singly from place to place.

MRS. J. F. C.

## Floral Miscellany.

### THE COMING FLOWER.

THERE can be little doubt that the new race of Tuberose Begonias is destined to play an important part in the decorative gardening of the future. The Begonia is, so to speak, the coming flower. There are two particular lines along which we may expect to see the Tuberose Begonias extending themselves—namely, as green-house summer decorative plants, and as bedding-out or rock plants. In each of these they have already distinguished themselves. As indoor decorative plants they come at a season when they are especially useful—at a time when green-house flowering plants are becoming scanty, and when for the most part recourse must be had to the tender annuals. For the decorative use

RUSTIC TERRACE VASE.

their free branching habit, and the abundance of flowers they produce while still of moderate size, eminently adapt them. Their usually rich and now varied colors particularly recommend them for this use.—*Gardener's Chronicle*.

**Ornamental Plants.**—Among our common vegetables are varieties of distinct aspect and characters of growth which might well find use in our ornamental grounds. Thus, the rhubarb affords certainly two varieties—the *Rheum palmatum* and *Rheum emodi*—the former with broad, deeply-jagged leaves, the latter with rough-looking, red-tinted foliage. The blood-red flowers and fruit of *Rheum emodi*, hanging round its tall, upright stem, are very striking. Then there is the variegated kale, with its tall stem and

cuspid-edged leaves; the orach, also, with its towering stem and ample leaves. Do not let us overlook corn, of which we have variegated-leaved varieties; nor hemp, which is a tall, branching plant of much elegance and grace.

OBLONG RUSTIC VASE.

### ARBUTUS BLOSSOMS.

I.

We sought the moorland far and wide,  
The winds blew fresh and free.  
Where can ye be, we faintly sighed,  
Sweet blossoms of the lea?

II.

Fair, pale, waxen-hued, yet flushed  
With faintest tint of rose,  
As if a maiden softly blushed  
At what love might disclose.

III.

An ivy-bough we glanced below,  
When lo! they were beneath,  
Scattered like pearls, and pure as snow  
When first it touched the heath.

IV.

Eureka!—found our treasure-trove!  
What fragrance! What delight!  
No longer mourn, no farther rove,  
Nor wish for fairer sight.

V.

Goodness, power, and love divine  
Hath formed this tiny flower;  
May faith, and hope, and love be mine,  
Increasing from this hour.

MORENO.

**Asparagus as Decorative Plants.**—As a decorative plant some species of asparagus hold a high rank. Asparagus Bronssonetie is remarkable for its great vigor and rapidity of growth, quickly gaining a height of ten feet in spring, and with a dense and glossy foliage, and is recommended in France as a covering for bowers, as well as to make pyramids of in a diversified garden of plants.

### FUCHSIAS.

**RACEMOSE.**—This must be a very rare plant, as I have never seen it described in the CABINET, neither in any floral catalogue. This plant has a spreading habit, when old throwing up numerous suckers from the root, and thus forming large clumps from one to two feet high.

The flowers, which are of a bright scarlet, are clustered at the top of the stem in a raceme, and are very narrow in proportion to their length, the length being near four inches. I have counted on my plant over forty of these long, tubular blossoms and buds in one cluster. It has a very large, beautiful leaf and is quite a free bloomer.

It is easily wintered in a frost-proof cellar. Every lover of flowers should have one of these beautiful plants in their collection.

INDIANA.

MRS. S. A. H.

**More about Bouquets.**—At the same exhibition I was awarded a prize for the best bouquets. They were composed mostly of Moss Roses and buds, Rose Geranium leaves, and Candytuft.

RUSTIC GARDEN VASE.

Flowers can be arranged very nicely, and will keep well if the stems are inserted in mud; they can be made in any form desired. Pyramids are the most common form, when made in this way. In the latter part of the season a star of the brightest kind of Gladiolus, or, better still, of different shades of Asters, on a green foundation are very nice. If of Asters, the bright colors should be in the centre, decreasing in intensity towards the points of the star. A handsome anchor made of Moss Rose buds and Geranium leaves, with a Daisy chain falling from the ring, is very handsome.

**Wire-Worms in Pots.**—To kill wire-worms in pots use salt, sprinkled over the soil, or a diluted solution, not strong.

## Floral Miscellany.

## FLOWER PENCILLINGS.

"Oh! the flowers look upward in every place  
Through this beautiful world of ours."

FROM the far-away shores of the ice-bound North, where the Rose Carnation and lovely Forget-me-not creep shivering from their crystal couch of snow, to the dreamy Lotus-land of the South,

"Where the sun with a golden mouth can blow  
Blue bubbles of grapes down a vineyard row";

from the spicy isles of the ocean to Araby's "land of the blest," the air is filled with the redolent perfumes and our eyes gladdened with the entrancing beauty of flowers. They peer at us from the wayside, the moss-grown lane, and the shadowy forest. At the foot of the mysterious pyramids, on the lonely Campagna, in the dwellings of the rich and the lowly cottage of the poor, everywhere are found the lovely harbingers of hope, silent mementoes of an Eden lost and a paradise to be regained. Beautiful flowers! They wreath the cradle, the marriage altar, and the tomb. The Persian writes his love in perfumed nosegays, and the Indian child of the far West gathers with glee the luxuriant blossoms that deck the boundless prairies. The Arab stops a moment in his wild flight o'er the burning sands to pluck a leaf of the fragrant Myrrh for his dark-eyed mistress, while the sturdy "Lap" in his furry coat looks for a gleam of the blue-eyed Myosotis or sprig of the delicate Daphne for his fair-haired maiden. Who does not remember the touching story of Pellico, the Italian patriot, confined in an Austrian dungeon in the horrors of Spielberg. When the cold stone walls and cruel bars and iron guards shut out all hope from the poor exile, a flower became an angel, and its delicate beauty, creeping through the chinks in the courtyard stones, became a missionary and messenger of peace to his breaking heart. Our rarest flowers bloom with the greatest confusion in other lands. The charming Isle of Cyprus, famed alike in prose and poem, is brilliant with dazzling Hyacinths; the air is heavy with their misty perfumes, while every fountain and stream reflects again the image of the lovely Narcissus. At the Cape of Good Hope countless numbers of Callas (or, more properly, Richardia Æthiopica) grow in the swamps, lakes, and lagoons, while the delicate Smilax (Myrsiphyllum Asparagoides) weaves its evergreen traceries amid the foliage and drooping bells of the Fuchsia. The latter beautiful plant was introduced into cultivation in rather a singular way. One of the most eminent florists of the day, Mr. Lee, of Hammersmith, near London, hearing of a wonderful flower of exceeding beauty belonging to an impoverished sea-captain's widow, went at once to purchase it. She refused to part with it, however, as it had been brought her from abroad by her husband. The florist after many controversies finally prevailed over all her objections by promising her one of the young plants and the payment of eight guineas. He made cuttings at once, forced them in hot-beds, and the next season sold three hundred Fuchsias at a guinea each, keeping his

promise to the widow also by taking her one of the first blooming plants. In ancient Egypt the favorite flower was the Lotus, or Rose of the Nile, the Nymphia Lotus of modern botany. It bore a large, fragrant white blossom. So highly was it esteemed that distinguished guests upon their arrival in a city were presented with coronets of this exquisite flower as a conspicuous mark of honor. Woven in chaplets it played an important part in religious ceremonies. It crowned the head of Isis, that wonderful goddess whose very name is a romance. The first of all the heavenly deities, her many gracious gifts to mankind were represented by flowers interwoven with ears of corn. O traneing, soul-forgetting Lotus! thy very name bears with it a charm, a weirdness that carries us away to the very borders of Lethe, until

"No more, no more the worldly shore  
Upbraids me with its loud uproar;  
With dreamful eyes my spirit lies  
Under the walls of paradise."

Cleopatra, no doubt, crowned herself with this witch-flower when she wove her Circean spells about the yielding Antony. The Rose has been known, admired, and cultivated from time immemorial, "Fondest child of dimpled spring, the wood-nymph wild." It is the queen of every grove.

"Eye of gardens, light of lawns,  
Nursling of soft summer dawns,  
Love's own earliest sigh it breathes,  
Beauty's brow its lustre wreathes."

The name is of Celtic origin and signifies red. Anaereon, the celebrated Ionian poet, tells of the birth of the Rose in the following beautiful lines:

"When, humid from the silvery stream,  
Effusing beauty's warmest beam,  
Venus appeared in flashing hues,  
Mellowed by ocean's briny dews;  
When in the starry courts above  
The pregnant brain of mighty Jove  
Dislosed the nymph of azure glance,  
The nymph who shakes the martial lance,  
Then, then, in strange, eventful hour  
The earth produced an infant flower,  
Which sprang, in blushing glories dressed,  
And wanted o'er its parent breast.  
The gods beheld the brilliant birth,  
And hailed the Rose, the boon of earth.  
With nectar drops, a ruby tide,  
The sweetly Orient buds they dyed,  
And bade them bloom, the flowers divine  
Of him who gave the glorious vine,  
And bade them on the spangled thorn  
Expand their bosoms to the morn."

Who has not heard of the "Vale of Cashmere" with its roses, "the brightest that earth ever gave"? Feramors sings of its fairy charms to Lalla Rookh, of its flowers, its holy silence, interrupted only by the dipping of the wings of birds in marble basins of purest water.

"Where the spirit of fragrance is up with the day,  
From his harem of night-flowers stealing away,  
And the wind, full of wantonness, woes like a lover  
The young aspen trees till they tremble all over:  
When the East is as warm as the light of first hopes,  
And Day, with his banner of radiance unfurled,  
Shines in through the mountainous portal that opens  
Sublime from that valley of bliss to the world."

Cicero slept on a couch of roses and violets, as did

many other noble Romans; and Propertius, a Roman poet, was buried in them, as he sings, that the earth may lie lightly on his grave. In the convivial festivals and Bacchanalian revels of the ancients they crowned themselves and lady-loves

"With buds of roses, virgin flowers  
Culled from Cupid's balmy bowers,  
In the bowl of Bacchus steep  
Till with crimson drops they weep."

The beautiful custom of crowning the young bride with a chaplet of flowers has obtained in all ages. The choicest gems of Flora's kingdom were culled to grace the marriage festivities. The ancients fashioned the bridal wreath of the beautiful Myrtle, while now the Orange-Blossom is used almost exclusively. The bride herself must gather the wreath in olden times, as to purchase was considered an ill-omen. Our brides of to-day do not seem to fear any such evil forecast, as the dainty wreaths and bouquets made so skilfully for their sovereign use are of the most costly description. We hope none of our readers will share the fate of the unlucky Proserpina, daughter of Ceres, the goddess of grain and harvests, who while gathering the Rose, the Hyacinth, and Crocus in the Nysian plains with the ocean nymphs, her sisters, beheld a Narcissus of extraordinary beauty. Reaching for it, she was caught up by Pluto and transported to Hades, where she remained until restored by Jupiter and the intervention of Mercury and Erebus. Proserpina signifies the seed corn, which, cast into the ground, is carried off by the god of the lower world and reappears again in the waving grain or is restored to the mother Ceres.

"Blossoms," says Pliny, the Latin naturalist, "are the 'joy of trees,' and wherever these beautiful creatures are found, they seem to say to us, Yes, be joyful too. The darkness of thy lot is only the avenue through which thou art passing. God, who is good to the flower and the blossom of the tree, will not forget thee." MRS. THEO. BUTTERWORTH.

QUINCY, ILL.

## BEAUTIES OF LICHENS.

AND lo! what are these tiny, wondrous-looking, cup-shaped flowers of pale green which thickly spread over the moss carpet? And, again, little trumpet-shaped corollas arise, with edges daintily notched, each bearing a pistil, and sometimes a stamen or two. Occasionally, as if done by the hand of a "child fairy," one trumpet is placed within another trumpet, each rising above the other in perfect regularity, and putting forth one pistil and stamen at the top. In others delicate scarlet mould dots the top of slender stems, which, when seen through a microscope, resemble beautiful rosebuds.

Lichens cling to the dark and barren breast of the old gray rocks, and make that which is unsightly to appear "a thing of beauty." Always clinging to the north side and softening its ruggedness, it reminds us of that love which displays itself in adversity, softens defects, and beautifies life in its darkest moments.

## THERE IS NO DOUBT

That thousands of children die from deficient or improper nourishment, and mothers and nurses should see to it that the infant constitution is built up and strengthened by proper food before the trying

SUMMER MONTHS

come, which are the most dangerous to infant life. For this emergency

**RIDGE'S FOOD for INFANTS AND INVALIDS**

has the endorsement of the Matrons and Physicians of the principal Infant Asylums and Lying-in Hospitals in the United States, and Physicians of all schools have given it their unqualified approval as a HIGHLY NUTRITIOUS and easily assimilated food, and especially adapted for infants and growing children.

**RIDGE'S FOOD for INFANTS AND INVALIDS**

is also specially adapted to adults suffering from weakness of the digestive organs, and therefore those afflicted with any symptoms of INDIGESTION will find, on trial, it has all the qualities that have been claimed for it, and all that they can desire in the way of nutrition and strength. WOOLRICH & CO. on every label.

Spring, is quite as delicious, and equally refreshing.

SOLD BY ALL DRUGGISTS.

## Never Well.

Thousands of people who are not absolutely sick complain that they are "never well." Without being in pain, they are perpetually in a state of discomfort worse than bodily suffering. The cause of this indescribable wretchedness is a morbid condition of the digestive, assimilating, and discharging organs. Tone, invigorate, and regulate these viscera with TARRANT'S EFFERVESCENT SELTZER APERIENT, and the languor, depression, and nervous debility which are inevitable results of indigestion, biliousness, and an irregular habit of body, will cease. The Aperient contains all chemical basis of the famous Seltzer

## Beautiful Books for Every Home

The following books contain over 2,000 illustrations, and more than 1,000 ways and plans to make your home beautiful and attractive.

**HOUSEHOLD ELEGANCIES.**—A splendid new book on Household Art, devoted to a multitude of topics, interesting to ladies everywhere. Among the most popular topics are: Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Work Boxes and Baskets, Straw Work, Skeleton Leaves, Hair Work, Shell Work, Mosaic, Crosses, Cardboard Work, Worsted Work, Spatter Work, Mosses, Cone Work, etc. Hundreds of exquisite illustrations decorate the pages, which are full to overflowing with hints and devices to every one, how to ornament their home cheaply, tastefully, and delightfully with fancy articles of their own construction. By far the most popular and elegant gift book of the year. 300 pages, 205 illustrations. Vol. II, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50; gilt, \$2.00. Sent postpaid by mail.

**BEAUTIFUL HOMES.**—Devoted to House-Furnishing. Everything relating to the picturesque furnishing of bed-room, hall, parlor, sitting room, how to beautifully arrange all the rooms of the house, is described. Carpets, Wash-stands, Wall Paper, the Living-Room, the Parlor, Bed-Rooms, Halls, Umbrella-Stands, Door Mottos, Toilet and Dressing Tables, Curtains, Lambrequins, Screens, the Library, Cabinets, Etageres, the Dining-Room, Window Screens and Blinds, Mantels, Chairs, Rugs, Ottomans, Tables and Stands, Sofas, Lounges, Foot Stools, Cushions, Affghans, Baskets, Racks, Tidies, Miscellaneous Conveniences, &c., &c. Contains over 300 pages, 350 illustrations. Vol. IV, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50, by mail, post-paid. Gilt, \$2.00.

**EVENING AMUSEMENTS; or, How to Entertain Company.**—A splendid book for young Ladies, Gentlemen, and Children. This volume contains over 250 Games and Ways of Entertaining Company, and amusing young people at school, at parties, in home sports, picnics, for Christmas charades, tableaux, and all social occasions. Fireside Games, Tricks of Magic, Mystery, and Conjuring, Cards, Riddles, Acrostics, &c. Vol. V, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50, cloth, or gilt, \$2.00. Postpaid by mail.

**WINDOW GARDENING.**—A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selections of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House-Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume contains 300 pages, and is profusely illustrated with 250 choice engravings. Vol. I, WILLIAMS' HOUSEHOLD SERIES. Price, \$1.50; gilt, \$2.00.

**LADIES' FANCY WORK.**—A charming book, devoted to Feather Work, Paper Flowers, Fire Screens, Shrines, Rustic Pictures, a charming series of Designs for Easter Crosses, Straw Ornaments, Shell Flowers and Shell Work, Bead, Mosaic, and Fish Scale Embroidery, Hair Work and Cardboard Ornaments, Cottage Foot Rests, Window Garden Decorations, Crochet Work, Designs in Embroidery, and an immense variety of other Fancy Work to delight all lovers of Household Art and Recreation. Vol. III, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50; gilt \$2.00.

**EVERY WOMAN HER OWN FLOWER GARDENER.**—A delightful little treatise on out door gardening for ladies—practical, timely, charmingly written. Contains valuable information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, &c. Send for it. Printed in excellent taste. Price 50 cents, postpaid. Bound in cloth, \$1.00.

**LADIES' GUIDE TO NEEDLE-WORK.**—This is a charming little hand book of all the various kinds of Needle-Work, Embroidery, Crochet, Worsted Work, with their numerous stitches and is invaluable to all who are fond of fancy work. Every lady will find it a needful companion for her work basket and toilet case. Beautifully illustrated.

**Contents:** Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, with numerous designs, also, for Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Picture Frames, Wall Pockets, Shawl Case, Net Embroidery, Cretonne Work, etc., etc. Eighteen chapters; nearly 100 illustrations; 160 pages. Price 50 cents, paper covers, richly illuminated. Bound in full cloth, \$1.00.

**HOUSEHOLD HINTS AND RECIPES.**—This is not a Cook-Book, but a valuable little book devoted to housekeeping topics, and full of useful items, hints, and directions about the house in all its departments, from the kitchen to the parlor, bedroom, and attic. It contains a wonderful amount of real good practical information about housework, and there are recipes by the hundred so valuable, that no prudent housekeeper can afford to do without them. A single hint may save her many dollars in money, or much wasted time and trouble. Price, 50 cents; paper covers.

# NEW BOOKS FOR 1879.

## INSECTS ON FLOWERS AND HOUSE-PLANTS,

AND

## HOW TO DESTROY THEM.

This is a valuable little Book of Directions to Window Gardeners and lovers of Flowers how to overcome and destroy Insects on their Plants, both out-doors and in-doors. It tells how to fertilize and stimulate plants, the experiences of cultivators in keeping their plants healthy. Among the topics are these: "Red Spider," "Aphis," "Green Fly," "Worms in Pots," "Rose Slugs," "Rose Bugs," "Snails," "Caterpillars," "How to Destroy Insects on Garden Fruit-Trees and Vegetables," etc., etc. It is exceedingly valuable also to Housekeepers, as it tells all about "Ants" and all House Bugs.

Price 30 cents by mail, postpaid.

## Williams' Designs for Needle-Work.

A very beautiful collection of designs for Borders, Corners, and Centres in making Tidies, etc., on Java Canvas, Holbein Work, Worsted Work, Barlap Work, etc. These designs are new and remarkably pretty. Every lady should have them.

No. 1 contains nearly 25 Designs for Worsted Work, Canvas Work, Crotchet Work, etc. Price 30 cents.

No. 2 contains nearly 25 Designs for Holbein Work, Honeycomb Canvas, etc. Price 30 cents.

No. 3 contains Designs for Burlap Rugs, Mats, Small Carpets, etc. Price 30 cents. Address

## HENRY T. WILLIAMS,

Publisher,

46 Beekman Street, New York City.

NEW YORK, MAY, 1879.

## ILLUSTRATIONS OF THE MONTH.

UPON page 1 are several illustrations of window and parlor decorations. Figs. 1 and 3 are shell rests, used to hold ornamented shells, which often contain a little moist moss or earth, in which are planted some slips of flowers; and thus a miniature garden is formed upon the mantel-piece.

Fig. 2 is a combined aquarium and plant-stand, three feet six inches in height, the bowl twelve to sixteen inches in diameter, and the little cups are large enough to receive a six-inch flower-pot.

Upon page 4 is a sketch of a plant of the *Eryngium Leavenworthii*, grown by W. C. Wilson, florist of Astoria, Long Island. This is a remarkably showy annual, with stems from one to three feet high and very branching. The heads are of a beautiful purple. Branches cut after the flowers and leaves have matured will last two or three months, making it a valuable addition for winter bouquets.

Upon page 5 are sketches of some exceedingly ornamental rustic terra-cotta garden vases. The oblong rustic vase is made in imitation of rustic wood-bark, and is eighteen inches high and sixteen inches long. The rustic terrace vase is thirty inches high, twelve inches in diameter across the base, and seventeen inches in diameter across the handles.

The rustic garden vase is made of willow wood, trimmed often with grape-vine. The whole is forty-eight inches high; lower vase, twenty by twenty-eight inches; middle vase, eighteen by twenty-one inches; top vase, ten by thirteen inches.

Upon page 9 are given sketches of *aquaria ornaments*. The *granite castle* is capable of a double use, either as a fine ornament for a large aquarium, admitting of a variety of water-plants all around the

castle, or it can be used as a flower-pot for small ferns and plants.

The *shell ornament* represents a shell with figure and surrounding plants. There are three openings to receive water-plants.

The *fairy castle* is to be attached to some source of water giving a steady supply, and the flow will be as shown in the illustration. This figure is twelve inches high and eleven inches long.

The little window-garden with its wire railing and shelf is four and a half inches high, three feet long, and eight inches wide.

The little fernery is twelve inches in diameter, with glass fifteen inches high.

All the above articles are made by G. Hennecke & Co., of Milwaukee, Wisconsin, who make many very tasteful window and floral ornaments.

Upon page 12 are sketches of ladies' needle-work. The *shopping bag* is in canvas-work. It will be found most useful, and satchels for shopping were never in more universal favor.

The materials are: canvas, No. 14 gray Berlin wool, coarse floss silks of a bright emerald green and gold color, gold thread, small pearl and garnet beads, white and gold tassels, cord, rings, half a yard of colored silk. Work in any block pattern, and make up with silk lining, finishing with cord. The same work may be made up at an upholsterer's with a strong steel clasp, and will be more serviceable.

The *shawl or wrap case* is of *Holland*. It is bound all round with worsted braid. The border in embroidery may be in Andalusian wool or purse silk. The roses and foliage are cut out of cretonne, and fastened upon the holland with cording-stitch. The outlines of the pattern are in chain-stitch, or machine embroidery may be substituted. The straps are of holland, lined and embroidered with a simple design.

The *lamp-mat* is a mat upon net canvas, in feather embroidery. The ends of the feathers are slipped through the meshes of the net to the wrong side, and securely fastened. The edge consists of three rows of feathers, two rows of quilled ribbon, and the centre of the mat grounded in a dark color, or, if preferred, a pattern can be embroidered in silk or Berlin wool upon the net.

## WINDOW GARDENING.

IN growing plants for winter use it is best to take slips early in the summer, and grow them in pots in a sheltered situation out of doors until the third week in August, then repot into larger pots and bring into the house at once. I find that my plants are less apt to wither and lose their leaves if I bring them into the house early. I have a great many plants to care for, and I begin to pot them for the house about the second week in August, and keep working at them until all are finished.

If you wish your *Calla* to bloom early, pot it in rich earth in August and water sparingly until it begins to grow; then keep it very wet, letting it stand for at least an hour in a saucer of warm water every day. It will grow rapidly and will soon throw up a flower-stalk; and it will bloom at intervals all winter. When it shows that it is in need of rest,

which will be in the following May, withhold water gradually, and as soon as the weather admits of it put the pot out of doors under a tree or shrub, turning it upon its side that it may receive no water. It will soon become dry and the earth appear to be baked; do not meddle with it until you are ready to repot it for winter blooming, when proceed as before.

A beautiful plant for the house is *Lilium Candidum*; one year ago last fall I bought a bulb for twenty-five cents and planted it in a four-inch pot. It soon began to grow and sent up a stalk of delicate foliage; in March it bloomed, having three white blossoms out at one time; it remained in bloom for three weeks. After it was done flowering the foliage showed signs of decay, so I put the plant away for a rest. When all danger of frost was past I set the plant out of doors on the south side of the house and left it until fall; during that time it received no water except what rain fell upon it. In September I took the pot into the house; it soon threw up a second flower-stalk with seven buds, and for weeks it was the pride of my window. A few weeks ago I brought it from the cellar, where it has been resting since the autumn, and now two flower-stalks have made their appearance. They are already more than a foot high.

Some time ago one of your correspondents enquired if the *Aloe* is a member of the cactus family. I believe that the question has not yet been answered, so I will insert one here. The *Aloe* is not a cactus. It belongs to an entirely different order—the *Liliaceæ*, sub-order *Aloineæ*. The *Aloe* is a native of Africa, and it is found there in great profusion; there are a number of species, all having true stems, but varying in height from a few inches to many feet. The *Aloe-wood* of commerce is not obtained from the *Aloe-tree*, but is an entirely different substance. The *Aloe* plants that are sold by florists are some of them of great beauty, the leaves being marked or striped. One of the newest varieties is the *Partridge Aloe*, so called because the markings resemble those on the wing of a partridge.

We often hear the *Century-plant* spoken of as the *American Aloe*. This is a misnomer, as the *Century-plant* is not an *Aloe* but an *Agave*. It is a member of the great family of *Amaryllids* that includes a number of well-known species; among these may be mentioned the *Narcissus*, *Tuberose*, *Jacobean Lily*, *Snowdrop*, and *Star-grass*. There are a number of *Agaves* native to America, of which the best known is the *Century-plant*. The especial difference between the *Agaves* and the *Aloes* is that the former have no stem, the leaves rising directly from the ground. The *Agave Americanus* sends up a flower-stalk of from fifteen to twenty-five feet high, bearing a panicle of yellow flowers. The story that it blooms only at the age of one hundred years is now known to be false. In its native home it blooms when it is from ten to twenty years old, but in a green-house it requires a longer time. In California and Mexico, where these plants grow wild, they bloom often at the age of fifteen. After the *Agave* blooms the plant dies to the ground, but new shoots grow from the roots, which perpetuate the species.

## Window Gardening.

### THE CULTIVATION OF HOUSE PLANTS.

In order to grow Geraniums, Salvias, Camellias, Roses, and Primroses successfully, a temperature of sixty to sixty-five degrees for the day, and about fifteen degrees lower at night, is necessary.

This temperature is not warm enough for the more tender plants, Coleus and Begonias. For this reason I reserve my Begonias for my hanging-baskets, as the air of the room is some degrees warmer near the ceiling. Nothing can be more beautiful than a Begonia in full bloom, especially those having ornamental foliage.

In order that Begonias may attain their fullest development they must have plenty of moisture, and with a little care this is easily obtained.

I have a Begonia Maculata in a hanging-basket, one of whose leaves measures over a foot in diameter.

A pretty hanging-basket may be made by taking a common five-pound starch-box, and, after

GRANITE CASTLE.

cleansing it carefully of all paint, sand-paper it until it is perfectly smooth. Then with an ivy-leaf laid on a piece of paper draw a vine, and prolong it until it will go around the box. Cut this vine carefully out of the paper and paste it on the box, being careful that the edges of the paper are securely fastened. With a brush now stain the box a black-walnut color, and after it is dry remove the paper. You will have a pale, cream-colored vine on a dark ground; give the box two coats of varnish, and you will be surprised at its beauty. It will resemble the most costly inlaid work. Before staining the box it should have a narrow moulding nailed around its top. Suspend the box by copper wire from picture-screws fastened in each corner of it. Wooden boxes are preferable to terra-cotta hanging-baskets as they do not dry out so soon. Bore a few holes in the bottom for drainage.

Fuchsias are very satisfactory plants for the house, as with two or three large plants one need never be without blossoms. They require very rich soil, at

least two-thirds well-rotted cow-manure to one part leaf-mould and sand. While in bloom they need plenty of water, but after the blooming season is past

WIRE RAILING OF WINDOW GARDEN.

they must be dried off and given a two or three months' rest. They will do well in a cellar during

FERNERY.

the winter months, if you have not room for them elsewhere. They can be readily grown from slips. The Heliotrope is a very pretty plant for the winter,

FAIRY CASTLE.

but it must be grown in a pot throughout the summer, as it is a very difficult plant to move. The

strength of the plant lies in the small white fibres of the roots, and these are apt to be broken in removal.

Roses must also be grown in the pots where they are to bloom, as their roots are tender. The Eupatorium is a plant that will bear hard usage. It requires plenty of pot-room and a great deal of water; in return it will grow luxuriantly. During the summer months keep pinching the ends of the branches to make it grow bushy, as it only blooms upon the extremities of the branches. It has small white blossoms and is very fragrant.

I have a great variety of plants growing in our sitting-room; most of them were raised from seed or cuttings. I usually start all cuttings in a bowl of sand. I use only cuttings of the new wood that will break readily. It takes about a week to root most cuttings, and during this time I keep the sand very wet. The room is heated by a coal-stove, and the fire is never suffered to go out.

Early in the fall, as a precaution against sudden changes of temperature, I paste wall-paper, with the white side out, over every crack and crevice in the window; this keeps out every draught of air. One

SHELL ORNAMENT FOR AQUARIUM.

who has never tried this will be surprised at the additional warmth of the room; if your paint is white, use wall-paper; if it is grained, take brown or yellow wrapping-paper as near the color of the paint as possible.

Many persons find it difficult to grow Carnations successfully in the house, as the buds shrivel in the dry, hot atmosphere of most sitting-rooms; this may be prevented by wrapping a damp newspaper around the plant at night and taking it off in the morning. The red spider, that pest of Carnations, will be effectually destroyed by this means. There are three other insects which infest many house-plants: the aphid or green fly, the scale-bug, and the mealy-bug. The aphid is the most common, and is easily destroyed by syringing the plants with a decoction of tobacco-water. An easier way for those who have conservatories will be to set a pan of coals on a couple of bricks, and lay a few leaves of tobacco on the coals; the smoke will destroy the aphid very quickly.

IDA I. LAW.

## Hints in Housekeeping.

## A TALK WITH HOUSEWIVES.

MUCH has been written about housekeeping, and a great deal learned by reading, but after all "experience is the best teacher." This old, time-worn maxim cannot be more truly applied than in this case. Not till our housekeeping years can be counted by the dozen do we feel anything near satisfaction on reviewing our attainments in this branch of the business—for it is a business (I was going to say a science, and am not quite sure but it is), and those who engage in it should be trained just as much and as well as for any other life-work.

There are many inventions nowadays professedly to lighten woman's labor, but I think there is great danger of it being too much lightened in this one direction. For instance, it is becoming too much trouble to beat the butter and sugar to a cream and whisk the eggs to a puffy lightness necessary to have good cake, and some one of the numberless popular raising mixtures are used instead. Nor is it cake alone, even bread, the staff of life, has to suffer by these new inventions, and the sweet, lively yeast such as our grandmothers kept in the stone jug on the cellar floor is in some families a thing of the past. I am glad to say there are still some housekeepers old-fashioned enough to keep their own yeast and make the good old-time bread.

I do not wish to have you think I condemn the improvements and new inventions; by no means would I do so, for there are many such good and true. But there are some general principles that must be followed in order to bring good results. For instance, the yeast must be sweet and lively, the flour fresh and fine, or the bread will not be good. The water must boil before it is poured on the tea, or it will not be drinkable.

I recently heard a mother recounting the total ignorance of her daughters in regard to housekeeping. One of them being left at home one afternoon without a servant, and the mother also being absent, there was no remedy: she must get the tea herself or go without it. Having a gentleman visitor, she set about getting the evening meal. When at table she passed the tea to the gentleman, he (being a privileged friend) asked, "What ails your tea? I don't think the water boiled when you made it." "Why, must it boil?" said the young lady innocently. "I did not know it should; it was pretty hot." The gentleman made the tea himself. This same young lady graduated with high honors at one of our popular colleges. Can we wonder there are so many unhappy homes in our land when there is so little attention paid to our daughters' education in this particular branch? Of what avail are all the accomplishments upon which so much time and money are spent? When a woman has a dinner to cook, a sick child to nurse, or a retinue of servants to look after, how can she tell others to do what she knows nothing about?

Some one has said if a young lady can make a good sponge-cake she is ready to get married. I cannot agree with them. No woman should assume the duties of wife and mother without some practical know-

ledge of housekeeping; this knowledge and a love for the work will in time bring perfection. I once heard a gentleman say, "If I was a woman, I would be a housekeeper, and one of the best, too, and would not be satisfied with only an ordinary name."

That is just it: the largest majority of our women are not in earnest in this great work, but delegate to the rough and often inexperienced hands even the finest points of this business; they cannot endure this "eternal vigilance," necessary from garret to cellar, if everything has a place and is kept in it.

I am not speaking a word for those fussy, fretty, housewives who are continually in a broil lest the sun should shine on the carpet (if it would be allowed to slip in and sweep up some of the must and mould in some parlors we wot of, there would be more health, and happiness too, there) or their furniture get rubbed. My dear sisters, what are these things for? Why not enjoy them while we can? Those who come after us will not want them; other fashions will turn them out. Therefore, I say, don't let us invest so much in our household goods that we cannot afford to use them while we have health and strength to enjoy them. Better far get less costly adornments for our homes, and invest the surplus in brightening the homes of those less favored than ourselves.

I admit it is painful to any good housekeeper to see our best chairs, holding two hundred pounds of human flesh, tilted back on two casters, or a careless boy leaning on our new piano, scratching the shining surface with his buttons. But accidents will happen to furniture as well as persons; and while a broken chair is a loss to the owner, it is a gain to the dealer when we buy another; and this is what we are to do: "Live and let live."

I would like to speak a word for the help, or, as some say, the "hindrances," in our homes. Those of us who must endure these "necessary evils" (I quote again) should bear in mind that these same persons are members of the same human family as ourselves, have trials and disappointments such as we. Let us then try the gentle method; a little praise will set the wheels of domestic machinery in swift motion, sometimes, when a cross word or sharp rebuke would excite passion and bring everything to a stand-still. Who of us would not much rather serve a beloved friend than one who takes no interest in our affairs? Let us then try what patience and gentle dealing with firmness (for without this the reins will be too slack) will do in our domestic government, and I think we will be amply repaid by faithful serving.

There are training-schools now for housekeepers. No doubt these are excellent institutions. But there are scores of American homes where there are far greater opportunities for gaining a practical knowledge of housekeeping in all its branches. I have heard more than one say, when urged to learn the ways of keeping house, "It will be time enough when I am obliged to do it; I can learn then." But when that time comes, how gladly would this self-confidence be exchanged for a little real practical knowledge. Let our daughters be taught, while under the roof-tree of home, a complete knowledge of housekeeping.

MRS. E. R. COOK.

TRENTON, N. J.

## HOW TO MAKE DYES.

A GERMAN writer tells us that a number of excellent dyes can be obtained from the berries of common plants by boiling them in water so as to produce a strong decoction. The whortleberry and the blueberry, when boiled down, with an addition of a little alum and copperas, will make a fine shade of dark blue. The same treatment, with a solution of nut-galls added to it, will make a handsome brown; while by adding alum, verdigris, sal-ammoniac to the berries several shades of bright purple and red can be obtained. The juice of elderberries boiled in water with a little alum will also produce a shade of blue. The berries of the privet, when over-ripe, will yield, by mixture of a little salt, a scarlet red; and the seeds of the burning bush, when treated with sal-ammoniac, make a beautiful reddish purple. The juice of the currant, with a little alum, will dye a bright shade of red; and the bark of the bush, treated in the same way, makes a good brown. Yellow can be obtained from the bark of the elm, the poplar, the ash, and the apple-tree, boiled down strong and mixed with alum water. The tassels of broom-corn, treated in the same way, produce a good shade of green.

## USEFUL RECIPES.

**Cement for Glass, etc.**—A new and very strong mucilage, capable of fastening together wood, porcelain, or glass, is described in the *Journal de Pharmacie*. To a strong solution of gum-arabic, measuring eight and one-third fluid ounces, add a solution of thirty grains of sulphate of aluminum, dissolved in two-thirds of an ounce of water.

**A Cheap and Truthful Barometer.**—Put a small quantity of finely pulverized alum in a long, half-ounce vial, and fill it with spirits of wine. When the atmosphere is dry and clear, the spirits will be clear as crystal; but on the approach of rain or bad weather the alum will rise in the centre in the form of a spiral cloud, which is an infallible indication of rain or bad weather.

**A Cheap Tidy.**—First make a frame, about a foot and a half square, of common laths; have two bunches each of red and white dress braid. Cut the braid in pieces the length of the frame, and tack them on at both ends, about two-thirds of an inch apart. Weave the braid together over one and under one. When it is all woven in, pull the tacks out, baste the ends down, and fringe out the edges.—"*Maud*," in *Home Guest*, Boston.

**Cookies.**—One and one-half pound sugar, one-half pound butter worked until a cream; add 6 eggs, the yolks first, the whites beaten to a froth; 3 teaspoonfuls of baking powder; beat one egg, spread on each cookie. Strew with sugar.

**Ginger-Snaps.**—Boil together 1 pint of molasses, one and one-half pint of butter. When cool, take 1 tablespoonful of ginger, 1 tablespoonful of soda, 1 teacup of sugar; flour to make a stiff dough. Roll thin and bake quick.

## Housekeeping Experiences.

## HOUSEKEEPING IN ARKANSAS.

My sister Belle lives in Arkansas and I in Michigan, so the distance being great and travelling expenses high, when she and her husband invited me to visit them I went for a long stay. I found them living in a pleasant white cottage surrounded by trees, but disfigured, like many other Southern houses, by chimneys built up on the outside—one for each of the four rooms. Southern style, a wide hall extends through the centre, two rooms on each side opening into it, to allow a free circulation of air—in summer very important in that climate. In winter, too, would sister Belle have it, if she followed the example of her neighbors, for they seldom close the doors of either house or store in the day-time, never except for unusual cold or a driving storm, but sit, wrapped up and shivering, before huge blazing fires; she has been, however, too much accustomed to the warmth of a cosy Northern house to like this hospitable but very uncomfortable fashion, so she closes the doors and carpets every floor in that season; and has a stove in living-room and parlor, and, burning less wood, is more comfortable than most of her neighbors; but she cannot persuade them to the belief that stove-heat is more agreeable, for they say, "It is so gloomy not to see the fire, and, besides, how do you manage to warm your feet?"

Sister Belle had not unlimited means at her command in furnishing her house, but she did have almost unlimited ingenuity. She already had a bedroom set of black-walnut for one room, and bought parlor furniture, but still had another bedroom and the dining-room (also sewing-room) to supply; she bought a bedstead and mirror for the one, and a safe and some chairs for the other; then supplied herself with boards, a box, and a barrel, saw, hammer, and nails, and went to work. She first made a top for a toilet-table, in lieu of a bureau, about two feet by four; this she laid over the top of the barrel, then she tacked pink paper cambric around the edge, front, and sides lengthwise, so that it touched the floor. Above this she plaited a skirt (straight) of book-muslin (don't tell) which she had "worn out" herself, and covered the top with a spread of white piqué edged with a gay chintz bordering. A wooden box for comb, brush, etc., she then lined with pictures and covered with pink cambric and a white embroidered ruffle, surmounting the lid with a pin-cushion to match, and put it on the toilet below the mirror, hung upon the wall. The barrel was a receptacle for clothing packed away when out of season, and the toilet-top could be easily lifted off. The washstand she made from the box, similar to some lately described in the CABINET, and curtained to match the toilet. Embroidered curtains, too much worn for further use in the parlor, she hung cross-wise, à la lambrequin, over shades of chintz to cover and adorn the high windows, and as there was no wardrobe in the room she improvised one thus: she had a high shelf, some seven feet long, put up on cleats behind the door, and to its edge tacked white curtains which hung nearly to the floor and protect-

ed the garments hung on hooks sewed in below the shelf. A few brackets and pictures relieved the bareness of high white walls. Now I hope I have made my room appear as pleasant to you as it did to me, dear reader, when I first saw it. Sister Belle said it was "real pretty," and some of her Southern friends thought it "mighty pretty." I thought the adjectives equally out of place. Now to the dining-room, across the wide hall which also serves as library, containing a bookcase and hour-glass (home-made), a light stand, and at each entrance a huge stag's horns, mounted, for a hat-rack. In lieu of an extension-table, sister Belle ordered a common pine one made, with turned legs, oval at the ends and long enough to seat six persons (there were three of us in the family); this she stained to imitate oak, and when not in use it made quite a respectable appearance covered with a large red spread. A lounge in this room deserves special notice. It is a box, seven feet long, two wide, and eighteen inches deep, covered by a light frame to which is nailed heavy canvas; a mattress on this covered with a green material formed the bed, while the box, concealed by a flounce of the same, made an excellent wardrobe, for it would hold many dresses, laid in full length, with very few folds; silk below and muslin ones above would keep as fresh as if "just from the iron," for months. In one corner we put up an arrangement for the "goodman's" smoking materials; it was a corner-bracket, sawed out in a pattern on the outer edges, and painted in arabesque to resemble a darker wood inlaid; the front of the shelf, however, had an ornamented edging, some three inches high in the middle and sloping to each side, making the box it formed one inch high next the wall.

Now, to the kitchen, we will go through the back doors of the hall, across a porch seven feet wide and twelve long. It is enclosed by green blinds and is a delightful dining-room in summer. The kitchen is really an addition to the house, but in Southern parlance the two are always separate. The kitchen proper "on this lot" was about twenty feet from the house; one of the two rooms forming a house, the other being intended for the home of the cook and her family. I can assure you a kitchen apart is a necessary arrangement where negroes preside; for left to themselves they have none of the nice, deft ways desirable to all who would like to have a neat house. Only persons who are colored go out to service in Arkansas, and many of those who might do so, like their white sisters elsewhere, are too delicate in health or too sensitive in temperament to endure the wear and tear, physical and mental, of a servant's life; so if they do anything for their own support, they prefer to take home laundry work, and good servants are hard to find; when found, they ask very high wages and bring their families "on the lot" to be supplied gratis from the household stores. One perhaps is a good cook; but besides the cooking she does only the washing, and others must be hired to wait upon her, for it is a notorious fact that one capable white person will do the work of two average colored ones.

Well, those Southerners who cannot afford this drain on their purses, enjoy the fleeting services of the young and inexperienced class which tries the

patience of housekeepers elsewhere. Sister Belle is one of those independent women who have been able to take matters into their own hands, discharge the clumsy servant and take the lead in housework, and she has assisted by example and advice many who were willing to help themselves but knew not how. They had but few modern conveniences, because negroes are averse to any but "oletime" ways; and competent theoretically though a Southern housekeeper may be to do her own cooking, mountains are in the way of her doing it practically. I found sister Belle had overcome some of them; she bought a new cooking-stove (her sister-in-law, used to negroes, wondered how she could keep it so clean and so long; her best servant would burn one out in three years) and she turned the former dining-room into a kitchen. There was a large store-closet back of it; and across one corner she built a cupboard for dishes, spices, etc., etc., near the stove; a large box served for pot-closet and sink; she put a shelf into it and nails to accommodate the iron-ware; above it was a shelf for tinware, and behind the door she nailed up a small box for a cupboard for the kerosene can, knife-scouring materials, and other things. The laundry work she put out usually, so she had no care of that; and she rented the old kitchen, if she could find good tenants, to a small family, premising that some one of the occupants should bring wood and water, do errands, and help in the house when wanted. When the house was not rented she hired a young girl to wait on her and do a scullion's work, etc., but when I was there to assist, we grew very independent and would have no help indoors, unless we were well suited, except occasionally by the day. Our cooking was part Northern, part Southern in style. We always had light bread (raised wheat bread), but for breakfast toast or some other hot bread, and we used Irish potatoes a great deal, but every new servant we had to teach to cook them properly; while we ourselves had many failures before we learned to cook rice and hominy to suit the Southern palate of the goodman. Only experience taught us to stir the latter very frequently till it was thoroughly swelled, to prevent it from sticking and burning to the bottom of the saucepan, then to set it back to take care of itself for half an hour, cooking slowly. For the former we learned to use nearly two quarts of water for a teacupful, salted to taste, and let it boil till tender, then pour off the water and set it back on the stove to dry off; then we would serve up a dish of snowy rice, each kernel whole and standing alone—as much a desideratum to a Southerner as mealy potatoes to a Northerner. A simple desert we made was a "Pot Ball." On baking-days lay aside a little bread-dough and let it rise till very light, putting it into a basin ready to go into a steamer, and steam thirty minutes. Serve hot and fresh, with a sauce made by boiling a pint of syrup with a tablespoonful of butter till thick.

Thus I could go on and fill pages with our experiences and recipes; but I forbear, and will stop at once abruptly, lest you, reader, be weary.

**Moths.**—To keep them out of carpets wash floor with turpentine or benzine before laying them.

## The Home.

## THE GAY DECEIVERS.

BY HARRIETTE WOOD.

WE were to entertain the Sociable a few days hence, and the house must look its very best. Accordingly books, brackets, pictures, vases, and all the pretty things were arranged to show off to the greatest advantage. I am proud to add that no borrowing was done; but we did descend to some other false pretences, less reprehensible, to make confession of which is the object of this sketch.

Some days previous to that of the gathering we were considering whether we might, could, would, or should squander a very little in the purchase of some bouquets, when one of those bright ideas which, we suppose, travel through space, touching only at those points which most attract them, chanced to rush into the head of one of the young ladies of our household. So overpowered was the little sprite by the shock of receiving a new thought, as she said, that she gave a sudden and terrifying scream, which summoned us all to the dining-room, where she stood before a stand of house-plants in no apparent distress, other than of being "too delighted," as she expressed it. "Well, Sunshine, what is it? What is the matter now?" we asked.

"May I do just what I please with these plants?" was the satisfactory reply.

"They are in your hands," we said, "only you shall preserve them alive." Now, although our plants

back. Both the omission and commission of everything of which we could hear or read we have tried, all to nearly no effect. And so it happened that at this time our plants were void of bloom.

"But I'll make this wilderness bloom like a full-blown rose," said Sunnie, slightly misquoting Scripture.

yet" for two years, as I am told—was supplied with such perfect counterfeits of the same that I do not care whether it ever produces a real blossom or not. I doubt if it would ever know its own from its adopted offspring any way!

In the evening Sunnie and her sisters, together with a few young friends, her colleagues in many another enterprise of fun, had plenty of enjoyment watching the guests as their attention was drawn toward them, and their admiration of the flowers variously demonstrated. The enthusiastic Mrs. A., the sharp Mrs. B., the calm, unruffled Quaker lady Mrs. C., with Farmer D., Attorney E., and Dr. F., were all alike victimized by the gay deceivers, as they stood in silent, graceful dignity adorned with borrowed holiness. Pastor G. was especially partial to the Rose. "It was a Bible flower," he said, and bent down to inhale its fragrance, but, having a bad cold, was unable to perceive any.

But as the evening began to wane, and our friends to talk of retiring, Sunnie stole up to the good Reverend and in her own irresistible way said:

"Pastor, I am like Mark Twain, not like George Washington—I could tell a lie, but I won't. Please to inform these friends that every one of our flowers is a sham, nothing but a deception in paint and wax."

This he did, adding: "I am not, however, altogether prepared to pronounce an artifice by which we have

been so completely cheated a sham. I hope that Sunnie, and all of us for whom she has prepared this seat of beauty, may be able to attain unto as great perfection in the imitation not only of the Creator's works but of himself, in all those things wherein he has commanded us to be conformed unto his own glorious image."

LAMP-MAT IN FEATHER EMBROIDERY.

For several days the child shut herself up in her room and kept busy at work. Finally she appeared one morning, bearing upon a huge band-box cover a quantity of most exquisite flowers which she had been constructing, of course of wax, but every one of which was as perfect, in outward appearance, as if nature alone had been concerned in its formation. And now indeed the wilderness *did* begin to bloom, even as she had promised. For both varieties of the Fuchsia she had made a proper quantity of the lovely jewel blossoms which they bear, and these she proceeded to attach at those points upon the branches where the natural flowers should have appeared. This was easily done by means of twining the delicate wire stems around those of the plant, whose abundant foliage concealed the work of joining most effectually. In the same way my Bridal rosebush was put in blooming order, and my Tree Carnation covered with

SHOPPING-BAG.

always look remarkably healthy and thrifty in winter, we do not succeed often in obtaining flowers from them. We have pinched off, and we haven't pinched off; we have cut back, and let alone cutting

buds, and a single full-blown choice Pink prematurely opened (?). My two Cacti next flashed into a flame of scarlet bloom, and lastly my lovely Wax-plant—though "the time of flowers is not

SHAWL OR TRAVELLING CASE.

**Worms in Pots.**—Bake fine-cut tobacco, spread a thin layer of the earth around the plant when the earth is dry, then water freely; repeat if needed and first application is not thorough.

## Household Arts.

### HINTS ON HOME ADORNMENT.

THERE are quite a number of women who, not possessing the carte-blanche to make their homes attractive like their more favored sisters, would fain sit down in an unadorned home, and spend their time in useless repinings—not so much from discontentment that they have not been so highly favored, but from the knowledge that they do not know how to make anything that will really add to their homes and suit their own fastidious tastes. Now, for the benefit of these, I will describe some things which I saw while on one of my not unfrequent visits to my nieces.

In the parlor was a very pretty vase made in imitation of the Japanese ones now so fashionable, and this was the way it was made: First was selected a common four-gallon stone jar, one of those which are smaller at the bottom, gradually swelling out toward the middle of the jar, and growing smaller toward the top; it also had small handles on the sides. Then it was painted two-thirds of the way up a light tint of green, the other third being painted black. The rim around the top was also painted the light shade of green, and ornamented with gilt stars. Then, after procuring suitable pictures for pottery decorations, these, with the aid of mucilage, were stuck promiscuously all over the jar, after which it was thoroughly varnished with white varnish. It is quite a pleasing study to arrange the pictures effectively, and care should be taken not to get them too close, or several pictures of one kind together, and you should have as much variety as possible in your pictures; reptiles especially can be used with effect. The vase I have just described had for a centrepiece on one side a large alligator, seemingly in the act of grabbing a small fish, judiciously placed just out of his reach. On the other side was a tortoise. Bugs, butterflies, flowers, leaves, fruit, Japanese figures, and fish can all be used with artistic effect; they can be procured cheap at any picture house. Most every one can find some old jar, jug, or antique pitcher about the house, that could be made very ornamental in this way. I have even seen teapots, by having the spouts knocked off and painted black and covered with pictures, metamorphosed into respectable-looking Japanese pitchers. Now, as my nieces informed me that their vase did not show off half its charms when sitting in a corner on the floor, they

pressed papa into their service, and the result was a cunning little stand, about a foot high, made of the rough barked willow so much used for rustic work, and varnished. One can scarcely conceive what a beautiful ornament this made placed before the window, the vase tastefully filled with a bouquet of dried grasses, and some shells laid carelessly around on the rustic stand where it projected from the vase.

Two corner brackets in the room were draped with beautiful and cheap lambrequins; they were made of Turkey-red calico. The lambrequin was gathered in graceful folds about a foot above the shelf, and

deep blue delaine of the lambrequin, and the gray moss, with the marble statue, made a very harmonious and beautiful combination.

Also in the sitting-room was a durable and pretty sofa, upholstered by these ingenious nieces. The hair-cloth becoming worn through, making it an unsightly piece of furniture, they procured cheap cretonne, and proceeded to their unaccustomed task. After taking the seat out and covering it smoothly, stretching the cretonne very tight, they cut a piece of the cloth to fit the back, turning the piece wrong side out over the back of the sofa. Then they cut strips of pasteboard half an inch wide, and tacked the cretonne all around the outside edge. It was then turned and stretched, and tacked underneath the framework. By this expedient no unsightly tacks could be seen. The arms were covered in like manner, and a neat cushion of the cretonne made to match. A chair was covered in the same way with seal-brown calico, and a strip of cretonne stitched on up the centre of the back of the chair and across the bottom. This was quite pretty.

For a more expensive chair, work on Penelope canvas a pattern in shaded zephyrs. Fill out with some suitable shade, and put it on the material with which you wish to upholster your chair, with a cord on each side of the worked stripe either made of the cloth or of silk as you prefer.

One of their bedrooms looked quite cheerful and comfortable. It was furnished in this manner: On the floor was very pretty drab and scarlet wool carpet. The windows were draped with curtains made of unbleached muslin, trimmed with a band of Turkey-red calico. They hung very gracefully. A small table had a cover on it to match the curtains, and a pin-cushion on the table was made of the Turkey-red calico, with a puffed tarlatan cover. Scarlet and white wool toilet-mats, some cunning little pictures framed with splints, and et-ceteras included the handiwork of the room. AUNT ELIZA.

"THE NEW ORGAN."

tacked to the wall, and finished with a bunch of autumn leaves; the cloth extending thus up behind the Parian marble busts and vases made them stand out in bold relief. The lambrequin was then allowed to fall over the shelf and half-way down the bracket, where it was gathered in artistic folds, and finished with a neat wool tassel.

A blue one in the sitting-room similarly made had sprays of Spanish Moss, *Tillandsia usneoides*, tacked on in place of the autumn leaves, and allowed to fall down around the ornament on the bracket; the

**Cold Coffee Cake.**—Take of molasses 2 cups; sugar, 1 cup; butter, 1 cup; coffee, 1 cup; currants, 1 pound; citron, one-half pound; raisins, 1 pound; one nutmeg; 1 tablespoonful of cloves; 1 tablespoonful of cinnamon; 1 heaped teaspoonful of soda; flour to make it stiff as pound-cake.

**Cocoanut Cake.**—Sugar, 2 cups; milk, 1 cup; butter, one-half cup; eggs, yolks of three; flour, one and one-half cups; soda, one-half teaspoonful; cream tartar, 2 small teaspoonfuls.

## Household Elegancies.

## ÆSTHETIC HINTS.

LADIES OF THE CABINET: There is an excellent song which commences thus: "Scatter the germs of the beautiful, by the roadside let them fall," and so forth; hearing it frequently, it as often causes me to muse upon humanity's universal love of beauty, and I feel that we should all foster this love by striving ever to ennoble and beautify our homes. Let us daily flood them with blessed influences by admitting an abundance of sunshine and fresh air, ever remembering to let the sunshine of love also irradiate our countenances for the cheering of our children, and as a salve of consolation for the observant husband wearied by the cares of the day. As we would have our children's future homes, so should we make ours in the present; and if the real still fails to compare favorably with the ideal, we should not be discouraged. We may cause so much of beauty, so many comforts and æsthetic delights, to cluster around us, that they will never forget the dear old home when they have formed new homes amidst other scenes. Forget not that children are the flowers of humanity; treat them with tender regard, and, although you may not succeed in cultivating house-plants successfully, yet remember that earth's fairest and dearest blossoms may be trained to enliven and beautify home as no other flowers can, ultimately repaying us for our patient devotion to their interests. Permit me at this time to allude to some of the household elegancies with which persons who have leisure may embellish their homes, pausing only to say that where one does not possess a cabinet great care should be exercised in the selection and artistic arrangement of minerals, relics, bric-à-brac, etc.

Home should be neither a bazaar nor a miniature baby-house; hence, if one has more of such things than one has room for it is best to present some to friends, or have two sets, one for summer, the other for winter, and use alternately. First, calling your attention to my palm-leaf whatnot, I will endeavor to tell how it was made. One summer day, having thought of a plan by which I might have one entirely novel, I sent blond-haired Tillie, our little German help, to "the stores" with thirteen "nickles" wherewith to purchase thirteen palm-leaf fans, telling her to have them of uniform size as nearly as possible. Now, Tillie's rather lagging feet could not keep pace with my nimble fancies, but in the course of an hour she returned to the ark of home, bearing, in lieu of an olive-branch, the required number of branching leaves of the tropical palm. I had not thought the errand would prove unpleasant; but she was just budding into womanhood, and she also brought back several budding roses on her cheeks as she told how the clerks had quizzed her about being so excessively overcome by the heat. Begging pardon for this digression, I will proceed. I had the handles sawed off and laid by for future use; joined the fans in pairs, with a layer of dark cotton batting between; took two pairs for each shelf except the top one, which had an additional fan doubled up and joined to it to form a small semicircle for the corner. When in shelf-

shape, at the place from whence the handles were removed I tacked flat rosettes of dark paper to hide stitches; bound the edges, then twisted narrow strips of heavy black paper into what children call cat-steps, and trimmed all the edges. Had it stained, varnished, hung with scarlet cords, and my original and oriental piece of furniture was ready as a surprise for my husband. It cost one dollar and ten cents only, was kept in the parlor two years, and has been used in my bedroom for the last two years as a receptacle for the family band-boxes. Let me add that the panels were stained, and being entwined with the cord keep the shelves from slipping out of place. In making air-castles fray green cloth and simulate moss instead of snow. Preserve real mosses by painting them dark green. Place painted ferns with bright autumn leaves in a dark gray vase, engraved with maroon and silver lines, and you will have "a thing of beauty." I have a large pear-shaped hollow stone which I line with moss, and scatter over it white pebbles and tiny forest leaves with good effect. I reserve some unpainted ferns and use them freely in making pansy pictures, one of which I will describe, as it is an invention of my own. I covered a cardboard the size of my frame, eighteen by twenty-one inches, with black velvet; this formed a rich background. A little above the base I pasted a line of royal pressed pansies of every hue of light and dark (their gorgeous colors making them resemble airy butterflies), then built it up in the form of a pyramid of pansies alone, until I reached a point where one flower only was needed. I gave to this for a pillow a scarlet geranium blossom, which served to brighten it in its loneliness. At the base of the pyramid I placed a support of amber-colored, locust-shaped leaves combined with arbor-vitæ, with here and there sprays of both green and withered ferns, to give contrasting color. At its top pasted an arch of small, round leaves and feathery grasses, with a few detached petals (not blossoms) of scarlet geranium. Over all was placed a smooth glass, and, framed in walnut and gilt, it became my mother's Christmas gift. Ferns and fluffy things from nature's storehouse look well in an egg-shell vase; make it thus: break a small piece of shell from the large end of a white, smooth egg; after removing its contents paste a very delicate binding of gilt around its broken edge. Leave the rest plain white or trim with peanut lace; then glue it by the small end to a dark, square surface, and your vase is complete; it costs scarce a penny and its uses are many. Pleasant remembrances of the joys to be found in woodland ways may be secured by hoarding black-thorns, horse-chestnuts, burrs, pine-cones, acorns, mountain-ash berries, sycamore balls pendant from limbs, mosses, grasses, and other beauties too numerous to mention. Oak balls strung on silvered wire, *à la* bead-work, and finished with a fringed tassel make lovely hanging-baskets.

*Frosted Ornaments.*—The more substantial of the above, also small fruits, may be frosted with sugar frosting, retaining and frosting the stems; thus disguised, place them in a choice plate upon a mat of red leaves, and if they are well done you will not complain of fruitless efforts or lost time. Coal-cinders as they come from the grate are not objects of

beauty, but if fantastic in shape, color them with carmine or violet inks or aniline dyes, with a few crystallized for white ones, and their last state will not be worse than their first. They may then be placed with choice minerals, and there puzzle the observer, unless he chanced to be a geologist familiar with every form of matter "on this mundane sphere."

"Lichens and toad-stools, laugh them not to scorn;  
Bright-colored, shell-shaped things, they shall adorn  
The home of one to fits of musing prone,  
Whose love for nature ne'er may be outgrown!"

Once at a picnic I found a hollow, horn-shaped stick, its many knots and indentations covered with rich-looking bark, and bore this token of "ye merry greenwood" to a relative, who varnished it, filled it with cedar, rose-berries, straw flowers, oats, crystallized grasses, grasses natural, various seed-pods and thorns. High on the wall in a corner it makes, in its rich, dark colors, a pleasant contrast with her thrifty plants and cool green vines. My fern-bracket was once a portion of a dark-red, pebbled paper collar-box. I cut the rim and side pieces in an open-work pattern, bound the edges with narrow strips of white paper cut in points; then, placing two golden-brown chestnut-leaves at the base, clothed it with ferns, grasses, and green puff-balls, and hung it above a bracket on which rests a flesh-tinted bust of Dickens, displayed against black velvet trimmed with cedar. Rainbow flowers may be made by fringing out silks, delaines, or canton flannels, and sewing the ravellings in imitation of zephyr flowers. They are as brilliant as the latter, and much more delicate. Our Memorial Wreath, on white cardboard, is an array of pressed leaves from nearly every State of the Union; with Southern flowers, holly, mistletoe, etc., sent me by a soldier friend during the war. Skeletonized leaves are over some of the brightest colors, and, to represent our own prairies, I have enthroned one tiny keepsake; for the pearl of them all, near the centre, is my snowy white violet. Elegant portfolios for engravings and handsome woodcuts may repose on the centre-table, and afford our friends much pleasure. To make them procure perforated cardboard, and embroider them and bind with ribbons. Be sure to have the word "Engravings" wrought or printed upon them. Also be old-fashioned enough to have several scrap-books for the amusement of old and young. I have one which I prize very highly. In it I preserve only poems from authors of acknowledged merit, or such anonymous gems as are exquisite enough to find a welcome without the author's name. Sponges utilize thus: cut them into thin slices with a sharp razor, and after coloring them rose-red, fashion them into a card-basket. Groceries are useful as beautifiers in spite of their prosaic qualities—flour, rice, raisin-stems, almonds, peanuts, cranberries, apples, cloves, oh! there is not space to enumerate all. Almond lace for decorating silk articles may be obtained by placing an almond on its side and cracking carefully, to avoid breaking the handsome wooden lace-work which will be found between its inner and outer shell. Remove with a pin. I suspect that tiny worms are the artisans which carve for us these exquisitely minute patterns, but they are found in good as well as refuse almonds. MRS. GEORGE R. LEE.

## NEW EXCELSIOR LAWN MOWER.

### Reduction in Price!

Less Weight! Lighter Draft!

It has been adopted and can be seen in Practical Operation in the Public Parks of New York, Brooklyn, Boston, New Haven, Cleveland, Chicago, and almost all the Prominent City Parks in the United States and Canada.

ROLLER MOWERS, 7 Sizes; SIDE-WHEEL MOWERS, 6 Sizes; BACK-WHEEL MOWERS, 5 Sizes; HORSE MOWERS, 4 Sizes.

10-In. Popular Croquet Mower, \$10.

Our New Horse Mower is conceded to be the **LIGHTEST** and **BEST** Horse Lawn Mower ever made.

N. B.—Horse and Hand Lawn Mowers are alike guaranteed in every respect. Address **CHADBORN & COLDWELL MFG CO.**, Newburgh, N. Y.

Send for Illustrated Circular and Price List.

## BUTTER-WORKER.

The most effective, simple, and convenient yet invented. **Works 30 lbs.** in less than 5 minutes, thoroughly working out butter-milk and mixing in the salt. **AGENTS**

WANTED. Send for circular. **A. H. REID**, 6 N. Eighteenth St., Philadelphia, Pa.

## NEW MUSIC.

### 48 Choice Pieces FOR 50 CENTS.

Every number of **Richardson's Musical Hours** contains 12 choice pieces, by the best composers of America and Europe. The monthly is elegantly printed, has an engraved cover in two colors, and is an "ornament to any Piano." There are no advertisements scattered through its pages, but the music is entirely separate, and thus can be bound at any time into a book. The selections comprise Songs with Chords, Ballads, Comic Songs, Waltzes, Polkas, Galops, Schottisches, Marches, Mazurkas, Nocturnes, etc., etc., all of which can be played on the Piano or Organ; in fact, just the pieces you would purchase at the Music Stores for 35 or 40 cents each. Now we have sold many thousand single numbers at 25 cents each, but in order that every player in the United States and Canada may see the Magazine and judge of its merits, we will send it post-paid four months for only 50 cents. Each number contains 12 35c. pieces; thus you receive 48 post-paid for only 50 cents (cash or stamps). Eight months (96 pieces) for \$1.00. Owing to the expensive manner in which **Musical Hours** is issued, we cannot afford to send sample copies.

**GEO. W. RICHARDSON & CO.**, 37 Temple Place, Boston, Mass.  
Please mention in what paper you saw this.

50 Gold, Silver, Lace, Diamond, Lily, Rosebud, etc., Cards. Your name neatly printed on them all, only 10c.

# THE LADIES' DOMESTIC

BY HENRY T. WILLIAMS.

NEW YORK, JUNE, 1879.

No. 90. PRICE 12 CENTS.

## A FERN BED IN A RUSTIC FRAME.

A BEAUTIFUL and luxuriant group of Ferns may be had for the entire summer by any one who has a large tree under which to plant them. If there is a wet or unsightly place under the tree that never can be made to look well, all the better; choose that spot for your Ferns. An airy place, shaded by the house, will do nearly as well. To prepare the bed for the Ferns proceed in this wise: Choose a bundle of stakes two and a half feet long, an inch and a half in diameter, and which still tightly retain the bark; drive these into the ground in a circular or oblong form, as you may wish the bed to be; the stakes may stand from twelve to eighteen inches above the ground; now weave in and out about the stakes, basket fashion, grape-vine until the top of the stakes is reached. You then have what appears to be a rustic basket. Fill in the bottom with sod, or earth rubbish of various sorts, but leave room enough in the top for a good layer of forest mould, in which plant the Ferns, which may be taken from the woods as soon as the fronds begin to peep above the ground.

It is better to choose the Ferns from a plot where they grow thickly, and take them up so that they may be as little divided as possible, and with plenty of soil unbroken about the roots. Fill your basket full of them, and, if you water them well, in a few weeks you will have a thing of beauty to gladden your eyes for many a week to come. The basket may be further ornamented by slipping seeds of the Cypress vine or Morning-glory between the interstices of the grape-vine into the soil. They will sometimes grow right merrily, and if trained about the basket beautify and illuminate it in a very dainty and exquisite fashion.

**Red Spider.**—An exchange suggests: If small plates of bright tin or glass, with a little sulphur on them, are placed in the full rays of the sun under the plants, no red spiders will trouble

them, as the sulphur fumes kill them. A weak solution of whale-oil soap is excellent; but it must be very weak.

DESIGN FOR FLOWER-STAND.

## A WELL-MANAGED HOUSE-PLANT.

THE Massachusetts Horticultural Report mentions a very finely-grown tricolor Pelargonium, exhibited by John Parker, who gave in substance the following statement of his treatment: "In summer it is plunged in open ground in the garden; taken up, severely cut back, and repotted in autumn, the old earth completely shaken from the roots. After January it is watered with liquid manure once a fortnight, made from a pint of hen-droppings in two gallons of water, settled, and sediment rejected. The droppings are first scalded with boiling water to destroy any animal germs. Once a week the plant is dashed with water, and, if the weather is mild, in the open air. The pots are washed once a fortnight, and the surface of the earth stirred with a fork." This was the treatment of a plant in a dining-room, and the result was a brilliant display. Mr. Parker said that it was important to keep plants near the glass, in the full blaze of the sun, from January to May.

## THE VALUE OF ORNAMENTAL TREES.

M. B. BATEMAN gives in the *Practical Farmer* an interesting example of the financial value of ornament. He says that some thirty years ago a neighbor at Columbus planted four Norway Spruces in his front yard. The trees cost him one dollar each. Ten years afterwards a wealthy citizen paid a thousand dollars more for the place on account of those trees than he otherwise would have done.

## LARGE PÆONIA.

MARSHALL P. WILDER exhibited last year, among other fine flowers, a tree Pæonia of the variety known as Louis van Houtte, which measured nine inches in diameter. It is rare that six or seven inches are exceeded by the tree Pæonia.

## The Garden.

## OUT-DOOR GARDENING IN ALABAMA.

I HAVE always been a passionate lover of flowers. When but a "wee bit toddler" the most pleasant part of the day was that spent at eventide in my grandmother's vegetable garden, with its narrow central bed of old-fashioned flowers, Hollyhocks, Primroses, Sweet Williams, many-colored Forno-Clocks, and other homely favorites, dear to us from association with childhood's innocent pleasures, but now mostly relegated to obscure corners in order to make way for their more aristocratic foreign sisters. What a never-palling delight I found in stripping the calyx from the Primrose buds and watching the petals unfold, like a flash, in all their golden glory! And I used to fancy that they enjoyed it as much as I did, and were grateful to me for hastening the moment of their liberation. Then the stores on stores of beautiful tiny cheeses afforded by the matronly Hollyhocks. And I must not forget the dear little Heartsease, "Little Stepmother," as the Germans call them, with their bright faces looking up so cheerfully, as if resolved upon doing their utmost to enliven and beautify the lowly station allotted to them in Flora's fair domain. I look with admiration upon the royal Pansies, brilliant in their gorgeous robes of purple and gold, but they never call forth the thrill of tender recollection produced by the sight of the little, unpretending favorite of my childhood.

When I returned from boarding-school, and settled down permanently to home life, I resolved to introduce a new element of beauty into our sweet but somewhat sombre "Hermitage": to devote a portion of my newly-attained leisure to the cultivation of flowers, and thus surround myself with "all things fair and lovely." We had a few varieties of flowering shrubs scattered about, which in the course of years had grown almost to the dignity of trees, but no space specially devoted to flowers. The dear old grandmother, in whose heart and home I had found loving room since my orphaned infancy, had but one defect in my eyes, and that was her failure to sympathize with me in my love for these frail children of the soil. In vain I quoted to her, "Your voiceless lips, O flowers, are living teachers; each cup a pulpit, every leaf a book," etc. Her nicely-kept lawn, with its noble evergreens, was the pride of her heart, and she insisted that flowers did not pay for the trouble of cultivating.

Finally, however, after much coaxing, she consented to allow me a spot on the lawn for my "experiment," as she called it, provided none of her cherished trees were sacrificed. I soon selected the location I considered best suited to my purpose, a plot of ground once shaded by a giant oak; but this had been blown down during a violent storm some years ago, and its place was now occupied by a thriving young magnolia. My first step was to draw a diagram of my future garden; so I went to work with paper and pencil and dashed off a most elaborate network of beds and walks. The services of the colored magnate of the vegetable garden had been placed at my disposal, so I soon had the pleasure of see-

ing "Uncle Ned" hard at work with "the shovel and the hoe," throwing up beds and levelling walks, while I stood by, paper in hand, stopping him, every few minutes, to make corrections or suggest improvements. I suppose I must have tried his patience sorely, for after an hour or two he suddenly straightened himself up, and, extending his hand, said, "See here, missie, you jes gimme that paper, and go in de house 'long o' old miss, and I'll fix it all right fer you." I meekly obeyed, and walked off, leaving him to his own devices. The next day he announced that the beds were ready for the plants, so I started out to beg contributions from my neighbors. The lady at whose house I called first professed herself delighted to accommodate me. "Would you like to have some Crape Myrtle?" "Oh! no, thanks; we have several, twenty feet and more in height, scattered about on the lawn." "Cape Jessamine?" These, too, I declined, as we had about half a dozen, and as she had nothing else I bade her good morning and started again, hoping for better success on my next call. Let me remark, en passant, that these two, Crape Myrtle and Cape Jessamine, are the standard flowering shrubs in Southern country homes. They are found everywhere, and everywhere they bestow added loveliness. Even the roughest log cabin loses something of its bleakness when embowered in clouds of rosy bloom, while the delightful fragrance exhaled from the waxen petals of the Cape Jessamine offers a pleasant greeting to the passer-by. They are of the easiest culture, and exceedingly tenacious of life, particularly the Crape Myrtle (*Lagerstræmia*). It will live and thrive in situations where even a bramble would die of starvation. I have seen it growing luxuriantly in clay gullies by the roadside, where the branches had been carelessly thrown in from a garden near by.

But to return. I made several calls, with varying success, and upon reaching home, and taking an inventory of my acquisitions, I found myself the happy possessor of about twenty-five plants, consisting principally of "slips" or cuttings of Roses, Spireas, Oleanders, Forsythia or Golden Bell, Purple Magnolia, two varieties of double Pomegranate, scarlet and lemon, together with a few hardy bulbs, Jonquils, Hyacinths, etc. Uncle Ned's services were again called into requisition to dig the holes for me, and before night my plants were all in the ground. But there was still space for more, so I concluded to send to a florist for his ten-dollar collection. In about two weeks they arrived, and I could scarcely wait to have the box opened. Such lovely plants! and not a leaf broken or withered. Two or three of the Roses and Carnations had buds on them. Besides these there were Fuchsias, Heliotropes, Geraniums, Verbenas, Pansies, Petunias, and many others too numerous to mention. They were "too lovely for anything."

But at the height of my excitement and admiration my enthusiasm received a momentary check, as a little cousin, who was standing by, exclaimed:

"Cousin Bell, what is this *weed* doing among your flowers?"

"That is an *Ageratum Mexicanum*, you uncultivated little heathen!" I answered, looking at the label.

"Well, if it is a *Nagerater Exicanderm*, there's lots of them in the woods round the school-house," she retorted, her little nose "tip-tilted" in disdain, as she glanced at the poor *Ageratum*.

The hundred plants contained in the box filled out my beds nicely, and now that my part of the work was done, I watched impatiently for signs of growth; but, alas! one after another they succumbed to the scorching sunshine, until by the last of June I had scarcely a "rose to tell where the garden had been." I was so disappointed at my failure that I had almost resolved never to make another attempt at cultivating flowers, when, one bright day, auntie came from her distant home to pay us a visit. Now, this same auntie was, like myself, a passionate lover of flowers, but, unlike poor me, was very successful in their culture. Knowing this, the second day of her visit I took her to see my garden, and begged her to tell me the cause of my failure.

"You commenced wrong," she replied; "in the first place, your garden is surrounded on two sides by huge trees, whose roots, I have no doubt, traverse the entire space, and absorb the moisture and nourishment which should support your flowers. Then, instead of thoroughly breaking up and enriching the soil, you only scraped the surface, and deposited your plants in holes dug in the hard ground. No wonder the poor things became discouraged and died under such treatment. Now, I would advise you to select some other place, away from these trees; and don't undertake too much at first—it is better to add a bed or two as occasion demands. Then spade up the soil to the depth of a foot, at least, and enrich it thoroughly. If you will give it just the same culture that your grandmother bestows upon her vegetable garden, you will be apt to succeed as well as she does. Keep the soil open by constant stirring, so that the air can penetrate it, and don't allow the weeds to creep up around your plants; they will soon overrun and perish them out."

"Thank you, auntie; and now please tell me what to plant, what varieties will best endure our long, parching summers."

"I am afraid you are disposed to make the climate responsible for your own shortcomings, but never mind that now. Of course you want a succession of bloom; well, first on the list come the spring bulbs, Jonquils, Narcissus, Snowdrops, Hyacinths, Daffodils, etc. Plant these in September, and you will have flowers through January, February, and March. Then come the Tea-Roses, Summer Pinks, Verbenas, Phloxes, and Petunias, the last two from seed planted in the fall, or after the first year self-sown. In May and June comes on the whole army of Roses, with the tender annuals, such as Zinnias and Balsams; and, by the way, I think there is nothing prettier than a well-trained Double Balsam. Keep the shoots pinched off, so that the leaves do not conceal the beautiful rose-like blooms. I take off all the side-shoots, or leave only three or four; either way they are lovely. There is one charming little annual that I must not forget, the Portulaca. This needs a situation partly shaded, or the flowers will close up in the afternoon. There cannot be a bit of more gorgeous coloring than a bed of mixed Portulacas in full bloom. You must, by all means,

have a bed of *Gladiolus*. These, like the spring-flowering bulbs I mentioned first, need only to be planted, and then you have no further trouble, except to thin them out every two or three years. Of course every garden must have a generous-sized bed of Violets and Mignonette, and its borders of Sweet Alyssum and White Candytuft. Then I should have half a dozen good Dahlias, and these, with the gayly-colored Double Hollyhocks and fragrant Chrysanthemums, will keep your garden looking bright and cheerful until frost. And now I come to the last, and perhaps most important of all, for it is the only one that will furnish us blooms in abundance when the ground is frozen and icicles hang from the eaves, and that is the *Camellia Japonica*. By all means have two or three of different colors, and during the dreary winter days, when even the sturdy little Violets have disappeared, you can have your rooms brightened and beautified by these lovely floral gems. There will be, perhaps, during the winter a few days when they may require some slight protection, such as a piece of carpet thrown over them; but when the 'cold snap' passes off you can remove it, and they will smile out upon you in unimpaired loveliness."

"Thank you again, amtie. I know I should succeed if I could only have you here to help me."

"I can introduce you to a much more competent instructor than myself. As soon as I reach home I will send you a copy of THE FLORAL CABINET. I need not advise you to subscribe for it, for you will be sure to do so as soon as you see it; and if you follow its instructions, I have no doubt but that on my next annual visit I shall find your garden a perfect bower of beauty."

Her prophecy was verified; at least, she was kind enough to tell me so when she came to see us last summer.

J. W. L.

#### THE FAILURES AND SUCCESSES OF AN AMATEUR FLORIST.

"Spake full well in language quaint and olden  
One who dwelleth by the castled Rhine,  
When he called the flowers, so blue and golden,  
Stars that in earth's firmament do shine.

Wondrous truths, and manifold as wondrous,  
God hath written in the stars above;  
But not less in the bright flowerets under us  
Stands the revelation of his love."

THE poet having thus so beautifully declared the mission of the flowers, let us open wide the portals of our hearts and homes to these gentle messengers of love, and banish to the potato patch all those prosaic individuals who sneer at these sweet treasures because "there's no bread and butter in 'em." Flowers will give somewhat of a real home air to the most dreary-looking dwelling; while if a cozy, cheerful cottage were placed on a smoothly-shaven lawn barren of shrubbery, Roses, and Lilies, the flowers taken from the vases and windows, the delicate vines torn from pillar and trellis, it would appear as "forlorn as an old bachelor."

Feeling and recognizing the cheering, home-brightening influence which these "blue and golden" pets gave my girlhood's home, I have always endea-

vored to keep my own dwelling under their sweet spell, but for several years contented myself with summer flowers, annual, biennial, and perennial, together with hardy Roses and shrubbery, for we lived in a small country town, far away from any greenhouse, and our house was so cold it would not keep plants from freezing. Visions of *Heliotropes*, *Geraniums*, and *Begonias* oft flitted through my head when sleeping and waking, but these were put by as the idle longings of discontent, until one day we purchased another property, purposing to remove there, and in making repairs moved the house and dug a cellar. Then did my day-dreams become so bright as to appear almost reality, and under my supervision the cellar was dug to extend five feet beyond the house on the south side, this extension being covered with glass. This was almost a success. My *Geraniums*, *Heliotropes*, etc., grew well all winter, keeping green and thrifty instead of sending out long, sickly, white shoots, as they do when kept in the dark; but there was no way of entrance except from the outside, and in long-continued seasons of cold the plants would damp off.

Having told of my failures, I must hasten to speak of my success, for I think I have attained this desideratum. We now live in a pleasant home of our own building, but while examining draughts and studying plans previous to building, I did not forget my flowers; not even when those delights of good housekeepers, spacious closets and commodious pantries, occupied my thoughts. In order to carry out my plans conveniently, and at the same time economically, I have a cellar for storing winter vegetables under my dining-room. The floor is paved and cemented so it is rat-proof. On the south side it extends five feet beyond the house. This extension is twelve feet long and is covered with glass placed at an angle of forty-five degrees. This is covered at night and in severe weather with wooden shutters; the centre one, running in grooves, can be pulled down off the glass. The end ones are hinged and lift back. The cellar has an inside entrance through a pantry which connects with the dining-room. Staging is erected in this extension or flower part in a way to economize space as much as possible.

One who is not accustomed to arranging plants would be astonished at the number which can be placed in so small a space. My cellar contains at present thirty *Geraniums*: Ivy, Apple, Rose, English and Fish *Geraniums*; eight varieties of *Fuchsias*; five of *Abutilons*; three of *Begonia Rex*, besides three other kinds of *Begonias*; *Tradescantias*, *Vulgaris*, *Zebrina*, and *Repens Vitata*; *Ivies*, *Ferns*, *Farfugiums*, *Verbenas*, *Maurandias*, pink and scarlet *Salvia*, and *Heliotropes*; a *Calceolaria*, an *Echeveria*, a *Crassula*, and an *Achania*. I like Cacti and they do so well in the cellar that I keep several varieties. I have now three species of Night-Blooming *Cereus*. One, the *Cereus Grandiflorus*, bore two flowers in the summer of 1875. The largest was fourteen inches in diameter. Another is now twelve feet high, far too high for my ceiling, and as it will not bend without breaking, the box which contains it is set on the floor in one corner and turned almost on its side, that the stem may not come in contact with its edge, and the plant hangs suspended from the ceiling by soft strips

of cloth. This has bloomed also, but the flowers were not so large as *Cereus Grandiflorus*. Then there is a large pot of *Cereus Flagelliformis*, or Snake or Rat-tail Cactus, which is now full of tiny pink buds. It has borne forty perfect flowers. Then there is a pot of *Cereus Phyllanthoides* full of buds. This has bloomed every spring for several years, and last fall it surprised me very much by sending out five beautiful flowers in November. There is also a pot of *Cereus Truncatus*, one of *Lace Cactus*, one of *Crab Cactus*, a *Globe*, a *Pincushion*, and two species of *Agave*.

It is sufficiently light behind the staging for my *Justicias*, *Oleander*, *Dwarf Orange*, *Aloysias*, *Pomegranates*, *Lantanas*, *Amaryllis*, *Agapanthus*, and *Tritoma*.

Now, any one who has not the means to buy such plants as they wish every season, or one who lives far from a city or large greenhouse, can in this way keep their plants with but little trouble and no expense.

All the attention my flowers receive during the winter is a little water once a week, and the shutters opened and closed morning and evening. I have kept plants in this way for eight years, and have never lost one in that time from freezing or damping off. Of course the atmosphere is too low, in a greenhouse of this kind, to keep some very tender kinds, such as *Coleus*, *Achyranthus*, and *Bouvardias*, but if you are so fortunate as to have a window garden, you can safely add them to your list. I have one that is beautiful with its ruby-centred *Euphorbias*, snowy, fragrant *Cyclamens*, and the varying tints of *Achyranthus* and *Coleus*. I have kept several varieties of these last for four winters in succession, and in a frame house, too, the room heated by a common wood stove—although some eminent florists say that *Coleus* cannot be kept in a dwelling-house.

Some one has truly said that "flowers are God's thoughts painted in colors." Then, while tending and admiring these beautifully illuminated texts from his great book of Nature, let us not forget the bountiful Author and Giver of all these benefits.

LOIS.

**Primroses** hold a first rank among plants for house-culture. They are easily raised from seed, and continue in bloom for a long time. The seed is very fine and is best sown in the house.

Take a shallow box, about three inches in depth, and fill with a mixture composed of equal parts leaf-mould and sand; sprinkle thoroughly with water, and sow the seed on the surface; do not cover the seed with earth, but press it gently into the ground with the palm of the hand. Lay a pane of glass over the box, and place it in a warm place; in a few days the seed will sprout. As soon as the third leaf appears, carefully pot off the young plants into another box, planting them three inches apart. Keep the glass over the box to retain the moisture, and avoid the direct rays of the sun.

Repot as often as the plants require room; I prefer boxes for small plants, as they do not dry out as soon as pots; if pots are used they should be inserted in boxes filled with earth; this will keep the roots cool.

## Floral Experiences.

## CHRYSANTHEMUMS.

AMONG our fall flowering hardy plants but few can be found more desirable than the Chrysanthemum, or *Artemisia*, as it used to be termed in my childhood. For profusion of bloom, variety of coloring, number of sorts, lateness of flowering, ease of propagation, and freedom from insects it can hardly be equalled, and surely not surpassed. It is within the memory of some of our older florists that only the large flowering sorts were known; and when the beautiful little Pompon varieties came out, they could scarcely be enough admired. These were soon followed by the Japanese, which fill the place among Chrysanthemums that the quilled varieties do among Asters. The Chrysanthemum is as easy of propagation as a Geranium, or even easier. Cuttings may be rooted with the greatest ease, and seeds also will produce new varieties if hybridized. There are almost innumerable varieties which have been thus obtained. Each plant will also send up a number of shoots in spring or after blooming, each of which, if taken off, will make a nice rooted plant. Cuttings of the tops, taken in April or May, and placed in light soil, either in pots or the open ground in the latter month, will speedily take root, if kept watered, those in the ground of course needing less attention than those in pots, unless in an unusually dry spring, such as we have had a few of lately. Several may be placed in one pot around the sides.

When rooted, and about six inches in height, pinch back to the third leaf. This will make them put forth side branches, which should be again pinched back in their turn as soon as they get four or five leaves. In this way the plant will become almost a perfect bouquet of bloom. After the first of July pinching should be discontinued, or your plants will not flower.

Although very hardy, a little protection from strong northerly winds will prove a great advantage, both by increasing the bloom, and also prolonging it. Plants set on the south side of an open picket fence I think do the best, as it allows of a free circulation of air around, though a close board fence or the side of a building does perfectly well, if the plants are not too closely in contact with them. A little rotten manure or a few dry leaves, or both combined, will be found very beneficial, applied around them in fall after flowering. Many people take them up, put them in boxes in a cellar, at the approach of winter, but I have never had any difficulty in keeping them out of doors when treated as described, or even when growing on an open border along a walk in a very bleak situation. However, if one has a new variety in limited quantity, "caution is the parent of safety."

Although a sheltered place is recommended, Chrysanthemums do not do well under the shade of trees. They are then apt to be attacked with a sort of mildew which quite disables them. Soapsuds on the foliage will sometimes benefit them in a measure when thus attacked.

In case plants are wanted for the house, the cut-

tings may be started in pots, and shifted from time to time until placed in a six-inch pot, or they may be grown in the ground until well budded, and potted soon after the buds begin to show color. In either case the pinching process is the same. A little manure-water once or twice a week will be very beneficial—not too strong, or the buds may suffer.

They are capable of sustaining a great deal of drought when growing in the open ground, but if in pots should not be allowed to become too dry if expected to flower abundantly.

After blooming the pots may be placed in the cellar, leaving the room they had occupied free for other plants, an advantage which will not fail to be appreciated by those whose window-room is limited. Among the most desirable sorts with which I am acquainted, I would mention of the large flowered kind: Virgin Queen, *Rotundiflora*, Beauty of St. John's Wood, all white; Yellow Perfection, Julia Lagrovere, purple; Pink Perfection; and of the Pompons, La Fiancée, white; Bégon de Horticulture, creamy white extra; Rose d'Amour, extra; Pearl of Autumn, pale pink; St. Justin, deep yellow and maroon, fine; Bob, deep maroon; Pluie d'Or, straw color; L'Erbenelle, deep golden yellow, etc.

The Japanese kinds bloom all winter if the early buds are removed in the fall. Among these will be found great variety of sizes, from the monstrous Red Dragon down to the smallest Pompon. *Laciniata* is a particularly desirable variety. The flowers are pure white, and greatly resemble a double White Pink.

The lovers of foliage plants will also find something to admire in the variegated-leaved Chrysanthemum *Sensation*, which is white, with beautiful green and white foliage. I am sorry to say that this, in common with many other variegated plants, will prove less able to withstand hardship than its plainer relations, being rather impatient of having its leaves wet or being exposed to too strong sun. Nevertheless, it is so pretty that it is quite desirable. The fine aromatic perfume of the foliage of Chrysanthemums is much liked by many, while their cousin, the Wormwood, is well known for its medicinal qualities.

A moderate temperature will be found most conducive to the welfare of potted specimens, as the flowers will retain their beauty longer. When used for cut flowers they will keep an almost incredible length of time, and are especially good for decorating the hair, as they do not droop as quickly as most flowers when not placed in water. Those who need flowers for church decoration will find them especially adapted to their needs, either in pots or cut. The dwarf varieties grow about eighteen inches in height, while the larger, stronger growing sorts will often attain to four feet.

The first Chrysanthemum ever grown in this city was raised from a cutting of an imported plant, by the writer's grandmother, over seventy years ago, and so precious was the slip deemed that a hole was actually drilled through a China vase to afford it a fitting receptacle. I have often wished that ancient dame could have seen the plants of the present day.

Probably no one will confound the annual Chrysanthemums with those of which we have been

speaking. There are several colors of these, and in a favorable soil some of them are very handsome. A light, sandy soil seems unsuited to them. They are more fastidious in that respect than the perennials. They are a good border flower, as they bloom early and continue late. A striking peculiarity is the fact that the first blooms on a plant are often single or semi-double, while the succeeding ones are double as roses. These are propagated by seed alone.

I remember reading an anecdote of a celebrated Italian who had some plants of the first perennial varieties brought to Europe, of which he refused to impart seeds or cuttings. A cardinal who was an intimate friend, after many endeavors to obtain some, determined to try the effect of strategy. He accordingly called often, and walked in the garden to feast his eyes on the rare beauties, jealously watched, however, by the owner. At last one day he made his appearance with a velvet mantle loosely thrown over his shoulders, which he contrived to drag over the plants and drop to the ground. Turning to his servant who walked behind him, he ordered him to pick it up and take charge of it. As soon as possible he left, and a close inspection of the mantle rewarded him with a few seeds, and in a few months he was able to invite the puzzled flower-fancier to an inspection of his specimens.

At the present time, however, there is but little inducement to resort to subterfuge, as the finest varieties may be purchased for from fifteen to twenty-five cents each, and even less in quantities. Two or three neighbors, by clubbing and purchasing a dozen, may each of them be the owners of a dozen sorts the succeeding spring, owing to the ease with which they are propagated. I have said that the Japanese occupied the same place among the species that the quilled varieties do among Asters, but there are some of them which in appearance resemble tassels; others look like bunches of thread, being, like most Japanese things, very curious. Some of them are spotted purple and white, and crimson and white.

F. A. A.

## PEONIES.

No flowering plants capable of enduring our northern winters are more satisfactory than the Peonies. Massive without being coarse, fragrant without being pungent, grand without being gaudy, various in form and color beyond the possibility of being successfully superseded, they stand in the first rank of hardy flowers. They are derived principally from four species, each of which is beautiful—*P. montan*, *P. Sinensis*, *P. officinalis*, *P. paradoxa*. A few varieties are from species of less importance. The Peony belongs to the natural order *Ranunculaceæ*, which fact alone is a warrant of its worth.

I have had much experience in ordering Peonies from catalogue description, and it has been so expensive and the result so vexatious that I have about reached the conclusion that color-blindness, carelessness, or worse are all that is needed to write a descriptive catalogue of them. I have rejected a good load of roots, after giving them a trial; not that they were inferior in any way, but because I had others so near like them that I could not readily tell one

from the other. The object of this article is to call the attention of amateurs to some varieties which are particularly fine, and which differ enough from each other to give satisfaction. The old Peony, *officinalis*, is the parent of several varieties. Of these *rubra* is a bright crimson, and *grandiflora rosea* is of bright rose-color. These sorts are old and grand; but whoever discards them on account of their being old will make a sad mistake. *P. officinalis tenuifolia fl. pl.* is a floral treasure, though I do not believe that it is a variety of *officinalis*, as it has all the traits of a distinct species. It blooms early; its flowers are double and of a bright scarlet-crimson color. Even without flowers it is a beauty, on account of its delicate, fern-like foliage. Though this variety is perfectly hardy and easily grown, it does not seem to be very plenty.

*P. paradoxa*.—The varieties in this division originated in Europe. The best is *Nemesis*. The flowers are very numerous and full, but quite small and of a rich crimson color. All the varieties from *P. paradoxa* are crimson, of greater or less intensity.

*P. moutan* differs from all the others in having a shrubby top. There are no decided colors in this division, but a simple range of shades, from a dim white to a dim rose. Some of the flowers are very good; and, as they are borne on bushes or trees from three to eight feet in height, they are quite conspicuous. The best white is *Bijou de Chuse*, and the best colored is *Gumpperii*, a bright rosy pink. I say to the amateur: Don't be in haste about getting Tree Peonies, for the best are not yet in market.

For brilliancy, grace, and fragrance the varieties from *P. Sinensis* must have the first place, as they may be had in a greater variety of shades and colors than those of any other class.

*Bicolor* is a handsome variety; outside rose-color and the centre of a very good yellow. *Festiva* is pure white and very full.

*P. fragrans*, sometimes called the Rose Peony, is one of the best. It is of a rose-color and very sweet. *P. Humei* resembles it in color, but blooms much later, and is the latest of all I have tried. *Jules le Boon* is a bright red. *Mrs. Dagg* is a very early variety, dwarf habit; flowers pure white, dotted with red. *Perfecta*, outside petals a peculiar shade of pink, inside petals lively salmon—a beauty.

*P. purpurea superba* is of a deep brilliant crimson. The plant a tall grower and very showy.

After getting more kinds than I have mentioned, the distinctions will begin to disappear between those you have and those you get. In making a selection I would especially caution the amateur, when he takes up a descriptive catalogue of Peonies, against making any great distinction between the colors which he finds mentioned as pink, rose, and lilac. Whoever considers these colors as differing much from each other will discover the true distinction when he sees the plant in bloom. A very good way is to let some reliable grower make a selection for you, as such a person takes pains to propagate the best varieties largely, and it often happens that he has a surplus of the best.

In raising Peonies from seed, the seed should be soaked in water for a day or two, as it is very hard. About the 1st of March it should be sown in a brisk

heat, and when the weather becomes warm the seedlings may be planted out, and will show their color the third year. They are usually increased by dividing the root; and, though this is commonly done in the autumn, there is nothing gained by it. March or April is a better time, as the new root will have a chance to get hold of the soil before it is called upon to endure our northern winter. The soil in which they are planted should be dry, rich, and deeply dug. The tubers should be planted six inches deep.

*P. moutan* is propagated by grafting on the root of *P. Sinensis*, and by an amateur may be performed as follows: In the spring take some good, strong single roots from the clumps of some Chinese variety and plant them by themselves in a rich place and grow them until September. Then cut a scion from *P. moutan*. It should be about three inches in length and contain a bud. Sharpen it and insert it firmly in the root which is used for the stock, and cover it with the earth that has been thrown out to make the experiment; and, if the work has been carefully done, the graft will take care of itself.—H. HUFTELEN, Le Roy, N. Y.

#### HINTS ON FLOWERS.

To be successful in the cultivation of flowers one must bring to the work some little knowledge of the nature and requirements of plants, the peculiarities of their growth, and the different conditions of soil best adapted to each variety. Much may be learned from the floral catalogues and papers, which give information on almost every subject connected with Floriculture; but experience is the best teacher, and the mistakes of one season will be guarded against the next.

First in importance is a judicious selection of seeds. The amateur will be most successful with the hardy varieties of annuals, and these are comparatively easy of cultivation.

At the beginning of the list I would place *Phlox Drummondii*; a package of mixed seeds will of itself be sufficient for almost a whole flower-garden. Next in importance are *Petunias*. Of these my favorites are the blotched and striped varieties; these almost rival the *Phlox* in beauty and brilliancy, while for showiness they are unequalled.

I must not forget the *Asters*. They blossom later than some other plants, but one is fully repaid for waiting by the beauty of their flowers. I have found the New Rose most satisfactory; a single plant of mine had on it last fall at one time more than thirty perfect and half-opened flowers, besides numerous buds. These plants require a very rich soil; they must be staked, as the weight of flowers bends them down.

The *Balsam* should be in every collection; but seed must be purchased of a reliable dealer, otherwise there will be a large percentage of single flowers. This variety of plants also requires a rich soil, the stronger the better, and they should be pruned to either a single stalk or to two or three branches; the flowers oftentimes are as perfect as roses, and as double.

The different varieties of *Dianthus*, especially *D. Chinensis* and *D. Heddwigii*, are very desirable for

garden cultivation, and are easily raised from seed to bloom the first year.

Be sure and tuck a few *Mignonette* seeds in every spare nook in the garden, for this plant is indispensable for its fragrance.

These varieties I have mentioned are but few of the many; but for the showy part of a small garden I think they will be sufficient, and if the plants are well grown, must prove satisfactory to any one.

If you have any unsightly fences or walls cover them with climbing vines; after many trials of different vines, I have found the good old-fashioned *Morning-glory* (*Convolvulus major*) the best for this purpose; its growth is rapid, its flowers pretty, but one must rise before the sun to see them.

For a trellis in the centre of a flower-bed nothing can be prettier than *Cypress vine*, with its delicate foliage and star-like flowers. For this purpose *Maurandia* is also very desirable. I think this a very nice way to arrange a bed, to have some delicate vine in the centre.

I remember once seeing a ribbon bed the effect of which was very fine. It was circular in form; in the centre was a clump of *Pampas Grass*, surrounded by *Cannas*; next was a row of dark-leaved *Coleus*, then a row of the golden-leaved; following this *Mountain of Snow Geranium* trimmed low, and lastly a border of blue *Lobelia*. Such beds, however, are impracticable anywhere but on a smoothly-shaven lawn.

I have found June to be the best time to root cuttings for winter flowering; keep a box of sand in a shady place, and in this plant the slips; in a week or two they can be transferred to little pots. Started so early they will make strong, healthy plants, and come into bloom sooner in winter.

LORA LEE.

#### AMARYLLIS AND ROSES.

A NOTABLE specimen of the first is thus described by a correspondent of *Laws of Life*: Calling on a friend one day last winter she displayed with pride and pleasure, as well she might, an *Amaryllis Johnsonii* in remarkable bloom. The seven blossom bulbs—the product of one purchased some years before—were in a pot of six-gallon size, and bore twelve tall flower-stalks, each having four or five, or even six, buds or blossoms. It had thirty-six fairly open, crimson-scarlet lilies, each petal having a longitudinal stripe of white over the midrib. They were in a soil composed of black muck, garden mould, sand, and old barnyard compost in equal proportions. The repotting was soon after the spring bloom, and the pot was kept in a warm window and well watered until time to plunge in the ground in June. Just before frost it was put into a close and rather warm chamber, where it was left without much water, losing its foliage. When wanted for blooming it was brought to the window and flowers and leaves came up quickly together. It would have been better in a cool, light cellar. It is to grace the church on Easter Sunday, and I know of a superb calla wearing its crown of eight white spathas that is to stand opposite the crimson lilies.

## Hints for the Garden.

## HALF-HARDY ANNUALS.

HALF-HARDY annuals are such as require starting under glass to get large plants before the weather gets warm enough to plant them out of doors, so that their full beauty may be seen before they are destroyed by the early fall frosts. There are also some kinds which are hardy enough for growing from seeds sown into the places where they are to remain during summer, but being of so slow growth that, to hasten their flowering season, it is advisable to start early in the season, and then plant into the garden for flowering. A hot-bed is the best place for starting seeds in; but where only a few are wanted and the means are limited for having a hot-bed, they may be sown in a pot or box and placed in a warm window. Some who use hot-beds sow the seeds into the soil placed on the surface of the manure; but I prefer sowing them in boxes, as I think they vegetate sooner and are less liable to damp off than when sown right into the soil. Use shallow boxes, about two and a half inches deep and just large enough to conveniently handle. For soil a sandy loam and well-decayed leaf-mold is the most suitable. Upon no consideration bury the seeds deep, especially small ones—such as Coxeombs and Lobelia—and before sowing such small seeds give the soil a good watering, for, unless carefully done after sowing, they are apt to be washed to one end of the box, and some of them get too deeply covered, and therefore destroyed. Generally one good watering before the seeds are sown will be sufficient until they vegetate if a piece of board or glass is put over the box to prevent evaporation. Do not, however, keep the board on the box close after they have vegetated, as they will grow weakly if kept too dark. Also guard against the sun shining too brightly upon them.

Previous to planting all kinds of plants out of doors which have been started under glass, they should be well hardened-off by full exposure day and night for some time. A good many plants are destroyed by being planted into the open ground without being sufficiently hardened after coming out of the warm, moist temperature in which they were started.

**BALSAMS.**—The seeds of Balsams should be sown about the end of March or beginning of April, and kept warm, as they are very tender. After they have made their second leaves, transplant them into other boxes or pots, if wanted for decorating the greenhouse, for which they are very suitable, and, if supplied with plenty of moisture and good rich soil, make beautiful specimens. If for out-door ornament, do not set out until the ground gets warm and all danger of frost is past, and give good rich soil, and their free-blooming and delicate flowers will amply repay good culture. The variety called Solferino is finely striped with lilac and scarlet on a white ground. The camellia-flowered kinds, both tall and dwarf, are of different colors, perfectly double, and for general purposes are the best in cultivation.

## CRASSULA PERFOLIATA.

IN California this plant is not as well known as it should be. It is a window or greenhouse succulent, and if properly treated will yield a profusion of blossoms in the latter part of November, and continue to do so till the first of January. Even at this date it does not completely discontinue to open its small white, star-like flowers, but sometimes spring has fairly opened before its last raceme has faded away.

The flowers are borne in large clusters; very often as many as ten or twelve of them will be on one stalk, and we have had, this winter, on three-year-old plants, no less than two dozen of these stalks.

In some of the European countries, where much taste is displayed in decorating, the flowers are employed in embellishing rooms, in making bouquets and wreaths, for all of which they are found to be well adapted, as its flowers remain fresh a long time.

No trouble will be experienced when the proper soil is used to have a pleasing display of hanging-baskets and pots placed on brackets or shelves containing one or more Crassulas with their branches falling over the sides, which will in a couple of years completely hide the pot.

This truly valuable plant should not be left out of our amateur collection of window plants, for its culture is easy, and it will grow in any position where there is an exposure to the sun. The profusion of flowers will well repay the little time bestowed in keeping them watered. The best results are obtained by giving them a full southern exposure, for they will not bloom satisfactorily in any other situation.

When blooming season approaches water should be given sparingly, but in no case let them suffer for the want of it. By having the plants "root bound" they yield a greater profusion of flowers. For plants three years old from cuttings a seven or eight inch pot will be large enough. One-year-old plants grow and bloom in three or four inch pots.

When planted in any other soil than that containing much sand the roots seem to decay and the plants rarely grow, and send forth few or no flower-stalks. A soil that will grow healthy Fuchsias, Heliotropes, or, in fact, any good potting soil, with the addition of about one-fourth of beach sand, is the best for this succulent.

At the close of the flowering season all faded shoots should be cut away, trim the plants into good shape, and, if necessary, repot with fresh earth. Should they be too much root-bound shift into a larger size pot. After this change give but little water till they are started into new growth, after this no fear may be had of giving them the usual amount.

If the plants have been kept through winter in the house, bay-window, or in a greenhouse, they may be placed in the open air during spring and summer, though in no case turn them out of the pot into the open border.

## CULTURE OF THE CALLA LILY.

I HAVE been thinking that an article on the Callas might be beneficial to some of the many readers of your valuable and interesting paper. Although many have written on the same subject, I wish to give you my treatment of and success with them.

The Calla should be in every collection of winter-blooming plants, both for the home and the greenhouse. I admit that the flower has no perfume; but the pure white spathe, as it stands up so grand among the bright green foliage, is beautiful to look upon and is admired by all lovers of flowers. It is not like many other kinds of flowers, which look well for a short time and then are done blooming for the season. The flower of the Calla will last for a long time, if it is properly attended to.

Having had quite an experience in growing the Calla, and meeting with good success, I will give my way of culture. I let my plants bloom until May in the greenhouse. Then they are put under the stage, in a shady and dry place, each pot laid upon its side and left in that position during the summer, as they will live without any water during the time they are having a rest, which I think is best after blooming all winter. But if you should want a few flowers during the summer, you can leave a half-dozen plants for that purpose. Set them in a rather shady place and give plenty of water, and you will find that the Calla will bloom in summer as well as in winter. The plants are left in their position in the greenhouse until August. Then they are taken out of the pots, and the old earth shaken from the roots, and divided if they are too thick; and then repotted in fresh soil. Thoroughly scrub the pots, inside and out, before repotting them. The kind of soil that I use is well-rotted manure from hot-beds and good garden soil, with some sand to make the soil a little loose. It should be run through a sieve and well mixed together, equal parts of each. The size of pots depends altogether whether you want large flowers or small. I find the larger the pot the larger flowers I have; but if you want small Callas, use smaller pots. I read a short article a few days ago on the Calla, which stated that if you wanted to have plenty of flowers you must have them in small pots and in poor soil. I cannot agree with the writer on the small-pot and poor-soil question; for, judging from what I have seen of the Calla, I think they want good soil and plenty of room in the pots.

Through the winter I water my plants every day, never letting the soil get dry in the pots. They require a great deal of water, and once a week I give them manure-water, which can easily be made by taking an old barrel, and put in it about a bushel of cow-droppings; then fill it full of water and stir it up when you want to use. Do not be afraid that it will hurt them. I have used it too often not to know. You will find that you will have some fine flowers, that will pay you for your trouble. I saw some plants last spring that were in eighteen-inch pots, and they had from six to ten flower-stalks on each plant. So I think that shows that large pots will not hurt them. I have been told that a good way to make the Calla bloom is to set the pot into hot water and steam the roots. I have never tried it, and do not think I shall. I have all the blooms I want without such treatment. The Callas should be kept in a warm place and have plenty of light and sun; and if so treated they will yield plenty of bloom, to cheer you and your friends through the long winter months.—J. F. T., in "*Cultivator and Country Gentleman*."

THE

AND

[illegible]

NEW YORK, JUNE, 1879.

## ILLUSTRATIONS OF THE MONTH.

UPON first page is sketch of Beautiful Window Garden and Globe Aquarium. It is of more than usually elegant character.

UPON page nine are sketches of some beautiful flowers as grown by Charles T. Starr, of Avondale, Pennsylvania: the precious Lily of the Valley; the Ivy-leaved Geranium l'Elegante, a plant of very lovely foliage, ereeping, trailing, with variegated leaves; the scented Geranium Lavender, the odor of which is like lavender.

Among other scented geraniums is the "Lady Plymouth," a very peculiar plant, leaves variegated, green and creamy white, with fragrance of the Rose Geranium.

UPON page twelve is an example of Chinese Embroidery, birds brilliantly colored and worked in fine silk, blue and scarlet. The Lamp Mat of appliqué work is of velvet, with silk of three different shades, sewn on with gold-colored braid.

The Welcome of the children to grandfather and grandmother reminds one of the days when "Old hearts become young again."

## FLOWER-GARDEN HINTS.

MANY people say that their flowers, which once did well, do not thrive any more, and the reason is incomprehensible to them. In many cases the trouble is from worn-out soil; and if a little manure or a little fresh earth be added occasionally it is wonderful what an effect it will have on the renewed growth of half-worn-out root-stocks. Some kinds of flowers, especially, soon grow surly and bad-tempered unless they have a complete change of earth once in a

while. The Verbena is of this character. In perfectly fresh soil—that is, earth which has never grown a Verbena before—it grows like a weed; but the next year it is not quite so well, and in a few years it absolutely refuses to creep, run, or do anything, and we are forced to confess that the Verbena won't do for us as it used to years ago.

Other flowers are not quite so stubbornly fastidious as the Verbena; but still all more or less like to feel rejuvenated by an addition of some kind occasionally to the earth-blessings they have already been treated to.

Almost all our best hardy flowers are natives of woods or low, undisturbed lands, where the decaying leaves from the trees or the washings of higher surface-lands make a new annual entertainment for them; and it has been found by experiment that nothing is so good for these pretty little flowers as well-decayed leaf-mould from the woods, spread round the root-stocks, just above the ground. But, where this cannot be had, any other well-decayed vegetable refuse that may "be lying around loose" will do very nearly as well. Strong, rich manure—barnyard manure—has not been found very good for garden-flowers. It makes the herbage too strong and the flowers less in proportion. But, if nothing more natural can be got at to help the flowers along, and the soil seems exhausted and poor, this will be found much better than leaving the plants to struggle along as best they can.—*Germantown Telegraph.*

## A LIST FOR AMATEURS.

ANNUALS are more trouble than they are worth to most flower cultivators. Certainly a large list will lead to discouraging failures. I will venture to suggest a list of indispensables and give a few hints for their culture:

1. *Asters*.—Truffaut, German, and Washington are the best. Sow in a hot-bed, and do not transplant till the plants are three to five inches high. Thin them thoroughly to make them stocky. Asters thrive in any rich soil.

2. *Snapdragon*.—A good bed of best colors will delight you. They are easily grown, either sown in open soil or in hot-bed. Set them eighteen inches apart. Almost all flowers are crowded too much to show their real quality. A fine plant is half the charm.

3. *The Japan Pinks*, especially the lacinated. The single flowers are really preferable, if they are large and finely colored. Set them six inches apart, so as to thin out the poorest after they come to bloom. Or set two plants in a place and a foot apart. In this case, one of each two. The poorest in bloom can be pulled out. Place two fingers of the left hand close about the plants, press down; then with the right hand draw out the plant you prefer to lose.

4. *Clove Pinks*.—These are not exactly annuals, and may with care last several years. Plant fifteen inches or more apart—better at twenty inches—so as readily to adjust a hoe. Cover lightly in the winter with sawdust.

5. *Petunias*.—No flower gives so much satisfac-

tion with so little trouble. Get the best seed of the singles. The doubles are mostly monstrosities. The exquisite shades and markings of the single varieties are incomparable. Pull up at once every ordinary plant, before the pollen has spoiled the seed of the finer plants. Set as described above, two or three in a clump. Then thin out the poorest.

6. *The New Golden Celosia, or Coxeomb*.—This is of all rich shades and marvellously beautiful. Set two feet apart. Transplant one or two into pots in late autumn, and they will remain fine until near spring.

7. *Balsams*.—These must have room and rich soil in order to be worth raising. Set two feet apart. Place a double-handful of manure about each plant, press it down, sprinkle a little soil on it, and the plants will not dry up or wither. This is a capital plan in transplanting any flower or vegetable from the cold-frame.

8. *Drummond Phlox*.—This is the darling of the garden—the summer pansy. It should not be grown in mass, but in single plants, ten inches apart. The finer sorts are indescribably lovely.

9. *The Verbena*, which may be grown as an annual, and any extraordinarily fine specimens saved as bedding plants. Take up only a small branch that has rooted.

10. *Mignonette*.—This pet will sow itself always; only give it a little sunny corner. The new varieties are no improvement, on the whole.

11. *Candytuft*.—But the new varieties of this flower are a most decided acquisition.

12. *Stocks*.—The large Ten Weeks are magnificent. Be careful not to have raw manure at the roots. Save single ones for the sake of seed. Set fifteen inches apart. Take up a few of the finest for winter bloom.

13. *Sweet Peas*.—Every year I say: We will have more of them next year. You cannot have too many. Sow for a succession from April to first of June.

Here is a good baker's dozen of choice first-class delights. If you have a bit of hard, rough soil, put on it Tropæolums or Nasturtiums. If a bed not easily worked and not too near the walks, cover it with Zinnias, two feet apart, and Tropæolums underneath. I always raise a few rich blue Larkspurs also.

Of biennials select choicest double Hollyhocks, the very best Sweet Williams, and a good supply of Wall-flowers. The last must be potted for Winter bloom.

For knolls select Reinus and Cannas. Set your Gladiolus in the beds of perennials.

CLINTON, N. Y.

E. P. POWELL.

## SPECIAL NOTICES—PREMIUM.

As the demand for the New Rose Duchess of Edinburgh was so great as to exhaust the supply, we were compelled to substitute in their place either a Bulb of Gladiolus or another Rose. We endeavored to send a satisfactory Premium, and our subscribers must not feel disappointed at the change of premium. We have endeavored to please as far as possible, while the supply lasted.

## Floral Miscellany.

### A MESSENGER.

Go, little rose !  
With all your dewy freshness,  
To my darling. And when  
You see her face, with its fair kindness,  
Greet her with my love  
And say I sent you.  
And if by some sweet chance  
She clasps you to her breast,  
O little rose ! stay softly still  
In happy rest :  
And as each tender heart-beat  
Moves you gently to and fro,  
Keep guard about her for me, rose,  
Because I love her so !

When evening gloaming  
Walks abroad the earth,  
And shadows gather, as the day is done,  
Oh ! then, my messenger, I charge you,  
Give her this (I press it  
Softly on your crimson leaves).  
Go, my rose, and fold her in a mute caress—  
She with her growing loveliness—  
And give the kiss I send  
With all my heart's fond love,  
And say I sent you.

—H. Russell, in N. O. Picayune.

### BOUQUETS OF FLOWERS.

With but little trouble any person can keep up a constant succession of beautiful flowers in the house

SCENTED GERANIUM—"LADY PLYMOUTH."

from the holidays until the season of their blooming in the yard or garden. To do this cut some small twigs of the various flowering shrubs or trees growing in the yard or lawn, and put them in bottles or jars containing pure water. If the weather is very cold when the twigs are cut, care must be taken not to

injure the buds, which is very easily done when they are frozen. After the twigs are cut lay them in a cool room a few hours, then put them in the bottles of water and let them remain two days in a cool place where the water will not freeze, after which they should be brought to the heat gradually. They

SCENTED GERANIUM—"LAVENDER."

will bloom if brought to the warmth when first cut, but the flowers and foliage are not so strong and luxuriant. After bringing them to the warmth the bottles should be filled up with fresh water every day.

When treated in this way, all the following-named shrubs bloom nicely : Daphne Mezereum, Forsythia, Spiraea Prunifolia, Deutzia Gracilis, Lilac (white and purple), Pyrus Japonica, Syringa, Weigela, and many others. The twigs of the Cercis Canadensis (Judas tree, sometimes called Red Bud, which grows very abundantly in many places in our woodlands) when thus treated give a great profusion of beautiful red and purplish pink flowers, and are exceedingly beautiful.

I use Hyacinth bottles, the tall ones of different colors. Beginning early in the winter with the Daphne and the Forsythia, they being among the first bloomers of spring, I tie a few twigs together with a soft woollen string (if tied tight it stops the flow of the sap), put them into the bottles and give them plenty of light and water, and in two or three weeks have a nice bunch of flowers, the red contrasting beautifully with the yellow. In about a week after starting the first I set a couple more bottles, and so on until the fine warm weather of spring produces them out on the lawn. The Japan quince does not produce flowers on the small twigs of the last year's growth, but the buds are formed on the two-year-old wood ; hence care must be exercised in selecting from this shrub, or no flower-buds will be obtained. I now have Forsythia, Spiraea Prunifolia, Lilac, Deutzia Gracilis, and Daphne Cneorum in full bloom, making a beautiful display in the window.

This method of producing flowers in winter is by no means a new one. My mother used to practise it when I was a little boy.

G. F. N.

MILLERSBURG, O.

### INSECT ENEMIES OF THE ROSE.

**Rose-Slugs.**—The body of the slug is about one-quarter of an inch long, green and soft like jelly. Slugs eat the upper surface of the leaf, leaving the veins and skin underneath untouched.

They are most troublesome in June, and frequently reappear in August.

They increase very rapidly, and will destroy the foliage of the largest bushes in a few hours.

The following are remedies used by various florists.

a. Take *white hellebore powder*, mix with water, and sprinkle over them.

b. Dust the plants thoroughly with *powdered lime, plaster-of-paris, or ashes*.

c. Even *road dust* may be used instead of lime, and be as efficacious ; repeat vigorously as often as may be required.

d. Sprinkle the plants thoroughly with a strong suds made of *soft soap*.

e. *Whale-oil soap*, whenever it can be obtained, is the best of special insecticides. It is a powerful enemy of all insect life, and is now for sale at all agricultural stores. Use one pound dissolved in eight gallons of water, or a quarter of a pound to two pails of water ; applied by means of a syringe every evening for a week, it effectually destroys all trace of the nuisance.

f. Another useful article for the destruction of rose-slugs, and other insect enemies of the rose or other

LILY OF THE VALLEY.

garden plants, is found in the *Persian Powder*, sold by most florists.

The powder should be applied three times to the rose-bushes before the buds appear, for after the buds have grown the powder mars the buds and the leaves.

## Household Arts.

## ONE WOMAN'S WORK.

I LAID down the paper with a long-drawn sigh and a feeling akin to despair. It was April and house-cleaning time, and I sat alone in my forlorn-looking sitting-room, earnestly pondering over the ways and means by which I could render my home more cheerful and attractive. I wanted it beautiful, like those I had been reading about; but how or where was I to begin? The CABINET had given me bright glimpses of rooms done in scarlet and gray, blue and silver, or green and gold, with pretty, tasteful furniture, beautiful pictures and ornaments, and bay-windows filled with flowering plants, and trailing vines running riot over lovely tinted walls, and sea-shells, and rockeries, and ferneries, and—oh! dear, nothing at all that seemed to just fit my case; my purse was so *very* limited, and there seemed so little to do with. I felt that every one of those fortunate daughters of Eve who had succeeded in constructing for herself a sort of earthly paradise had more “raw material” than I to work with. “Many of these ‘beautiful home’ builders,” I said to myself, “had pretty, roomy ‘French cottages,’ or at least something better than this wretched Liliputian den, to begin with,” and I cast a rueful glance around my two diminutive unfinished rooms, and at the dingy blue ceiling overhead; “and then, too, they had big, old-fashioned mirrors stowed away in the garret, and old blue wool-delaine dresses” (what a treasure one would be to me just now!), “and bundles of old swiss and laces” (there is my old white swiss dress, it’s out of fashion; that’s *one* item), “and presents of *bad* fifty-dollar debts, and—and a ‘John’ or a ‘big brother’ or *somebody* to do the sawing and hammering, and—” I stopped short; there was just where my trouble began: not the *lack* of a “John”—I had one—but it was the *lack* of *help* and *encouragement* that troubled me. My “John” didn’t care for beautiful things as I did, or I thought he didn’t, and he “*growled*” (that’s what “Nellie” calls it) sometimes when he caught me hammering away at some nondescript affair that I had concluded to build, and afterwards “made up” for the moment’s ill-humor by good-naturedly helping me among my flower-beds, and, in his careless man-fashion, pulling up choice plants along with the weeds, or clipping off the tops of my Moss-rose bushes with an unlucky sweep of the scythe. These were only a few of the difficulties with which I had to contend; ill-health was another serious drawback. However, I gathered consolation from the beautiful pages of the CABINET, and appreciated more than ever that article of “Nellie’s” in an old number, which seems to have been written expressly for the benefit of just such unfortunates as I, and, with considerable satisfaction, I recalled that last clause: “Let him growl; you, too, have a right to life, liberty, and the pursuit of happiness; enjoy it.” Well, I had already decided to “let him growl,” and do what I could towards beautifying my home. I took an inventory of the contents of my purse—just fifteen cents and some scraps of paper—not very encouraging. I thought a moment. “John” worked hard; I knew he would

have no money to spare for extra expenses. I must earn it myself somehow, and, to cut the matter short, I procured some work, and for the next few weeks, when not busy with household duties, I was busy as a bee at the sewing-machine. I had soon earned enough to defray necessary expenses, and was ready for the work of renovation. But where to begin? The house, as I have already intimated, was exceedingly small, a tiny white cottage, exposed on all sides to the glaring noonday sun, being built on a high plateau overlooking one of the loveliest valleys in Western New York. The scenery was picturesquely beautiful, and this was much to me. Standing back from the road some twenty-five or thirty feet, there was room for some lawn decorations in front. The rooms on the ground-floor were two in number: one ten and one-half by sixteen, sitting-room, dining-room, and winter-kitchen all in one; the other a nine by thirteen and one-half bedroom, unlathed and unplastered, ceiled overhead and painted blue, save in the smaller room, which was roughly plastered overhead. Both rooms had one long, narrow south window, reaching nearly to the floor, and facing the road; the front door between, opening into the larger room, in which was also an east window, sliding doors between the two rooms, a soiled, worn paper on the walls, a low, unfinished chamber above, a small summer-kitchen behind; a china-closet built in the wall supplied the place of a pantry. This was my home. The furniture was cheap and scant—six wooden-bottomed chairs, round backs, painted yellow and daubed with streaks of burnt umber, an old defaced wooden rocker, table ditto, and everything else to match. My first work was in the garret. I will not tire you by telling of the long, weary days of toil. There were dizzy sick-headaches, and aching back and limbs, that came of reaching and lifting, and papering and painting, and numberless blows on the poor bruised fingers from that abominable hammer, that always came down where I didn’t want it to; but it was finished at last. My “garret” was converted into two very pretty sleeping-rooms. Partitions placed along next the eaves formed store-closets that I found exceedingly convenient, and made the side walls of the sleeping-rooms higher. Into these partitions were fitted two small wardrobe closets, one in each room. These were papered smoothly inside with strong flour-sack paper. Both rooms had been lathed a long time—we could not afford to get them plastered—so I put on white-backed wall-paper overhead, wrong side out. I put the paste on the *laths* instead of the paper, and also on the edges of the strips of paper, smoothing it down tightly to the lath, but being careful not to stretch the paper much. It looks like plaster, has been on now nearly a year, and has not cracked. The side walls I covered with a delicate tinted paper, letting it hang loose from the lath, except along the edges of the strips; being put on very smoothly, it looked nice. The floors were covered with a light-colored rag carpet, the casings painted white, and I was ready for the furnishing. My best bedstead was a cheap affair with head and foot boards of serpentine turning, stained black-walnut, and varnished—not worth modelling over, so I used it as it was for one room, and hunted up an old wash-stand, minus

top and drawer, that I repaired and dressed over to match the bedstead. For the other room I purchased a new unfinished one of hard wood having a handsome grain; grained the mouldings and trimmings in black-walnut color and varnished it; this was very handsome, having a moderately high Gothic head-board, with panels and mouldings, and trimmings in fret-sawing (these I make myself), and cost me four dollars and a half. An old dry-goods box of suitable size and proportions served as a toilet-table. I sawed the top so as to form a curve in front, just in the middle, leaving the corners square, placed shelves inside, and papered it. I draped the outside with a curtain made of plain bright pink calico, having a wide fluted flounce of white swiss muslin over the pink at the bottom. This was headed with a narrow ruffle fluted, standing upright, and a narrow band of white, corded on each side with pink, between. Over this curtain I placed a loose drapery of white muslin looped up with bows of pink. The top I wadded and covered with pink, tacked smoothly over the edges, and over this placed a cover of white muslin, having a wide fluted ruffle at the edge, headed the same as the bottom flounce. The other toilet-table was like this, only all white with a touch of bright Turkey red. For the windows a lambrequin of the bright pink calico, edged with a fluted ruffle of white muslin, for one room, and another of bright Turkey-red calico for the other. These are lined with white. Over them a loose drapery of white muslin looped up with pressed ferns and small autumn leaves. I brighten the tints of my autumn leaves with oil-paints; it gives a gloss, and they will keep without curling. At the top of the window I placed a fluted ruffle of the muslin standing upright, and just below a vine running across made of tiny autumn leaves, fern fronds, and sprays of green French Moss. A wash-stand was constructed similar to the toilet-tables, only with a straight top, and draped in pink and white muslin. A mat of white-marbled oil-cloth, just the size of the top of this wash-stand, was pinked on the edge, and ornamented with a light running vine of Moss-rose buds and sprays of green, a cluster in each corner. The other wash-stand I covered on the top with white-marbled oil-cloth, drawn smoothly over the edges and tacked underneath. I should like to speak of the other adornments of these two pretty rooms, but have not space except to mention the two bedside rugs, made by crocheting fine carpet rags in shaded stripes, and finishing at the edge with pinked flannel. My first work in the lower rooms was to grain all the wood-work in chestnut and black-walnut to match the china closet, copying from the real woods. I felt a little proud of this piece of work, for it looked very nice. I covered the blue ceiling first with a strong flour-sack paper, and then wall-paper wrong side out over that. The plastered ceiling I scraped smooth and kalsomined a snowy white. The side walls of both rooms were covered with a lovely gray-tinted paper, put on in panels with a darker shade, and in the larger room fine lines of scarlet with a scarlet border next the ceiling, and again above the base-boards; in the smaller room a delicate vine of shaded gray, blue, and gold color run through the centre of the columns, lines and border of a bright turquoise

blue. The carpets were rag, but very pretty, and corresponded in color. The lambrequins of the larger room were curtain lace looped up with ferns and autumn leaves. Window cornices of plain pine, ornamented with oak leaves and acorns, the leaves cut from heavy brown paper, stained black-walnut, and varnished. Fine veinings of gilt paper were added, and they were a very good imitation of walnut and gilt carvings. From the lower edge of the cornice drooped over the lace a short, pointed lambrequin of scarlet embroidered in applique. Long lace curtains and lambrequin of turquoise blue, embroidered also in applique, draped the one window of the smaller room, designed as a parlor. My window garden filled the east window. A plain box three feet four inches long, and eighteen inches wide, and nine inches deep was covered smoothly with white-marbled oil-cloth drawn tightly over the edges and tacked on the inside. Flat mouldings one and three-quarter inches wide and one-half inch thick were also covered, and fastened on with small screws from the inside, in such a manner as to form two panels on the front and one on each end. These panels are ornamented with decalcomanie having fine veinings of gilt. The box is filled with pots of plants, each space between filled with moss, and a fine, delicate, moss-like greenhouse fern planted in the soil around the edge of each pot. This forms a carpet of living green drooping over the edges of the pots, and is beautiful to behold. A shelf on the window-sill, level with the top of the box, and another resting on brackets half way up, support other plants in pots painted gray, ornamented in different ways with decalcomanie, tiny autumn leaves, and fern fronds. From the front edge of this upper shelf droops a border of pressed ferns, headed with a vine of tiny autumn leaves and sprays of green French Moss. Madeira Vine, Smilax, and German Ivy ramble over the lace lambrequins and wreath the cornice above, and two small hanging-baskets of pink coral, filled the one with gray Sedum, the other with the delicate fern before mentioned, depend from the under side of the shelf. A large hanging-basket of moss filled with Othomna Grassifolia is suspended from the ceiling above, whose long, graceful tendrils droop downward to meet the stately Calla below. The south window is also filled with plants at the sill, and a group of hanging-baskets above, and has side brackets holding pots of English and German Ivy. I have not space to describe my plants, nor many of the adornments of these lower rooms. The wooden chairs I transformed into black-walnut ones, polished and cushioned with gray and scarlet striped rep, fastened around the edges with ornamental tacks. A beautiful wreath of tiny autumn leaves, fern fronds, and sprays of green French Moss is fastened in the centre of the ceiling, in the smaller room, and from its centre depends a handsome basket of crystal beads, filled with ferns and grasses. One corner is filled with a three-shelf hanging whatnot holding a collection of sea-shells and branches of coral. Beneath it a quartet-stand holds a beautiful gray moss cross, wreathed with tiny autumn leaves, fern fronds, and sprays of French Moss. The lambrequins of this whatnot are turquoise blue embroidered with white Water-Lilies and buds. There are pictures and other

ornaments that I have not space to mention; but a beautiful floral design I will at some future time describe. I am well pleased with my petite castle, and, what is better, my "John" is proud of my work.

JENNIE.

### HOME ITEMS.

HOUSEKEEPING is an art, and, to be enjoyed, must be considered in that light; we should all the time be trying to improve in all its departments, whether they be useful or ornamental. All housekeepers, in the common walks of life especially, ought to try and be in love with their work, for it drives the dullness out of our tasks; and "what we do for love we surely shall do well."

When washing up the dishes let us try and see how we can make the glasses sparkle by wiping them with dry towels free from lint; have all the earthenware wiped from hot water, and their sweetness will repay you. I remember of trying to clean new ironware by scouring with soap and sand; it was an unsatisfactory piece of business, and had to be repeated. Since then some one told me to grease new ironware with fresh grease, set it on the stove and heat quite hot, then wash with soap and water. I have had occasion since to try this method, and found that it was indeed *the* way.

Tea-kettles sometimes trouble one by rusting; this can be prevented by putting an oyster shell in the bottom of the kettle; it also prevents it from cracking in case the water boils away; a piece of pumice-stone is nice to use round the sink to clean ironware that has been cooked in; this with a dish-cloth knit out of twine will be found a great help to remove anything that sticks to dishes.

Being my own maid, my kitchen has to be made pleasant; here I keep my plants, and it is a good place, for the steam and heat agree with them; two deep, sunny basement windows make one of the best of places for them. In one I have an old tin foot-tub painted green; this is filled with Ivy, Madeira, and Nasturtium vines, also Oxalis; the vines are trained over the window, and nearly do away with the need of a curtain; Fuchsias, Heliotropes, Geraniums, Pinks, Roses, Cactus, Ipomoea, Corn Plant, and Calla serve to fill my hanging-baskets and windows full; these two windows are my pets, and they please my eye when my hands are employed. I can empty almost all of my refuse water on them, and find it is beneficial. I never have spoilt one meal by being so near them when cooking.

We are great lovers of soup, and for that we get a shank, say one weighing about twelve pounds; have it sawed in three pieces; take the two last cuts, put them on, give them a good boiling in sufficient water to cover; when tender, or nearly so, skim off some of the grease, salt and pepper, and for three quarts of liquor add one turnip and four or five potatoes, two onions cut in dice; the onions should be put in first, next put in half a cup of rice, then your potatoes and turnip, also a small carrot cut in two or three pieces; just before taking from the stove, dust in some summer savory and it will be found an agreeable dish.

The other piece of shank I put on and boil until

quite tender, then take out and mince it up, season to taste, put it in a long cake-tin, turn some of the grease that rises on the water where it was boiled; when cool it will slice off, and is good and cheap.

For my dinner to-day I had fried oysters, and as it was my ironing day I did not feel as though I had the time to spare to fry them one by one, so I took three eggs, broke and beat them, put in a little salt and pepper, rolled five butter-crackers fine, added these; I had put the oysters to drain previously, so now I stirred them all together and fried them by the spoonful in good hot fat (we had one quart of oysters); if anything, we found them superior to the former way. For pie we had dried apples and prunes; pick them both over and put them to soak over night separately; in the morning cook them. The apples cook best in a covered dish so as not to stir them; when both are done put them together carefully, so as not to break them to pieces; sweeten to taste, adding a little butter. They are good. I could give you many more recipes of my own, but guess that these will do for the present. Let us bear in mind that such home labor is not lost; the Master has put this for my task, and by his help I intend to improve.

H.

**Clove-Apples.**—Select apples of perfect shape, and sound; fill them with cloves to exclude the air, and, if they are not disturbed by some lover of cloves, they will remain good for years. A friend once told me, with tears in her eyes, that herself and husband having been reduced to extreme poverty by long-continued illness, she could think of nothing she could make for his Christmas present but a clove-apple, which she gave him with the following lines:

"This apple of clove I give, with much love,  
To him whom my husband I call;  
May its pleasant breath be like a sweet memory  
To hallow the gift, though 'tis small.  
While moons wax and wane still 'twill fragrant remain,  
A durable gift it will be;  
At least 'twill be thought to be better than naught  
While I cry, Merry Christmas to thee!"

I thought her lines very touching. Since then "fortune has smiled upon them," but they never forgot the clove-apple. The raisins you may eat, but dip the stems into melted sealing-wax, both red and black; dip others into white wax, and finish your bouquet by trailing damp grasses lightly through flour to make them look snowy—but not doughy, oh! no; dip lightly and shake lightly. Let it be neat, but as odd as possible, for it is called the hap-hazard bouquet.

**Bread Pudding.**—Take stale bread; scald it; one-half cup of sour milk, 1 egg, 1 cup of sugar, 1 cup of shortening, one-half pound of raisins, one-half pound of currants, cream-tartar, and soda. Bake well; eat with brandy sauce.

**Stale Bread Fritters.**—Soak 1 large bowlful of dry bread, then squeeze it out dry; add to it 2 eggs, 1 coffee cup of sour milk, 1 teaspoonful of baking soda, one-half cup of flour. Salt to taste; fry in hot lard.

## Hirside Reading.

## HE LEADS US ON.

He leads us on,  
By paths we did not know;  
Upward he leads us, though our steps be slow;  
Though oft we faint and falter by the way,  
Though storms and darkness oft obscure the day,  
Yet, when the clouds are gone  
We know he leads us on.

He leads us on  
Through all the unquiet  
years;  
Past all our dreamland hopes, and  
doubts, and fears,  
He guides our steps. Through all  
the tangled maze  
Of sin, of sorrow, and o'er-clouded  
days.  
We know his will is done;  
And still he leads us on.

And he at last,  
After the weary strife,  
After the restless fever we call life,  
After the dreariness, the aching  
pain,  
The wayward struggles, which have  
proved in vain,  
After our toils are past,  
Will give us rest at last.

## WALKING WITH GOD.

THE difficulty which most people have in religion is to bring the thought of God into their daily lives. His very greatness makes it hard to connect him with homely, every-day matters. We get some sense of him in church, or in the prayer-meeting, or in rare hours of exalted feeling. But when we go into the busy world, where most of our life is spent, God fades away into heaven, that is farther off than the blue sky above our heads. This is a great loss to us. It is neglect on our part of our highest opportunity. God walks with us, in closest nearness, at every moment. There is in him, if we could learn to take it, a provision of helpfulness, of sympathy, of sufficiency, for every step in the whole round of our daily life. The very things that seem insignificant and without spiritual meaning are set round us by God as a part of our education. And if we habitually recognize his presence in them, all the incidents of business and our household care and daily walk would become threads of gold, holding us in the sweetest, noblest friendship with our heavenly Father.

## ANSWERING A FOOL ACCORDING TO HIS FOLLY.

LET me tell a Dutch story right here, because it comes from a Dutchman in the eastern part of Pennsylvania and must be a true story. The Dutchman was never ashamed of his religion. In his neighborhood there was a sceptic who said, "You can't believe anything you can't understand"; and so some of the better class of people asked the Dutchman if he would not have a conversation with him. He said, "Yes, if you tink best."

The odder day I vas riding along the road and I meet von dog, and that dog had von of his ears stand up in this way, and the odder one he stand down so. Now, vy was dat?"

Now, that was very unhandy just then—very unhandy. He either had to prove that the dog did not have one ear standing up and the other ear standing down, or else say he did not believe it. So he said, "I don't know."

"Oh! then you are not so very smart after all. I ask you anoder question. I saw in John Smith's clover-patch the clover come up so nice, and I looked over into the fields and there was John Smith's pigs, and dere come out hair on dere packs; and in the very same clover-patch vas his sheep, and dere came out voll on dere packs. Now, vy was dat?"

Now, that was as bad as the other, because the same perplexity arose. He had to prove there was wool on the back of the pig, or hair on the back of the sheep, and he couldn't tell why, and, therefore, he had no business to believe it. Finally he said, "I don't know."

"Vell," he said, "you are not half so smart as you tink you are. Now I asks you anoder question. Do you pleef dere is a God?"

"No, I don't believe any such nonsense."

"Oh! yes, I hear about you long ago. I know all about you. My Bible knows about you, for in my Bible he says: 'The fool says in his heart there is no God'; but you big fool, you blat it right out."  
—G. P. Hayes.

## THE LATEST INVENTION.

THE London *Saturday Review* once declared that the greatest benefactor of the human race would be he who could enable men to drink an unlimited quantity of wine without getting drunk. Such a man has been found. Dr. Bell invented the telephone, but its wonders pale before the telegastograph. This is an electrical machine by which the palate can

be tickled and pleased by any flavor and for any length of time, without fear of indigestion or inebriety. By putting soup, or fish, or wine into a receptacle connected with a powerful battery, the taste of the daintiest viands can be conveyed along a telegraph wire miles, and to an unlimited number of *bons vivants*. They have only to put the wire in their mouths, and they seem to be eating and drinking. They may get drunk or overfed; but the moment the contact is broken the evil effects pass off, and nothing remains but a "delightful exhilaration." The inventor, however, keeps the *modus operandi* a perfect secret.

GRANDFATHER AND GRANDMOTHER.

"Have you any objections to the neighbors coming in?"

"No; shust as you tink best."

So they made the appointment and everybody was there. The old gentleman came in and was introduced to the sceptic, and he began by saying:

"Vell, now look here. I pleefs the Bible—what you pleefs?"

Said he: "I don't believe anything I can't understand."

"Oh! you must be one very smart man. I was mighty glad I meet you. I ask you some questions.

## Household Elegancies.

### OUR NEW HOUSE.

WE had been married about three years, and been living in a rented house all that time, when we began thinking of building a house of our own. How to plan one that would come within our means, which was but a few hundred, and still have one that would be cosy and convenient, was what bothered us. But was there ever a woman that was not interested in a new house, "be it ever so humble"? So for some months before we built I would often sit down and draw some kind of a house on any little piece of paper I happened to pick up. My husband said if I could plan one to suit myself he would have it built as I wished. We both wanted a cottage, but how to divide it into rooms puzzled us. So one day a very dear lady friend came to spend the day with me, and together we settled on the plan of this house as it is now, and I have never wished to have it different. I will describe it as near as possible, in hope that it may help others that must build with small means. In size it is twenty-six by twenty-eight feet; there is a little hall four by nine, with glass over the front door to light it; a parlor thirteen by fourteen, with two south windows and one west—"it is a splendid room for plants in the winter." Back of the parlor there is a bedroom ten by twelve, with two windows, and a closet for clothes three by six. There are folding-doors between parlor and bedroom, which I thought would be nice if we should ever want to use it as double parlors. There is a door opening out of the parlor into our sitting-room; this room is thirteen by fifteen and a half feet, and off this room there is a small bedroom nine by nine; that is quite small, but I have a bed, wash-stand, and two chairs in it, and room enough to move the bed from the wall and get around it with ease. There is an inside stair that leads from this room to an attic the whole size of the house; it is eight feet high in the centre, and lighted by a skylight; I call this the most convenient room in the house, for it is just the kind of a place one wants to store things in that are not in every-day use. The front of the house faces the south, and the sitting-room the east; this room has an outside door that opens out to my flower garden, which is just lovely to see in the summer. Now, back of this upright is a wing fourteen by twenty-two, which is divided into a small dining-room with china closet, and kitchen with pantry; there is a door opening out of my dining-room to my small fruit-garden. I have a cellar twelve by twelve, which I go to from the kitchen. Back from the house we have a nice wood-shed, chicken-coop, and barn, with a good kitchen-garden, which my husband (my own make), as I could not afford to buy all-plant and cares for before and after his day's work.

We are quite proud of our little home, and every one that has been here seems surprised to find so much room in so small a looking house.

Now I must tell you of some things I have done to make my home pleasant. In the first place, I try to keep everything tidy by doing my work regular and when it should be done, although sometimes I dread

carpet is crimson and gray; one of my bedrooms is furnished in scarlet, the other in blue. And here I must tell you about the lambrequins I made for my blue room from a hint I got in the CABINET last spring. I took an old sheet, and after washing and blueing it quite blue, I tore it into strips one inch wide, and ravelled out both edges, leaving only four threads in the centre. When all was ravelled I took a board long enough to reach across the window, which made it forty-two inches long, and leaving it four inches through the centre. I ran it to about half an inch at each end; then I made a lead-pencil mark at every inch clear across the edge of the board, and on every mark I tacked one strip of the fringed cotton; then I divided them into lots of six strips each, which made seven lots. The middle lot I left two feet long, the next two and a half, the next three, and the outside ones three and a half. At the bottom of each lot I fastened a large tassel, made of one strip of the fringe, and tied it with blue ribbon, and across the top I put a band of blue ribbon one and a half inches wide, which covered the tacks. It just took half of a sheet for each window. My friends said they were very pretty.

I covered an old box with some blue cambric for a stand, and took some dotted muslin (an old dress) and puffed it over the cambric, and looped it where necessary with blue ribbon. I made a wall-protector for back of the stand of the muslin, and lined it with the cambric. I learned that from the CABINET, too. I made a rug of some old socks; as I have never seen this kind of rug spoken of in the CABINET, I will tell you how I made mine. I took old woollen socks or stockings, and cut them in pieces lengthwise, cutting them two inches wide and as long as the sock will make them; then I ravelled them from one edge, leaving about half an inch on the other edge without raveling. When all was ravelled I took a piece of coarse cloth the size I wanted my rug, and began at the outside edge. I sewed piece after piece of the ravelled socks to the cloth, letting each piece overlap the others just enough to hide the sewing until the cloth is all covered. One can use every little piece of socks or children's stockings they happen to have, and if dyed bright colors they make handsome-looking rugs. I have a few nice pictures, among which are Vick's chromo, "Winter In-doors and Out," and "Treasures of Garden and Woodland," in frames that my husband made from some of the moulding that was left after building. I stained and varnished them myself, and they look very well.

I have a pretty little canary that a friend gave me for a Christmas present. But my plants are my pets. I have about a dozen, besides a large box of Scarlet Verbena, which is in bud.

LAMP-MAT IN APPLIQUÉ WORK.

CHINESE EMBROIDERY.

## Household Elegancies.

## HOW INGENUITY TOOK THE PLACE OF MONEY.

"MOTHER, our lounge and chairs need recovering; they are very shabby."

"I know they are, but times are so hard we cannot afford it."

"There is that Knickerbocker we have had in the house so long; if I embroider a pretty pattern upon it will that do?"

"Yes, I think it will; we will try what we can do."

We first cut a piece long and wide enough for the lounge, upon which we basted a piece of a coarse bag, which resembled the canvas that is used in embroidering upon cloth; then I worked a pattern in three colors with common yarn. The arm of lounge, backs and seats of chairs were worked in the same style. The back and front of the lounge were covered with the same material, side or kilt plaiting, reversing the plaits at the bottom of the material. For gimp I crocheted a chain the required length, then crocheted one stitch treble into each stitch of chain, tacked it on with small-headed tacks. The chairs mother covered with an old quilt, then with embroidered covers. We had an old-fashioned bed-blanket, around which was some linen fringe, which we colored brown with Leamon's dye, sewed it around the seats of chairs, tacked on the gimp, continuing it up over the back, and they were completed, much to our satisfaction.

We next turned our attention to making a flower-stand; procured a boot-box about forty inches long, fifteen inches wide, eleven inches deep, into each corner of which we nailed round sticks taken from the wood-pile, twenty-seven inches long, and supplied them with casters. Next painted front and ends and legs dark brown. Of all kinds of fancy work I disliked paper work, but I was at a loss for something to ornament the edges of the stand, so I very humbly folded brown paper into points, and tacked a double row; the points of one row were placed up, and the other row down; between the rows I folded a square of the paper cornerwise, and took three or four plaits in the bottom and tacked them on; at the corners I made a rosette of the plaited papers, and finished with a button-mould in the middle. The front we divided into three panels by placing two rows like the border between them; pushed thick brown paper under the points to protect the panels from the lighter brown paint with which we painted the paper border. Varnished; when dry put a bouquet of decalcomania pictures in each panel and on each end. Laid dry moss on the top—of which we secured a large supply in the fall—filled it with pots (or rather fruit-cans painted brown, which are far better for plants, and much easier arranged than the old earthen pots), and it was soon a vision of loveliness, which we could wheel from room to room as fancy dictated.

The plants looked so nice in their bed of moss that we nailed a board on each window-sill, covered with moss, and put plants upon them; one window is

quite a window garden; we drove the ends of a piece of wire into the sides of the casing, thus making an arch, over which a Madeira Vine luxuriates; threads from the top of arch to the shelf support white and red Petunias; brackets on each side of window contain Air Plants and Smilax; a hanging-basket in the centre is made of an old hand-basin, has pink and white Oxalis, Harrison Daisy, and English Ivy.

So much encouraged were we by the success with which we met, we next attempted a matting for my bedroom; obtained from the stores matting that tea-chests are enclosed in, washed them—which stiffens them—and cut into ten-inch squares; bound one half of them with old black cloth, the other half with red, then stitched on the machine. Cut out of thick paper a square like the matting, then cut from the middle of paper an oak-leaf; on those that were bound with red we painted a black leaf, on those bound with black a red leaf. Sewed the squares into breadths, then laid on the floor as other matting is, and we had a lovely and durable covering for my floor, and the cost was very slight. We now launched out into an entirely new line of fancy work, that of making use of empty spools.

I had long wanted a towel-rack, so one stormy day I besought mother to help me make one; she kindly consented. First we cut from a pasteboard box a piece sixteen and three-fourths inches long and nine and one-half inches wide; now mark off one and one-half inch all around and cut out the centre. Split No. 40 spools in two as evenly as possible, and glue on the upper edge of the frame, also lengthwise; let the heads of the spools project over until the frame and body of spools are even; the second row must be placed so that the heads of the last row of spools must be in the middle of the bodies of the first row. Little spools from which twist for buttonholes had been used were placed two in each corner. Stained with black-walnut, as we did the lounge and chairs previously described. The stain is simply asphaltum made light as you wish with turpentine, and applied with a brush; ten cents' worth will last a year. For the centre of the rack I worked in large letters the initials of my name, with white worsted on red canvas. Framed as any picture with glass; a piece of board the size of the whole frame strengthens it. Take two pieces of strong wire each four inches long, bend one end over one-quarter of an inch, one inch from that make another bend, drive the short bend into the board two inches from edge; the long end that is in front must be turned up at the end; bend the other wire in the same way, then place a wooden rod upon them to hang the towels on, and it is ready to hang up in its place.

One day in looking over some rubbish I found two old iron candlesticks, which I imagined looked like some vases that I had seen. I immediately broke off the little slides, sand-papered, and painted them a light-drab color; gave them three coats, bought some small embossed pictures of flowers, and placed some around the candlestick, others on the base, and varnished.

A small bottle put into the place "where the candle ought to be," then fill with ferns and flowers. Look, behold and wonder! two beautiful vases stand-

ing on sea-foam mats, and no one would dare to insinuate before them that they had once been called candlesticks.

To finish I will describe a jardinière we made for church decoration. The base is a cheese-box cover nineteen inches in diameter; a standard twenty-nine inches high; an old umbrella divested of cover, handle, and ribs, except an inch on each side of where the braces are fastened; slip the umbrella inverted over the standard within seven inches of the base; fasten it there. A circular piece of wood three and one-half inches in diameter is crowded down the standard into the umbrella, which presses it out the required distance, thirteen inches, and is held in place by a wire. Take a piece of hoop-iron thirty-eight inches long, and wire the lower ends of the ribs firmly to it; another piece of hoop is wired to the upper ends of ribs, and is forty inches long. Fasten a piece of wire on one side of the upper hoop, pass it through a small hole made for that purpose in the standard, and fasten on opposite side of hoop. A tin bottle with the bottom melted off, cut in inch-wide strips half way to the neck, makes a pretty cup; fasten on the top of standard; bend the strip over in graceful curves. Paint all brown. Fill base and middle with moss and vines, leaving room for pots of plants in bloom, and in the top cut-flowers; be sure and have plenty of vines. It was much admired and criticised; but to no one did we impart the secret of its manufacture.

## USEFUL RECIPES.

**To Clean and Polish Brass.**—Oil of vitriol, one ounce; sweet-oil, one-half gill; pulverized rotten-stone, one gill; rain-water, one and one-half pints; mix all and shake as used. Apply with a rag and polish with buckskin or all woollen. Rotten-stone followed by Paris white and rouge is very good also.

**To Keep Lard Sweet.**—To one gallon of lard put one ounce of sal-soda, dissolved in a gill of water. Do not fill your kettles more than half full, for it will foam and perhaps boil over. No other water is required than what the soda is dissolved in. When it is done it will be very clear, and will keep two years. Strain through a coarse cloth and set away.

**Household Pests.**—Housekeepers will be glad to learn from the *Journal of Chemistry* that hot alum-water is the best insect-destroyer. Put the alum into hot water and let it boil till all the alum is dissolved; then apply it hot with a brush to all cracks, closets, bedsteads, and other places where insects are found. Ants, bedbugs, cockroaches, and creeping things are killed by it, while it has no danger of poisoning the family or injuring the property.

**Boils** should be brought to a head by warm poultice of camomile flowers, or boiled white lily-root, or onion root, by fermentation with hot water, or by stimulating plasters. When ripe they should be destroyed by a needle or a lancet. But this should not be attempted until they are fully proved.

## A Man of Ncted Health

Was asked how it was he seemed to be always well. "I am not particular in my meals. I eat what I like; and whenever I feel under the weather, I resort to my TARRANT'S SELTZER APERIENT, which I keep always in the house." Wise man, and economical as well. He does not resort to violent means for relief. He uses Nature's remedy in the shape of this Aperient.

SOLD BY ALL DRUGGISTS.

## NEW EXCELSIOR LAWN MOWER.

### Reduction in Price! Less Weight! Lighter Draft!

It has been adopted and can be seen in Practical Operation in the Public Parks of New York, Brooklyn, Boston, New Haven, Cleveland, Chicago, and almost all the Prominent City Parks in the United States and Canadas.

ROLLER MOWERS, 7 Sizes; SIDE-WHEEL MOWERS, 6 Sizes; BACK-WHEEL MOWERS, 5 Sizes; HORSE MOWERS, 4 Sizes. 10-In. Popular Croquet Mower, \$10.

Our New Horse Mower is conceded to be the LIGHTEST and BEST Horse Lawn Mower ever made.

Invented by E. N. Horsford, late Professor in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent stamp to the manufacturers for a sample.

RUMFORD CHEMICAL WORKS,  
PROVIDENCE, R. I.

## A MURDEROUS SEA-FLOWER.

ONE of the exquisite wonders of the sea is called the Opelet, and is about as large as the German aster, looking, indeed, very much like one. Imagine a very large double aster, with ever so many long petals of light green, glossy satin, and each one tipped with rose-color. These lovely petals do not lie quietly in their places, like those of the aster in your garden, but wave about in the water, while the Opelet clings to a rock. How innocent and lovely it looks on its rocky bed! Who would suspect that it would eat anything grosser than dew or sunlight? But those beautiful waving arms, as you call them, have another use besides looking pretty. They have to provide food for a large open mouth, which is hidden deep down amongst them—so well hidden that one can scarcely find it. Well do they perform their duty, for the instant a foolish little fish touches one of the rosy tips he is struck with poison, as fatal to him as lightning. He immediately becomes numb, and in a moment stops struggling, and then the other beautiful arms wrap around him, and he is drawn in the huge, greedy mouth, and is seen no more. Then the lovely arms un-

close and wave again in the water, looking as harmless as though they had never touched a fish.

## FRESH AIR.

So few houses are well ventilated that, unless provision is made for this in any given case, there

stove-pipe or chimney, if it be in cold weather. Take out a pane of glass from the upper window, place a pane of tin instead. Through the centre of this cut a hole say four inches in diameter, and onto this, in the room side of it, solder a tin elbow, with joint eight inches into the room and one foot and a half in length for the turn-up. Into the horizontal part insert a damper such as is put into stove-pipes, and you have as good a ventilator as one could ask.—*Laws of Life.*

## HEIGHT OF TREES.

WHEN a tree stands so that the length of its shadow can be measured, its height can be readily ascertained as follows: Set a stick upright; let it be perpendicular by the plumb-line. Measure the length of the shadow of the tree, and at the same time measure the length of the shadow of the stick. As the length of its shadow is to the height of the stick, so is the length of the shadow of the tree to its height. For instance: If the stick is four feet above the ground and its shadow is six feet in length and the shadow of the tree is ninety feet, the height of the tree will be sixty feet (6:4::90:60). In other words, multiply the length of the shadow of the tree by the height of the stick, and divide by the shadow of the stick.

VIEW ON THE UNION PACIFIC RAILWAY—ENTRANCE TO ECHO CANYON.

will be an observable deficiency. To ensure it make one or two ventilators in the window, and in the

## Floral Hints.

## CARE AND CULTURE OF PLANTS.

ALL who truly love flowers, and have the facilities for taking care of them, desire to make their culture a success. Nearly all who write for the CABINET upon this subject give instructions how to successfully cultivate plants in the window and living rooms or in conservatories, but there are a great many flower-lovers who, like myself, live in lightly-constructed houses, and in our changeable climate find that they cannot safely keep tender plants in the house. I have known many beautiful and valuable collections of plants to be entirely destroyed by the first cold snap that came. Here in Middle Alabama all tender plants require a place secure from frost five months out of twelve. This is an all-important consideration.

This article is not written for those who have greenhouses, or other appliances that wealth can supply, but rather for that other and much more numerous class that we all know of. I find a pit to be the safest as well as the cheapest protection for all tender or greenhouse plants. The pit should be made on the south side of some building, so as to be protected from the north and west winds. A good size, that will accommodate a large number of plants, is 7x12 feet and 5 feet deep. My pit is well supplied with shelves, arranged like steps; the top one reaches to within about fifteen inches of the glass. It is on the south side of the house, and just underneath my parlor window, where I can see the plants growing and blooming, and enjoy them as much as if I had them in the house. It is covered with close-fitting sash, and I find that all greenhouse plants not only keep safely, but grow and bloom in my pit all winter. I have all kinds of Geraniums; many of them have not been without bloom since they were put into their winter quarters in October.

I kept my plants two winters in this same pit, but instead of sash I had close-fitting frames with coarse cotton cloth tightly stretched and securely tacked to the frames. My plants did not bloom much thus shaded from the sun, but they grew and came out in the spring in excellent condition for blooming. My pit is now (February 11) lovely. I have all kinds of Geraniums in bud and bloom; also Chinese Primrose, single white; Cyclamen, Stevia Eupatorium, Abutilon, Oxalis, Calla, Begonia Ageratum, and Camellias coming on. I had a Fuchsia Elm City laden with blooms at Christmas. These, and indeed all greenhouse plants, do equally well in my pit. My plants look even more flourishing than many that I see in greenhouses, and then I am not troubled about providing artificial heat. They get full sunlight all day—one of the essentials, I think, to successful plant-culture.

I have learned from experience that if you are not prepared to provide artificial heat for your plants, any attempt to cultivate what are by florists termed stove or hothouse plants will but result in failure. You may possibly keep them alive, but such poor homesick-looking specimens can afford you no pleasure.

My home is on a farm in the country, and I usually get the soil in which most of my plants grow from the fence-corners in a large enclosure to which all kinds of stock have access. In this enclosure is a grove of large oaks, and I find the soil that collects on the lower side of this lot is a mixture of sand, leaf-mold, and manure of various kinds, and not having been often removed, it is well rotted. I find this suited to nearly all kinds of plants; for some I add a little more sand, enough to give the soil an open, sandy appearance. I use leaf-mold and sand alone for Azaleas and Camellias. If worms are in the soil add a little wood-ashes or lime, or water the plants with lime-water. I have never been troubled with insects of any kind on my plants—have never seen a red spider; but I am not anxious to make their acquaintance.

A friend gave me a Coccoloba that was covered with the brown scale insect. I removed them from the plant with the point of a penknife, and washed the entire plant with warm soapsuds. Two or three applications and not a scale was to be found. I attribute the great healthiness of my plants and their entire freedom from insects to the humid atmosphere of my pit. Every cold morning they are as wet as if they had been in a shower, though the pit is perfectly dry; no water ever rises or drips into it. Any kind of pots may be used that suits the taste and convenience of the cultivator, as I have plants growing in glazed and unglazed pots, in cigar-boxes and in iron and tin cans, all doing equally well. I prefer pots on account of their neater appearance, and always use them when convenient, but I now have plants laden with blossoms growing in the sheet-iron cans in which gunpowder is sold. These cans hold about five gallons and are painted green. I cut them in half, punch holes in the bottom, and put in two inches of broken charcoal for drainage. Plants growing in these cans require less water, as it does not evaporate so easily. They are very good for this reason to use for hanging baskets. I have an Hibiscus that has grown in a powder-can for four years; it is near four feet high and branched like a little tree. I water all my plants when the surface soil in the pots look dry. One must learn from experience how much water to give and when the plants need it, etc., as no exact rule can be given that will apply to all plants. In my experience too much water and too frequent potting are very injurious to nearly all plants.

When it is warm enough for my plants to be taken out of the pit, I move all those that do best in full sun to the east side of the house, where they get the full morning sun, also the rains and dews; but they have entire shade all the afternoon. Since I have adopted this plan my plants are one sheet of blossoms all summer. Some plants, such as Fuchsias, Chinese Primrose, Begonia Rex, etc., like partial shade and protection from the weather; these I keep on a shaded porch where they get only an occasional ray of sunlight. Plants with me do not do well under the drip of trees, and I avoid placing them where they would be thus exposed. I plunge the pots of Camellias in partial shade, but avoid the drip of trees and do not water them often, unless there is a long spell of dry weather. In September I cut back such of

my plants as need it, and repot or give fresh soil by turning the plant out of the pot, and take off part of the ball of dirt, wash the pot in warm suds, have it well dried, and, after putting in an inch or so of charcoal for drainage, return the plant to the same pot. I sometimes take off some of the top soil and add new.

August and September I find to be a good time to get slips to grow. Geraniums I usually stick down in the edge of a pot in which plants are growing, and they scarcely ever fail to grow. Others, like Heliotrope, Fuchsias, Abutilons, Begonias, Cactus, etc., I start in dishes of pure sand, kept wet and in full sun all day; keep the sand very wet, or the slips will be injured. My cuttings root easily, scarcely ever losing one in this way. As soon as I find that they have ever so small a root, I shift them from the dish of sand into small pots. If allowed to remain too long in the sand, weak, imperfect plants are the result. Plants should be occasionally turned out of the pots, to see if the roots have become matted and need repotting. As the little plants make some growth, I nip out the bud to make them branch, and continue to pinch the ends of the branches as they make new growth. This is especially advisable with the Fuchsia, as by this plan you will have many more blooms and handsomer shaped plants. When left to grow after their own sweet will their aspirations are too lofty for the accommodations that I have for them. Chinese Primrose are best grown from seed, unless they can be had well established in pots and not have to disturb their roots. I have never been able to save one that came to me through the mail. I have flowers in abundance the year round. I usually keep a south window in my room filled with plants in bloom, but carry them to my pit for safety whenever there is any danger from cold of losing them.

MRS. J. J. J.

JONESBORO, JEFFERSON CO., ALA.

## FARFUGI GRANDE.

A LADY in the CABINET wished to know about the Farfugi Grande. I have one, which was given me by a friend last autumn. It was a small root with one leaf. I kept it in the upper part of the house through the coldest weather we had in December, in a room which had no heat but from that adjoining. It was then taken down-stairs into a warm room. It grew very fast, and now has six or eight leaves.

I find it requires a great deal of water, and cannot stand the sun. I read that it is a native of low, marshy places, and that it would live out all winter. The leaves are very beautiful, as large as a large saucer.

M. P.

**Preventing Seeding.**—Can we prolong the life of an annual or biennial plant by preventing the perfection of the seed? CORNOR. [By constantly removing the flowers and preventing the formation of seed, the tendency is to prolong the growth, but the effect varies much in different plants, with the richness of soils, amount of moisture, degree of temperature, and other influences.]

## The Garden.

### GARDENS FOR CHILDREN.

GARDENS and children have a sympathy and a fellowship. We hope that the parents among our readers have been wise enough to bestow the use of a plot of ground upon each one of their children. We do not at all insist upon its being large; indeed it is better that it should be small, but let it be in a good place and well prepared. Let its beds, be they more or less numerous, be carefully laid out, and good edging of board or some other material put around them. Let the beds be small, carefully adapted to the size of the child who is to be its happy owner, so that its little arm need have no difficulty in reaching across it.

Now do not make the mistake of planting this garden before you bestow it upon your child, but when all is ready take the little ones out, assign to each their bed, and tell them they shall have it all to themselves, and plant it to what pleases them best. This last is a very important item. I heard of a little girl who moved her garden from the place first taken at the foot, to the top of a hill, and carried water up the hill all summer, simply to avoid being advised about it. All children might not show so much resolution, but I think most would have something of the feeling. Of course if they ask advice it should be given.

Now, if your children are old enough, provide them with a seed catalogue—for children the illustrated ones are probably best; tell them just how much money you can allow them for seeds, and await results. I promise you a great deal of pleasure in watching them while they are making out their lists.

Do you know what a very bewitching kind of reading these same catalogues are? Especially when you read them with the knowledge that you have the money all ready to spend as soon as your choice is made. I have sometimes thought that a judicious use of seed and plant catalogues would drive novels out of the field, for they are so very charming.

But we are wandering, and must come back to our subject. Many and busy will be the consultations the little folks will have, and mamma and papa will be appealed to again and again to help them decide. Then, too, papa must help them, if they are quite little, in writing and sending their order, and he will perhaps need some patience before the seeds come, for they will begin to expect them the day after the order is sent, and each day after, until their arrival, will ask for them.

But let him be patient; the benefit they will derive from their garden, the exercise in the open air, the knowledge of plants, and, more than all, the opening up to them of a new source of interest, which will never fail during the longest life, is worth the exercise of some, yes of a vast deal of patience. Said one who had spent a long life in the culture of plants: "It is an employment of which one never wearies, for you are always finding something new, and in the longest life will never have made acquaintance with all the treasures of the floral world."

To give to children a source of interest, and pure,

healthful, refining amusement like this, is worth a good deal of effort on our part, and the outlay of no small amount of patience, and of all the money we can afford.

There will be for those children who have pocket money another benefit. They will have some better use for their money than buying candy. A new plant for their garden, or another paper of seeds, will have such attractions that they will learn how much more may be accomplished by a wise than by a foolish use of money.

Try it, my friends, and when your little girl or boy comes running to tell you that there is a flower in their garden, don't be too busy or too tired to go with them and sympathize in their pleasure.—*From the California Horticulturist.*

### A BIT OF EXPERIENCE FROM THE SOUTH.

LAST spring we had only a few plants, as we lost nearly all during the winter; but we bought some, and had a good many slips, or cuttings, given to us, and in a short time we had quite a nice start.

We have a very small, cramped yard, but we had a good long shelf put up against the fence—for we have no piazza—about two and a half feet from the ground. Here they can get sun a portion of the day, and grow very well.

Our experience with cuttings is that they root readily in clear water. Place the end of the slip—being careful to cut it just below a joint—in a bottle of water, and put some cotton around the stem at the mouth of the bottle, to prevent the water from evaporating; this also keeps the temperature more uniform. They will strike root in this way in two or three weeks, if kept on or near the window-sill in the sun. Another way is to have some good soil with a little sand mixed with it; make a hole with your finger and pour a little sand in it, and, placing the cutting in, press the earth firmly around it, not giving very much water till rooted. Again, we often put them in pots with other plants. With either of these ways we succeed very well, but not as well with wet sand; perhaps did not give it a fair trial. Last summer we raised a *Datura Wrightii* from seed; it had a very large, delicate-looking bloom, but we thought it more suitable for a garden, as it is a large, strong-growing plant.

Among our collection we have *Geraniums*, single and double, zonal and scented; *Begonias*, *Callas*, and *Lily-of-the-Valley*; *Wax Plants*; different kinds of *Joint Grass*; a *Mauraudia*, which I am training to resemble a wigwam in shape, by placing a pole perpendicularly in the centre of the box, near the plant, and fastening cords from the sides of the box all round to the top of pole. I think it will be quite pretty when the cords are covered, and will not require more space than the box occupies; besides, it is easily made. It has not been protected during the winter, except being put under a shed to keep off frost. We also have a dozen or more varieties of *Cactus*, and I think them very interesting. They grow slowly, but require very little attention. We plant them in good soil, with about one-third sand and brick; break the brick tolerably fine, and mix

well. Ours are doing well, nearly all cuttings from last summer. I have one about three years old, called here the *Clove Cactus*; it has not bloomed yet, but grows compact and pretty, sending up fresh green bract after bract all winter, and admired by all. It hasn't been repotted since I have had it.

Last fall I purchased a Chinese *Primrose*, pink, and an *Eupatorium*, white. Both bloomed freely; the *Primrose* has been blooming all winter, and bids fair to continue to do so some time longer.

A LOVER OF FLOWERS.

ORANGEBURG, S. C.

### A TALK ABOUT FLOWERS.

#### A WONDERFUL CACTUS.

I WILL first tell you about what I call my wonder of wonders. It is a large scarlet cup *Cactus*. A few years ago I wrote about it having three hundred flowers. Then we had no suitable place to keep it; but last year father built us a small conservatory, in which we placed it. It is about five feet in height, and ten feet in circumference; it is planted in a box about fifteen inches square and fifteen inches deep. It began to bloom about the first of March, and continued in bloom till the first of June; having one thousand flowers on it from the time of opening till the time of closing; and having three hundred open at once. A gentleman who called to see it, who had travelled in regions where cacti grow wild, says "that in its native country he never saw one with such a profusion of bloom." There were callers from all over the place to see it; and in talking to them about the culture of the *Cacti* I think I see why so many fail. On looking at it, invariably the question would be, "Have you planted it in sand?" No, I have it planted in good rich soil, with a quantity of cow-mannure mixed with it. I know the *Cacti* grow in sandy districts, but I do not think the temperature of our living rooms is the same as that in which the *Cacti* grow. I think that they need to be cultivated as well as other plants. And, as I have met with better success than any one I know of, I think it is good proof that my way is the better plan.

#### BOUVARDIA.

And here is my white *Bouvardia*. I purchased it about three years ago, in the summer; it had then but one flowering branch. I enquired how I should treat it, and was told to leave it in the pot till the next summer; you can imagine it did no good for me till then, as it had no chance of sprouting. Well, the next summer I planted it out in a bed on the north side of the house. In August, I replanted it in a pot, and broke off all the new shoots half-way back. It was sprouting beautifully, and I was beginning to conjecture to myself how pretty it would be in the winter, when there came up a great storm. As my flowers were sitting on a back porch where they caught the full force of the wind, when I ran up to see to them my *Bouvardia* was broken off nearly to the ground, and it could not recover till last summer. But the sight of it now repays me for all my trouble. It is about three feet high and full of branches. At the end of each branch is a large cluster of white flowers.

EMMA P. RESSMYDER.

## Garden Hints.

## OUTSIDE THE GARDEN.

AN amateur in the home-culture of flowers, who counts the years of her experience on half the fingers of one hand, who has drawn all the knowledge she has from the CABINET—what can she give back to her teacher. The success which has given us so much pleasure does not differ from that of others, who have told of it and how to obtain it better. Though our houseplants are loved and petted treasures, we cannot hope to interest you in them. We have wondered, sometimes, why we found in this FLORAL CABINET of ours so little about the floral world which lies outside of lawn and garden, as these lie outside of the window-garden and conservatory; and if you will come down in the woods with us this bright, clear morning, perhaps we can have a little pleasant chat about some of the sweet dwellers there.

Through the orchard and down the wood-road beyond, where young oaks and beeches meet overhead, and stretch away on either hand. Years ago primeval pines reigned here; grand old monarchs, when they fell, their places were quickly taken by these aliens. See how kindly Mother Nature has spread her daintiest handiwork over the great stumps, making them fitting memorials of the old forest kings. How the colors of the different mosses, lichens, and fungi brighten the dead brownness around; but not more than do the little pine-trees; bright and sturdy little princes these are, growing up from the parent roots, strong and vigorous, under the very arms of the usurpers; and the story is that by and by there will come a day when these shall fall at the feet of the young pines, which, in full possession at last of their inheritance, will grow with the century to the perfect stature of their fathers. But much we fear that meddling agriculture will possess the land long before the day of the young pines shall come. Here in spring and early summer anemones lift starry, white faces, and afterward moonwort ferns grow riotous, but no more flowers.

Farther on, over a tumbling stone wall, and we are under the pines—noble trees, though the largest trunk is smaller than a third part of some of the old stumps we have passed. Evergreens love evergreens. The lesser ones are always found in the shadow of the greater. The tree-tops, so far above us, are hardly so green as the brave little things that rise just above the finer needles under our feet. Here are several kinds of Lycopodiums, Hepaticas, Pyrolas, and Pipissimas; spotted and creeping Wintergreen, Mitchella repens, likes to hide a little, but not deeply; pull away the brown covering and how the bright eyes laugh up in your face, from where it lies luxuriantly in its warm bed. Below that large rock, in a sudden little hollow, is the spring, full and overflowing. A long curving line of bright green in the meadow beyond shows where the "sweet, pleasant water" takes its way. And in this meadow, in the corner beyond the spring, is the paradise of violets; blue, yellow, and white; blossoming larger and fairer as spring passes into summer, and summer lengthens towards the fall. Marsh

Mangolds are here too; nor do we disdain them, when we come for clumps of violets, which, planted in deep plates, will carry the spring pleasantness into close rooms.

In this smooth, clear space, Low Crenels will cover the ground in midsummer. The scarlet berries which follow the odd, changing blossoms make lovely fall bouquets; a loose bunch in a white vase, with only their own green leaves. Over there Lady-Slippers always tantalize us from under the brush and bushes, rising so gracefully on longer stalks, with pendent moccasins of deeper rose-pink the farther under they grow. Beyond the meadow is the swamp, frozen now; impenetrable in summer except with boots of masculinity. Some of our choicest summer treasures come from here—Azaleas and Callas; our own native Calla Palustinus; not to be placed beside the proud Lily of the Nile, truly, but very sweet and interesting in its own quiet way. A large plant in bowl or vase of water (with a few pieces of charcoal for sweetness' sake) will continue in bloom a long time. Blue Flags are here of course. For their own sake, we could wish that these were not so common. Yet great honor is theirs; for the sweetest song that poet ever sung for a single flower is that of the "Flower-de-luce." Resting on this high bank some bright June day, looking down to the "sluggish meadow brook," where the first blue lilies stand sweet and stately by the water's edge, it were easy to believe that the poet too was resting here, when he listened to

"The Muse, who far from crowded cities  
Haunted the sylvan streams,"

fit words of greeting to the azure-winged Iris queen:

"Born to the purple, born to joy and pleasure,  
Thou dost not toil nor spin,  
But makest glad and radiant with thy presence  
The meadow and the lin.

"The wind blows and uplifts thy drooping banner,  
And around thee throng and win  
The rushes, the green yeomen of thy manor,  
The outlaws of the inn.

"The burnished dragon-fly is their attendant  
And tilts against the field,  
And down the listed sunbeam rides resplendent  
With steel-blue mail and shield."

With the song on our lips it seems almost a vandal act to tear the fair flowers from their home; but we want them for our own home's adorning. So down from the mossy bank, where white violets and reddening strawberries are, towards the water's edge we go courageously, though well knowing that the royal Iris is royally guarded, and that we are not properly equipped for a tilt with her brave defenders. Alas! the drooping banners are still far beyond our reach when we stand dismayed, overpowered. The winged warriors whizz around our head. The thronging rushes, those "green yeomen," stretch out helping hands, but we know their treachery; they would draw us into the black depths from which they rise. Every tuft of grass, every black root, yields us faithless footing. The "still river" follows our steps, and its kisses are not sweet to us, as to the lilies. Standing here, we look back to the

mossy bank and think again of the poet's song. What is it he says at its closing?

"O flower-de-luce! bloom on, and let the river  
Linger to kiss thy feet."

Then we look ahead at the royal Lilies, and surely they are laughing, while strange sounds come to our ears from the whispering reeds, hinting of a deeper meaning in the words than we had seen before. Had we thought that the poet said "bloom on," because, by reason of his exquisite sense of the fitness of things, he could not tear the fair flowers from their surroundings? Not at all. He had only left his rubber boots at home, and loved not that the river should "linger to kiss" his own feet. Shamed and saddened, we must retreat as best we can; but it is only to return, properly "armed" for the contest, and very soon the blue banners droop amid their green spears, in a moss-filled china bowl on our parlor table, with the dainty green and gold volumes close by, open at

"Beautiful Lily, dwelling by still rivers,"

and we know that our callers will fall into raptures of delight over them.

After the Blue Flags come the Cardinal Flowers, with their splendid dazzling beauty. Did you ever, after long and weary striving for the possession of some of these, have a strong feeling of disappointment when at last they were arranged in bouquet form? We think there are no flowers more easily spoiled. Without the right surroundings they utterly refuse to shine with the flaming brilliance which so fascinated us when first we saw them in their boggy home. We like best a pure white vase filled with the glossiest, darkest green leaves we can find, a few only drooping over the vase. Then put in the crimson spikes, one at a time, not too closely together, and place the vase on a corner-bracket or stand, where no strong light will fall on it, or else directly in a sunny window. They are lovely in a dark corner, where each tiny blossom seems to glow with double power, and dazzling bright in the sunshine. For a table ornament fill a tall crystal vase with fine white flowers; green leaves and trailing vines around the edges and Cardinals in the midst, rising high above all. These are easily transplanted, taking up the roots in early spring or late autumn. They will grow almost anywhere if given rich earth and plenty of water, but they seem sadly out of place in flower-bed or border. Put them in some hollow or corner by themselves, a good many together; or, better yet, at the foot of an old mossy stump or vine-covered rock. If the frozen roots are lifted in the winter, thawed out very gradually, then given warmth and water in abundance, they will surely think that spring has come, and begin to grow at once. Several around the fine Calla in your aquarium will leave nothing more to be desired.

On this wet bank will rise the wise heads of the preachers. Very fine they are, each erect in his gay pulpit; but the tiniest violet teaches the same lessons as truly. Here, too, are the curious Pitcher Plants, or Huntsman's Cups, with their odd umbrella blossoms. Do you know what pretty window ornaments can be made of these green pitchers. Fill a large one with water, after suspending it by strong thread above a

hanging-basket; then put in it some trailing little plant, or a few cut leaves and flowers. If kept filled with water it will last all winter. We have seen in Boston a man selling these for fifteen and twenty cents apiece, a tiny bouquet of everlasting flowers being in each pitcher.

Late in the summer we shall have flowers from this swamp, than which there are none more beautiful and fragrant among all our natives—the small purple-flowered Orchids. We shall give these a tall lava vase, with shining beech leaves, polypody Ferns, and flowering grasses among the rose-purple trusses. Here at the end of the pines grow the sweetest of all the Violets, the Bird-foot—*Viola pedata*—with its delicately-cut leaves, in such neat, compact shape; the large velvety blossoms rising above on long, graceful stems. We have counted sixteen in full bloom on a single root, with half as many buds. These take very kindly to cultivation, and thrive beautifully as petted favorites; throwing up flowers more freely, as well as larger and sweeter, than in its woods home.

Now come down to the brook; we shall find evergreen ferns there. See how those large ones bend under the weight of ice-drops. There are many set in the icy borders of the brook; and here is a perfect frond imbedded in the ice, every delicate point showing as plainly as if under glass. And see those baby-ferns, none more than three inches long, fresh and green in their mossy bed, as if this were June instead of January. We will lift a clump of the frozen moss, little ferns and all. This, with a handful of the larger ones, we will keep for a few hours in a basin of cold water; then their bright fresh beauty shall grace our tea-table. The moss on a plate; a silver vase in the centre with the larger ferns, one pure Calla in their midst, and Partridgeberry Vines, with plenty of the berries, drooping around.

Going home through the old pasture we shall see where the Bluets grow. No sheltering, shading trees for them. They must catch every ray of the spring sunshine, for they are our earliest flowers, as Arbutus passed away years ago, and is known here no longer. Bluets, too, like the Bird-foot Violets, are delightful pet plants. Last year we had a clump in a moss-bordered soup-plate which was a thing of exquisite beauty for several weeks. If transplanted early—taking up enough earth to fill a shallow pan or tray—they will bloom steadily for months. They like a good deal of water, but they are very patient under a course of careless neglect. Bluets, Eye-brights, Innocence, Dwarf Pinks, the tiny flowers are called by many names; *Houstonia cerulea*, the botanist says “Dwarf Pink,” is simply absurd. Of the others Dr. Gray says: “The French Canadians call them Bluets, but in the States they do not seem to have got any one well recognized popular name, to which they have a clear title. Innocence is one which they may share with many a simple flower. Eyebright is not bad; but it belongs to a very different blossom, which is rare in this country. Bluets is an importation, but it is coming into use, and is preferable to the others. But *Houstonia* itself makes as nice a common name as *Magnolia*.” Of course this is a dictum indisputable, yet we cannot help thinking that “*Magnolia*,” which belongs to

a superb tree, would not be quite so euphonious if given to a “wee bit” blossom on an inch-high stalk. We wish that Eyebright had not been condemned; but if “Bluet” is allowable, Bluets they shall always be to us, though they are hardly blue enough to warrant the name, as some have not even a tinge, and those that are deeply colored when they first open usually fade to pure white in the sunlight. The tiny blossoms, each with a golden star in its centre, rise on stems from one to four inches high; sometimes in clumps, where the stems are set as thickly as the blades of grass around them. We have read of the little plant covering yards of ground with this dense growth. Here we usually find the flowers scattered in the grass, not far apart but separate, each little branching stem by itself, and it must be the bluet which grows in this way that has been linked with the stars of heaven, to teach one of life's noblest lessons:

“The starry flower, the flower-like stars that fade  
And brighten with the daylight and the dark,  
The Bluet in the green I faintly mark.

EVA MAY.

### ANSWERS TO CORRESPONDENTS.

IN the March number, 1876, I find this, in speaking of rooting plants: “*Bryophyllum* requires even less pains, as new plants will form on the edges of a leaf hung up, which may then be repotted.”

The enclosed leaf will grow in that way, or by putting in ground with edges of leaf exposed. It is from a plant with straight grayish-green stalk, seldom, if ever, branching; no blossoms; can be set out in the ground during summer; growing rapidly. We call it Air Plant. Please tell me if it is *Bryophyllum* or what.

This is the third year I have taken the CABINET, and I intend to be a *life-subscriber*, for I cannot keep house without it.

LORA MYRNE.

ROCKFORD, ILL.

ANSWER.—The leaf is certainly *Bryophyllum*. It is the peculiarity of the plant to produce buds from the edges of the leaf. No other plant has this power, so far as we know.

In next FLORAL CABINET please tell something of the management of “*Hoya*,” or Wax Plant. I have one the branches of which are three or four yards long; has a few blooms, but no leaves, except at the bottom. Should it be cut back?

A Calla Lily, which bloomed profusely two years ago, has not bloomed since. What must be done with it?

I find your FLORAL CABINET very useful and instructive. Respectfully,

B. B. W.

BIG LICK, ROANOKE CO., VA.

ANSWER.—Do not think of cutting back your Wax Plant; it is probably doing well. The Wax Plant is very peculiar in its habit of growth; in some respects like the Cacti. It has a season of very rapid growth, during which it sends out long cord-like processes, which attain a very considerable length without showing any sign of leaf or bud. They are of a dark reddish-brown, and have a very

singular appearance; after a little the leaf-buds show themselves, and unfold in thick glossy pairs. During this season of rapid growth it needs to be well watered and have plenty of sunshine until the flowers appear, which is usually about midsummer. The fact that your plant has leaves only at the bottom only means that the leaf-buds have not yet formed. The growth of the stem is much more rapid than the production of the leaves.

The flower-buds appear at the bottom of the leaf-stalk. Be careful not to break off the flower-stalk when the flowers have fallen, as the same stem will produce flowers for several years—a fact not generally known. When the flowers have fallen the plant relapses into a state of rest, and through the winter it may be left without fear in any room where it will be secure from frost. In February it generally begins to wake from sleep, and it then needs more air, warmth, and water.

Your Calla has probably become crowded for room, or needs more water; immerse the pot in a tub of tepid or quite warm water about to the brim, and let it have plenty of sunshine.

MRS. JENNIE DUNCAN, BURGETTSTOWN, PA.—  
The leaf sent is White Jessamine.

Should Ferns have ventilation at bottom of Wardian case?  
SOPHIA A. HOMER.

HANCOCK, IND.

ANSWER.—No; Ferns in Wardian case need only to have the glass raised once or twice in a month.

Will you please tell me how to treat an Irish Wallflower.  
MRS. H. J. FLEURY.

ROUSE'S POINT, N. Y.

ANSWER.—The seed of Wallflower should be sown in the spring, in the first warm weather, in open border. It will bloom in the spring following. In the climate of New York it should be kept in a cold-frame through the winter. Choice kinds are propagated by cuttings. Seeds cannot be depended on to bring the same variety. The plant is a native of Southern Europe. It grows among rocks and upon old walls; hence its name. The colors vary from light orange and brown to deep blood color, running through innumerable shades. It needs rich loamy soil, and not too much water, but a moist atmosphere.

MISS EVA BELDEN.—Try charcoal dust about the roots of your roses. If they still languish, smoke them with tobacco to destroy insects, and repot in good rich loam, giving good drainage, that the soil do not sour. It often saves a rose to cut back severely.

MRS. T., MONTREAL, CANADA.—Your Geranium trusses should be large if the plant is vigorous. Has it not been injured by insects? Some flies attack *only* the flower-bud, and do not touch the leaves; perhaps this has been the explanation of the failure of your flowers. Try treating the first buds to a little tobacco-water, and watch closely.

## Floral Miscellany.

## TO A ROSE-BUSH.

[On receipt of the CABINET Premium, "Duchess of Edinburgh," by mail.]

DARLING little rose-bud,  
Peeping out between  
Little shining leaflets  
Of the brightest green—

Lovely little rose-bud,  
I shall watch with care  
Till you are a blossom,  
Fresh and sweet and fair.

Naught shall mar my rose-bud,  
For I've just learned "How  
To Destroy Insects,"  
And, I tell you now,

Not a single rose-slug,  
Nor an aphid sly,  
Shall molest my rose-bud;  
*If they do, they'll die.*

## GROWING PANSIES.

A CORRESPONDENT writes: "Can you tell me how to grow Pansies, and be sure of success? I have a perfect passion for them, and always fail with them. Have tried to make them grow and bloom half a dozen times, and am ready to give up. Isn't there some 'knack' about it which belongs only to certain persons? I have followed directions carefully, and always with the same result. The seeds grow, but the plants are weak, and generally die before they blossom."

It does seem as if some persons had a peculiar "knack" for making certain flowers grow. But generally, when you come to enquire into the matter you find that they have found out the conditions necessary to a healthy growth of the plant they succeed with, while others fail, and that is really the secret of their success. I used to experience the same trouble with Pansies that my correspondent does. I tried growing them in shade, as recommended. I tried this location and that one, and a few poor flowers was generally all the satisfaction I got for time and labor expended. I began to think I lacked the "knack" of growing pansies, and gave up trying. One day a friend went a mile or two into the country and came back with some of the loveliest Pansies I ever saw. They were very large, and no two seemed to be alike. They were in all shades of purple and yellow, and were marked with black and maroon and pure white. "You ought to see them in the bed that these came from," said my friend. "I never saw anything like them." On enquiry I found that an old German woman grew them. Knowing that the Germans are very fond of them, and are successful in growing them, I determined to visit this old lady and see if I could find out what her "knack" was. The next day I drove to her place, and interviewed her. She told me that she always started her Pansy-seed in the house, in rich earth, early in March. She took pains to have

the young plants get plenty of sunshine and air, so that they would not become weak and spindling. By the time the ground was warm they were large, fine plants, and in a short time would begin to blossom. She made the soil mellow, but not over-rich, and chose a spot where the hot sunshine of midday would not strike them. But she did not believe in having them shaded entirely. In that case they were apt to make a straggling growth, but would have few flowers. They wanted plenty of air, and unless they could have it they would mildew and become unhealthy. She never had any trouble in making them grow, and always had fine flowers. Every year she raised new plants, as she thought they blossomed better than old ones. This year's plants would have the largest flowers, but next year they would blossom more profusely, and at the end of the season she threw them away.

I have tried her plan, and have no trouble with Pansies now.—*Exchange.*

## CACTI.

My love and admiration of nature's beauties have for years past led to the cultivation of many rare and lovely plants. Of my success with some I should like to give a brief account, hoping the slight information may be of benefit to some floral friend. I have long entertained a strange fancy for the Cacti family, and having loved and cared for them so many years I feel that I must bring them first into notice—a notice which they well deserve.

There is a large Cereus family. The Grandiflora (or Night-blooming Cereus) is the general favorite; but not so with me. True it is a fine Cactus, growing yards in one season, and can be trained on a trellis and lapped about like a serpent. I do not find they require to be almost starved for water to cause them to bloom, as some persons assert. On the other hand, they make much larger and stronger plants by watering well through the summer. In this climate (Northern Louisiana) we have long droughts in the heat of summer, when the very atmosphere becomes so dry that, in order to have our plants flourish, they must be watered and sprinkled often.

My Grandiflora blooms beautifully every season, to the admiration of my neighbors. The flower is closed by morning, never more to open.

The Quadrangularis and Triangulis are both fine Cereus. The former grows wonderfully tall. Mine being of such an immense height, it was placed in the yard and fastened in places to the house. The passers-by gazed in amazement at the tall green plant with such wonderful spines. Its flowers open at night also. The bloom of the Triangulis surpasses that of the Grandiflora; unfortunately, it closes by morning light, as if too delicate for the rude glare of day. Any one desiring to cultivate a Cereus for the beauty of the plant should immediately order the Serpentinus. It produces a beautiful fruit, which of course adds much to its otherwise attractive appearance.

There are many low-growing Cacti as fine, and more easily cultivated, than the tall varieties, since they require no support. The Epiphyllums have the

loveliest flowers; but to bloom well they should be grafted on a Cereus, which can be done by splitting the Cereus half in two for about two inches; then place your Epiphyllum between the halves, and close them by wrapping cord around tight enough to hold them in place. The Echinocactus, Mammillaria, Orange, and Melon are exceedingly interesting; some having fruit, others bright red berries, much resembling the Turkey berry. There is much I could say about the Cacti of Texas—growing wild over portions of that vast State. Some varieties may well compare with the green-house pets. The Cereus Cespitosus ranks first. It does not grow more than a foot high, and in shape greatly resembles a corn-cob. It is literally covered with small white spines. Echinocactus Horizontalis spreads out like a large pineushion, and is ornamented with thick crooked spines. Their flowers are very attractive, since they open by daylight and remain in bloom some time. The Echeverias are much admired here. Why is there so little mention made of them in the CABINET? They are so easily grown, and flourish like a house-leek in our dry, warm climate. In the latter part of summer the Metallica Echeveria puts up four or five tall stalks, which in the fall are loaded with small, wax-like flowers. To know how exquisitely lovely these flowers are one's own eyes must behold them. A feeble pen can convey but a faint idea of their singular beauty. The Sanguinea has fine foliage. The Secunda is very pretty for filling spaces in large jars or boxes, with tall plants in the centre. I wonder if any lady reader of the CABINET has ever tried to cultivate a Bonapartea Juncea. They are very rare and ornamental, belonging to the family of Century plants, yet greatly unlike them; so much more graceful and delicate in growth, the long, slender foliage drooping from every side like a fountain. They can be grown in pots and kept in the green-house, pit, or window, wherever your fine plants are wintered.

**Pressed Leaves.**—A good way to arrange autumn leaves and ferns is to stitch or pin or iron them on with thin mucilage to a strip of lace of suitable width, and with it border lace or muslin window curtains and lambrequins. This confines them so they will not easily be broken, and the light falling through brings out the colors finely, and the whole produces a charming effect. An invalid of our acquaintance decorates her room by twisting the stems of autumn leaves on fine wire as milliners do artificial flowers, twining the sprays about walls, windows, and pictures, like vines.

**Select Tender Roses.**—The prize for the finest collection of tender roses of twelve varieties at the exhibition of the Massachusetts Horticultural Society a year ago was for the following sorts: Belle Lyonnaise, Bon Silene, Catherine Mermet, Climbing Devonensis, Climbing Hermosa, Gloire de Dijon, Maréchal Niel, Isabella Sprunt, Niphetos, Pauline Labonté, Souvenir de la Malmaison, and Triomphe de Rennes.

**Iron for Flowers.**—Work iron filings and iron-chips in the soil of your flower-beds, and you will add greatly to the bright rich coloring of flowers.

# THE Ladies' Floral Cabinet

AND

PICTORIAL HOME COMPANION.

The Handsomest Illustrated Journal of Household Art, Flowers, and Home Literature in America.

\$1 30 per year, Monthly Edition, with Premium. 65 cents, six months, without Premiums. 50 cents, Quarterly Edition, one year, with Premium.

These terms include postage prepaid on Paper, which is paid by the publisher. 25 cts. for agent's outfit of paper and chromo.

Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.

Advertising Rates—50 cents per agate line of space, or \$7 per inch. Address

## NEW BOOKS FOR 1879.

### INSECTS ON FLOWERS AND HOUSE-PLANTS,

AND

### HOW TO DESTROY THEM.

This is a valuable little Book of Directions to Window Gardeners and lovers of Flowers how to overcome and destroy Insects on their Plants, both out-doors and in-doors. It tells how to fertilize and stimulate plants, the experiences of cultivators in keeping their plants healthy. Among the topics are these: "Red Spider," "Aphis," "Green Fly," "Worms in Pots," "Rose Slugs," "Rose Bugs," "Snails," "Caterpillars," "How to Destroy Insects on Garden Fruit-Trees and Vegetables," etc., etc. It is exceedingly valuable also to Housekeepers, as it tells all about "Ants" and all House Bugs.

Price 30 cents by mail, postpaid.

### Williams' Designs for Needle-Work.

A very beautiful collection of designs for Borders, Corners, and Centres in making Tidies, etc., on Java Canvas, Holbein Work, Worsted Work, Burlap Work, etc. These designs are new and remarkably pretty. Every lady should have them.

No. 1 contains nearly 25 Designs for Worsted Work, Canvas Work, Crotchet Work, etc. Price 30 cents.

No. 2 contains nearly 25 Designs for Holbein Work, Honeycomb Canvas, etc. Price 30 cents.

No. 3 contains Designs for Burlap Rugs, Mats, Small Carpets, etc. Price 30 cents. Address

HENRY T. WILLIAMS,

Publisher,

46 Beekman Street, New York City.

### THE INCREASING SALES,

notwithstanding the stringency of the times and the fact that the success of this as a standard preparation has induced many others to enter the field with preparations of varied value,

IS A SURE PROOF  
THAT

**RIDGE'S FOOD FOR INFANTS AND INVALIDS**

is all that is claimed for it.

MOTHERS, NURSES, AND INVALIDS can rely upon this preparation on account OF ITS TRUE MERIT.

It is suited to the weakest stomach and at the same time has life-giving and bone-forming properties attained by no other. The reason of this is that

**RIDGE'S FOOD FOR INFANTS AND INVALIDS**

is a cooked food, prepared upon scientific principles, and as a result of great care and study by Dr. Ridge, a London physician of forty years' successful practice. "WOOLRICH & CO." on every label. Sold everywhere by Druggists.

Invented by E. N. Horsford, late Professor in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent stamp to the manufacturers for a sample.

RUMFORD CHEMICAL WORKS, PROVIDENCE, R. I.

\$66 a week in your own town. Terms and \$5 outfit free. Address H. HALLETT & Co., Portland, Me.

This little book contains choice selections for writing compliments in the albums of friends. Verses and poems, sentiments from celebrated authors, and lines humorous, affectionate, and dedicatory.

Price, sent by mail, prepaid, 15 cents. Address HENRY T. WILLIAMS, Publisher, 46 Beekman Street, New York.

AYER & SON'S MANUAL contains more information of value to advertisers than any other publication. Sent, post-paid, on receipt of 25 cents. Address N. W. AYER & SON, Advertising Agents, Times Building, Philadelphia.

THE only reliable Marking Ink is PAYSON'S. It requires no preparation, and is always good. Sold by druggists and stationers everywhere.

World's ONLY Manufacturer of

### Wheel Chairs

Exclusively. ALL Styles and Sizes

For Invalids' and Cripples' self-propulsion by means of hands only in and out doors. Comfort, durability, and ease of movement unequalled. Patentee and Maker of the "Rolling Chairs" pushed about at the Centennial. Send stamp for Illustrated Catalogue, and mention THE FLORAL CABINET. HERBERT S. SMITH, 32 Platt Street, New York.

MADAME ROWLEY'S  
MEDICATED

## TOILET MASK

A Natural Beautifier for bleaching and purifying the skin, and imparting a Clearness and Brilliance to the Complexion that can not be produced by any other known means. This ingenious invention (the only one of the kind) is soft and flexible in form, convenient and agreeable in application, and may be

### WORN DURING SLEEP

or at any time, as the wearer may elect. Eminent Medical Experts and Chemists, who have analyzed the MASK, pronounce it perfectly pure and harmless, and admirably adapted for the purpose intended.

Its action is truly Marvelous; and it proves at once Durable, Cleanly, Comfortable, Easy to Apply, and will save its possessor hundreds of dollars, uselessly expended for Cosmetics, Lotions, and like preparations.

The MASK is sold at a moderate price—will prove indispensable to ladies who value a Beautiful Complexion—and with ordinary care will last for years.

A DESCRIPTIVE TREATISE, giving full particulars, and the testimony of well-known society and professional ladies, mailed FREE. Address,

THE TOILET MASK COMPANY, 1164 Broadway, New York.

All correspondence is in charge of ladies who have had ample experience in all matters relating to the subject.

### INVALID RECLINING CHAIR ON WHEELS.

Occupant can lie down or sit erect in it.

MADE BY  
NEW HAVEN FOLDING CHAIR CO.,  
NEW HAVEN, CONN.

Exhibited at International Exhibition, Phila.

20 REP or DAMASK CARDS, with name, 10c., postpaid. J. B. HUSTED, Nassau, N. Y.

\$5 to \$20 per day at home. Samples worth \$5 free. Address STINSON & CO., Portland, Me.

60 CARDS—20 Chromo, 10 Motto, 30 Ocean Shells, Snowflake, etc. Name on, 10c. CLINTON BROS., Clintonville, Ct.

NEW YORK, JULY, 1879.

## ILLUSTRATIONS OF THE MONTH.

On page 11 is a splendid illustration of scenery on the Union Pacific Railroad. This view is of the immense rock at the opening to Echo Cañon, and is called Bromley's Cathedral. The railroad track winds immediately under it, and passes eastward through a cañon whose wall of rock rises from 500 to 800 feet high, of immense size and perpendicular form. It is the most noted point of scenery along the route.

Upon page 9 is a pretty little sketch of the *Deutzia crenata flore pleno*. Most of our readers are familiar with its name, but few possess it in their gardens. It should be everywhere in the yards of every country home. It flowers early in the spring most profusely, and is an ornament of great beauty.

Upon this page is also a sketch of an English flower-garden, where a mound has been selected of immense size to display bedding plants and those of beautiful foliage.

Upon page 12 are designs to use in *Java Canvas Work*—borders, corners, etc.

Upon page 13 are sketches of scenery in St. Augustine, Florida; the upper view being a scene along the beach, the centre is a tropical garden, and the lower scene one of the gates of entrance to the city.

## ORANGE FLOWERS.

THIS beautiful evergreen is found in every civilized country where the climate is favorable, and in colder countries it is the cherished ornament of the hot-house. It flourishes in the most southern limits of the United States, largely in Florida, and to a considerable extent in Mississippi and Louisiana,

south of the lakes. In Mississippi and Louisiana they are favored by the lakes tempering the cold north winds. There seems but little difference between these States in their favorable localities. However, the tree requires delicate cultivation and studied treatment. About the year 1816 oranges were introduced as ornaments to the States by the French. In 1830 an orange-tree in a box, in bloom, brought 400 francs, and about this time some attention was paid by horticulturists, and blooming trees in boxes were sold at from 50 to 100 francs in New Orleans.

The time of flowering is from the beginning of February until April 10, in healthy trees; unhealthy ones are found in bloom sooner or later. The last week of February finds most of the trees blooming. The petals remain on the flowers for about two weeks. Unfavorable conditions shorten the time. The humidity of the atmosphere materially affects the flowers—when too wet the pollen heads are injured and the secretions are imperfect. Dryness has a similar effect on the pollen and nectar, but does not affect the secretion of oil. When the temperature is too low but few flowers are fructified, the oil-cells are limpid and no nectar is secreted. The most favorable temperature is about 68 deg. to 76 deg. F. Under 60 deg. F. flowers are blighted. When the busy bee is found collecting the nectar the conditions are favorable for the development of flowers and fruit, and then the flowers contain their most agreeable odor.

An ordinary tree will yield from two to ten pounds of flowers, ordinarily about seven. As soon as the petals begin to fall a canvas is spread under the tree and by brisk shaking the petals will fall, with some leaves, which are easily separated. The time when flowers are most fragrant is early in the morning, and late in the day the odor is greatly diminished. Prior to the late conflict negroes collected and sold orange petals in New Orleans. A tea-saucer full (about 2 ozs.) was measured out, put upon a china plate and set in the room, for which the negro received about 50 cents. From two to three plates would perfume a room for a week. Orange flowers produced in the extreme southern borders are believed to possess a stronger odor and more oil. The difference is accounted for in this manner: In the tropics and semi-tropics the trees do not begin to bear very much until about twenty years old, while in this country they begin at about seven. The development is more rapid, the tree more vigorous, and it is reasonable to suppose a better development of odor in the flower. The writer was informed by an orange-grower who had made extensive observations in different countries and fully confirmed this supposition. The flowers are more fragrant and the fruit more juicy, but not so sweet as in some other countries.

The writer made several experiments with orange flowers. When placed in the direct sunlight, in the course of two days they lose all their odor. In diffused daylight they retain it for at least three days, and in a dark, humid atmosphere the odor is quite distinct after one week. When bruised, they lose their odor in half of the time stated. The writer has no means for experimenting as to amount of volatile

oil, but he believes that the better plan for the pharmacist is to have the petals hermetically sealed and to make his preparations direct.

Orange-flower water is one of the most agreeable vehicles for nauseous medicines that we have, and when the pharmacist can make fresh preparations they will be fully appreciated and the expense will not be greater. The syrup of either flower or fruit has no superior, especially the syrup of the fruit. A honey collected from orange flowers is very fragrant with the orange odor. The flowers, placed in tin cans and sealed up, are known to have retained their odor unimpaired for nine months. As a perfume they have no equal. To sit under a tree when in full bloom is delightful, the fragrance intoxicating. If any one has made the syrup of orange from the fresh juice of the fruit and used it, he will not want to use any more which is made from simple syrup and a few drops of the oil of the rind.—*Villa Gardener*.

## PRUNING THE OLEANDER.

THE oleander is certainly one of the best hard-wooded plants we have got for bearing trimming. If the points of the shoots are injured with the frost, cut them back to healthy wood, even if it be to the old wood of the plant, as from it fresh shoots will start in abundance. I often see large, straggling-growing plants of oleander, set out in conspicuous positions, that look anything but attractive. If they were compact they would be very beautiful. By a judicious use of the knife there is no need of poor-shaped plants, as they will bear with impunity cutting into shape, if it is done before the plants start into growth in the spring. When the growths have started, some one or two may probably start stronger than the others, taking the lead. These should be pinched and kept in check, so that more strength may be concentrated in the others, and a better form given to the plant.

As is well known, the successful flowering of this plant depends upon thoroughly ripening of the young wood; therefore this should be well attended to. Our climate is well adapted for the successful flowering of this plant. When it is kept out-of-doors during the summer, the young wood gets well ripened before the time for housing it. When it is wanted to flower during the summer months, the cellar of the cool-house is the best place for it; but it requires, when in a cool temperature, to be kept rather dry at the roots, or else the shoots may damp and the foliage get soft. Bring the plants gradually to the light in the spring; if brought from the dark and placed at once where the sun may strike hard upon them, the leaves are apt to get browned and drop off, which should be guarded against, as evergreens of any kind denuded of their leaves are left in a very weakened condition.

M. MILTON.

**To keep a Lawn Fresh and Green.**—Put on frequently a slight sprinkling of salt or bone-dust, or superphosphate, or any good fertilizer. When the soil is soft, run the roller over it; it helps the appearance greatly. The application of a little ground gypsum will also freshen up the grass.

# FLOWERS FOR WINDOW BOXES.

WHEN you have filled your box with earth you can select your plants, if you have not already done so. What do you want? Plenty of flowers? Then I advise you to use Geraniums. Get Master Christine for pink, General Grant for scarlet, Rose Rendatler for salmon. If you want a double one, and they are very fine for summer flowers, and your box is expected to have fulfilled its mission by the time frost comes, get Gloire de Nancy, bright scarlet, very double and profuse; Mad. Lemoine, bright rose, or Asteroid, soft crimson. But I do not advise you to get all of these. I only named those I consider the best for the purpose. I would select the color I preferred from them, but would not mix scarlet and pink and salmon together. I think you will find the effect much more satisfactory if you confine yourself to shades of the same color, as, for instance, Master Christine for the centre of your garden, flanked by Mad. Lemoine. You want a harmony of color, and you cannot have this if you blend scarlets and pinks together. Among the Geraniums I would put Heliotropes. They are profuse bloomers, and so very fragrant that they are indispensable. Their lavender tints will harmonize perfectly with your pink Geraniums. If you want Fuchsias, plant them next the window, where the other plants will shade them. Get Aurora, or Arabella, pink and white varieties, blossoming profusely, and furnishing a shade of color that will blend perfectly with your Geraniums and Heliotropes. At the outside edge of the box put slips of some trailing plant, like Moneywort or Kenilworth Ivy. They will soon cover it with their luxuriance, and hide its roughness from the eyes of outside spectators. At the ends put tubers of the Madeira Vine or roots of German Ivy. Or you can plant seeds of Morning-glories, which will be prettier

DEUTZIA CRENATA FLORE PLENO

AN ENGLISH FLOWER-MOUND.

than either Madeira Vine or Ivy. Then scatter some Mignonette seed over the batch among your plants, and—wait.

Before the vines at the ends get much of a start, you must make some sort of a trellis for them. You can fasten a square frame to the top of the window and stretch twines from the box to it, if you can afford nothing better. In a short time it will be hidden, and then you will be as well satisfied with it as if it had cost you two or three dollars—perhaps better.

You must be sure to give plenty of water; for, being so exposed to the air, the box of earth will dry out rapidly. Water at evening, giving the plants a good sprinkling. You will be surprised at the amount of bloom you get. The Geraniums, Fuchsias, and Heliotropes will make your window bright through the entire season, and the Mignonette will make your room sweet as nothing else but Mignonette can, and the Morning-glories—you know what they can do if they try; and if you don't let them dry out at the roots they will do their best, and wreath your window with their vines and flowers from June to October.

Such a garden is inexpensive, and affords a vast amount of pleasure. A box of the size I have named will accommodate from ten

to fifteen plants handily, exclusive of the vines and Mignonette. But I would prefer ten to fifteen. They will be all the finer through the latter part of the season for having plenty of room. A great mistake is made in crowding a large number of plants into the box to begin with, and attempting to make a satisfactory show at the start. Give the plants time and they will satisfy you. If you use too many you dwarf the whole, and lose the luxuriance, which is so attractive.

If you want a window-garden of "foliage plants," put a Cana in the centre, and Coleus and Centaurea to fill in about it.—*Exchange.*

## Household Elegancies.

## HOW WE MADE OUR HOME PLEASANT.

We live in the country and follow the profession of teaching, which allows but little time for house-decorating; nevertheless we find some spare moments, and we endeavor to improve them. At first we boarded—my husband, Cousin Dell, who teaches music in our school, little Daisy, our baby, and myself—but finally concluded that between us we could manage to keep a small house. So my husband procured one, a cottage with four rooms, with dining-room and kitchen attached. How we planned to make our nest cosy! Saturdays found us at the cottage tacking down carpets, hanging pictures, and getting everything ready for us to take possession. Finally, the day for us to begin our new work arrived. How happy did I feel when my first snapper passed off charmingly! We had four rooms to make comfortable, and we wished to do it with as little expense as possible. We started with the parlor, which does the service of music-room and library. We carpeted the floor with white matting, spreading a bright rug wherever it was necessary. We then turned our attention to the windows. These we draped with white lace curtains over maroon chintz, which renders the room dark and cool in summer and warm and cosy in winter. Our piano cover was maroon embroidered with gold, so it corresponded nicely with our curtains and the gilt frames around our pretty chromos, the largest of which hangs over our mantel. We festooned our pictures with hanging moss which drapes so gracefully the cypress-trees on the banks of our Southern rivers.

We place our books in a large case made for them. The case is made with a cornice over the top, underneath this we confine a lace curtain to fall over the books, and when it is looped back the pretty bright volumes peep out as if to invite us to come and search within their leaves and become wise. But no time for that until our fernery has been described. Guess where it is? In no less place than the fireplace. Every Southern country housekeeper will understand what I mean by a fireplace; they are generally considered the test of a housekeeper, so of course, as beginners, we wanted something nice for ours. We first thought to make a pretty spatter-work screen, but as my husband is averse to having a closed fireplace, we went to work with a good will to transform this black, ugly chimney into a thing of beauty.

Cousin Dell with the school-girls started for the woods with the children's little wagon and a spade. They took up large groups of beautiful ferns and mosses in their own black dirt, while I put in readiness their future home. I whitewashed the back and sides, also the hearth, put away the andirons and tongs, and everything was ready when the girls returned with the lovely captives, the ferns and mosses.

We made a bed of the black dirt three inches deep, on this we placed the most beautiful groups of ferns, being careful to conceal the dirt with a covering of green moss. Several times during the warmest days we would give them refreshing showers of water.

The ferns grew very rapidly; some of them spread their leaves far up the chimney. Of course some of them died out, but so many young ones unfolded their delicate leaves we hardly missed the yellow ones that we pulled out. We felt quite fond of our fernery when we listened to the exclamations of delight from our admiring friends. When we look around we can see our pretty camp-chair, comfortable rockers and lounge, with bronze vases filled with bright flowers culled from our yard, and a beautiful silver card-stand on the mantel. Our centre-table, on which is placed a glass stand of flowers, was arranged by the skilful hands of my fair cousin. She made a ground-work of Geranium leaves and fine grasses; trailing around the sides are the feathery Cypress vines; half hidden under the shadowy grasses may be seen blush Rose-buds, delicately tinted Pinks, and snowy Daisies. Around this stand on the table lie some of the latest journals and monthlies, among them the much-read and loved FLORAL CABINET.

After the parlor comes my room. It is also my husband's study. It is furnished with a cottage set of furniture; a pretty carpet on the floor, though it is not a new one; small pictures on the wall, as we chose the largest for the other room. But the crowning attractions of this particular apartment are the baby's crib and our desk. This desk was made by a design planned by my husband. It contains at the back three shelves for books, each one smaller than the other. On the top is placed the most beautiful wall-pocket I ever saw. It was made by a lady friend in Pennsylvania. It is trimmed with leather-work made in the shape of grape-leaves. On the front is arranged a large bunch of grapes surrounded by leaves in the form of a large leaf. It has a group of leaves and tendrils on each of the four corners. This with a nice bright student's lamp and a large easy rocker finishes the room.

Now for the crib, or, as Daisy calls it, "tibble house." It is tall and has rockers on a little form made for it, so my carpet is not worn out, and the crib rocks without the usual noise and strain. I think so many mothers have been injured by stooping over rocking a heavy, unhandy cradle. 'Tis my delight to keep the crib looking cheerful and inviting to our little cherub. It is always dressed in white coverlids. In summer I keep it completely covered with white netting looped at each end of the crib, and Daisy is not satisfied until I pin a "bota of fowers" where it is looped.

Cousin Dell's room is a little home within itself. A nice new carpet, white curtains over green, instead of the usual paper shades. She bought six yards of green calico tacked on the inside of her curtain, so she could raise her windows without tearing her shades. Her washstand is of our own manufacture. A goods-box is turned up on the end, a white curtain to fit around it; on the top is a cover made of linen trimmed with white bands. Over the washstand is a wall-protector made of the same dark linen. It is divided into two pockets, one in which she keeps her comb and brush, the other that of our little cousin, who boards with us and rooms with her. Between the pockets she stitched a division just large enough for a tooth-brush handle, one for her side and one for the little girl's. In the middle of this hangs a pine cushion of green worked with white, with a

large German D in the centre. On each end is a little hairpin case made of white perforated board, worked with green and marked with her initial to correspond with the cushion. Above this hangs her mirror, by the side of that is her watchcase, which is the 'cutest thing imaginable. It is made of zephyr-work. It is to look at simply a spray of flowers, but, on closer examination, under a rose you will find a little case for a tiny watch.

The Roses and buds are red and the leaves and tendrils green. Everybody laugh when they find out how useful the pretty little ornament is. Cousin Dell has her walls beautifully decorated with pictures, which she adorned with the airy grasses common in our old fields. Our fourth room is twin sister to Cousin Dell's; but it is occupied by two boarders, school-girls, and of course has not the little ornaments which particularize the room of a refined grown lady.

Now, our four rooms are very comfortable and pleasant, and though they are elegant we are happy, and think many other people, who say they cannot be literary and housekeepers, too, should adopt our plan. Though they cannot do as well as those who do nothing but attend to their household affairs, let them do all they can—have an hour set apart for each particular duty—and I dare say school-teaching and housekeeping can be very well combined.

EASTERN CAROLINA.

**Homemade Scrap-Book.**—Pretty scrap-books can be made of old print starched stiff and cut into sheets the size you wish, and the pictures pasted on with boiled starch. The remains of the picture-books which will accumulate in the best regulated families of children, are capital for this purpose, and the scrap-books will bear a good deal of rough usage. If you have nice pictures, really beautiful books can be made by using linen or cambric for the leaves. One before me now, which was made for a weary little invalid, has large leaves of gray cambric doubled, and the edges turned in and stitched together. The pictures are of all sorts and sizes; some steel engravings from old volumes of the *Lady's Book*; some beautifully colored ones from the *London News* almanacs; some floral chromos from the catalogues, and a few scrap pictures proper bought for the occasion. The covers are of stiff cardboard, covered on both sides with the same cambric. Pictures are pasted on the insides of the covers, and on the outside of the upper one is a wreath of small flowers and leaves, surrounding the letters of the child's name and the date. The covers are bound with blue ribbon, and sheets and covers are fastened together with bits of blue ribbon put through eyelet holes worked in each, and tied in a bow and ends. These can be untied, and extra sheets added at any time. If you have not pictures enough for a scrap-book, you can take a strip of cambric or stiff print, about eight inches wide and as long as you like, and paste pictures all over one side. Fasten one end by tiny tacks to a round stick, and the sheet can then be rolled into small compass and put into a cover. The cover to the last one I made was of pasteboard, joined together to form a roll and covered with gilt paper.

## The Household.

## USEFUL RECIPES.

**Pulled Bread.**—Take from the oven an ordinary loaf when it is about half baked, and with the fingers, while the bread is yet hot, quickly pull the half-wet dough into pieces of irregular shape about the size of an egg. Do not attempt to smooth or flatten them—the rougher their shapes the better. Set them upon tins and place in a very slow oven, and bake to a rich brown. This forms a deliciously crisp crust to eat with cheese, milk, or cream.

**Kentucky Corn Cake.**—Take one quart of corn-meal and two tablespoonfuls of common wheat flour (not prepared); add salt to taste, and mix thoroughly with a sufficient quantity of buttermilk to form a batter. Next melt a heaping tablespoonful of lard, stir it with the batter well, and bake on a hot griddle, pouring them thin. By this recipe the full flavor of the corn-meal is obtained, unmixed with the taste of molasses, which many people mistakenly deem necessary to cause the cakes to bake brown.

**Buckwheat Cakes.**—Take one-half teacupful of good yeast and stir the cakes at night, adding a spoonful of molasses in the morning. Bake from two to four more than are eaten; while hot, pour boiling water on them and let stand until cool; then squeeze them fine and put in your pitcher, where there should be one teacupful of the batter. Add a cup of water, that it may not sour during the day, and set in a cool place. If in danger of souring, pour off the water and add fresh when they are stirred the next evening. One-fourth Indian meal improves them, or instead of meal what we call wheat middlings. Fry quickly.

**Frosting.**—Grate one cocoanut fine, beat the whites of three eggs, mix one-half pound of pulverized sugar (with eggs), then put a layer of icing and spread the cocoanut over it. Bake 6 round cakes, a layer of icing and cocoanut between each. This frosting is for cocoanut cake.

**Custard Cake.**—One cup of sugar, one-half cup of sweet milk, 1 egg, 2 teaspoonfuls of baking powder. Bake in thin layers like jelly cake. Prepare a custard by boiling a half-pint of thin cream, 1 beaten egg, 1 tablespoonful of flour, 1 teaspoonful of corn-starch, and one and one-half cup of sugar together. When cold flavor with lemon and spread the custard between the layers of cake.

**Beef Sausage.**—Take 10 pounds of beef or 5 of beef and five of pork, one-quarter pound of salt, 1 ounce of pepper, one-quarter ounce of nutmeg, one-quarter ounce of cloves, one-quarter ounce of salt-petre. Cut it and stuff it in bags, and let it lie in pickle over a week, then hang it up to dry.

**Huckleberry Dumpling.**—Make a paste like very rich soda-biscuit dough, roll it half an inch thick, then, laying this in a basin with a part hanging outside, fill with berries and fold over the outer part, enclosing the berries. Steam thirty or forty minutes; serve with a sauce of butter and sugar. Blackberries and black raspberries may be used.

**Chili Sauce.**—One dozen large tomatoes, ripe, peeled and sliced; 6 onions chopped fine; 6 tablespoonfuls of brown sugar, 2 tablespoonfuls of ginger, 2 teaspoons of cinnamon, 2 teaspoons cloves, 4 teacups of vinegar, 1 teaspoonful red pepper. Boil two hours. Seal in bottles.

**Onions a Cure for Croup.**—A lady who speaks from experience says that probably nine children out of ten who die of croup might be saved by the timely application of roast onions, mashed, laid upon a folded napkin, and goose oil, sweet oil, or even lard, poured on and applied as warm as can be borne comfortably to the throat and upper part of the chest, and to the feet and hands.

**Salt for Burns.**—An extensive scald, which for twelve hours gave agonizing pain, when immersed in a saturated solution of salt, was followed with surprising relief. The abatement of pain was immediate, and in four hours both pain and swelling were gone. The next day the scalded hand differed from the other only by a slight swelling and redness.

**For Sick Headache.**—It is simple and cheap, and will do no harm if it should not cure your case. Take lumps of charcoal (I have used it from the kitchen stove), pound very fine or to a powder. Dose: Two tablespoonfuls to a half tumbler of cold water. It will require considerable stirring to cause it to unite with the water. Then drink, being careful to swallow all the charcoal possible, and not let it settle to the bottom of the tumbler. It is excellent to allay acidity in the stomach.

**Chapped Hands.**—A correspondent writes us that a simple mixture of equal quantities of rich cream and strong vinegar will make a compound which, if used on the hands after washing them, will cure chaps.

**Cure for Hoarseness.**—The juice and pulp of lemons, stirred thick with white sugar, will relieve hoarseness—besides being an agreeable remedy.

**For Toothache.**—Put a piece of lime as large as a hickory-nut into a quart bottle filled with water, and rinse the mouth with it frequently.

**Beeswaxing Floors.**—In a hot solution of five pounds of good pearlsh, in soft water, shaved or rasped fine. Stir the mixture while boiling, and, when effervescing, add, while stirring, five pounds of dry yellow ochre. Pour into cans or boxes and let it harden. When wanted for use diffuse one pound of the mix-

ture in five pints of boiling hot water, stir the mixture well, and apply, while hot, to the floor with a paint brush. It dries in a few hours, when polish with a floor brush and wipe with a coarse woollen cloth.

**To Prevent Moths.**—Moisten with turpentine a small linen rag and place it in the chest or wardrobe, renewing it two or three times a year, and no moths will enter. When furs are packed away in the spring, they should be beaten well with a small rattan, in order to dislodge any eggs of the moth; afterward brush thoroughly, and sew up carefully with a linen pillow case; over all pin newspapers, leaving no crevice where an insect could insinuate itself.

## THE VEGETABLE WAX

(RHUS SUCCEDANEA).

THE most important article for illuminating purposes in Japan is the candle made from the fruit of the *Rhus succedanea*, a tree about the size and appearance of the common sumac of this country. It is grown more or less extensively almost everywhere in Japan, and especially in the western provinces, from the south northwest to the thirty-fifth degree. Specimens of this tree have been imported for introduction.

The tree has a quick growth, and attains the diameter of a foot and a half, and a height of twenty-five feet. They begin to yield berries the third year, but in California may bear the next year after planting. The berry here is the size of a small pea, of a white color, hanging in clusters, and contains the wax, as a thick white coating of the seed. The full-grown tree averages fifty pounds of seeds annually, about one-half of which is wax. It is a hardy plant, growing on indifferent soil, on embankments, and out-of-the-way places.

The wax is obtained by the berries being crushed, steamed, and then placed in hemp bags and pressed in a wedge press. It is also obtained by boiling the bruised seeds and skimming the wax from the top. The wax is a palmitine or glyceride; when first extracted it is of a yellowish white color, and somewhat softer than beeswax. It melts at one hundred and twenty-seven degrees, and when formed into candles gives a fine clear light. In ordinary candle-making the unbleached wax is used. When washed and bleached in the sun and air it assumes a pure white color.

The vegetable wax of commerce is the imported article from Japan. From experiments made it can be readily grown in this country. The tree is highly ornamental, as well as for its useful production. The wax is in great demand, and commands a good price. It is valuable for candles, making the gloss for linen, for waxing thread, and other purposes for which the ordinary wax is used. Since it may be grown so readily, its cultivation could undoubtedly be made a source of profit, and especially since the present process of extracting honey from wax will tend to lessen the supply of the ordinary article, and also leave ample room for this new industry.—“Henry Loomis,” in *California Horticulturist*.

## Household Elegancies.

## TABLE-FURNISHING.

THERE is decided improvement in the taste with regard to table-furnishing within the last few years.

The convenience of using white china caused it for a long time to be the prevailing mode, but the reaction of taste has brought about a keen appreciation of color, and the introduction of so much Oriental ware has cultivated a taste for the grotesque.

The simplest object for table use may be had in high toned colors and all manner of strange shapes.

Exquisite things are made for sale representing shells, flowers, dragons set upon curved feet.

Other styles show a leaf of the brilliant Aloeasia of rich green lined with crimson, which is decorated with the large pale-tinted blossom.

The leaves of the Pond-lily and blossoms come in the same fashion in various tasteful designs. The following is clipped from an excellent description of the prevailing styles, which may suggest some ideas to the readers of the CABINET in furnishing the table:

"There are large *plateaux* in majolica, bordered with a pattern of cherubs' heads, eagles' heads, and serpents in brightest colors, upon a *Roi bleu* ground. A large fruit-plate has a representation of the "Gathering of the Mamma," and others whereon are depicted interlaced serpents, musical trophies, dragons, sphinxes, and leaves. The brilliancy and durability of the colors on majolica ware are esteemed more highly than the drawing of the designs; but the graceful shape of the ware is a distinct quality, and

comes this season with even more than usual grace and taste. There are no two objects made alike. The *plateaux*, ewers, lipped jugs, bowls, sauce-boats, salt-cellars, cups, vases, tozzas, are each worthy of a study. A lofty centre-piece is made of black Wedgwood, with jewelled reliefs raised on a stand of pearl-white; over this wanders the purple grape-antique, where in all colors, such as delicate pink, gray, cream,

gray-black, and a fine maize, and is highly glazed."

The same ideas may be carried out in cheaper ware, and yet with very pretty effect. The great thing is to have a brilliant contrast of color, and at the same time to have them harmonized well in contrast to the white damask.

PATTERNS FOR JAVA CANVASS WORK.

the richest purples flash upon half-hidden leaves of green. This is one of Wedgwood's choicest designs, and on the table is surrounded by platters of the same shape, forming a circle made of the new Martigny ware in cream-colored ground, beautifully decorated in Oriental fashion. The novelty of the season is the Cien ware, in three-cornered dishes. It comes

about one quart to a carpet of a good-sized room, wet it just enough so it will not be sticky, sprinkle your carpet with it, then take a broom and give it a good scrubbing, then sweep off and it will be almost as bright as new. Mine is green and oak color, and when I do this, although it is quite old, it comes out quite bright.

ROSAMOND.

## WALLS.

A HANDSOME paper is made in close imitation of leather for halls and libraries; the colors are greens and drabs, interspersed with gold. Another style is in imitation of tiles; the dado, of rich Oriental colors, is in such elaborate designs as might be copied from the ornamental portions of Gothic architecture. Some of the designs look like jewelled pottery. The Eastlake Gothic work is seen in dados, used instead of wainscoting. The wall-papers are generally dusky, with deep rich coloring, here and there glittering with dead gold. The figures are small and are taken from Saxon, Mediaeval, and Oriental sources, corresponding with *bric-à-brac*. Messrs. Gilman Collamore, R. H. Maey & Co., and B. L. Solomon & Sons will please accept our thanks for information furnished.

## TO BRIGHTEN OLD CARPETS.

I WILL tell you how to make your carpets bright that are getting old. Take some corn-meal,

## Family Reading.

### READY WIT.

A PRETTY long list might be made of men who have owed their advancement in life to a smart answer given at the right moment. One of Napoleon's veterans, who survived his master many years, was wont to recount with great glee how he had once picked up the emperor's cocked hat at a review, when the latter, not noticing that he was a private, said carelessly, "Thank you, captain." "In what regiment, sire?" instantly asked the ready-witted soldier. Napoleon, perceiving his mistake, answered with a smile: "In my guard, for I see you know how to be prompt." The newly-made officer received his commission next morning.

A somewhat similar anecdote is related of Marshal Suvaroff, who, when receiving a despatch from the hands of a Russian sergeant who had greatly distinguished himself on the Danube, attempted to confuse the messenger by a series of whimsical questions, but found him fully equal to the occasion. "How many fish are there in the sea?" asked Suvaroff. "All that are not caught yet," was the answer. "How far is it to the moon?" "Two of your Excellency's forced marches." "What would you do if you saw your men giving way in battle?" "I'd tell them that there was a wagon load of whiskey just behind the enemy's line." Baffled at all points, the marshal ended with "What's the difference between your colonel and myself?" "My colonel cannot make me a lieutenant, but your Excellency has only to say the word." "I say it now, then," said Suvaroff, "and a right good officer you'll be."

### HE LIKED HIS MOTHER-TONGUE.

A BLUFF, hearty, well-dressed party in spectacles had just banged his valise upon the counter and registered his name.

"Want some rooms. Wife and babies meet me here to-morrow. Stop a week. How are you fixed?"

"That will be *au fait*," remarks the clerk.

"Give you a nice suite—just vacated by Count Salamagundi, and—"

"Eh?"

"I remarked that it would be *au fait*, and that we could give you a *suite*."

"*Orfay—sweet!* Young man, what sort of things are those? This is Boston, isn't it?"

"Yes, sir, that is—I—"

"Well, won't you be kind enough to talk English? It is good enough for me here."

"Well," said the clerk, flushing red in the face, "anything to please you, sir."

The bluff, hearty party turns away, and strides in the direction of the reading-room, but the word "boor" which reaches him causes him to look back and remark:

"My friend, I am no boor. I can speak and write nine languages well enough to teach them in ——— University. I like my mother-tongue best of

married three times, but had been unfortunate in each of his matrimonial ventures. His first wife was an extremely gay, fashionable, worldly woman; the second was very fleshy, and too fond of good living, and the third was a perfect virago. The old gentleman once thus expressed his opinion of his three better-halves: "I am afraid," said he, "that my chance of salvation is very slim, for although I solemnly promised and vowed in baptism that I would renounce *the world, the flesh, and the devil*, yet I have embraced them all in the persons of my three wives."

On one occasion the old gentleman was sitting by the fire with his wife (No. 3), and the cat and dog were sleeping comfortably together on the hearth-rug, to which the old lady called her husband's attention, saying: "My dear, why cannot you and I get along together as quietly and peaceably as they do?" "Humph!" said he, "tie them together, and see what they will do then."

### CURIOSITIES OF WOOLING.

IN olden times it was the fashion for a suitor to go down on his knees to a lady when he asked her to become his wife, which with very stout gentlemen was an uncomfortable proceeding. The way in which Daniel Webster proposed to Miss Fletcher was more modern, being at the same time neat and poetic. Like many another lover, he was once holding a skein of thread or wool which the lady had been unravelling. "Gracie," said he, "we have been untying knots; let us see if we cannot tie one which will not untie in a lifetime." With a piece of tape he fashioned the half of a true-lover's knot; Miss Fletcher perfected it, and a kiss put the seal to the symbolical bargain.

### SUNLIGHT.

It is not a little remarkable that intelligent men and women, knowing by their own observation and experience how absolutely necessary to the growth and perfection of plants and animals light from the sun is, should fail to draw the inference as to its needs to human beings. No man would expect grass, grain, or vegetables to grow thriftily in darkness, nor even in shade. A little observation shows that shaded light keeps back growth and perfection. Under dense foliage of trees nothing grows as outside in the broad light. House-plants, flowers, and shrubs are trained and educated to bear light, yet children are kept from the direct rays of the sun, as for the most part women are, and in a measure men also.—*Laws of Life*.

SCENES AT ST. AUGUSTINE, FLORIDA.

all, and believe that it answers all practical purposes in this country. In your intercourse with me be kind enough to use it, and you will do me a particular favor."

### AN ECCENTRIC MINISTER.

ABOUT the time that Queen Victoria ascended the throne there resided in the town of Stafford an eccentric old minister of the Church of England, of whom many amusing anecdotes are related. He had been

## The Home.

A GLIMPSE OF A PASTRY WHERE  
THE BREAD IS MADE.

As a dear friend has kindly loaned me several FLORAL CABINETS, which I have read with exceeding interest and from which I have gotten several new ideas for the future, I will venture the lifting of my pantry curtain, and give you a pen-picture of it. Our kitchen is rather small, and we are obliged to utilize all the space we have. A dough-tray fills one corner of the pantry, leaving just space enough at the end to hold the flour-barrel. At the side of it and in the opposite corner stands a large stone jar for corn-meal; over the barrel and jar are a series of shelves, whereon are spice, soda, and tartar boxes, nicely labelled. Tapioca, oatmeal, macaroni, etc., stand in large square tin boxes, together with salt—fine and coarse—and my receipt-books, both bought and pasted. There are many other like materials all ready and within reach for baking. A few strips of painted wood are nailed to the wall opposite the shelving, where spoons, sieves, flour-box, pans, etc., are hung. Right in front is a window, which in summer is shaded with Morning-glories. I have just room and nothing more to stand at the door-opening while preparing the baking, and when my poor back gives out, can strengthen myself by leaning against the wall. At the end of the dough-tray my cake-board stands, a Christmas gift years ago from one now gone out from among us to a hearth of his own. Inside the tray is my rolling-pin, cake-cutters, etc., and under it my bread-baskets—for I still cling to them. Fitting nicely into my flour-barrel is a large baking-bowl, and over it a cover with handle. I think you can easily place everything, and follow me in making a batch of bread, and I venture to say it is the best and easiest way it can be done.

The day before baking I generally have mashed potatoes for dinner, and manage to save from dinner near a bowlful. Sift into the large wooden bowl flour enough for your baking. Just before going to bed I heat in winter three pints of sweet milk; in summer use new milk, if it is warm weather seldom heat it; then I stir the mashed potatoes in the milk until well mixed. I pour this slowly into the bowl, using a large iron spoon with wooden handle, keeping the flour well around the sides of the bowl, so that the mixture is free from the wood. I add salt, and stir it until it is the consistency of pretty thick batter-cakes. Then, I have a penny's-worth of baker's yeast standing some time, and from this I pour the water, and add not much more than half what I get for that coin, and again stir. I then put the cover on the bowl, and in warm weather set it back in the barrel and say "good-night" to it. In the morning I slip the bread-board from the end, and place on the dough-chest, which saves the turning of the lid, and arm myself with a sieveful of flour. I take out my bowl of dough, and again stir, adding flour all the time. When it is too thick to use the spoon, my hands, well floured, turn in and knead until I can turn it from the bowl to the well-floured board. I work it over and over again until it is smooth and

somewhat like putty. Just here is the secret of good bread, for it must be worked and pressed until you tire; but even then you must not give up. I then cut this sponge into three portions—this, after I am sure I cannot knead it any longer. Then I work each piece nicely and have my bread-basket warm, and, with a napkin slightly dusted with flour, put my loaf in. I have my bread-napkins numbered one, two, and three, so I can tell which loaf should show first it's getting lighter. Now, having gone this far, I must not stop. When the loaf is light, I have sheet-iron pans, and they being dusted with flour, the loaf is gently placed upon them, and they in the stove, watching it to have the heat the right grade. When the lower crust is slightly hardened, I slip the loaves on to the floor of the oven and draw the dampers. In less than an hour I have three loaves of a delicate brown, with a very nutty-tasted crust.

MRS. H. M. P. WALTERS.

PREPARATIONS NEEDFUL FOR THE  
CARE OF THE SICK.

LET the dress be loose and easy, the shoes light, and such as may be removed in a moment if perfect silence is required. Aprons are not desirable to be worn when much lifting of the patient is to be done; it is well to keep the face and hands constantly bathed in pure water, as a mode of refreshment, and every opportunity should be embraced to go to the window and inhale the fresh air, that the system may not become speedily exhausted. The meals should be taken at regular hours, and the laws of health as strictly regarded as circumstances will admit. I insist the more upon this, because the best nurses are usually the most self-forgetful, and apt to be so much interested for the patient as to neglect the care needful for their own health. They must be reminded that if suitable precautions are not taken their strength may give way at the critical moment, and the good of the patient be sacrificed as well as their own. In regard to the arrangement of the room: if possible, let the bed be a single one, on rollers, and let it stand so that one may pass entirely around it. Have a stand, light but firm, set near the bedside, with a clean, white cloth upon it, several clean napkins, spoons, and a glass with cool drink; no vials or food, unless it be some tempting fruit, the scent of which is sometimes enjoyed by the sick, particularly that of fresh lemons. The addition of a few fresh flowers is generally agreeable, and gives a cheerful air to the room. In the adjoining chamber keep a small tub of water and towel, to wash everything that is used the moment it is no longer needed, and let a sufficient supply of cups, glasses, etc., be placed there. Have ready plenty of clean linen, well aired, a large roll of old linen, and another of old flannel, the latter being best to use for fomentations; a sponge, syringe, an oil-silk bag, or prepared bladder, for ice. The supply of ice should also be kept here; this is easily managed by filling a small tub with cracked ice, packed in sawdust, and placing beside it a large bowl, in which to rinse off what is needed; in this way it may be obtained when wanted without a

moment's delay. If medicine be administered by the minute or hour, make out from the doctor's direction a list of the times at which it is to be administered, putting down every time; let the physician read and know that you have made no mistake, before leaving the house, and every time the medicine is given, cross the figure off, thus:

9 o'clock, drops.  
9½ o'clock, powders.  
10 o'clock, if no sleep, give drops.

In this way you will avoid mistakes and ensure punctuality, and if you are forced to leave the room, any one else may administer the draught at the moment. I have seen many cases where the observance of the above simple rules, might, I have not the slightest doubt, have saved lives sacrificed through ignorance.

MRS. C. S. NOURSE.

**To Cook Potatoes.**—To make old potatoes mealy and palatable it is only necessary to wash and pare them, then boil in water in which you have put a little salt, and when done pour the water off, cover the kettle closely and shake gently for two or three minutes; your potatoes will then come out white and mealy as the nicest new ones. Another nice way of preparing them is, after boiling, throw in a coarse sieve, break them up a little, add a little butter, a little salt, and enough milk to enable you to rub them easily through the sieve, place a vegetable dish under the sieve, and so let the potatoes fall into it as you rub it through. Then serve on the table without stirring.

**How to Keep Vegetables.**—It is best to place all vegetables in a cool place as soon as gathered; leaving corn in the husk, peas and beans in the pod, till ready for cooking. A nice way to prepare corn is to take a sharp knife and cut it from the cob, then boil till nearly done, strain off the water and add a cup of milk to every quart of corn, and a piece of butter the size of a walnut. Let it boil, stirring all the time that it may not burn, and pour into a hot dish and send to the table. It is very nice. Pour cold water over pea-pods to remove all dust and bugs from them; shell and boil the pods fifteen minutes, salt this water and pour it boiling hot over the peas, then boil them twenty minutes in it.

**A Handy Relish.**—In the spring, when your store of pickles has given out or is getting low, chopped cabbage makes a nice change. I have eaten this in many places, but usually it was merely cabbage with vinegar poured over it. This is much nicer if you add a little salt and a spoonful of sugar to a quart of the finely-chopped cabbage.

**A Pretty Bracket.**—This is a combination of cardboard perforated, silver card-board, and scarlet velvet cut in the shape of maple-leaves, and button-holed around its margin with black zephyr. Upon it rests a lovely white shell brought from the coast of Africa by a sailor uncle. Its outer part is deeply indented, but its inner surface, which lies uppermost, is of a smooth, silvery nature.

## Are You a Bankrupt?

Do not resent this question, reader. It is not an impertinence. We have no right to enquire into your business affairs, and don't intend to. But are you *Bankrupt in Health*? If so, recruit, regulate, and renovate your insolvent system with TARRANT'S EFFERVESCENT SELTZER APERIENT. Turn its reserves of latent strength and vitality into active, vital capital with that most agreeable of all tonics, that mildest of evacuants, that most genial of stomachics, that most salubrious of exhilarants. It puts dyspepsia and biliousness to flight, cures constipation, braces the nerves, clears the brain, and refreshes, reanimates, and purifies the whole physique.

SOLD BY ALL DRUGGISTS.

## DOBBINS'S STARCH POLISH,

FOR POLISHING

### SHIRT BOSOMS, CUFFS, COLLARS, LACE CURTAINS, ETC.,

putting on the same gloss and hard pearl finish as when bought at the store new.

It enables the most incompetent ironer to compete with any laundry. It makes the clothes clean and white. It makes the clothes iron smoothly, and prevents the iron from sticking. It makes old linen look like new. It saves a woman many hours of hard work each week.

A polished shirt-bosom, cuff, or collar, keeps clean much longer than linen not polished, for this reason: the enamel fills up the pores, lays down the nap, puts on a hard pearl gloss, which prevents the dust or dirt from working into the cloth; therefore, by the use of the enamel, clothes can be worn much longer without washing.

PRICE TWENTY-FIVE CENTS, POSTAGE PAID.

### DOBBINS'S SILVER POLISH

is composed of the finest and best ingredients known for polishing—without injury—Silver, Gold, Plated Ware, Jewelry, Glass, etc., equal to new.

PRICE TWENTY-FIVE CENTS.

FOR

# THE WONDERS OF PRAYER.

A BOOK OF

WELL AUTHENTICATED AND WONDERFUL ANSWERS TO PRAYER.

To a greater extent than any other book, and in an extraordinary recital of facts, with over five hundred interesting incidents, it fully answers that all-important question, "DOES GOD ANSWER PRAYER?"

Nearly 1,000 instances are given, all from experiences of individuals of the present day. It is a simple, humble, candid book of honest facts and experiences connected with daily practical Christian life, and answers those important questions: "Will God ever now answer Prayer?" "Whose Prayers will He Answer?"

400 PAGES. PRICE \$1.50.

HENRY T. WILLIAMS, Publisher, 46 Beekman St., New York.

Sold by Agents, or sent postpaid, by mail on receipt of price.

## Beautiful Books for Every Home.

The following books contain over 2,000 illustrations, and more than 1,000 ways and plans to make your home beautiful and attractive.

**HOUSEHOLD ELEGANCIES.**—A splendid new book on Household Art, devoted to a multitude of topics, interesting to ladies everywhere. Among the most popular topics are: Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Work Boxes and Baskets, Straw Work, Skeleton Leaves, Hair Work, Shell Work, Mosaic, Crosses, Cardboard Work, Worsted Work, Spatter Work, Mosses, Cone Work, etc. Hundreds of exquisite illustrations decorate the pages, which are full to overflowing with hints and devices to every one, how to ornament their home cheaply, tastefully, and delightfully with fancy articles of their own construction. By far the most popular and elegant gift book of the year. 300 pages, 265 illustrations. Vol. II, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50; gilt, \$2.00. Sent postpaid by mail.

**BEAUTIFUL HOMES.**—Devoted to House-Furnishing. Everything relating to the picturesque furnishing of bed-room, hall, parlor, sitting-room, how to beautifully arrange all the rooms of the house, is described. Carpets, Wash-stands, Wall Paper, the Living-Room, the Parlor, Bed-Rooms, Halls, Umbrella-Stands, Door Mottoes, Toilet and Dressing Tables, Curtains, Lambrequins, Screens, the Library, Cabinets, Etageres, the Dining-Room, Window Screens and Blinds, Mantels, Chairs, Rugs, Ottomans, Tables and Stands, Sofas, Lounges, Foot-Stools, Cushions, Affghans, Baskets, Racks, Tidies, Miscellaneous Conveniences, &c., &c. Contains over 300 pages, 350 illustrations. Vol. IV, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50, by mail, post-paid. Gilt, \$2.00.

**EVENING AMUSEMENTS; or, How to Entertain Company.**—A splendid book for young Ladies, Gentlemen, and Children. This volume contains over 250 Games and Ways of Entertaining Company, and amusing young people at school, at parties, in home sports, picnics, for Christmas charades, tableaux, and all social occasions. Fireside Games, Tricks of Magic, Mystery, and Conjuring, Cards, Riddles, Acrostics, &c. Vol. V, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50, cloth, or gilt, \$2.00. Postpaid by mail.

**WINDOW GARDENING.**—A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selections of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House-Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume contains 300 pages, and is profusely illustrated with 250 choice engravings. Vol. I, WILLIAMS' HOUSEHOLD SERIES. Price, \$1.50; gilt, \$2.00.

**LADIES' FANCY WORK.**—A charming book, devoted to Feather Work, Paper Flowers, Fire Screens, Shrines, Rustic Pictures, a charming series of Designs for Easter Crosses, Straw Ornaments, Shell Flowers and Shell Work, Bead, Mosaic, and Fish Scale Embroidery, Hair Work and Cardboard Ornaments, Cottage Foot Rests, Window Garden Decorations, Crochet Work, Designs in Embroidery, and an immense variety of other Fancy Work to delight all lovers of Household Art and Recreation. Vol. III, WILLIAMS' HOUSEHOLD SERIES. Price \$1.50; gilt \$2.00.

**EVERY WOMAN HER OWN FLOWER GARDENER.**—A delightful little treatise on out door gardening for ladies—practical, timely, charmingly written. Contains valuable information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, &c. Send for it. Printed in excellent taste. Price 50 cents, postpaid. Bound in cloth, \$1.00.

**LADIES' GUIDE TO NEEDLE-WORK.**—This is a charming little hand-book of all the various kinds of Needle-Work, Embroidery, Crochet, Worsted Work, with their numerous stitches and is invaluable to all who are fond of fancy work. Every lady will find it a needful companion for her work basket and toilet case. Beautifully illustrated.

**Contents:** Embroidery, Braiding, Applique Work, Canvas Work, Bead Work, Lace Work, Tatting, Knitting, Crochet Work, Netting, Transferring, Perforated Card Work, Persian Rug Work, Patch Work, with numerous designs, also, for Scrap Baskets, Colored Rugs, Needle Cases, Shoe Bags, Work Baskets, Edgings, Handkerchief Borders, Point Lace Edges, Shopping Bags, Picture Frames, Wall Pockets, Shawl Case, Net Embroidery, Cretonne Work, etc., etc. Eighteen chapters; nearly 100 illustrations; 160 pages. Price 50 cents, paper covers, richly illuminated. Bound in full cloth, \$1.00.

**HOUSEHOLD HINTS AND RECIPES.**—This is not a Cook-Book, but a valuable little book devoted to housekeeping topics, and full of useful items, hints, and directions about the house in all its departments, from the kitchen to the parlor, bedroom, and attic. It contains a wonderful amount of real good practical information about housework, and there are recipes by the hundred so valuable, that no prudent housekeeper can afford to do without them. A single hint may save her many dollars in money, or much wasted time and trouble. Price, 50 cents; paper covers.

# THE LADIES' DOMESTIC

BY HENRY T. WILLIAMS.

NEW YORK, AUGUST, 1879.

No. 92. PRICE 12 CENTS.

## OUR CONSERVATORY.

Our conservatory is small, only thirteen by eight feet, and last year we were enabled to sell enough plants to pay for the coal and to buy a few new choice plants.

Through the summer I gather sod and place it in a pile, mixed with a quantity of cow-manure, and leave it to rot till fall. Then I take garden soil, sand and the compost described, mix well together and use for planting my flowers. Water them whenever they need it, some plants requiring more water than others. This year I have quite a collection of plants, consisting of Calla Lilies, Poinsettias, Geraniums, Heliotrope, Bouvardia, Hibiscus, Amaryllis, Cyclamen, Album, Chinese Primrose, Verbenas, Abutilons, Begonias, Roses, Santa Annas, Petunias, Sedum Farfugium, Othonna, Cissus Discolor, Cape Jessamine, Passiflora, Cobea Scandens, Lophospermum, Smilax, Kenilworth, Parlor Ivy, Strawberry Vine, Ferns, Sweet Alyssum, Maurandia, Euphorbia, Carnations, Cineraria, Fuchsia, Cacti, Oxalis Vervulva, Wax-plant, etc., all of which are doing well, and I can safely recommend them for window-gardening.

Never let your plants become too dry, else they will be injured. Wash them at least once a week with lukewarm water. And never water with cold water, else it stops the bloom.

EMMA A. REFSNYDER.

DESIGN FOR HOUSEHOLD BRACKET.

**Aster-Bugs.**—Plaster sprinkled over the plants while wet with the dew will put them to flight. It is also an efficacious remedy for the rose-slug.

## THE BONNET GOURD.

This plant was originally placed in the genus *Cucumis*, and is thus placed in Loudon's "Encyclopædia of Plants," published in 1836. He says: "Its fruit is very insipid, but in India it is eaten boiled and pickled." It is described in De Candolle's "Prodromus," vol. iii., p. 302, under the name of *Luffa acutangula*. He says it is a native of China and India, and is also cultivated in European gardens. The name given by De Candolle is also given by Endlicher in his "Genera of Plants," and Lindley in his "Vegetable Kingdom." Lindley remarks that it is a favorite pot-herb of the natives of India, and esteemed very wholesome. The name *Luffa* is the one adopted by the best modern botanists. It is often called Bonnet Gourd at the South. Not long since I saw some bonnets made of it worn by small girls of one of my neighbors.

S. B. B., Austin, Tex.

**Mildew on Roses.**—This is manifested by a whitish-looking mould or dust on the plants. If plants are growing out-of-doors, stir the soil frequently. If plants are growing in-doors, sprinkle a fine dusting of flour of sulphur over the whole plant. In general,

sulphur will prove a good antidote to mildew.

**Hot Water** will destroy aphids instantly, without injury to the plant, if not too hot.

## The Garden.

## A FEAST OF ROSES.

CALIFORNIA is setting an example to the Eastern States in its rapid progress in Floriculture. The luxuriant growth of plants in that part of the State in which Santa Barbara is situated is enough to awaken enthusiasm in the most indifferent, and to the lovers of flowers such a garden of nature must be an inspiration.

A letter from Santa Barbara describes a Rose Festival, held there at the studio of an artist. Every one was invited to bring their pets, and display their beauty to the best advantage. So many responded to the call that a complete procession was formed of persons laden with roses, reaching nearly two miles. The object was to collect together all the named varieties, and to identify and verify their nomenclature. The writer describing the scene says: "The work of assorting and decorating went bravely on—Ferns, hanging-baskets, Palms, and Callas, to which the most aspiring individuals must look up, graced the walls, centre-pieces, and mantles, contrasting rarely with the fine collection in conchology and scenes from many lands portrayed by the brush of our gifted host, Mr. Ford. Presently out of apparently hopeless chaos came order, and beauty, and infinite loveliness: Roses dyed in carmine and old-gold and tints of the sea-shell; Roses with great creamy hearts and royal in hues of the sunset; a world of buds and blooms, and swinging censers of perfume. All else gave way to the Queen of Flowers; apologetically cleft in a few rare things, some of the newer sorts of Amaryllis, Arundo donax, Ozothamnus, Diosmifolia, Bougainvillea, Pawlonia Imperialis—that fine addition to our flowering trees. A new evergreen to us was the Fruella, from the grounds of Mr. Sexton, a stray seedling, whose graceful thread-like sprays aroused the desire of every beholder to know the whereabouts of a nursery of this beautiful addition to our evergreen collections. *Durania variegata*, as a foliage plant, found many admirers, though it required singularly fine floral specimens to attract any attention, the avowed purpose of the exhibition being Roses. Visitors were seen, after their first exclamations of delight, passing around from table to table, note-book in hand, adding notes for more intelligent guidance in their future rose culture, and settling questions of identity as to names with the deepest apparent interest. An informal committee of rose culturists gave their time on Saturday to the examination of each named collection as to numbers, and the correction of wrongly-labelled varieties. Many interrogation points are found in questionable cases, as labels are notoriously evanescent property. Some questions were left over until next year. A first-class Rose, of the color of *Gloire de Dijon*, habit of *Reine du Portugal*, with a distinct thread-like margin of maroon, was one so adjourned. Two samples came from different gardens, one labelled "*Adelaide Ristori*," which is evidently a mistake, as that variety is not so described. If any of your readers can give the true name it will be a favor. The nearest to the descrip-

tion is "*Eugenia*," which I have not seen. The six Roses which attracted the most attention were: "*Marie van Houtte*," yellow with a tinge of rose deepening with age, indescribably beautiful; "*Nephotos*," pure white, whose long pointed buds brought the note-books into play at once; a full-blown one measured eighteen inches around; "*Perle de Jardin*," in golden beauty, was scarcely less attractive; while a new sensation was found in the color of "*La Nankin*," a true novelty and a decided improvement on "*La Jonquil*," unique though somewhat the same color, but not nearly so double. "*Mme. Pernet*," in a deep, pink cup form, is a decided advance on the deep pink Roses, while a centre-piece on Dr. Dimmick's table of the Archduke Charles—or more fully named "*Mutabuis*"—attracted much attention, running over the gamut of color, as it does, from palest pink to dark crimson. Between these six ranged more than two hundred others. One collection exhibited one hundred and eight varieties, with one hundred more to hear from. The committee decided that it was safe to call our collection in cultivation here something over three hundred, mostly Teas, Chinas, Noisettes, and Burbons, with a few Hybrid Perpetuals. Of these, Paul Neron in pink, Charles Lefevre in crimson, *Reine Notting* in deep velvet maroon, and Vulcan in blackish purple, gave most satisfaction.

## LETTER FROM A GENTLEMAN.

## HOME OUTSIDE THE HOUSE.

I HAVE just laid aside the CABINET, which I had been perusing with the greatest delight, because I was seized with a desire to contribute a mite to the general store of information which has proved so beneficial to myself. I am sure that I should never have attempted such a thing had it not been that my subject admits so much being said upon it; and had I not thought that what I wished to say had not been said.

I am not a little surprised to find that gentlemen exhibit so little interest in this matter as that they offer no suggestions as to how their portion of making home a paradise can be accomplished; although I realize that generally they are only too willing to cast this additional care upon willing, but I must say incompetent, hands.

As I laid aside my magazine my glance fell through my sitting-room window upon a rustic seat which I constructed last summer, literally out of nothing. And as it is admired by many I will tell you how I managed it. Description will enable any man who is clever with a saw and hammer to construct a similar one in a short time. First, I found a broad, stout board, fourteen inches wide, two thick, and nine feet long. Then going into a grove I procured several burr-oak poles about two and a half inches in diameter. These were for legs, back, arms, etc.; and I took burr-oak because of its rough bark. Next I made a common bench out of my material and placed it under a fine young oak where it is always shady, and just where a gravel serpentine path makes a curve. Taking four pieces of my poles, each four feet long, I drove them into the ground, two at each end, so that they crossed in the middle of the board, the

slender pieces being outside and inclining backward. Then I took a pole nine and a half feet in length and nailed it firmly to the tree, and at each end to the slender stakes at the ends near the top. Next I crossed two similar pieces at the tree, nailing each end firmly, one at the top, and one at the bottom, thus forming an X in the back, and my frame is complete, strong, and durable. Lastly, I took a long wild-grape-vine and, setting the larger end in the ground at one end of the seat as though growing, bent it gracefully over the end, forming an arm-rest; across the back according to fancy, over the other end to the ground again, and my seat was finished. All made without money, with but little trouble, yet being neat, tasty, and, above all, delightfully comfortable.

I have constructed nearly a dozen such "rests," placing them near objects of interest or in some shady nook where they invite one to a moment's quiet repose.

You cannot conjecture the charm which these simple affairs lend to my "country yard" and the air of cheerfulness, and I might almost say luxury, they convey to the surroundings.

I hope that this sketch may prove of some benefit to some one who, like myself, is anxious to become an exemplary "John." R. HOWARD.

## GERANIUMS.

So many people in looking at my Geraniums ask: "How is it that you have so many trusses and such large flowers in a truss?" In purchasing a new Geranium, I always examine the flowers closely. In order to give you perfect satisfaction, it should have a large bunch, all the flowers opening nearly at the same time, and each separate flower large. Don't take it for granted, as a good many of my neighbors do, that so long as you see the color of the flowers, the bunches will be pretty much of a size. Rest assured that in the greenhouse the flowers are more or less forced, and that they will not do quite as well for you. So buy the best.

And here is a peculiar vine, very nice for hanging baskets. It is called here a strawberry vine, although I do not think that is its proper name. It grows like the garden strawberry, several yards in length, and at each joint throws out a white blossom which turns to a large red berry.

EMMA A. REFSNYDER.

## SMILAX.

My Smilax is in a five-inch pot and is throwing up one tendril after another, some of them between three and four yards in length, twining around the top of the window and over to the hanging-basket handle. Last year it was full of flowers, which were much more fragrant than the *Mignonette*. Each of these flowers turned to a bright red berry. We set it away in the garden, where the berries dropped after they were ripe, and the wind strewed the seed all over the garden. In the fall we saw large quantities of small stalks coming up, which we distributed to our friends.

EMMA A. REFSNYDER.

## Floral Experiences.

### MY EXPERIENCE.

I MUST tell you of my double Petunias, which can be kept through the winter, and in spring they will send forth an amount of large purple and white flowers. I had a cutting of a double pink Petunia given me by a friend in March, and now it has three stocks a foot high with a dozen and a half buds and five beautiful, delicate pink blossoms. I think if I had room for only one house plant, that one should be a double pink Petunia, they are such fast growers and free bloomers; they remind me of a blush Rose, which I think is the "queen of Roses."

The Calla should be immersed in a butter-birkin of water until the warm weather is over and then repotted for the house. I have tried putting them in the ground and allowing them to stay uncared for, only by Dame Nature; but when time to pot, they have gained such a strong hold upon the soil that the transplanting is too severe; so I think on the whole it is a better way to immerse in water; you will have earlier blossoms and a larger quantity.

One year I had a Tuberose which was perfectly beautiful; it shot up nearly *six feet* and had thirty-six blossoms, and their fragrance filled my sleeping-room so that I was obliged to carry it to a room where there was more air.

The Sweet Pea I also plant, and this year I intend to bush them like garden Peas, as I think it a much better way than to make a trellis of cords.

I was very much pleased with the way to cultivate Candytuft for the house which I have been reading in THE CABINET, and this autumn I shall make an attempt.

In making up gardens I hope, mothers, you will not forget the children, but allow them a little spot they may call their own, where they may plant Sun-flowers, Marigolds, or Holyhocks, at their own free will, and thus early in life they may learn to love Nature's children, and in after years you will feel amply repaid for all the trouble they may have caused you, as they help to refine and educate the mind in the great goodness which God has bestowed upon us mortals of earth.

C. B. H.

HUDSON, N. H.

### THE CALLA AND THE CACTUS.

"O NEIGHBOR!" said the Calla to a Cactus standing near, "I am so thirsty, the life seems nearly all gone out of me; if I don't soon have a good drink and a refreshing bath I shall surely die. Even the lovely young bud I put out, almost at the expense of my life, in hope of attracting pity and attention, was cruelly allowed to perish of thirst. For many weeks I have been trying to struggle through the dry, hot atmosphere of this room and keep up appearances on one short ration of water a day. But see my poor, scant, faded dress, all dusty and full of vermin. Once I was a handsome, stately young plant, well dressed in a superb suit of fine, large green leaves. Now I have but three poor, faded, ragged ones, on weakly stems. Oh! me, and how they slander me. I am compelled to listen to such

conversation as, 'Did you ever see such a looking thing as the Calla is? It does no good at all, grows less instead of larger. I have always been told the Calla was a fine plant for window-culture, so easy to manage. I give mine the same treatment that I give my Geraniums, Begonias, and others, and they do well; but I cannot succeed in making the Calla bloom—never had one to bloom in my life—and this contrary one is four years old.'

"Yes, I am getting old; but what a life for me. No rest in all those years; no change; only to be dumped from one pot to another about every six months—not that I need more room so often, but by way of medicine no doubt. If I might suggest a remedy for my failing health, it would be—let me alone where I am—instead of a new pot to set me in, set me in a pan of good warm water every morning, and let me take all I want; give me plenty of light and sunshine; do not crowd me so badly to make room for others, and I will surely do all that any reasonable mortal would ask.

"And, friend Cactus, it strikes me that you too are looking poorly. What is wrong with you?"

"Yes, I also have cause for complaint. But I am surprised to hear you say that want of water is killing you, while it is too much of it that is killing me. Why, I get a good drenching every few days, when I would be much better without any; my poor roots are drowned and decaying. And I, as well as you, am getting on in years—nearly five years old—and never bore a flower. Behold me now in a pot or box that would hold soil and roots enough for a good sized oak-tree. I have been stifled every fall and spring since I was torn from the parent stem. I have managed to grow some, but it has kept me busy and I had no time to bloom.

"Last summer I was set out in the hot sun and left to shift for myself; the weather was dry for weeks, and I hoped my troubles were over, when I was beginning to feel so strong and well I took courage and put forth buds. But alas! I was discovered too soon; my keeper was delighted to find almost a hundred tiny buds on me; so I was taken in to be nursed, and set in a cold, shady room, where the evening sun would only shine on me about an hour, and the cruel drenchings resorted to with renewed vigor. Do you wonder that I was so shocked at the change that I dropped every bud?"

"How strange that those who love us will not try to understand our wants, that we might repay their care."

MOLLIE S. MERRYMAN.

—From Park's Floral Magazine.

### HOW GRASSES BREED.

GRASSES require to be crossed quite as much as the largest and most attractive of true flowers. Singularly enough, we find that the distinction between the showy insect-fertilized flowers and the unattractive wind-fertilized grasses is carried out even to the sizes and shapes of their pollen grains. Those of the former are roughened over with surface projections, so as to cause them to adhere all the better to the hairy bodies of insects. Those of the latter are lighter in weight, smoother, and often flatter, so as to expose as much of their surface as possible, and

thus help the wind all the better to blow the pollen about. The *anthers* or pollen-bags of grasses are usually more pendulous than those of large flowers. More pollen is also produced—considerably more than can be utilized; but as its manufacture is of the easiest, that does not exhaust the plants. In this manner the possibility of some of the discharged and blown-about pollen taking effect is rendered certain. The amount of pollen thus poured into the atmosphere during June, by the grasses in our meadows, is such as literally to surcharge it. This it is which produces on sensitive nostrils the annoying complaint known as "hay fever." People suffering from it hurry to the sea-side or the mountains, somewhere where grasses do not grow, and where the atmosphere is freed from their pollen. We may notice in the flowers of grasses, also, how admirably the filaments which bear the anthers or pollen-bags dangle outside the glumes, ready for the slightest breeze to blow them about. The filaments have the power of suddenly growing very rapidly while the pollen is ripening, so that the pollen-bags are thus lifted outside the chaffy scales of the flower where they have hitherto been protected. Not less admirably adapted to wind-crossing is the pistil in the flowers of all grasses. Sometimes it is a living forked net, feathered to its base, and everywhere covered with an exceedingly sticky fluid. Any stray pollen grain blown by the wind must inevitably be arrested by this subtle contrivance. Once made prisoner, the pollen begins to put forth a tube which ultimately reaches the base of the pistil. Fertilization is then effected, the seed grain begins to develop, and after this manner the world gets its "daily bread."

### THE AUTUMN CROCUS.

FOR those unfortunate people who cannot make plants grow, no matter how much care they take, we recommend the autumn Crocus as a plant that has such an unconquerable desire to do its duty that no amount of ill-treatment can suppress its flowers. It will bloom anywhere and under almost any circumstances, only it prefers to wait until its pretty congeners, the young Crocuses, have had their day, and during the spring it grows only leaves; but when autumn comes each bulb sends up not one but many flower-buds, generally six or eight, which open brightly when the spring bulbs are sleeping quietly in the cellar, but do not perfect their seed until the following midsummer.

They bloom well in a comfortable bed in the garden, but do not object to being tucked into a basket of damp moss and being hung in the veranda, or brought into the house; indeed, if they are laid away on a shelf they sustain that last dignity with perfect equanimity and continue to flower, though not quite so brilliantly as if kindly treated. If any one fails to have flowers in abundance from the autumn Crocus, it would be as well to bow to the decrees of fate, and abandon the cultivation of plan's altogether.

Those who do not possess this pretty and curious plant already, may plant it the latter part of this month and in a short time it will send up buds and be ready for removal to the house before frost.

## Floral Hints.

### CULTIVATION OF THE LILAC.

IN an admirable paper on the Lilac, read by George Ellwanger, before the recent meeting of the Western New York Horticultural Society, the following directions are given for its culture and management:

It is adapted to almost any soil and climate. In park or garden, lawn or hedge, it lays claim to distinction for effectiveness and beauty. In city gardens, where there is only limited space, it is one of the cleanest and most satisfactory of shrubs, either as well-shaped bush or a low tree with neatly balanced head.

But it is in large places that its charms can be displayed to the best advantage. In lawns, where large clumps of the snowy-colored varieties can be planted, it has few superiors in point of brilliancy and fragrance. Clumps of Lilac *Josikæa* are introduced with fine effect in the Central Park, and, when in flower, are among its finest attractions.

In this climate it takes the place of the Rhododendron, so much prized in England. Besides being very hardy, it has the additional advantage of its fragrance, which the hardy Rhododendrons do not possess.

In grounds sufficiently large it can be used for ornamental hedges. Its dark green foliage is not affected by atmospheric changes, nor has it any insect enemies. It, therefore, always forms a clean and handsome background, and, when in flower, is a feature of the park or garden.

Where privet hedges are already grown, the Lilac can be grafted with no little effectiveness, at intervals of about ten to fifteen feet. The Lilac grafts, when grown, project over the privet, and form round or pyramidal heads varying the monotony of the ordinary formal hedge.

By many the Lilac and other highly fragrant flower-shrubs are considered invigorating and healthy as atmospheric purifiers and dispellers of noxious vapors. I well recollect when the cholera was raging throughout Europe in, I think, 1830, the *savants* of the city of Stuttgart, where I was then residing, ordered the burning of fragrant herbs in the marketplace, to prevent infection. Whether owing to this means or not, the city escaped the dreadful scourge.

Although it will thrive and flower in any soil, an annual top-dressing of stable manure will well repay the trouble and expense, in the fuller development and beauty of both flowers and foliage.

Half standards for single specimens can be grown either on their own roots, or grafted on the common sorts, as well as on the ash or privet. In order to render them attractive they must have well-balanced, bushy heads, and be kept in form by regular thinning and pruning. After the flowers have faded they should be removed, in order to cause new growth that will ensure profuse blooming the following season. By this means the flowers may also be very much enlarged.

In all large Continental cities, and particularly in Paris, the Lilac is in great request for winter flower-

ing. The common purple is generally used for forcing, and when kept in houses darkened by mats or otherwise, produces pure white flowers. In order to produce the best results, the plants should be carefully selected in the spring, and planted in pots; then plunged in the ground during the summer, and kept well watered. In September they should be repotted into rich compost, and in succession according as required; be placed in an atmosphere of 60 to 70 degrees Fahrenheit, which should gradually be increased to 80 degrees, and even as high as 100 degrees. The roots should be well supplied with water, and the plants should receive frequent syringing with tepid water. They may also be taken up carefully with balls in the fall, to be forced the following winter, but we recommend the former method. When no forcing house is accessible, a warm room answers very well in its stead.

### HINTS ON BOUQUET-MAKING.

A BOUQUET seems an easy thing to make when all the flowers are so beautiful separately. Surely just to pick them and put them in a vase is simple enough, but alas! Nature possesses a subtle secret for blending colors which we poor mortals cannot wrest from her. The moment we transfer them from their garden home to our drawing-room the charm is gone. Then experience comes to our aid and gives us the following hints:

**Don't Crowd your Flowers.**—Flowers have their individualities and affinities which we must recognize and respect. For example: A spike of brilliant scarlet *Gladiolus*, with a feathery bunch of *Asparagus*, and a gleam of white *Feverfew* here and there, will light a shady corner like a torch, but smother your stately blossoms with *Phlox*, *Verbenas*, and a host of floral beauties, you will see at a glance how the effect is weakened. Again, *Petunias*, with their stiff, sprangly stems and delicate blossoms, are very difficult to combine with any other flower; but give them a wide-mouthed vase, with no rivals, and they are positively graceful, while their delicate perfume fills the room with its fragrance.

**Mass your Colors.**—This is of great importance. Put your scarlets and crimsons and purples in separate bunches, use white to blend them, and you cannot fail of a good effect. Yellow is the sunshine of a bouquet, but it must be used sparingly or it will produce a glare. A wise choice of this color always lends cheerfulness.

**Saucer Bouquets.**—In making these you can use flowers too choice to pick in quantities, and those not adapted to other bouquets, like the *Balsam*, *Stock*, etc. A Fern-bed in some shady corner is a great help in giving lightness and relief to the solid flowers in this mode of arrangement. *Rose-Geranium* leaves alternating with *Fern*-tips make a beautiful edge about any shallow dish; next lay some stiff stems criss-cross on the water to prevent the blossoms sinking, then lay in *Balsams*, *Pansies*, a *Tea-Rose*, or any dainty blossom you have, being careful to have plenty of sweet *Alyssum* or some fine white flower to blend.

Mrs. J. B. Root.

### FLOWERS FOR THE TABLE.

Now during the summer a pretty ornament may be secured for every meal by merely running into the yard or garden and gathering a few buds and flowers and sprays of green for a bouquet. This habit if once commenced will so grow upon the taste that the spoons and napkins will hardly be more indispensable. It is well to let the children furnish the table bouquets from their own flower-beds. One day our Willie gathered a cluster of apple-buds and blossoms for the dinner table; a friend who sat at table said to him "Those blossoms if left on the tree would have grown to be apples." "I would just as soon have the blossoms," was the answer. A pretty ornament for the table is made by placing a goblet in a shallow glass fruit-dish and filling both with flowers. If the scarlet radishes are laid on the green lettuce in the salad bowl it makes almost a bouquet of it. In serving place a radish on each saucer of salad.

### ANIMATED OATS.

THESE animated or cricket oats, as they are called by many, because of their active properties, are queer little oddities. I presume many of your readers have seen them advertised, and have thought no more about them. But they are well worth a place on your list of curiosities.

There is no trouble in raising them. Put them in a little corner by themselves, and then watch them as they ripen, or you will find them buried, head down in the ground, with their little heels sticking up, looking so funny.

When you gather them have a little box or envelope in which to put them, as they cannot be held in the hand, but will crawl out of a very small place. A friend put some in an open envelope in the drawer; when wanted they were gone. On looking farther, he found them all fastened in her tatting work.

When your friends spend the evening with you, it is amusing to watch their faces as they start on seeing the antics of the little fellows. Lay a large paper on the table, then dip some in a dish of water and spread them around. Then look out for the twisting, turning, and big jumps they will make; they will astonish you. One old gentleman watched them intently for a while; then said: "I give it up; they are alive."—*Selected*.

**Exercise for Children.**—Often we hear mothers say to their little girls, "Sit down now and be little ladies; don't run and romp so." As if a healthy child could sit down and keep still with nothing to do! Children, girls as well as boys, need exercise; they need fresh air and sunshine. Suppose they do tan their faces; isn't it better they should be brown as a berry, and healthy and happy, than to be white as a lily, with cold hands and feet, headaches and feverishness? What if they do tear their apron; mending it is much pleasanter work than nursing a sick child. I prefer my girl to be a healthy little romp with her heart full of the beauties of nature, the birds and flowers, rather than a pale-faced little lady with her thoughts on her dress and her personal appearance. MAIDA McL.

## Floral Miscellany.

### SEASONABLE ADVICE.

THIS is the season when everybody tells everybody else what he knows about gardening. The papers, daily and weekly, abound with directions and suggestions. The moral, mental, and physical good effects of amateur floriculture and horticulture are set forth in glowing terms, and so direct has been the transmission of our first parents' bias that nine readers out of every ten feel their hearts stir within them at the mere thought of becoming "tillers of the soil." Unfortunately for many who go at it "tooth and nail," the writers of these are generally successful enthusiasts, who have arrived at the full enjoyment of horticultural delights after a patient, persistent, and practical apprenticeship, the hardships and discouragements of which are lost sight of in the soft radiance of its reward. So used are they to the many phases of nature that all are beautiful, and all are met with precautions and supplements which render them harmless. Woe to the unlucky novice who thinks to find things as they are represented, in his or her first season of gardening! Rather will they wish Adam had been placed in a good-sized town, and Eve created in a first-class market-house from which to bring the early vegetables and cut flowers in time for Adam's breakfast, if by that means all their descendants could have escaped the toils and miseries of defeated horticultural aims. Still, gardening is delightful—a little of it. Following directions and accepting suggestions is easy, pleasant, and profitable—if everything suits. The pith of these statements lies in the last clause of each sentence. Writers see from their standpoint; readers must reflect that circumstances hedge in each life from every other. In spite of all the physicians, health-officers, and visionaries, there are some persons who *cannot* garden, there are others who *must not* garden, and there are many who *ought not* to garden. If one belongs to either of the three classes, let him say so without fear. Flowers are lovely, indeed, but their price is too high when aching bones, strained sinews, neglected duties, and a general sense of too much to do, and so much left undone, is paid for them. Fresh and juicy vegetables are delicacies all appreciate, but they hardly cost more bought at a hothouse out of season than they cost a poor man who has everything else to do, and must overtax his strength or hire help to cultivate them. No need to sit down in dust and ashes, however. If one has a ten foot square of ground or a sweeping lawn, he has just that much velvet carpet at his command—lovely in color, in texture, in pile as no woven triumph of the loom has ever been. Smooth, weedless grass, a neat walk, a tree or two, a standard rose or so, and perhaps a few hardy perennials, are just as full of real comfort as the most ornate grounds, and any one can find time to care for them, even the grass. Lawn-mowers are expensive, but grass-hooks are cheap, and so are scythes. A woman can use either of the two last named, *for a short time*, as easily as she can a lawn-mower. I know she can, for I have seen it tried. "Lone, lorn women," who

like things beautiful around them, develop many unsuspected powers, and one of these has taken up the scythe under competent direction, and quite enjoys a short swing at the nodding clover. It is infinitely "nicer" than sweeping a dusty, musty, crowded room, and no more difficult or trying. If any person takes the trouble to read this, and sorrowfully thinks he may be classed among the incapables, while he loves gardening, just let him take "heart of grace," and refrain this year at least. What is may not *always* be, and strength or opportunity may come if he is patient; *never*, if he tries to do too much.

SARA T. SMITH.

### THE HARDY PITCHER PLANTS.

MR. GEO. SUCH, of South Amboy, has formed a full collection of the singular and, we may add, world-renowned Sarracenias, and thus describes them:

"Nothing in our houses proves more attractive than these beautiful and interesting Pitcher-plants, and consequently we cannot too strongly recommend them to the attention of our customers. Half a dozen, of the same variety, put into a ten or twelve inch pan, constitute one of the most remarkable objects that can be exhibited at a horticultural show. For florists these are valuable plants, and one, if no more, of each sort should be in the hands of all who have a greenhouse.

"*Sarracenia Drummondii alba*. The pitchers of this are two feet high, slender at the base and widening towards the top—being shaped much like a tin fish-horn. They are mostly a fine green color, but towards the top are pure white, netted with crimson. The flowers are crimson.

"*Sarracenia flava*. The pitchers in this are erect, and two or three feet long, narrow at the base, widening upwards, and forming a large open throat with a broad lid. The color is a fine bright green. A light yellow flower is produced on a tall stem; but even without this the plant attracts great attention.

"*Sarracenia psittacina*. The most compact in its growth, and one of the finest of the Sarracenias. The pitchers are beautifully tinted, and mottled with white and rose color, and are very oddly shaped, being crooked like a parrot's beak.

"*Sarracenia purpurea*. Our hardy Northern Pitcher-plant, which for quaintness of shape and fine markings is second to none of the family. We have made a selection of some fine plants of varied and distinct character.

"*Sarracenia rubra*. These pitchers are slender, varying from one to two feet in length. The color is bright green, profusely marked with crimson veins. The purplish-red flowers have the odor of violets.

"*Sarracenia variolaris*. This throws up pitchers eighteen inches long, which are green, finely mottled with white. The flowers are yellow."—*The Gardener's Monthly*.

### GIVE FLOWERS AWAY.

THIS is the month, in all our bay gardens, for an overflowing abundance, somewhat sobered down, it may be, from the untempered luxuriance of June

and the earlier enthusiastic outpourings of hoydenish May. But now the gardens have settled down to exactly thirty-one days of continuous bloom. Each lovable and treasured little garden is now a sort of blessed opportunity for gift-making. Suppose you have Pansies, at this season apt to blossom too much, go to seed, and become comparatively small. Pick them daily, give them away, mail them to every one you can think of—to tired teachers in dusty ravines, and to weary toilers in stores and factories. Even the censorious and often-quoted Mrs. Grundy might, we imagine, be mollified into a forgiveness of other people's peccadilloes if she were sufficiently overwhelmed with gifts of flowers from all sorts of quaint and stilly gardens. Golden-hearted lilies there should be, and slender, creamy rosebuds, and clustered, drooping fuchsias. But the list is too long; let the brotherhood and sisterhood of flower-lovers finish it for us.—*California Horticulturist*.

### CACTI ON ROCKS.

ONE day, not long ago, as we rode slowly up a winding mountain road, we passed a cottage surrounded by vineyards which covered a rounded hill near the house, and crept far up the mountain slopes until the soil became too scanty, and chaparral and rocks thereafter possessed the ridges. Pink wild roses covered the rude fence of slowly decaying logs, and close beside the cottage was a rugged pile of weather-beaten rocks, in whose crevices vines clung and tangled, while on its sunnier side a dozen brilliant scarlet-blossomed Cacti had been planted. That was all; this was no home of wealth and of carefully considered effects. But a royal landscape-gardener, fresh from costly labors, could not have surpassed the simplicity of the effect. That one flash of Cacti color, which, as our readers know, is indescribably velvety and glorious, was the central point in the landscape, and yet found a sufficient relief in the waves of soft green on the summer hillsides, and in the deep masses of entangled vines about the base of the rocks, which even half hid the scarlet flashes. Is there no suggestion here for our own wild gardens? Let us try something similar, if there is any rocky point or southern slope intensely hot during summer.—*California Horticulturist*.

**Obtaining Impressions of Leaves.**—Several methods are known, but most of them are somewhat intricate and not always satisfactory in the results. A simple plan, but one that requires a little practice to perform it efficiently, is the following: Lightly coat the surface of the leaf of which a copy is desired with ordinary printer's ink, and then place the leaf between two sheets of white paper and press heavily and evenly, and, provided too much ink was not applied, a very fair representation will be produced. Another mode is to cover one side of a sheet of white paper with olive-oil, then fold the paper in four, placing the leaf between the second foldings. After pressing remove the leaf and place it between two clean sheets of paper, the impression thus obtained being dusted with black lead or charcoal, a little resin being added to fix the color.

## Floral Correspondence.

## ANSWERS TO CORRESPONDENTS.

IGNORANCE.—How shall I plant Crown Imperial?  
CROWN IMPERIAL.

ANSWER.—The bulb of Crown Imperial should be planted four or five inches deep and a foot apart. They do not flower until the second year. They are very hardy and persistent, and require scarcely any nursing. No bulb gives so much satisfaction, as its flowers are stately and elegant, and appear among the first in the spring.

We have taken THE CABINET for a number of months and are much pleased with it. We missed one number, for which we were very sorry, as we find in each one something interesting or instructive. Please tell us whether Amaryllis needs peculiar treatment.  
H. M. MOULTON,  
Cohocton, Steuben Co., N. Y.

ANSWER.—The bulb should be planted in rich soil about up to the neck. It is not difficult to grow. A small fragment of the root will sometimes grow.

PLEASE give the treatment of Candidum Lily. Mine do not bloom, though they have good soil; some were reset two years ago, and some have not been disturbed for years; neither bloom. Can you tell me what is the matter? Also how to manage Crown Imperial.

MRS. W. B. GLENN.

ANSWER.—As you give no data from which to judge, we cannot tell why your plants do not do well. The plant is a free bloomer under proper conditions. It forms its leaves in the fall, and, if healthy, puts up the flower-stem in the spring. Perhaps you cover it too heavily in winter. Put only a very little straw over the leaves. Let the air come to the leaves, or they will be destroyed. When a plant seems languishing in summer take it up, see if the root is in good condition, and plant in another place. This should be done in August.

WHAT is the best Moss Rose?

AMATEUR.

ANSWER.—We think the Gloire des Mousseuses. It is a pale rose, rather large, very thickly covered with moss.

ARE the small black flies around our house-plants injurious? If so, what remedy? Also cure for red spider.  
E. E. H. GILUM, N. H.

ANSWER.—Yes. Cleanliness and careful watching are the best protection against insects, but they will sometimes attack plants in spite of care. The larvæ of the black fly will be found in the earth, in the pots, like minute white grains near the surface. Sprinkle the soil lightly with cayenne pepper.

One way is to pour on a good supply of warm water, and when white, wriggling specks are seen on the surface, pour off the water; repeat the process until they are destroyed. Wood-ashes are thought to be

good. For red spider wash the plants in a decoction of quassia, and rinse well with clear water. Keep the air moist.

How old must the Wisteria be before it blooms?  
MRS. BLANCHE DITTO, Delphos, Ohio.

ANSWER.—That depends upon the health of the vine. Sometimes it grows slowly at first and then takes a sudden start and makes twenty feet or more in a summer, but generally it does not bear flowers until it is quite a strong plant and pretty well established. It means business, and can afford to take its own time. For freedom of growth, elegance of flower-foilage and foliage, and hardy persistent endurance, we have no climber to compare with it.

Please tell me when to cut off the flower-stalk of my Calla Lily?

ANSWER.—As soon as it has done blooming. What makes the leaves of Glorina curl?

ANSWER.—The leaves of thrifty plants curling is generally caused by the puncture made by insects. See if there are not marks of their presence. Often a magnifying-glass is required to discover them.

I enclose leaf of Begonia I have. It has never bloomed, but about nine months ago it sent up from the root a new stalk, which is now five feet high, with many side-shoots. It has a jointed appearance. Please tell me what kind it is, and if it blooms. I have a Shell Begonia, which has leaves measuring thirteen and a half inches in length and nine in width. Thanks to the CABINET for its kindly answers and most valuable instruction. I am a constant reader.  
MRS. A. B. MACKIE.

ANSWER.—The leaf is Begonia Veitchii. The late growth is probably a flower-stalk, and you will be gratified by seeing it flower.

Please tell me proper name of enclosed shrub. I send bean, bloom, and leaf. Some call it Bird of Paradise, some Texas Locust. It is hardy here, needing no protection.  
J. C. D.

MARSHALL, MO.

ANSWER.—This plant is not recognized by any florist. It is undoubtedly an Acacia of some kind, but the species is not known. It is certainly very beautiful. The leaves closely resemble the Mimosa; the flower is yellow, five-petalled, with innumerable stamens the thickness of a hair, more than twice the length of the flower, and dark crimson in color. The pod is pale green mottled with specks of dark red. The one sent about two and a half inches in length.

Please name enclosed leaf.  
J. B. EDSALL.  
COLUMBIA CROSS-ROADS, PA.

ANSWER.—It is a variegated Day Lily, or Funkia.

## ROSES ON THE PACIFIC SLOPES.

CALIFORNIA bids fair to vie with the vale of Cashmere in the production of roses. On page 114 of this number we quote the account of the "Feast of Roses" held in Santa Barbara, and we think that it is evident that that display of beauty has roused the

greatest interest among the lovers of roses, and it will no doubt excite a healthful and honorable emulation between different parts of the State. A letter in the California Horticulturist for June gives an account of the rose-gardens of Fresno, a town not yet six years old. The names of five or six persons are mentioned as having fine collections. One lady is said to grow more than a hundred kinds. The following account of another garden will strike Eastern readers as singular in its arrangement as it is tasteful: "The garden of Mrs. O. F. is unique and very characteristic. In a real grove of Italian Cypress and Acacias in front of the dwelling-house Mrs. F. cultivates some of the most beautiful and perfect roses to be met with anywhere.

"The number of her varieties is very limited, but those she has grow to the greatest perfection. Her Maréchal Niel is unsurpassed in size, and numerous bushes of General Jacqueminot, covered with dark bluish flowers, are unequalled in beauty. Here, if anywhere, we can see what can be effected with taste and care."

The writer adds:

"Lastly, in my own garden, I grow about one hundred and forty varieties of roses, several of which, however, are young and have not yet blossomed. The following twelve roses I consider the finest I have. Hybrid perpetuals: Antoine Mouton, La France, both unsurpassed in form and color. Chestnut hybrid (hybrid tea): Reine des Violettes, Empress of India, and François Michelin, all as near perfection as I can wish. Among teas the finest are Perle des Jardines, Rubens (splendid), Aline Sisley, Souvenir de Madame Pernet, Marie Von Houtte, and Regalia. But I suppose as my roses are coming into bloom I will have to change my views and give the place of honor to some other varieties.

Some varieties stand the heat of the sun better than others. Among these I consider Appoline, Pink Daily, Clare Carnot, and Reine des Massifs, perhaps also Niphotos, to be the best. When we had it 116° Fahrenheit in the shade they stood it splendidly in the full blaze of the sun, when at the same time other varieties, such as Mme. Margottin, Bon Silene, and Marie Guillot were burnt to crisps. But my letter is getting too long and I must cut it short. A few words of how I treat the plants. I flood my garden every ten days during the hottest months of the year, and sprinkle the leaves two or three times a week. When some roses do not open well I give them plenty of wood-ashes, and sometimes a little lime. When the ground is sandy a shovelful of pulverized clay will in a short time produce a wonderful growth. Such a treatment is especially recommended for Maréchal Niel, which rose in sandy soil will hardly grow at all. In the middle of April our roses are in full blossom, but even now, in the beginning of June, I can pick a few hundred rosebuds every day."

If the new States advance with such rapidity in flower culture the East will have to look out for her laurels.

Surely all has not been done that might be done in the cultivation of the Queen of Flowers. To have "hundreds" of rose-buds to gather daily is worth no little exertion.

# THE Ladies' Floral Cabinet

AND

PICTORIAL HOME COMPANION.

The Handsomest Illustrated Journal of  
Household Art, Flowers, and Home  
Literature in America.

\$1 30 per year, Monthly Edition, with Premium.  
65 cents, six months, without Premiums.  
50 cents, Quarterly Edition, one year, with  
Premium.

These terms include postage prepaid on Paper,  
which is paid by the publisher.  
25 cts. for agent's outfit of paper and chromo.

Terms to canvassers sent on receipt of P. O.  
stamp. Agents wanted in every town.

Advertising Rates—50 cents per agate line of  
space, or \$7 per inch. Address

HENRY T. WILLIAMS, PUBLISHER,  
P.O. Box 2445. Office, 46 Beekman St., N. Y.

HEWITT, PRINTER, 27 ROSE STREET, N. Y.

60 Lily, Floral, Enamel, Gilt Scroll, Motto,  
marble cards, no two alike, name on, 10 cts.  
CARD MILLS, Northford, Conn.

## SAVE THE NATION!

For it is sadly too true that thousands of  
CHILDREN are STARVED TO  
DEATH every year by improper or insuffi-  
cient FOOD.

REMEMBER

RIDGE'S  
FOOD for INFANTS  
AND INVALIDS

is all and a great deal more than we have claimed  
for it. It is a **HIGHLY NUTRITIOUS**,  
and because a **cooked food**, easily assimilated,  
grateful to the most delicate and irritable stom-  
ach, and especially adapted for the **INFANT**  
and **GROWING CHILD**.

Invalids, Nursing Mothers,

and those suffering from *Indigestion* will find on  
trial that

RIDGE'S  
FOOD for INFANTS  
AND INVALIDS

is all they can desire. It is carefully put up in  
four sizes. Sold by Druggists at 35 cents and  
upwards, with "WOOLRICH & CO." on every  
label.

Invented by E. N. Horsford, late Professor in  
Harvard University.

It is better and healthier than ordinary Baking  
Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it  
is only about half as much as by ordinary Baking  
Powder, and the result is much better.

It restores the nutritious elements which are  
taken from the flour in bolting. No ordinary  
Baking Powder or anything else used for raising  
bread does this.

Universally used and recommended by promi-  
nent physicians.

Put up in packages containing 11 ounces, just  
enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent  
stamp to the manufacturers for a sample.

RUMFORD CHEMICAL WORKS,  
PROVIDENCE, R. I.

\$66 a week in your own town. Terms and \$5  
outfit free. Address H. HALLETT & Co.,  
Portland, Me.

MADAME ROWLEY'S  
MEDICATED

TOILET MASK

A Natural Beautifier for bleaching and purifying  
the skin, and imparting a **Clearness** and **Brillian-  
cy** to the **Complexion** that can not be produced by  
any other known means. This ingenious invention  
(the only one of the kind) is soft and flexible in form,  
convenient and agreeable in application, and may be

WORN DURING SLEEP

or at any time, as the wearer may elect. Eminent  
Medical Experts and Chemists, who have analyzed  
the MASK, pronounce it perfectly pure and harm-  
less, and admirably adapted for the purpose intended.

Its action is truly **Marvelous**; and it proves at once  
Durable, Cleanly, Comfortable, Easy to Apply, and  
will save its possessor hundreds of dollars, uselessly  
expended for Cosmetics, Lotions, and like prepa-  
rations.

The MASK is sold at a moderate price—will prove  
indispensable to ladies who value a **Beautiful Com-  
plexion**—and with ordinary care will last for years.

A DESCRIPTIVE TREATISE, giving full particulars,  
and the testimony of well-known society and profes-  
sional ladies, mailed FREE. Address,

THE TOILET MASK COMPANY,  
1164 Broadway, New York.

All correspondence is in charge of ladies who have  
had ample experience in all matters relating to the subject.

## NEW BOOKS FOR 1879.

INSECTS ON FLOWERS AND HOUSE-PLANTS,

AND

HOW TO DESTROY THEM.

This is a valuable little Book of Directions to Window Gardeners and lovers of  
Flowers how to overcome and destroy Insects on their Plants, both out-doors and  
in-doors. It tells how to fertilize and stimulate plants, the experiences of cultiva-  
tors in keeping their plants healthy. Among the topics are these: "Red Spider,"  
"Aphis," "Green Fly," "Worms in Pots," "Rose Slugs," "Rose Bugs,"  
"Snails," "Caterpillars," "How to Destroy Insects on Garden Fruit-Trees and  
Vegetables," etc., etc. It is exceedingly valuable also to Housekeepers, as it tells  
all about "Ants" and all House Bugs.

Price 30 cents by mail, postpaid.

## Williams' Designs for Needle-Work.

A very beautiful collection of designs for Borders, Corners, and Centres in  
making Tidies, etc., on Java Canvas, Holbein Work, Worsted Work, Burlap  
Work, etc. These designs are new and remarkably pretty. Every lady should  
have them.

No. 1 contains nearly 25 Designs for Worsted Work, Canvas Work, Crotchet  
Work, etc. Price 30 cents.

No. 2 contains nearly 25 Designs for Holbein Work, Honeycomb Canvas, etc.  
Price 30 cents.

No. 3 contains Designs for Burlap Rugs, Mats, Small Carpets, etc. Price 30  
cents. Address

HENRY T. WILLIAMS,

Publisher,

46 Beekman Street, New York City.

This little book contains choice selections for  
writing compliments in the albums of friends.  
Verses and poems, sentiments from celebrated  
authors, and lines humorous, affectionate, and  
dedicatory.

Price, sent by mail, prepaid, 15 cents. Address  
HENRY T. WILLIAMS, Publisher,  
46 Beekman Street, New York.

AYER & SON'S MANUAL contains more infor-  
mation of value to advertisers than any other  
publication. Sent, post-paid, on receipt of 25  
cents. Address N. W. AYER & SON, Advertis-  
ing Agents, Times Building, Philadelphia.

50 FINE CARDS, no two alike, with name  
and case, 10 cts.; 50 white, 10 cts.  
POSTMASTER, Higganum, Conn.

W. C. WILSON'S  
CATALOGUE

of Choice Bedding and Greenhouse Plants, Flow-  
er and Vegetable Seeds, will be mailed to all who  
apply by addressing W. C. WILSON, 45 West  
Fourteenth Street, New York City.

MAMMARIAL BALM restores and  
develops the bust. Warranted sure and  
safe. Price \$1. NEW ENGLAND MEDICAL IN-  
STITUTE, 24 Tremont Row, Boston, Mass.

paid! Stamps taken  
J. W. FRIZZELL, Baltimore, Md.

NEW YORK, AUGUST, 1879.

## ILLUSTRATIONS OF THE MONTH.

UPON page 113 is a sketch of a very handsome stand or bracket for holding fish-globes. It is 13 inches high, 10 inches wide, and is finished in nickel and blue at the very modest cost of about \$1.50. It is something very new and beautiful just manufactured by G. Hennecke & Co., of Milwaukee, Wis.

Upon page 121 are familiar rural scenes, reminders of country life—the young folks and the birds, in spring and summer pleasures.

On page 124 are sketches of rustic flower-stands, which almost any one can make from a glance at the engraving. Collecting rustic bark, roots, and branches from the woods, they can be cut apart, and fastened upon the frame-work, and in a short time a very desirable ornament is made for the lawn, garden, or piazza.

The other illustrations give home-like suggestions needing no description.

## LILIES.

As August is the month when many beautiful varieties of Lilies are fully in bloom, I would suggest to those whose purses are limited to make a selection of bulbs while they can compare the flowers of each variety, and not trust the wonderful description of perfection which the floral catalogues would lead you to suppose each plant had attained.

The *Lilium auratum* is styled the "Queen of the Japanese Lilies," and is deliciously fragrant, but there are some varieties to which I would

give the preference, were I making a selection of bulbs.

The *Lilium lancifolium punctatum* has flowers of a flesh color, with spots of delicate rose. The *Lilium speciosum*, which is also found in the collection of Dr. Siebold, who introduced them from Japan, would, in my opinion, both rank higher than the *Auratum*, but the common garden Lily (*Lilium candidum*) is unequalled for purity, beauty, or ease of culture.

In *The Country*, a journal of rural pursuits published in England, I read not long since a piece on Lilies which gives many facts of interest concerning the white Lily and the scarlet Martagon.

This article states that Mr. Shirley Hibberd, editor of a serial work descriptive of garden flowers, issued by Messrs. Cassell, says that the *Lilium candidum* is a native of the Levant, and as that country includes Palestine, it is by no means improper to consider this as the "Lily of the field" referred to by our Lord in the Sermon on the Mount (Matt. vi. 28). If, however, we seek for a distinct flower as the Lily of the Holy Land, we must take note of Canticles vi. 2, where the Lily is associated with spices; and this Lily has a powerful and spicy odor that exactly answers to the suggestion of the text.

Thus the white Lily may be the Lily of Solomon, because of its powerful fragrance, but the Gospel Lily need not be scented, but must be glorious in apparel, comparable with this splendid monarch.

It happens, then, that the Martagon Lily (*L. Chalcedonicum*), which is almost odorless, but produces flowers of a brilliant scarlet, like the robes of Solomon, grows in profusion in the Levant, and is especially abundant about the Lake of Gennesareth, on the plains of Galilee, and the pastures on the borders of the desert.

But it must also be borne in mind that the Shushan, or Lily of Scripture, may be rendered "Rose" or "Violet" with propriety, and probably had a very broad meaning, so that we might read, "Behold the flowers of the field, how they grow," without in the slightest degree misrepresenting the purpose of our Lord.

The word "Lily" is of unknown origin, and in all its older forms is of general application, and, therefore, we cannot hope to identify with certainty any flower so called in ancient, and especially Eastern, documents.

It is none the less interesting, however, to note how admirably these two Lilies answer to the two references cited, so that we may, without resorting to invention, regard the scarlet Martagon and the common white as *par excellence* the "Lilies of Scripture."

In conclusion, I will add that in color this Lily is a reddish orange, its strongly revolute sepals are thickly covered with dark purple spots, the leaves are a glossy dark green and grow up the entire length of the stem, which is a rich brown, about two feet high. It may be found in the swamps of tide-water Virginia, in full flower, the end of July or early in August.

THE FLORAL CABINET comes to hand with its usual bright array of illustrations and interesting articles on floriculture.—*From Republican Star.*

## HOUSEHOLD ELEGANCIES.

ONE of the best reasons for doing fancy work is to get rid of all unsightly articles. This can only be done by making them ornamental, and modern ingenuity seems determined to effect such a change even in a clothes-basket. The *Domestic Monthly* gives a very pretty illustration of how this may be done. We copy the description, hoping our readers will be glad to avail themselves of the suggestion. The large basket is an article of necessity in a household, and in limited quarters it is not always possible to keep such an article out of sight. The next best thing the housekeeper's taste suggests is to ornament it so that it need not be barely practical and nothing more. The decorations of the basket here seen are the upholstery canvas bauds which come already stamped, as previously described. Coarse wools of the brightest colors are used for this work; and if the basket is open and not very fine, cross-stitch proves more satisfactory than single stitch for working. A linen or jute fringe trims each band, and a square worked in colors to match the borders is placed upon the cover. The spaces intervening between the decorated bands on the basket are filled in with cross-stitch, executed in black or any color that accords well with the general shadings employed. A great deal of fancy-work and filling-in is done at present by the Gobelin stitch, which is perpendicular, taking up as many threads as may be required for making the work finer or coarser. Where canvas is ten stitches to the inch, a showy design is worked with shaded wools, each stitch over four canvas threads.

## WHAT PEOPLE THINK.

I MUST tell you a little compliment. The gentleman to whom I carried my CABINETS for binding said when I called for them: "I never saw so handsome a book as they make. I carried them home to my wife to look at."

MRS. ANABEL C. ANDREWS.

HUDSON, N. H.

I have enjoyed your paper for two years and hope to enjoy it many more.

MRS. JOSIE M. SIMON.

SWAN, NOBLE Co., Ind.

THE CABINET is a most charming paper. I could not do without it. It is always interesting and never fails to please. I enjoy reading over back numbers; they always seem new, and furnish rich food for busy brains.

LONA S.

MT. PULASKI, Ill.

SIR: Since August last I have been a most grateful recipient of your excellent journal, THE FLORAL CABINET. The more I know of it the more I am convinced that it must be doing a blessed work. Beginning at the home, which is the basis of the state, its influence for good upon the latter cannot fail to be appreciated. All to whom I have shown it are pleased with it, and I trust that some, if they have not already, will send in their names as subscribers.

HARRIETTE W. SHERRILL.

LE ROY, N. Y.

EFFECTS OF PERFUME ON HEALTH.

WE learn that an Italian professor has recently made some very agreeable medicinal researches, re-

increasing its oxidizing influence. The essences found to develop the largest quantity of ozone are those of cherry, laurel, clover, lavender, mint, juniper, lemon, fennel, and bergamot; those that give it

closed vessels. Flowers destitute of perfume do not develop it, and those which have but slight perfume develop it in small quantities. Reasoning from these facts, the professor recommends the cultivation of

WILD FLOWERS AND FOREST VERDURE.

SUMMER PLEASURES.

sulting in the discovery that vegetable perfumes exercise a positively healthy influence on the atmosphere, converting its oxygen into ozone, and thus

in smaller quantity are anise, nutmeg, and thyme. flowers in marshy districts, and in all places infested The flowers of the narcissus, hyacinth, mignonette, with animal emanations, on account of the powerful heliotrope, and lily of the valley develop ozone in oxidizing influence of ozone.

## Household Elegancies.

## FANCY-WORK IN PODUNK.

OUR sewing-circle met one afternoon last summer with Mrs. Deacon Potts, and when Lyddy Plumb came she brought several FLORAL CABINETS, thinking that perhaps she might persuade some one to subscribe. After the papers had been thoroughly examined, and we were sewing again, the talk ran on doing fancy-work, making all such things as were illustrated in the CABINET, "fixing up" furniture at home, etc.

"Well," said Mrs. Potts, "if any one has got time to spend on such nonsense, they are welcome to it; I haven't."

"Neither have I," said Mrs. Pincher, "and I think it's just wicked to spend time fussing things up so. I wouldn't have little fancy things around anyway, to litter up the house; and I reckon Mrs. Princee thinks as I do, too, for she hasn't got any such trash in her house, any more'n I have in mine."

Mrs. Princee smiled in her grand way, and answered:

"Really, Sister Pincher, I can't say that I think it is wicked. If one wants to do it, I suppose they have the right; but I think it is in extremely bad taste 'to litter up' a room as you say with little fancy articles. They detract so much from the elegant effect which a well-furnished room produces. Now, when I began housekeeping I made cotton-flannel doves and rabbits, and grass bouquets, and bead baskets, and had bird's nests on forked sticks, and butterflies hung by threads; but I soon tired of them all, and at last swept them out. I do not believe, though, that I ever could have made one of the barrel-chairs that those papers say so much about. The idea of sitting on an old barrel! How can a lady have such a thing in her parlor! My idea of good taste in furnishing is to buy good honest things, as handsome as one can afford. If I could not get nice pictures I would go without any, rather than cover my walls with little trashy things in home-made frames."

I saw several of the ladies exchanging glances, but no one seemed willing to oppose their opinions to Mrs. Princee's, until Aunt Keziah Prindle spoke up in her own blunt way:

"Land sakes now, Mrs. Princee! It'll do for you to talk so, for you can get all the handsome furniture you want; but s'pose you couldn't! Land sakes! I don't know nothin' about these fancy things, 'cept that they do fix up a house mighty pretty and pleasant when folks can't get nice furniture and big ile-paintin's."

"Well," said the deacon's wife, "if one can't afford to get good plain furniture, they certainly can't afford to spend time in doing fancy-work."

"But one can do a great deal of such work, Sister Potts, without 'spending time' as you say," said Becky Prim, a pretty little matron. "I keep a bit of crochet-work, or something of the kind, in my basket all the time, and when I sit down to rest a minute, or when a caller comes in, or I have baby on my lap, I can pick it up and do a few stitches. I

have made a good many things in odd minutes when very likely I should not have done anything if it had not been that, and, as Aunt Keziah says, they do fix up the house, so that it would look plain and dull enough if they were all taken out, for I have got nothing really nice."

"Well," said Mrs. Pincher, "you young folks all seem to be going in for such things nowadays. I agree with Mrs. Princee. Now, I've just got a new parlor set, best of hair-cloth, and springs so stiff that Jerushy can hardly bear 'em down; and that's the kind of things to have in a house I say. But, if you'll believe it, the girls, and Nathan too, wanted me to take that money and get muslin curtains, and some pictures and brackets and vases, house-plants too, and new wall-paper, and even a new carpet, if 'twas 'nothing but the cheapest ingrain," Jerushy said; and that beat me. Why, my parlor carpet was the best piece of body Brussels that I could get at the Centre, and it's most as good as new, if it has been worn nigh on to twelve years, but they don't like the pattern; sunflowers and pumpkin-vines, Nathan says 'tis; and the wall-paper too is satin finish and good as new, but Nathan, he asked what I wanted eabages on the wall for, if they were satin? And the girls, they wanted to cover the old chairs with their old green empress-cloth dresses and have Nathan help 'em fix up a lounge out of old stuff. Dear me! I never was so taken down. Why, I said to Jerushy how was she a-going to get time for all that work, when she couldn't finish the 'rising-sun' quilt that she begun years ago; and I do want it to put on the spare bed, for 'twill be mighty pretty and there's a dreadful sight of work on it already."

Aunt Keziah broke in here:

"Land sakes! how you talk, Sister Pincher! Why, I should think you'd 'nough sight rather fix the house to suit your children, seein' as they're young men and women grown most; and 'll be wantin' to hev nice company and seel. And house-plants too! Land sakes! I s'posed every one believed in havin' them. It makes children like their home a sight better if they hev flowers to take kere of. Now, if you'd let the girls do as they wanted to, they'd hev thought the world of it; and you say Nathan would hev liked it too! Dear me! mebbe he wouldn't sit in the grocery so much evenin's if there was a real nice, cheery place to home, where he could hev some of his mates come in and hev a good time with the girls. It does young fellers seel a sight of good, arter workin' all day, to dress up and put on their company manners. Ye see young folks an't as they used to be, any more'n anything else is; an' they an't a-goin' to sit in the kitchen evenin's, with nothin' pretty around and nothin' lively goin' on. And as to piccin' quilts, I don't see why it an't 'fancy-work' as much as embroiderin' footstools and curtains; and now, when everybody has to cover up their quilts with a spread, seems to me it's a sight more sensible to put the extra work in the parlor where 'twill show."

Aunt Keziah is the one privileged person in the village, who says just what she pleases to every one; else, of course, Mrs. Pincher had been mortally offended at such plain speaking. As it was, she only said sarcastically:

"Oh! well, Aunt Keziah, we all know you always stand up for the young folks, as if they were so much wiser than their elders; but I guess if you had a house and children of your own to take care of, you'd do about like the rest of us."

"Mebbe I should; but I'd thank the Lord that I haven't got 'em, if I could believe that I'd ever hev put the house before the children."

"Really now, Sister Pincher," said the deacon's wife, "you might let Jerushy keep a few plants; I could give her some slips. They don't make so much work as most folks think, and then you can see them grow and blossom. I don't believe in fancy trash any more than you do, but flowers are different."

"Oh! she did have some Geraniums once, but she always spattered the floor when she watered them; and kept the blinds open—let the flies in—because they must have the sun; and I was glad enough that they died off while she was up to her grandmother's."

Then Mrs. Peters took up the ball:

"Sister Potts, I quite agree with you that it is a great waste of time for a sensible woman to do fancy-work; but I do not call all ornamental things 'trash' by any means. I have always liked to have pretty things in the house, and my girls like to have nice toilet-sets and trees in their own rooms, as well as pictures and brackets and vases in the parlor; and I have always thought that one showed a refined taste in wanting to have everything around them pretty as well as neat. I use a large part of the money I earn with my sewing-machine in buying such things, and I always encourage the children in spending their pocket-money so; but I think it much better to have a book at hand to employ a few minutes' leisure than a piece of fancy-work. Then, too, one can buy such things so much cheaper than they can make them. Now, one of my nieces spent the best part of two days last week in making a bracket like one that I bought for fifty cents."

We had a new member at this meeting of the society. The Pinkertons had moved here the week before; and when Mrs. Peters had finished her say Becky Pym said: "I wish Sister Pinkerton would say something. She believes in fancy-work I know; I've seen her house." And after some urging she gave us some of her experience:

"When we were married, three years ago, John put all of his savings into the house and I was going to furnish it nicely with mine. I had my piano, a good many flowers, and plenty of house-linen; then his mother gave me her cooking-stove, when she broke up housekeeping, and her best bed, with mattresses and quilts; and all her common crockery and kitchen-ware. But before I had spent a cent John had a dreadful accident, and, with paying for board and nurse's and doctor's bills, my money barely lasted until he was earning again; so we went to housekeeping with only the things I have mentioned, and a kitchen table and four chairs. Oh! wasn't I homesick in that bare house. I could not get any music-scholars there, and after baby was born I was not strong enough to take in sewing, and there was nothing else I could do to earn money myself. We could spare just one dollar a week from John's pay,

and I went to work with all my might to make those dollars tell. Of course with my housework and sewing to do, besides taking care of baby, I was pretty busy, and had to slip in other work edgewise, a bit at a time as I could, and we always kept the best part of our evenings for reading and music. But with a good deal of help from John I managed to make several barrel-chairs, and packing-box lounges, and toilet-tables, and ottomans. Then I got some old things at an auction for nothing almost, a tête-à-tête and great easy rocking-chair, which had lost every vestige of varnish and haircloth. I restained and varnished the frames, and stuffed and covered them with pretty bright stuff that I bought as remnants. I got a table too at the same time, that looked really nice revarnished, with a cover that I made of an old blanket, colored dark gray, with border of scarlet spattered in a fern-leaf pattern. John put up a mantel, and whatnot shelves, and brackets, and I made lambrequin covers for them all, and lamp-chimney vases, and tidies of scarlet and white yarn (worsted costs so much), and picture-frames of all kinds, for the most of our money went for pictures. I have several music-scholars here, and shall be able to get some things in Mrs. Peters's way; but my sitting-room is pretty and cheery now, though there has not been more than enough to get a good carpet spent on it. I have never made any ornaments just because they were pretty, if they were not going to be of use too. I need pretty things to make my home pleasant, and everything that adds to its beauty and cheerfulness I think is useful, and worth the making though it does take considerable time. I try to make things that will fit into the room, and have a nice effect on everything else. If I had rich, handsome furniture, I think I should like a great many elegant little fancy things too; and some of them I should like to make myself, just for the pleasure of it, as I would like to paint a pretty picture if I could, though I were able to buy one a thousand times better."

Here Mrs. Potts announced supper, and Mrs. Pinkerton promised to show us girls everything she had if we would come and see her.

As Lyddy and I were walking home Jack Park joined us, and Lyddy at once put the question to him: "Jack, we're discussing fancy-work; to do or not to do; give us your opinion, pro or con."

"Je-nipiter! Beg pardon, Lyddy, but, con. for ever, for conscience' sake."

"Jack! I don't believe you know anything about it."

"Don't I? Haven't I three precious old aunts—bless 'em, they deserve a better neevy—and if it wasn't for their everlasting fancy-work I'd stay with 'em, as they want me to; but a fellow gets tired of being called up two or three or a dozen times every evening to hold a skein; and of having a bit of worsted, that he must match, tied around his little finger every time he goes down street. Then the plague of the things when they're done! There are all sorts of birds and beasts and flowers everywhere, and if a fellow touches 'em its scream here and scream there. If I put my feet on a stool, Aunt Em brings a towel and spreads over it; Aunt Jane jumps up and turns back the tidy as quick as I sit down,

and if I lie on the sofa Aunt Di jerks out the nice soft pillow, and brings an old bunchy, scratchy one. There are dozens of chairs and things all pinned up in white cloth for my benefit. I steer clear of them though. Damaging to a fellow's temper—very—pins are."

"Jack, be still! Don't you say another word. I'll tell you this, though. There shall never be any such work in any house that I have anything to do with. But wouldn't you like handsome tidies and pillows that you could put your head on, and a room full of pretty things that make it bright and pleasant and sweet-homey; and that don't bother you a bit?"

"Why, to be sure. That is like Mrs. Pinkerton's house."

"What do you know about Mrs. Pinkerton's house?"

"I was there yesterday. John is putting up our shop. Prettiest house I ever saw; sweet-homey all through; made one feel like a pitiful old bach, more than ever. Didn't he look comfortable though. They're poor enough too. He isn't able to work all the time. But I didn't suppose that you called such things as her's fancy-work, though I'm sure I don't know what kind of things they are; only there isn't any carpet, and there are quantities of pictures; but the house is prime, and I say, Lyddy, if you like it too, why can't my 'good time coming' be like Pinkerton's?"

"Jack! do behave yourself."

"Yes, by and by. I want Evie to hear, and help me perhaps. You see, I asked Mrs. Pinkerton if three hundred would make a home anything like that, and she said 'Yes, and a good deal nicer, except the piano and flowers'; and there's the little brown house, the old ladies are all ready to give it to me any day, you know."

"I'll think about it."

"Well, think here then."

And I left them on the porch, and went into the house alone, as it was so evident that Jack needed no help from me. They were married at Thanksgiving, and the little brown house is the sweetest home in the village. Mrs. Pinkerton helped us plan and make for it; indeed we all worked under her direction, and Jack told me yesterday that he had not dared rub his eyes yet, for fear that he should wake himself up; and Lyddy's only grief is that they ever could have thought it necessary to wait until they had five hundred dollars, at least, to begin housekeeping with. "O Evie! if it hadn't been for Mrs. Pinkerton's 'fancy-work.'" EVA MAY.

#### A BRUSH FOR WASHING DISHES.

A HOUSEWIFE in Coleman's Rural gives her mode of washing dishes with a broom-corn brush: "This brush is of easy construction. Take from four to a dozen stalks. I usually keep three or more sizes, as they constantly extend their sphere of usefulness. Tie firmly with wire and twine, and sew the brush after the fashion of a broom, leaving but a few inches of brush. Leave the smallest brush round, as they drop into cups and cans more readily. The largest I use for scrubbing benches, washing out tubs, etc."

#### SMALL FRUITS FOR FAMILY USE.

No farmer should be without small fruits for family use, though many of them are satisfied to live along on regular coarse farm diet rather than expend a few dollars for plants and the time to attend to a small plantation of small fruits. A half-acre devoted to small fruit would abundantly supply a large family, and if well cared for would furnish a surplus for market enough to pay for the cultivation, while the many cans and jars of them which could be put up for winter use would give an assurance that there would be something more palatable than mere bread and meat to subsist on during the cold weather. Four or five rows of strawberry plants with about a hundred plants in each row would furnish a fine lot of fruit for table use; the Jersey scarlet, the Kentucky (a late variety), or the Charles Downing being better ones than the Wilson's Albany seedling, which is a better market berry. A couple of hundred plants of raspberries such as the Brandywine, and the same number of blackberries, the Wilson being a most excellent sort, soon produce enough to fully supply any family; then a row or two of Gooseberries and two or three of currants could be put in, while the plantation could be regularly dotted over with dwarf or standard pear-trees to fill up the place. The Bartlett (as a standard) and the Duchesse (as a dwarf) are the most popular as well as the surest croppers. They bear regularly and heavily, and are large and of good flavor.

#### IMPROVED CURRANT CAKE.

"HOUSEHOLD DEPARTMENTS" are very good adjuncts to a newspaper in their way when edited by a woman, but the male journalist who dabbles with the inspired mysteries of cooking runs a frightful risk. The editor of the *Weekly Petaluma Pearine*, started a column of that kind recently, and a few days afterward a fierce-looking female came into the office, carefully concealing some object behind her apron. "Are you the man that published that new and improved way to make currant cake?" He said he was. "You said to mix washing-soda with the flour, and stir in a little corn-meal and a little sweet-oil to give it consistency?" "I—I—believe so." "And to add 15 eggs and some molasses, and two ounces of gum-arabic, and set it in a cool place to bake?" "I think that was it." "Well, take that then!" And the indignant housewife floored him with a weapon that felt like a sand-club, but which he felt in his heart must have been a half-baked hunk of cake constructed on the *Pearine* pattern.—*San Francisco News-Letter*.

#### CLEANSING.

Don't let scratches on paint worry you any longer. Cut a sour orange or lemon in half; apply the cut half to the marks, rubbing for a moment quite hard; then wash them off with a clean rag, dipped first in water to moisten it, and then in whiting. Rub well with this rag, dry thoroughly, and nine times out of ten the ugly marks will vanish. Of course, sometimes they are burned in so deeply that they cannot be eradicated.

## The Young Housekeeper.

A WORD TO YOUNG MOTHERS ABOUT  
BABY-CLOTHES.

If there is ever a time when sewing becomes a luxury it is in preparing the *layette* outfit, as it is now generally termed, of the first baby. Every tiny garment is a study of beauty, and we do not envy the mother who does not find the fashioning of the dainty garments a positive delight which could not be given up to hireling hands.

Everything that is for a baby's use should be delicate in fabric and in color, where color is introduced at all, and above all should be well made. Some persons will not have anything made upon the machine; but this is an extreme of fastidiousness. Machine-sewing, when really well done, is as elegant and even more so than hand-sewing; the idea that it is less so originated, we think, in its being carelessly executed; but of course on fine work all the finishing, hemming down, etc., should be done by hand. Embroidery, now so much in vogue, is never more appropriate than upon infants' clothing, but it should be upon wash materials, as the garment can then be preserved a long time with reasonable care, and when baby assumes short dresses, as is now the

DINNER-TABLE FLOWER-HOLDER.

fashion at six months, be laid away uninjured. Baby-ropes are made with French yokes and long sleeves, made of fine material, with delicate rather than profuse embroidery. Cloaks are made of white cashmere, for summer simply lined with silk, and corded

and piped with white satin; and these are very elegant. Very fine piqué cloaks are elaborately embroidered, and are trimmed with hand-crocheted lace. Caps are made of real Valenciennes or Italian lace insertings or edgings. The baby's dress should

GARDEN STAND.

always be white and soft mulls; India muslin, and fine undressed cambrics are pretty. No thick material should be used, and the trimming should never be of heavy or thick embroidery.

In saques, hoods, and shawls bright colors are admissible, and as much variety as is desired, but keep to the tints of spring flowers. It will be time enough by and by for rich colors. Scarlet looks well in coral, but turquoise clasps are much prettier and turquoise blue for ribbons.

Shoes are made of fine cashmere embroidered in forget-me-nots or tiny rosebuds. The christening robe is of linen cambric, and should be simply made to be in good taste; shoulder-knots tied without bows and with long ends, and a sash of white ribbon, complete the dress. At the ceremony a card with the baby's name is presented to the clergyman.

Baby-baskets are now a delight to the eyes; they are either square or circular, wide but not deep, lined with sheer muslin over pink or blue. The cover is elaborately embroidered either in white or in color corresponding to the colored lining. White is, we think, decidedly the prettiest, and for those who have not time or skill to embroider transferred work cut from some old-fashioned collar, and neatly laid down, makes often quite as handsome a finish. The edge of the basket may be finished either with a quilling of satin ribbon, a fall of lace, or more simply by a deep-plaited ruffle. There should be nooks in the basket for every article of the toilet, not forgetting a bag lined with oil silk for soap, and one for sponge, and a case for small scissors, needles, and thread, should any accident make a stitch necessary. The finest sponge should be selected, and one well rounded. Safety-pins should be provided in abundance, and the smallest sized English pins. Combs and brushes fit for fairies may be had in all styles and plain wood to carved ivory and pearl.

A gentleman was disturbed from his rest in the middle of the night by some one knocking on the street door. "Who's there?" he asked. "A friend," was the answer. "What do you want?" "I want to stay here all night." "Queer taste; stay there by all means," was the benevolent reply.

## ANSWERS TO CORRESPONDENTS.

PLEASE tell how to make a rustic cross for wax flowers, and how to color wax black?

ANSWER.—Take small, straight branches of grapevine, the size and length you desire, and strip entirely of bark; form the cross, smooth a little with knife, and varnish with only one coat of thin varnish. Let the cross lean a little to one side. Color wax black by melting it with ivory-black, and a little balsam of fir. If you wish it in sheets, pour it quickly over a sheet of window-glass.

Mrs. L. T. LYON.

How should Scrap-Books be arranged?

M. H. O., Victoria, Texas.

ANSWER.—Differently, according to the object in making them. If merely to preserve occasional clippings the easiest way is to paste in as they are made; it saves time; but if you wish to preserve many really valuable things, as it is possible to do from the admirable papers now published, classify according to subjects with a running title, thus: Poems, Literary Notes, Household Matters, Fun. Mark Twain's Scrap Books require no paste or gum. They are very convenient. Simply wet the gummed lines with a brush dipped in clear water, and press the paper upon it. Picture scrap-books are best quite large, as you then have room for a wide margin, which gives a handsome appearance to the volume. For use merely, an old ledger with eight or ten leaves cut out here and there at intervals makes an excellent and serviceable scrap-book. Every one should keep several such books, they are of the greatest use, if made systematically, as books of reference for those who cannot afford large libraries.

RUSTIC WOOD GARDEN VASE.

Paraffine Solution.—W. H. B. asks: Can you inform me what will keep a solution of paraffine with linseed oil in a liquid state, and not destroy its drying qualities?—ANSWER. Turpentine spirits, since in it paraffine is soluble.

## Fireside Reading.

### SLANDER.

A WHISPER woke the air—  
A soft, light tone, and low—  
Yet barbed with shame and woe;  
Now, might it only perish there—  
No farther go.

Ah, me! a quick and eager ear  
Caught up the little moaning sound;  
Another voice hath breathed it clear,  
And so it wandered round

From ear to lip, from lip to ear,  
Until it reached a gentle heart,  
And that—it broke!  
It was the only heart it found,  
The only heart 'twas meant to find,  
When first its accents woke;  
It reached that tender heart at last,  
And that it broke.

Low as it seemed to other ears,  
It came a thunder crash to hers—  
That fragile girl, so fair and gay,  
That guileless girl, so pure and true.  
'Tis said a lovely humming-bird,  
That in a fragrant lily lay,  
And dreamed the summer morn away,  
Was killed by but a gun's report  
Some idle boy had fired in sport!  
The very sound was death!

And thus her happy heart, that beat  
With love and hope, so fast and sweet  
(Shrined in its lily, too;  
For who the maid that knew  
But owned the delicate, flower-like  
grace  
Of her young form and face?)  
When first that word her light heart  
heard,  
It fluttered like a frightened bird,  
Then shut its wings and sighed,  
And with a silent shudder—died!

### GUARD WELL YOUR DAUGHTERS.

YOUR daughters should have rooms of their own. We know it is difficult in our cities, where every additional room in a house costs three or four dollars a month; but a mother, writing on this subject, forcibly says:

It often arises from want of thought on the subject, and the wish to save the care of an extra room, that girls are put to sleep in the room with others, occasionally with hired help; but if a mother could realize, as I do, the impure influence thus thrown about her child, she would endure any amount of toil and inconvenience rather than allow it. Of course there are exceptions—girls, pure-minded girls, who will be as careful of their words as the mother herself—but in too many cases every new hired girl brings a new lot of coarse stories and information, with which she is only too willing to

enlighten the ignorant and innocent child. The child is under a vow to "Never, never tell any one, especially mother," and feels that she is growing extremely wise; but she is really receiving false impressions which it will take years to eradicate, and losing an innocence of mind, a purity of thought, which can never be regained. She may live to see the wrong and curse it; she may never see the wrong and let it curse her. We all know how easily some natures are balanced either to the right or wrong, and how slight an influence at a certain time will prove "the pebble in the streamlet scant" which turns the course of a whole life.

I wish I had the power to rouse the attention of

rattle, the child grieves over her broken doll, the school girl has her pet sorrows that everybody laughs at, and farther on come the love troubles which are certainly heart-breaking. Through them all it is a comfort to have the privacy of one's own room, where, secure from intrusion, we can fight our mental battles or seek our needed quiet. Mothers, give your daughters a room to keep, to decorate, and to cry in.

### A SENSIBLE COLLEGE.

GIRLS are admitted to the Iowa Agricultural College and taught all sorts of queer and absurd things. For instance, the authorities there have the funny notion that girls ought to know how to cook! Every girl in the junior class has learned how to make good bread; weighing and measuring her ingredients, mixing and kneading and baking, and regulating her fire. Each has also been taught to make yeast and bake biscuit, pudding, pie, and cake of various kinds; how to cook a roast, to broil a steak, and make a fragrant cup of coffee; how to stuff a turkey, make oyster soup, prepare stock for other soups, steam and mash potatoes so that they will melt in the mouth, and, in short, to get up a first-class meal, combining both substantial and fancy dishes, in good style. Theory and manual skill have gone hand-in-hand. Vast stores of learning have been accumulated in the arts of canning, preserving, and pickling fruit, and they have taken practical lessons in all the details of household management, such as house-furnishing, care of beds and bedding, washing and ironing, care of the sick, and numerous other things. It is not stated whether girls are taught how to get up in the morning and build fires, but no doubt such a useful branch of information receives the attention its importance demands.

A fanciful theory is broached by an Englishman with regard to the effect of sound on the growth of plants. It is stated by the writer that, having built a small conserva-

tory in a barren locality, he attempted the cultivation of roses and other plants under shelter. They did not thrive well, however, until he happened to remove an harmonium into the greenhouse, and, practising on it steadily for some months, was surprised to see a gradual but rapid recovery of health on the part of his plants. From this circumstance he has elaborated the hypothesis that music is conducive to vegetable health and life.

**Rose-Grubs.**—If there are any grubs in stems of roses run a fine wire into their holes and kill them.

SLY PUSS.

every woman who has a girl entrusted to her care, and make her see, as I have seen, the great evil of the slight and apparently unimportant habit. I have mentioned the main reason why the intimacy arising from the sharing of a room should be avoided, but there are other reasons why a young girl should have a room of her own. She will learn to keep it in order, to arrange it tastefully, and take pride in collecting within it her little treasures. Then, too, we are apt to think that no season of life except our own present one contains any real trials; but they are scattered all along. The infant cries for its lost

## Housekeeping.

## FUTURE HOUSEKEEPERS.

WE sometimes catch ourselves wondering how many of the young ladies whom we meet with are to perform the part of housekeepers, when the young men who now eye them so admiringly have persuaded them to become their wives. We listen to those young ladies of whom we speak, and hear them not only acknowledging, but boasting, of their ignorance of all household duties, as if nothing would so lower them in the estimation of their friends as the confession of an ability to make bread and pies, or cook a piece of meat, or a disposition to engage in any useful employment. Speaking from our own youthful recollections, we are free to say that taper fingers and lily hands are very pretty to look at with a young man's eyes, and sometimes we have known the artless innocence of practical knowledge displayed by a young miss to appear rather interesting than otherwise. But we have lived long enough to learn that life is full of rugged experiences, and that the most loving, romantic, and delicate people must live on well-cooked food, and the house be kept clean and tidy by industrious hands. And for all the practical purposes of married life it is generally found that for a husband to sit and gaze at a wife's taper fingers and lily hands, or for a wife to sit and be looked at and admired, does not make the pot boil or put the smallest piece of food therein.

## SUMMER DRINKS.

ALL know the torment of drinking warm, brackish water. I have used the following plan, which came under my notice a year or two since: I bought half a dozen tin milk-cans holding four gallons each, and covered them with coarse, thick canvas, of a kind that absorbs water easily, drawing the cloths tightly around the cans and sewing them so that they could not get off. At night the cloths are dipped in a tub of water until they are thoroughly saturated; the cans are then filled with water and set where the breeze will blow upon them, and in the morning the water is quite cold, and remains so during the day if the cloths are wet occasionally and the cans placed in the shade where they are exposed to a current of air. The men on going out to work take as many cans of water as they will need, and so have the luxury of cool water to drink during the heat of the day. Any kind of coarse cloth will do to cover the cans—the thicker the better—as they won't need wetting so often, but the cans must be kept closed and the cloths wet to ensure success.

The above is from an exchange, and is an excellent plan, but for keeping water cool in small quantities and where the weight of the vessel containing it is of no importance, we believe the following will be found better, as earthenware is better than tin. The water-bottles of Oriental lands are composed of porous clay.

Water can be kept cool for drinking in warm weather by the following method: Get fresh water, let it be kept in an unglazed earthenware pitcher

wrapped around with two or three folds of coarse cotton cloth kept constantly wet. The theory of cooling water in this manner is the absorption of heat from it by the evaporation of the moisture in the cotton cloth. Expansion produces cold, compression heat.

The same idea is applied to keeping butter cool without ice. In this case the cloths are not used, and perhaps the simpler plan would work quite as well.

**Firm Butter without Ice.**—In families where the dairy is small, a good plan to have the butter cool and firm without ice is by the process of evaporation, as practised in India and other warm countries. A cheap plan is to get a very large-sized, porous earthen flower-pot, with an extra large saucer. Half fill the saucer with water, set in it a trivet or light stand—such as is used for holding hot irons will do—upon this set your butter; over the whole invert the flower-pot, letting the top rim of it rest in and be covered by the water; then close the hole in the bottom of the flower-pot with a cork; then dash water over the flower-pot, and repeat the process several times a day, or whenever it looks dry. If set in a cool place, or where the wind can blow on it, it will readily evaporate the water from the pot, and the butter will be as firm and cool as if from an ice-house.

## HOW TO CAN FRUIT.

GLASS and stone jars are the only kinds to use (for the acids of fruits will not be healthful if preserved in tin) and they can be purchased very cheaply. Nearly all the fruits retain their flavor better if they are steamed instead of stewed, as they are not so much broken up. To four pounds of the fruit take one pound of lump-sugar, as it is less subject to adulteration. Fill the jars within two inches of the top with the fruit; melt the sugar in very little water and turn it boiling hot upon the fruit; place the jars in a pan of boiling water and let them steam about ten minutes, or until the fruit, by the expulsion of the cold air, has been forced to the top of the jar; put the cover on at once, with a cloth, so as not to burn your hands, and screw it down tightly while in the boiling water; set the jars on the table to cool, and if any bubbles appear in them take off the covers and boil again until the fruit is again forced.

## COOL CELLARS.

WHAT is more refreshing, satisfactory, and pleasing than, when the mercury is up among the nineties, to have the privilege of eating butter, berries, cream, vegetables, etc., that are cool, fresh, and inviting? Many do this, but it is at the expense of an ice-house or an ice-fed refrigerator. But this desirable acquisition may be obtained and enjoyed without the expense and trouble of either one or the other, providing you have a cellar. It is done by keeping the sun's rays and heated air out of the cellar. The former you accomplish by shading it, the latter by the proper use of hinged windows. So arrange your window-sash that they may be either swung up, or to the right or left on the cellar side, or so place the

hinges that they may be let down, which will be quite as convenient. During the days of hot, sultry weather, keep them tightly closed; but on cool, still nights open them, and the cool, fresh, outside air will rush in and displace the warmer air of the cellar. In the morning again close the sash, and should the cellar be a common one the window need be opened only two or three times a week, and then only on cool, still nights. To prevent cats or other animals from taking possession of the cellar during the night, nail a fine wire netting over each window on the outside. Those who leave their cellar-windows open night and day will find the air to conform quite well with that outside, as the wind forces the warm air in and thus displaces the cooler current that is always found nearest the bottom or floor. Let the closing and opening of the windows, as stated, be one of the duties of servant or milkmaid.

L. D. S.

BARRINGTON, N. Y.

## HINTS ON DRESS.

REAL lace is much worn, though not to the exclusion of other delicate fabrics. Lace is worth buying because it is enduring and a thing of real beauty, like a gem. Extravagant, or what seems extravagant, prices are paid for it, but it must be remembered it will last a lifetime.

Square necks, with fichu above and short sleeves with net gloves nearly to the elbow, have become general for dress occasions. Breakfast caps trimmed in a very tasteful way, with a roll round the crown of the same material in a pale shade of color.

The new material *mousseline de soie* is used for stylish dress; simpler kinds of fine swiss, or any sheer fabric, are less expensive, and often quite as pretty. Mousseline is made of silk and beautifully woven.

Bonnets may be said to be of all possible shapes, for people are beginning to learn that to look well is better than to look like every one else. Some are large, some are small, some are wide flaring and some close, but after all there is a general style prevailing among the different kinds. For walking costumes the colors are rather grave, but pale for full dress; lemon, straw color, and bright rose are much worn.

Chip hats come in various delicate tints, and they are generally trimmed with plumes of the same hue, or in very slight difference of shade. Strong contrasts are reserved for flowers, which is excellent taste. Wreaths extending nearly round the hat are very popular.

The Wellesley College students have established a flower mission, each one contributing a penny a week for purchasing flowers, which are sent to hospitals and other institutions about Boston, two students being chosen weekly to carry the offerings to them.

The oldest Woman in New Hampshire who accepted the privilege of voting at the recent town elections was Mrs. Lovey Wentworth, aged ninety years, of Rollinsford, who walked to the ballot-box in that town with a firm step and deposited the first vote of her life.

## DISEASES,

Like rivers, spring from small causes The roaring river may not be easily diverted from its course, nor the neglected disease from its destructive work. Taken in time, disease, which is merely an interrupted function, may be averted by the use of Nature's remedy, TARRANT'S SELTZER APERIENT. It combines the medicinal properties of the best mineral waters in the world.

## COLGATE & CO'S EXTRACT WHITE ROSE

For the Handkerchief.

### American Fruit-Preserving Powder

**AND LIQUID** is the cheapest, most reliable, and best-known method of preserving all kinds of **Fruit, Tomatoes, etc.** Strawberries, Raspberries, and all high-colored fruits retain their rich color, as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.

Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruit, Tomatoes, etc.**, and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs or barrels *without sealing air-tight*. Simply corked or tied down with a strong paper is all that is needed.

The fruit will keep *without sugar*, or any quantity of sugar may be added as desired.

Warranted to be as *healthful as table salt*.  
The fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the fruit, etc., in quantity as directed.

One package will preserve 256 pounds of fruit, tomatoes, etc. Price **One Dollar** per package. Give it a trial. If you cannot get it from your druggist or grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of Rocky Mountains for \$1.25 per package. **Local and General Agents Wanted.**

It is impossible to remain long sick when Hop Bitters are used, so perfect are they in their operation. For weakness and general debility, and as a preventive and cure for fever and ague, nothing equals them.

**USE**

Balmy sleep, good  
digestion, rich blood,  
and perfect health in  
Hop Bitters.

**HOP**

A little Hop Bitters  
saves big doctors' bills  
and long sickness.  
Cures drowsiness, bil-  
iousness, pains, and  
aches.

**BITTERS.**

The following cut is exact size and represents the **BEST 2 BLADE KNIFE IN THE WORLD.** Every knife is warranted strong and perfect, and is made with round corners at both ends, so as not to wear the pockets. They are made of the finest material, and finished in the very best manner by the most skilled workmen, are regular beauties and favorites with everybody; they give better satisfaction for general purposes than any other knife on the market. These knives are imported from Europe in large quantities, especially for us, and are stronger, handsomer and better made than knives sold in most stores at \$1.50 each. For a short time we will send one of these

**HANDSOME 2 BLADE KNIVES FREE**  
by mail, post-paid, as a premium to any one who will send 4 subscribers to Farm and Fireside at 50 cts. a year.  
**PRICE OF IMPORTED 2 BLADE KNIFE,** post-paid, and 1 year's subscription to Farm and Fireside, is One Dollar.  
**AN EXCELLENT 2 BLADE KNIFE** (made in this country) but not quite so large as the cut, will be given as a premium to any one who sends 2 subscribers to Farm and Fireside, at 50 cts. a year.  
**PRICE OF AMERICAN 2 BLADE KNIFE,** post-paid, and 1 year's subscription to Farm and Fireside is 75 cents.

GREAT

BARGAIN.

**FARM and FIRESIDE** is the most popular Agricultural and Home Journal in the U. S. It is suited to the home circle in city, town or country, and is a welcome visitor in every household. Farm and Fireside is published twice a month, it contains 8 large pages, and the circulation is so large that we can afford to publish it at 50 cents a year, although it contains as much reading matter as most \$2 journals.

### DOBBINS'S STARCH POLISH,

FOR POLISHING

**SHIRT BOSOMS, CUFFS, COLLARS,  
LACE CURTAINS, ETC.,**

putting on the same gloss and hard pearl finish as when bought at the store new.

It enables the most incompetent ironer to compete with any laundry. It makes the clothes clean and white. It makes the clothes iron smoothly, and prevents the iron from sticking. It makes old linen look like new. It saves a woman many hours of hard work each week.

A polished shirt-bosom, cuff, or collar, keeps clean much longer than linen not polished, for this reason: the enamel fills up the pores, lays down the nap, puts on a hard pearl gloss, which prevents the dust or dirt from working into the cloth; therefore, by the use of the enamel, clothes can be worn much longer without washing.

**PRICE TWENTY-FIVE CENTS, POSTAGE PAID.**

### DOBBINS'S SILVER POLISH

is composed of the finest and best ingredients known for polishing—without injury—Silver, Gold, Plated Ware, Jewelry, Glass, etc., equal to new.

### THE SOLARGRAPH

## WATCH

ONLY \$1.

*A perfect Time-keeper, Hunting-Case, and Heavy Plated Chain, latest style. We warrant it for five years to denote time as correctly as a \$100 Chronometer Watch, and will give the exact time in any part of the world. It also contains a First-Class Compass, worth alone the price we charge for the Time-keeper. For Men, Boys, Mechanics, School Teachers, Travelers and Farmers, it is indispensable. They are as good as a high-priced watch, and in many cases more reliable. Boys, think of it! A Hunting-Case Watch and Chain for \$1.00. The Solargraph Watch is used by the Principal of the Charlestown High School, and is being fast introduced into all the schools throughout the United States, and is destined to become the most useful Time-keeper ever invented. The Solargraph Watch received a Medal at the Accuracies Fair, at Boston, in 1873. This is no toy, but is made on scientific principles, and every one is warranted to be accurate and reliable. We have made the price very low simply to introduce them at once, after which the price will be raised. The Solargraph Watch and Chain is put up in a neat outside case, and sent by mail to any address for \$1.00. We have made the price so low, please send two stamps if convenient, to help pay postage. This offer is good for sixty days only, and will appear but once. But two watches sent to one person. Name this paper.*  
Address **EASTERN MANUFACTURING CO.**  
Rockland, Mass.

(Cut is not near full size.)

This is an elegant Pocket-Book of a new design, made of Russia leather and handsomely finished with nickel plated mountings and clasps. It is arranged with pockets suitable for either silver, scrip or bills, and has a beautiful silk handle with tassels attached. They are equal to pocket-books sold in the stores for \$1.25 to \$1.50, and yet we send one by mail post-paid as a premium to any one sending five subscribers to Farm and Fireside at 50 cents a year. We are confident that our lady readers will be delighted with this new premium, and are sure that a more acceptable present could not be found.

**PRICE OF POCKET-BOOK,** post-paid, including one year's subscription to Farm and Fireside is \$1.

It is only because they are manufactured in large quantities especially for us that we can afford them at such a low price. **FARM and FIRESIDE** is the most popular Agricultural and Home Journal in the U. S. It is suited to the home circle in city, town or country, and is a welcome visitor in every household. ## WALKS IN GARDENS AND YARDS.

MANY persons are exercised in deciding of what material to make their garden-walks. Those who have been in Europe decide finally on gravel; but when the hot suns of summer come they learn that this country is not Europe, and that what is the best for one country may not be altogether the thing for another. The heat of our climate is so opposed to garden-ing enjoyment that we have always in the first place to study how to modify it before we can take much pleasure in summer horticulture. Gravel-walks make that which is hot hotter. Grass-walks are the coolest of all walks; but they require constant mowing and rolling if we wish to keep them neat and trim, and then if there be much travel over the course a "sheep track" is the mis-sightly result. Besides this, there are dampness from the dews, wet from the rains, and "soggings" from the thaws, until on the whole there is very little except the cool surface on a hot summer day to recommend them.

As for all preparations from tar, there is nothing to recommend them over gravel, except they do not require so much looking after, while the gloom which they cast around har-monizes badly with the pleasure of a garden.

In many of our old Germantown gardens tan-bark is largely used, and always gives satisfaction when properly employed. The proper way is to have a hard, solid walk first, and then put on a very thin layer of the

DESIGN FOR BIRD-CAGE AND STAND FOR FLOWERS AND ORNAMENTAL PLANTS.

bark. If there be much of a thick-ness it takes up so much water at the rains that it is worse to walk on than the soggy grass-ground referred to. It is decidedly unpleasant to walk on a thick mass of tan in wet-weather. Of course a tan-walk can only be made where the road-bed is rather level, as on an incline it will easily wash away in heavy rains. No one who has experienced it can have any idea of the pleasure of a tanned walk through a half-shaded ground on a warm summer's day.

But there is no walk in our judg-ment equal to that made from coal-ashes. The ashes should be riddled, and all the coarse pieces laid down first and covered by the fine ashes to the depth of about two inches and rolled hard. If well done it will last for years by topping-off with an ad-ditional inch of ashes every spring or two. It is always dry, even within a few minutes after a heavy shower, is pleasant to the tread, looks well, and seldom allows grass and weeds to ap-pear.—*Germantown Telegraph*.

## PHOSPHORUS SOAP FOR PLANTS.

A CORRESPONDENT of *Vick's Monthly* says that for the destruction of insects on plants he has found no-thing equal to phosphorus soap.

A tablespoonful dissolved in a gal-lon of water, applied with a watering-pot or syringe, he asserts will com-pletely clean the plant of insects, and prove also a valuable fertilizer to the soil. Many of our readers, we are sure, would be glad to find this prove true in their own experience.

## Window Gardening.

## CHOICE PLANTS FOR SUCCESSFUL WINDOW-GARDENS.

IN choosing plants for window-gardens the greatest success often comes from having an eye to *beautiful foliage* rather than flowers. Of this subject the *American Garden* says:

"Amateurs are always too anxious for flowering plants, not seeming fully to appreciate handsome foliage. If the Calla does not bloom, the Calla is of no account. Now, this is an elegant plant and well worth growing if it never bloomed. In the whole catalogue of ornamental foliaged plants scarcely anything is comparable to the silver-margined, golden tricolor, and bronze-leaved Geraniums, and those should never be allowed to bloom, that the opportunity for leafage be unimpaired. Begonia rex and some of its varieties are worth a score of ordinary blooming plants. There are many choice exotics that may be made available. For decorative vines I know of nothing equal to English Ivy, Madeira Vine, and Smilax. The Ivy Geranium (*peltatum elegans*), grown on a trellis, makes a very fine display in winter. So also do some of the Colens and other foliage plants. The selection will ever remain a matter of taste. One likes what another dislikes, and this is another of the reasons why we are so often disappointed in our purchases.

**Holland Bulbs.**—Nothing meets the want for flowers in the winter so fully as the Holland Bulbs. Our windows may be made gorgeous with them the latter part of the season. Not sweet like hyacinths, that are indispensable, but far more strong, are the early Tulips, the Duc Van Thols. Plant several in one pot in autumn and fill many pots. Set them away to grow roots, according to the florist's directions. Then in mid-winter bring them into bloom in your sitting-room. I have had the best flowers, especially from Hyacinths, by planting three, five, or nine bulbs in a box just large enough to hold them, and plunging the box in autumn into a warm border or somewhat sheltered place. In the winter, in a February thaw, I dug up the box or boxes, and when they were sufficiently drained gave them light and moderate heat, and the finest spikes of flowers made their appearance immediately. Pots would be broken by freezing; hence boxes must be used. And if they are unsightly in the window, cover them with Lichens, Cup-moss, and Baby-cones, an abundance of which may be gathered in the autumn rambles.

**Plants for Forcing.**—A long list of good garden plants for forcing has been given us, and I can speak with confidence of a few that I have tried, among which are *Dicentra spectabilis*, *Dentzia gracilis*, *Spirea arneus*, *Lilium longiflorum*, not forgetting *Sedum spectabile*, already mentioned. Of herbaceous *Spireas*, *Dicentra*, etc., crowd the pot full of roots. The more shoots the more bloom. Give the potted plants entire repose and no water, or only a trifle, after they are placed in the cellar—which may be done any time before the ground freezes. I never think it worth while to disturb this kind of

stock before mid-winter. Then bring to the living room such as you desire to bloom at once, reserving some for a succession of flowers. This kind of gardening has great advantages. You give place to the plants only while the growth is very rapid and the bloom abundant. Then they may be taken to the cellar with impunity, to await the spring planting. Any of our shrubs that form their buds in autumn might be taken and thus forced, if they were not too large for window-gardening. I have seen branches of white lilac placed in water producing very good bloom.

## NEW AND CHOICE FUCHSIAS.

THE following new varieties have been tested this year by George W. Park, of Mount Vernon, O., and his report is as follows:

**Charming.**—This Fuchsia is well named, as it is one of the finest we have ever seen. It is a free grower, with thrifty green foliage and red stems and petioles. The flowers are *very* large, rather slender in form. Corolla violet, sepals crimson, about half reflexed; they are borne profusely. This Fuchsia was imported last spring by Mr. John Dick, of Philadelphia, who favored us with the beautiful plant now in our possession. We would place it at the head of the list of choice Fuchsias.

**Lord Beaconsfield.**—This is a superb variety, very thrifty in growth, with massive foliage and flowers of immense size, often three inches or more in length; color, deep pink corolla, with like tube and sepals. The flowers are of great substance, and consequently not as graceful in form as those of some other varieties.

**Gem.**—This is one of the finest, a good grower, with very large *double* flowers. Corolla very full, royal purple; sepals broad, about half recurved, and of a bright crimson color.

**Lucy Finis.**—A very slow grower, delicate, and, so far as our experience goes, could not be recommended for general cultivation. Perhaps some of our readers have a better opinion of it; if so, they can report.

**Polyhymnia.**—This, too, is rather delicate in growth, and the foliage will not endure the hot sun very well. The flowers are of ordinary size, with pink corolla and light-colored sepals.

**Lord Byron.**—This promises to be a desirable Fuchsia. It is a slow grower, with stubby branches, dark, reddish foliage, and medium-sized flowers, which are borne upright on the stem. The corolla is purple, sepals deep red.

**Golden Eagle.**—A beautiful variety with golden foliage, and quite thrifty. Flowers a trifle larger than those of Lord Byron, with purple corolla and bright red sepals, well recurved.

**Meteor.**—This is a rare variety, but one of the finest for a trellis. The growth is vigorous, and the foliage of a bright red color and very showy. The flowers are double, corolla reddish purple, sepals crimson. But a plant with such showy and beautiful foliage does not need to bloom to make it attractive or desirable. We have often wondered why this variety is not more popular.

**Sunray.**—This is also a fancy foliage variety.

The colors, yellow, red, and green, are nicely blended, making the plant attractive as well as beautiful. Flowers rather small, with sepals well recurved, colors purple and pink. If this Fuchsia was of more rapid growth it would be quite popular.

**Joan de Arc.**—A fine Fuchsia, free grower and bloomer, flowers medium, corolla white, sepals red. One of the best of the white varieties.

## AMARYLLIS FROM SEED.

SHORTLY after blooming this summer a white Amaryllis gave indications of seed-pods; curious to know if the plant would perfect seed, they were allowed to grow and soon became so large that the stalk was unable to support their weight. One after another was taken off until but one pod remained.

This continued to grow until it was as large as a pear and about the same shape. The stalk was carefully staked up, that it might not break under the weight, and every one waited with interest to see what would come of this curious growth. One morning after a heavy rain the pod was found to be broken open and two seeds lay upon the ground and several others remained in their places. The following day all had fallen, greatly to the disappointment of the owner.

The seeds were as large as a horse-chestnut and of the same shape. In color they were of a pale green, which faded to a grayish tint. Supposing the pod to have been broken by the storm before the seeds had ripened, they were taken into the house as curiosities and laid away; for several days they remained unnoticed, when one morning one of the seeds was discovered to have sprouted, greatly to the surprise of my friend, who immediately conceived hopes of the rest. She distributed the seeds at once among her friends, and two of them were given to me.

When I received them one had a sprout two inches long, while the other one was beginning to swell.

I planted them at once in rich soil, leaving the seed about half exposed to the sun. That was two weeks ago, and there is a tiny green leaf about an inch long growing from each seed.

The bulb which produced these seeds threw up a flower-stalk with seven buds. The blossoms were very large and pure white, with a line of pink upon each one.

**Buckwheat as a Window-Plant.**—A window-gardener has tried the experiment of using Buckwheat Plants in his window-boxes. Growing two and a half feet high, it produces a handsome and odd appearance amid the other window-plants, of Colens, Geraniums, and Cannas.

**Cure for the Mealy-Bug on Plants.**—An English gardener desiring to preserve his plants and destroy the mealy-bug, thought of a trial of a dose of *strong Scotch whiskey*. Applying it, he found it to be most effectual. He worked it in among the leaves, fruits, and flowers with a brush made of a few feathers. It killed the vermin at once.

## Floral Correspondence.

### QUESTIONS ANSWERED.

YOU are so kind in replying to questions that I have made up my mind to ask you several. You can reply through the CABINET, that most charming paper, for I must have it next year. I can't do without it.

Just eighteen months ago I began to collect a few house-plants. I had had a great sorrow, and found my before happy home so sad and desolate that I thought a few plants would give me something to do, and brighten our home in the coming winter. I was as ignorant as any child, and I think almost all persons make mistakes when they begin to cultivate flowers. Some of my mistakes were of the most common kind. I began by putting cuttings in the largest jars I could find. My Geraniums did very well all summer, if simply growing had been all, but I had no bloom. I read an account of killing green lice and mealy-bugs with tobacco-smoke, by throwing a paper over the plant, and holding the burning tobacco under it. I lost several fine plants by trying this—the heat to produce enough smoke killing my foliage each time. I think it better to follow the advice of one of your correspondents, and put them in a closet or small room, where the heat will not be so near the plant. I have found that diluted alcohol will kill mealy-bugs, and aloes-water will rid you of both green lice and mealy-bugs. Lime-water kills all angle-worms, and there is no danger to roots of the plants.

I see in a book recently published, by Rev. Edwin A. Johnson, he says he would never think of attempting to have a Poinsettia. I can't see why; they grow tall and are out of the way of other plants, and they are beautifully bright all winter. I have two of my own propagation, and I never saw more brilliant or larger bracts. But I owe their beauty to the CABINET. The first number I ever saw was the November number of 1877, and in that there was a short article in which a lady complained of failure, but said a florist had kindly told her that the use of liquid manure would produce large and brilliant bracts; so all last summer I gave mine just what liquid manure they would take, every other day, and the result is more than satisfactory.

My window-garden is very bright now, the Poinsettia at the top; then I have two *Justicia superba* just covered with the beautiful velvety purple blooms; then come Geraniums on each side, all in full bloom now, and my *Browallias* are little gems. I wish every one would try *Browallia* for winter. It will not do to send to a florist in the fall for it. Sow the seed next spring, and take cuttings in August. Keep all the buds pinched off (for it will want to bloom at an inch high), and it will give you hundreds of blooms in winter. My *Lantanas* bloom beautifully, but some object to the perfume. *Bouvardias* are generally considered too much of a hot-house plant for amateurs, but, after getting them started, they bloom beautifully for me. I have one now in bloom with ten large clusters of buds in different stages of development. I put it as near the top of

the window as possible. Give it warm water in the saucer, and liquid manure twice each week.

Now for my questions. How must I treat *Fuchsias*, after receiving them by mail? I lose almost all. I have used small pots, covered them with a sash in a large box, and still they die. Please tell me how to treat *Japonicas*—I mean *Camellias*? Mine bud well, but drop the buds. What book on floriculture gives directions for their treatment? How can I make a fine *Eucharis Amazonica* bloom? At what time in the year should they bloom? Mine is in perfect health, and is a splendid-looking plant, but it will not bloom.

Do *Pelargoniums*, like *Geraniums*, require to be root-bound to bloom well? I have a very large one growing in a jar, made in imitation of a stump; it will hold four or five gallons. Last spring it did not bloom at all. It is now five feet high and very large around. Should I repot it, or cut it back now, or is it too late to do this? I am afraid it will not bloom next spring. Does *Mignonette* require a very strong sunlight to bloom? Will you please to get some of the wise ones to tell us what plants can do without sun, what do best with east, south, and west exposure? If some one would tell us just what to put on the top shelf, then on the next, and next, to the bottom; and what plants can sit a little way from the window, and behave well and bloom. I am sure I would treasure such a list among my valuables. The arrangement of my plants gives me much trouble. Please tell me why it is that I can have no *Heliotropes* to bloom? Is there any particular food or treatment necessary?

Please reply to my questions as early as possible, and greatly oblige,  
Very respectfully,  
MRS. M. M. COOKE.

PRATTVILLE, ALA.

ANSWER.—*Fuchsias* require a good deal of care and a knowledge of their peculiar needs. They are rich feeders and grow vigorously, wanting abundant room for their roots. The best soil for them is leaf-mould, with a little sand added. Yours have been probably kept too warm and close. They need plenty of air and light, but not too much direct sunlight. Tie up the main branch to a standard and train the plant in good shape by pinching off the tip of the branches when inclined to grow too much to one side. If in small pots see that they do not become root bound. Set them upon your lower shelves, and shade a little with the foliage of other plants.

Your complaint of your *Camellia* is a common one. The buds drop easily if they have too much or too little water, or are subjected to sudden changes of temperature. A northeastern exposure is good, as it gives only the morning sun. Soil, peat and leaf-mould, temperature 40° to 50°, with frequent washing of the leaves with dewy spray every morning; it does not require frequent watering except when in bloom. Give warm water.

*Pelargoniums* require repotting every spring.

*Mignonette* does not require very strong sunlight; but it will bear it well in open ground, but not in pots.

Give your *Heliotropes* plenty of sunlight, and in winter let them occupy a high shelf in your window,

as they stand 50° very well. In this month trim off many of its branches, and the new growth will push up rapidly and give you plenty of winter flowers. Sponge the leaves frequently and give it rich soil with a little sand. The information you need is found in *Window Gardening*, a book published by the editor of the CABINET.

### SCHOOL-GARDENS.

*Vick's Illustrated Magazine* for August has a very interesting article on School-Gardens. We have always been advocates of gardens for children; not gardens which they might call theirs, and from which they could gather the flowers and fruit only by permission, but such as they could tend and cultivate with their own hands, and the produce of which should be their "very own," so that they might do what they pleased with it. It is in this way that the child will learn to love the work for its own sake, and to teach a child to love nature is to bestow upon him an inestimable gift which nothing can take away, the cheer of which no calamity can darken, and which will grow more precious as the years go by.

The plan of school-gardens commends itself in every respect to the approval of thinking minds. The cultivation of the soil is the most healthful occupation for children in the world. The open air, the sunshine, in itself the best of medicines, the scent of the upturned earth, are all life-giving, and when to these is added moderate but active exercise we have the very best prescription for the establishment of a strong constitution.

Doubtless there would be some difficulties about the first establishment of school-gardens, but none that could not speedily be overcome, for "where there is a will there is a way." In our Western towns the experiment might be fairly tried, where ground is plenty and new ideas take root as easily as vegetation.

The plat for the garden should be, of course, first thoroughly prepared and laid out before the children are allowed to take part in the work; but they can be taught to plant and to work the ground in a very short time, and it would be easy to excite a spirit of emulation by a system of marks or prizes. The garden might be made of assistance in the study of botany, of chemistry, while the practical knowledge of the work itself would be invaluable.

It is not necessary that the expense should at first be great for plants. Wild-flowers could be sought and transplanted, seeds could often be gathered from the home gardens, and parents would readily contribute to the general stock, while no small benefit of the arrangement would be the turning of the small streams of pocket-money into a safe and healthful channel. The children would soon learn to prefer, if their interest were fully aroused, the sweets of the florist to those of the confectioner, greatly to the benefit of their health.

Wherever school-farms have been established in Europe, on quite a large scale, they have been found a success, and why should not gardens be in this country? We hope that the matter will be pushed with vigor, and that before many years have passed every school-house in America will have its school-garden.

## Floral Hints.

## OUR NATIVE ORCHIDS.

In calling attention to the beauty of our native orchids and their ease of culture you do worthy service, as we seldom see their culture tried, although their beauty excels many of the much-praised exotics. As I have been fairly successful in the culture of some the species, I give my mode of treatment, hoping it may induce others to try them and succeed with some of the following.

**POGONIA OPHIOGLOSSOIDES.**—This is generally found growing in moist locations, the thick fibrous roots being most luxuriant when growing in good live sphagnum, situated so that it is neither too wet nor too dry. In growing this beautiful plant I found it to succeed best in half-decayed sphagnum, mixed with charcoal to keep it sweet. When in flower they should not have any approach to dryness, and the atmosphere of the house should not be very dry, or else red spider is sure to attack the foliage, which greatly mars the following year's growth and flower.

**ARETHUSA BULBOSA.**—The flowers of this fine orchid appear before the leaves. They are of a bright rose-purple, varying in the shade of color according to the position and location in which the plant is growing. It is much rarer than the Pogonia, but I have met with it in some particular localities in considerable quantities. In cultivation it requires the same treatment as the Pogonia. Care must be taken to get the leaf as well matured as possible. Coming as it does after the flower, the leaf is apt to be neglected. A good out-door position for growing these orchids is a shady, moist spot, having a northern exposure—using for soil a mixture of muck and sphagnum. During winter, the bed in which they are growing is better to be protected with some rough mulch, for it appears that when taken from their moist home and placed in higher ground they lose their extremely hardy nature. Upon no consideration, however, treat them as being tender plants, or failure is sure to result in their culture.

**LADY'S SLIPPER.**—The different kinds of *Cypripedium* found wild throughout the country are remarkably pretty. *C. spectabile* has scarcely a rival in the long list of species in this family. It is found wild in bogs throughout the Northern States, and succeeds well in cultivation. It requires a soil composed of good fibrous peat, and, when sending up its flower-spike, plenty of moisture. I have found it do well when treated as a greenhouse plant by withholding water

when at rest, but giving sufficient to keep the roots in a healthy condition. *C. acaule* requires a rather shady position, and succeeds in a soil composed of fibrous loam and good fresh leaf-mould.

All our different kinds of native orchids, as well as many more of our native plants, are too much neglected; for beautiful as they are in a wild state, how much more so are they when well cared for under cultivation!—M. MILTON, in *Country Gentleman*.

*Celosia superba plumosa* is one of the most graceful varieties in cultivation. I first saw it in a collection of James Vick's, and was struck with the graceful habit and bright color which it possessed. It is equally adapted for out-door and pot-culture, being suitable for cutting for bouquets, either mixed with other flowers or in a vase alone. *C. cristata* is the Cockseomb, of which there are several varieties, some of which are tall, some dwarf, and of bright crimson, yellow, violet, and variegated colors. These dwarf kinds make excellent edges for beds.

## To Utilize old Fruit-Cans.—

The *Scientific American* publishes a plan which looks as though it might reduce the chances that the earth's surface will shortly be covered with old tin cans in a battered but not useless condition. The can is pierced with one or more pin-holes, and then sunk in the earth near the roots of the strawberry or tomato or other plants. The pin-holes are to be of such size that when the can is filled with water the fluid can only escape into the ground very slowly. Thus, a quart can, properly arranged, will extend its irrigation to the plant through a period of several days; the can is then refilled. Practical trials of this method of irrigation leave no doubt of its success. Plants thus watered flourish and yield the most bounteous returns through the longest droughts. In all warm localities, where water is scarce, the planting of old fruit-cans, as here indicated, will be found profitable as a regular gardening operation.

**Euphorbia Marginata.**—This is a beautiful-leafed, half-hardy annual, very showy for the herbaceous border, or for edging a bed containing large growing plants, such as Cannas. It grows about two feet high.—M. Milton, in *Cultivator and Country Gentleman*.

**Soot for Roses.**—Collect some soot from a chimney or stove where wood is used for fuel, put into an old pitcher, and pour hot water upon it. When cool, use it to water your plants every few days. The effect upon plants is wonderful in producing a rapid growth of thrifty shoots, with large thick leaves and numbers of richly-tinted roses.

**Lygodium Scandens.**—This pretty climbing fern is hardy under somewhat sheltered circumstances. This and the American climbing Fern, *Lygodium palmatum*, are the most beautiful under culture. There are few things more interesting than a fern garden. Any one who has a partially shady place, or a small piece of woods, even a group of half-dozen trees, may have one.

**Celosia**—For pot-culture, as well as for planting out-doors, the feathery *Celosia* and the crested or cockseomb are magnificent plants. The seeds being very small, care should be taken in sowing them, that they are not too deeply buried or watered too much when the plants are small, as they are apt to damp off. As soon as large enough to handle, transplant them into other pots. Keep shaded for a few days and give air when convenient, to prevent damping. They require a light, rich soil to insure a quick growth, and, although impatient in a stagnant soil, they require an abundance of water. I think

## The Flower-Garden.

### RURAL HINTS.

**Two Neglected Annuals.**—We noticed a garden where a good display had been obtained this season at little expense. The flowers grown last year grew up again from self-sown seeds, as they often will in this climate, and the owners merely cut out the surplus, leaving clumps at convenient spaces to increase and bloom. There were many gorgeous masses of Snapdragons (*Antirrhinum*), Phloxes, Petunias, and other flowers. We noticed *Phacelia congesta*, which is one of our common wild flowers in the bay counties, and which in masses produces a good effect with its lilac and hairy clusters, which uncoil as they bloom. We also saw the so-called shell-flower, a native of the Molucca Islands, each brown flower being set in the middle of a shield-like cup of veined green, which gives the plant its name. This was, if we remember rightly, distributed by the *Rural New Yorker* as a premium some years ago. Its culture is extremely easy.

**Sweet Williams.**—A writer to Mr. Vick says that his favorite flower is the *Sweet William*. "No one who has not tried it knows the perfection to which the *Sweet William* can be grown. I have had heads of flowers this season more than *seven inches* across—perfect masses of almost perfectly globular flowers. I sow the seeds as soon as they become ripe, selecting only a few from the very choicest flowers. As these seeds must be sown late, it is necessary to shade and water them until the plants appear above ground and, in fact, get strong. Then I transplant them into the bed and furnish a little protection during the winter, a little straw or cedar boughs. I have some fine double kinds, but like the single best, because the markings are so beautiful, while those contrasts of color are lost in the double kinds."

**Deutzia Gracilis.**—This beautiful little shrub, says the *Country Gentleman*, has now become widely cultivated, but there is one use to which it may be applied where it will produce a fine effect, namely, as an edging for large beds of low shrubbery. Plant the *Deutzia* in a compact line, and when well established cut it back to within six or eight inches of the ground, so that it may present an even surface at the top, and after it has made some growth pinch off the tips of any shoots pushing above the

rest. This treatment will not only keep it in good shape, but increase the abundance of its snow-white flowers. At other times of the year, when not in bloom, it will still present a neat appearance.

**A Brilliant Rhododendron.**—The *Irish Gardeners' Record* describes a plant of *R. altacrerense*

DESIGN FOR SUBURBAN VILLA.

twenty feet high, and the mass twenty-five feet in diameter at the base where the branches rest on the grass, and larger above. It was stated to be "a mass

DESIGN FOR STONE MANSION.

of flowers from bottom to top on all sides." Another, standing near it, about two-thirds its size, appeared at a short distance to be an unbroken mass of crimson, and bore at least one thousand trusses of bloom.

**Moss in Lawns.**—The best and most economical method to get rid of moss in lawns is to rake whenever the ground is bare in winter. Even when the ground is frozen the moss is readily torn up. After the moss is removed give a topdressing of finely-rotted barnyard manure, and early in spring sow on a liberal quantity of blue-grass seed and a little white clover. Then roll with a heavy roller and not mow in spring until the young grass has become well established. One drop of sulphuric acid in the heart of a plantain or other weed will destroy it completely. Care must be exercised in its use.

**A Pretty Garden.**—A lady in Columbus, Ohio, has a garden this summer with over four thousand plants in bloom. Last year she received seventy-two dollars in premiums for her flowers, all grown from seed. Among her successes are the following: Balsam Plants two inches in diameter near the ground, and nearly three feet high, one mass of bloom; Hollyhocks, every plant double flowers, the largest and most double ever seen, all white, and "perfect beauties." Zinnias as large as Dahlias.

### Androstephium Violaceum.

When preparing the chapter to accompany the plate of this rare species for "The Flowers and Ferns of the United States" it was supposed this beautiful Southwestern bulb was not yet under culture. It may not be to any great extent; but we see it offered among others in the spring bulb catalogue of Messrs. J. M. Thorburn & Co. It is pleasant to note that it is no longer necessary for those who desire to get American plants to have to go to Europe for them.

**Tuberose.**—"This is a good way to start tuberose. I plant them," says a correspondent of *Vick's Floral Guide*, "in old tomato-cans, without punching any holes for drainage, set them on the mantel over the kitchen range, and keep warm and wet. When well started I move them to a cooler place, and, at the proper time, set them out in the garden. In this way I have raised during the past two years vigorous plants, yielding from twenty to thirty-five blossoms each."

### To Kill Burdocks and other Weeds.

Pour kerosene or coal-oil upon them. First cut off the tops close to the ground, and then pour a few drops of the coal-oil immediately on the crown. Do so to every weed in your lawn and you will be surprised at the success of your new weed remedy.

## The Garden.

## NEWEST AND BEST GERANIUMS.

MR. GEORGE W. PARK, of Mount Vernon, O., reports his success as follows with the new Geraniums, and gives his choice of the best:

*Dr. Denny.*—This variety was advertised the past spring as a blue geranium. It has bloomed with us, and is a magnificent variety, though the best we could say of the color is that it is *bluish crimson*. The flowers are as large as those of any geranium we have ever seen, while they are borne in immense heads and open beautifully. The plant is thrifty and of rapid growth, a free bloomer, and we believe will be able to withstand the sun's rays, and thus prove a most valuable bedding plant. So far as our experience goes, we would pronounce this a first-class geranium in every respect.

*New Life.*—This Geranium, which was so loudly praised in the spring, and which met with such an immense sale, has not proved as satisfactory with us as we expected. It is dwarf in habit, a very slow grower, with rather small, brownish leaves when exposed to the sun, and producing its flowers sparingly. The flowers are single, of medium size, rather full, cup-shaped, and variegated crimson and white, very much resembling the *Radowitzii* Phlox. It is valuable as a novelty in variegation, but for a showy pot-plant or for bedding purposes we do not think it will become popular. If the plant was even a free bloomer it would not make an attractive bed, on account of the variegation of its foliage. For bedding we prefer a geranium with plain green foliage, as the flowers contrast nicer and the beds appear to better advantage.

*Bishop Wood.*—This is a double scarlet geranium, and a most profuse bloomer. The heads are large, the flowers brilliant, and the plant a free grower, with large, bright green foliage. We believe this is destined to become a popular bedding variety.

*Bishop Simpson.*—A variety with large, single, brick-colored flowers in handsome clusters. Foliage very large and fine, and promises well as a bedding plant.

*Mme. Amelia Baltet.*—The best double white Geranium, retaining its pure white color and fine shape, while other white varieties are white on opening but soon become suffused with pink. A free grower, and very pretty. The flowers are particularly valuable for cutting.

*Sir Robert Napier.*—After a trial of all, or nearly all, the tricolor Geraniums, we unhesitatingly pronounce this the finest and most desirable variety in cultivation. The colors are very distinct, the scarlet, which constitutes a large part of the color in the zone, being of the most brilliant hue and delicate texture. Like all other tricolors, it is a very slow grower, and should have an occasional watering with some good liquid fertilizer to promote a more rapid growth. The flowers of this Geranium are of no particular value, the foliage being so pretty that the flower only detracts from its beauty; it is therefore best to remove the buds as soon as they appear. The plants appear best when subjected to the sun's

rays for at least half the day—the forenoon being the best. Mrs. Pollock, Lady Cullum, Sophia Dumasque, and others do not begin to compare with this variety for brilliancy and beauty.

## THE BITTER-SWEET.

NATURE has denied the Bitter-sweet the bloom and fragrance which are the ruling charm of so many of its fellow-climbers. But she has made it their equal as a decorative plant, by the rich, green shelter of its leafy mantle and its sturdy stretch of vine. With naught else, it is fit to deck and shield alike the humblest and the most ambitious home. Flowers and perfume are fleeting, but the rich foliage of the Bitter-sweet holds against the scorching sun a dense and spreading growth of brightest green, outlasting the breath and tinge of flowers.

But the signal glory of the plant, compassing the year, is the clusters of its berries. From the size and tinge of tiny grapes till the early frost strips the wrap of white and gold from its coral fruitage, the plant at every step puts on new and changeful features; each gain toward ripeness brings a dainty store for tasteful decoration.

First, following its modest bloom, come little globes of lively green. These soon swell and change their tint to a greenish bronze. A little further toward the chilly nights of early frost slender gaps in those tawny globes reveal the white wrap, hiding the flashing glint of its ripening seeds. Those opening slowly, widening more and more, unmask the glorious store within of a fiery fruitage. By and by, as the early frost thins and brightens its foliage to a tenderer tint, the Bitter-sweet bears to Autumn a blazing crown of clustering coral clasped in cups of gold.

This fruitage of our climber, plucked and stored at each stage of this advance, yields a wondrous harvest for adornment. For every place and posture becoming winter bouquets and unfading garlands it furnishes unrivalled aptness and grace; and its little green clusters, laid by to dry while they still hide and tightly clasp their treasure, or when first the fiery glint of gold and scarlet flash from their opening screen, or garnered after the frosts from its still unfallen and tender-tufted leaves, uncovers its blazing store to the full sunlight, the Bitter-sweet, at each phase, offers no end of help to decorative taste. No outcome of the seasons in fruit, leaf, or blossom so brightens the home, so helps out the dearth of flowers or faces the wintry gloom with such blazing fireside tint and cheer. Wreathed into evergreen festoons, tufted amongst them and other bright seed-pods and berries, or with them and autumnal leaves, dried ferns, grasses, and the feathery seed-whorls of the wild white Clematis, fringing and crowning the mirror, gaily bordering the paintings on the wall, or grouped with them and living plants in vase or hanging basket, the Bitter-sweet beyond any bloom or growth of the year helps in the welcome of the holidays, and keeps up brightness and cheer in the household till the longed-for coming of the flowers.

One of the loveliest lessons I have ever seen in Nature's handling of color and tasteful planting was our climber, belting the wealth of its glowing harvest

over a group of New England cedars. On a bright, dewy morning of early Autumn, beside a little rest in the climb of a hilly country road, I came upon a group of some half-dozen well-grown, thrifty, young cedars. They stood in easy distinctness around one of stouter form and taller spire. Every branch drooped with rich, full verdure, and a store of berries for the winter-tarrying birds. Around this group thus arranged, circling from one to another, and up the central pinnacle, wound and festooned a vigorous Bitter-sweet vine. Its tender, frost-tinged foliage, with the bright clusters of blazing berries drooping from every tendril, hung out distinctly from the dark background of those cedars.

To emphasize this tasteful array of color the frost-tinged crimson drapery of a climbing Sumach threaded and girt a couple of the furthest cedars, and stretched its gay streamers up that central spire. So perfect was the grace and coloring of this group that it seemed the result of art rather than nature.

This woodland picture teaches to the heedful new uses for the Bitter-sweet and its like. For example, imagine added to the pencilling of this group the golden foliage of the Japanese Honeysuckle, delicately robing one of the cedars and threading its way among the crimson garlands of that central spire. These are but hints. The chances for like effects are in finite.—W. H. NOBLE, in *Gardener's Monthly*.

## THE CALIFORNIA LILIES.

THE California *Horticulturist* thus speaks of the native Lilies: "The mountain children whom one meets on their way to school these July mornings load themselves down with what they call 'Tiger Lilies,' or, in other words, *Lilium Humboldtii*, whose spires flash out with wonderful brilliancy around the bases of volcanic rocks, or near shattered ledges, or on the hard red clay of the hillsides. One of our authors, who studies with loving and analytic mind the colors and sounds and meanings of the Sierra woods, has called it 'earnolian-hued,' with its orange and amber ground, veined with black. In favorable places we have found lily-stems as tall as a man. The bulbs are deep down, and not easily dug out. Some insect bores into and ruins many a choice bud. This Lily loves company, being always found in groups. Where you see one yellow flash you may be sure there are others near. After blossoming time is over the stalks disappear very quickly. By following up the long ridges blossoms may be found in perfection for several months. The same is true of the lovely white Lily, *L. Washingtonianum*. Both species are in perfection in Nevada County."

## TWO SUCCESSFUL GIRLS.

A COUPLE of good, smart girls at Farwell, Michigan, are apiarists engaged in bee-keeping. They have *fifty swarms of bees*, and have sent recently to market *eleven thousand pounds* of honey, worth \$3,000. Here is a new employment for many girls, who could make a good living in this business.

# THE ROBBINS FAMILY WASHER AND BLEACHER AGENTS WANTED.

In bringing this article before the public it becomes necessary to take into consideration

**THE ART OF CLEANSING FABRICS,** which is yet so imperfectly understood. Having had a lifelong experience in the laundry business, in connection with first-class hotels, public laundries, asylums, hospitals, etc., we know whereof we speak. The numerous devices of friction-rollers, pounders, squeezers, masbers, agitators, steam wash-boilers, etc., have all failed in one or more of the three essential points—namely, the saving of labor, wear and tear of clothes, or in perfectly extracting the dirt and discoloration—all of which are accomplished by the **ROBBINS FAMILY WASHER AND BLEACHER.**

**WHAT IS IT REMOVES THE DIRT?** You may ask washerwomen and housekeepers, and your answer from nine out of ten will be, "Plenty of elbow-grease," or, in other words, laborious rubbing upon the washboard. And such is the case, for you first rub soap upon the cloth and then you have to rub it in to make the dirt soluble. But does that remove it? No; to do that you must dip it in the water and rub repeatedly to force water through the fabric again and again. That is what removes dirt after having been softened by the chemical action of the soap.

The way in which this could be most economically accomplished has been developed in the **FAMILY WASHER AND BLEACHER**, which embodies all the above points.

It is harder work to operate these mechanical devices than to use the common washboard. They are constantly getting out of order, and wear out in a short time. They wear out clothes faster than the rubbing-board, because the friction is a hundred per cent. greater.

Mechanical devices take the entire time of a person during the whole wash, and will not remove streaks from the clothes. With the Washer and Bleacher, washing, baking, and housework are contemporaneous operations, the fire doing the washing and baking while the housewife does her housework.

All who have tried steam wash-boilers will unite with us in saying they do not give satisfaction.

**WE WILL EXPLAIN WHY.** As stated, water-force is what removes dirt from the fibres of the cloth. A large body of water is required to hold in solution a comparatively small amount of dirt. Steam wash-boilers cannot accomplish the desired result. They do not contain enough water to hold the dirt in solution. While steam will not remove dirt, it is a powerful agent to assist in cleansing because it expands the fabric and causes the discharge of dirt and impurities from the cloth that cannot be forced out in any other way unless by the application of heat and force of water combined.

In order to remove the dirt from steamed clothes they must be washed out in water at nearly boiling heat; for if you use water at a lower temperature it causes the fabric to contract, which "sets the dirt," thus causing the clothes to turn yellow. An essential thing to be mentioned is the rotting of clothes by steam wash-boilers, because of the small quantity of water used.

Everybody knows that a large quantity of soap dissolved in a small body of water must necessarily form an exceedingly strong alkali, which, after the clothes are packed in the steam wash-boiler, is converted into steam, every moment becoming more concentrated until the clothes are removed. A few such washings, and what is the result? Simply this: Your clothes fall to pieces of their own weight, and you pronounce steam wash-boilers, as they are, a failure.

**THE PRINCIPLE OF THE WASHER AND BLEACHER**

embodies all the essential points. First, we have the desired heat, which expands the fabric and causes it to discharge the dirt. Second, we obtain a powerful suction beneath the clothes, which produces a rapid downward current or water-course through and through them, thereby removing the dirt. Third, we use a large body of water, which holds the dirt in solution. Fourth, we use but a small quantity of soap. Fifth, the washing is done by water, and not by steam. This process cannot injure fabrics. It cleanses

thoroughly, rinsing the clothes being all that is required to complete the operation.

**THE CAPACITY OF THE WASHER AND BLEACHER.**

There are three sizes: No. 1, the family size; No. 2, suitable for small hotels, restaurants, barber-shops, boarding-houses, etc.; No. 3, or steam-power washer, into which is conducted, through a 3/4-inch pipe, live steam from the steam-boiler from which is obtained the power for driving the water. This washer takes the place of machinery in places where steam-power is used in the laundries.

The washer is composed of metal, and cannot get out of order.

The family size weighs about five pounds, and is only 8 inches long by 5 inches wide, and 1 1/4 inches deep.

The discharge-pipe is 13 inches high over that, and is 1 1/2 inches in diameter. It throws water in a solid, unbroken stream at the rate of ten to twelve gallons per minute. It will work in any family boiler. It takes only three or four ounces of soap to ten or twelve gallons of water, and will wash bed and table linen, a boiler-full in ten to fifteen minutes; wearing apparel in from twenty to thirty minutes; and will remove streaks without rubbing; requires no previous preparation of the clothes, such as soaking over-night. We take the clothes dry, and when the washer gets thoroughly at work we fill the boiler as full as it will hold by gently pressing them down with a stick. We use no chemicals, only good soap and soft water. If the water is hard it may be softened by a small piece of borax, which is harmless.

For LACE CURTAINS this Washer is invaluable. It cleanses them as no other process can, and without the slightest danger of injury.

The No. 2, or small hotel size, will do the work in a boiler four times the size of a common family boiler, and wash of average pieces from 1,500 to 2,000 per day; or it may be used in any smaller boiler. They will work in anything that has a flat bottom large enough for them to rest upon.

For hospitals this Washer is pronounced by the medical faculty invaluable, being the most powerful disinfectant known, leaving the fabric as pure as when new. By engineers, mechanics, and scientific men generally it is pronounced one of the most wonderful discoveries in the principle of hydraulics or water-force ever brought to light. By bleachers and chemists it is said to be the most powerful method of removing dirt and vegetable matter from fabrics ever known. It is the greatest bleacher extant, and for that alone is worth ten times the price.

**THE PHILOSOPHY OF THE WASHER AND BLEACHER** is this: We have five pounds of metal, which attains a much greater degree of heat than the water surrounding it; consequently the water underneath the Washer becomes hotter and more expansive than in any other part of the boiler, and is thereby thrown to the surface through the tube, thus tending to produce a vacuum underneath the Washer at the bottom of the boiler, into which the water is rapidly drawn. As it passes along the channels of the Washer the curved and contracted throats of the same prevent its flowing backward, and, being held in contact with the hot metal, it becomes hotter and hotter, consequently more expansive and more forcible, until thrown to the surface, thus producing a powerful suction beneath the clothes, through which the water must pass in a rapid downward current, thereby obtaining a water force which cannot be obtained by any other method known in cleaning fabrics. Thus we get a combination: first, we have the desired heat; second, perfect chemical action of the soap; third, force of water—all of which are required to thoroughly cleanse and purify any fabric.

**THE IMPROVED WASHER.** The improved Washer has a perfect-fitting pipe, and is a combination of metals which does not become sticky or dirty. It comes out of the boiler as bright as new.

**A WORD ABOUT BLEACHING.** There are few professional bleachers in the United States. The word "bleaching" implies the art of extracting vegetable or animal matter or discoloration from the various fibres which constitute all our different fabrics. This is done by a regular chemical process, consisting, first,

of alkaline boilings; second, immersions in solutions of chloride of lime; third, solutions of acids. After each process the goods receive a thorough rinsing in clear water; then, last of all processes, to thoroughly extract all injurious matter, comes that of boiling in good soap and water. This leaves the goods pure and white as snow, ready to finish for the market. Now the question arises, Can those fabrics again absorb and fix all their natural discoloration? We answer, No; impossible. Then, why is it (asks the housewife) my clothes become yellow and discolored? There are many reasons—poor soap, hard water, careless servants, not having strength to rub out the dirt yourselves, and not being able to use water by hand hot enough to keep the fabric expanded to the extent which is absolutely requisite to thoroughly extract the dirt or "bleach the clothes." Clothes should never be bleached but once, but thoroughly washed, and they will always be white. **THE FAMILY WASHER AND BLEACHER** will do it for you every time.

**THE INDUCEMENTS WE OFFER.** We want a Local Agent in every town in the United States. We know from experience that reliable, energetic men can make money selling the Washer and Bleacher in any community.

We want first-class men as **GENERAL AGENTS**—men capable of managing one or more counties.

To such men we give a duly-executed **LICENSE**.

We furnish descriptive circulars for distribution among families. Also large posters for advertising in public places.

The retail price of **NO. 1 WASHER** is \$3 50; **NO. 2 WASHER**, \$5; **NO. 3, or POWER WASHER**, \$50. Special terms to agents for **No. 3 Washer**.

**TERMS TO GENERAL AGENTS.** No. 1, \$24 per dozen; No. 2, \$36 per dozen.

**SAMPLE WASHERS.**

In States east of the Missouri and Mississippi rivers, also in Kansas and Nebraska, we will deliver at your nearest railway express office, **CHARGES PREPAID**: Sample No. 1 Washer, \$3 50; Sample No. 2 Washer, \$5. We will deliver, prepaid, a No. 1 Washer in Dakota, at Bismarck or Yankton, for \$3 50; in Wyoming, at Cheyenne, for \$3 50; in Idaho, at Franklton City, for \$4 50; in Colorado, at Denver or Pueblo, for \$4; in New Mexico, at Santa Fe, for \$5; in Arizona, at Prescott, for \$3 50; in Utah, at Ogden, for \$4; in Nevada, at Virginia City, for \$5; in Louisiana, at New Orleans, for \$3 50; in Arkansas, at Little Rock, for \$3 50; in Texas, at Corsicana, for \$4 50; at Texarkana, Denison, or Sherman, for \$3 50. For the Pacific Coast, we will deliver No. 1 at San Francisco, Sacramento, Marysville, or San José, for \$4. Our reason for so doing is to induce people to investigate this matter, feeling assured that a trial will secure an agent for us.

The great saving in time, labor, and material, and the extremely low price of the Washer, bring it within the reach of all. It cannot get out of order; it does the work rapidly and well. These points commend it to every one. Send for a sample; try it; show it to your friends; get their orders, and if you wish to secure a county or town, don't delay, but let us hear from you at once. Remember the old maxim, "First come first served."

In territory where there are no agencies established, to persons desiring a Washer for their own use, we will deliver the same, **CHARGES PREPAID**, on receipt of price as stated above. You can readily determine when there is an agency established, as posters will be put up in conspicuous places and circulars distributed.

**SPECIAL NOTICE.** As to the reliability of this company, we refer you to the editor of this paper; also to the **MERCANTILE NATIONAL BANK** of this city, or to any express company in New York.

In ordering, write plainly your name, post-office, county, and State; also the name of the express office to which you wish the Washer forwarded.

Cash must accompany all orders. Remit by post-office order or registered letter, at our risk. We ensure the safe delivery of all washers ordered as above. Money may also be sent by draft on New York.

## WINTER FLOWERS

We will send, free by mail, and guarantee arrival in good condition.

8 Fine Hyacinth Bulbs for	.....\$1
or 20 Fine Tulip Bulbs for	.....\$1
or 10 Fine Tulip and 4 Hyacinths	.....\$1
or 8 Roses, Fine Winter-Blooming	.....\$1
or 4 Roses and 4 Carnations for	.....\$1
or 8 Fine Geraniums, 8 sorts, for	.....\$1
or 2 Camellias and 2 Azaleas for	.....\$1
or 8 Carnations, 8 sorts, for	.....\$1
25th Year, 400 Acres, 15 Greenhouses.	

**Everything in the Nursery line.**

10 Grape Vines, 5 sorts, for	.....\$1
25 Raspberry, 5 sorts, for	.....\$1
12 Gregg Raspberry for	.....\$1
80 Strawberry Plants, 4 sorts, for	.....\$1
20 Sharpless Strawberry for	.....\$1
10 Currants, 3 sorts, for	.....\$1

Remit by P.-O. order, draft on New York, or in registered letter. Send your address for Catalogue free.

**STORRS, HARRISON & CO.**  
Painesville, Lake Co., Ohio.

## EMBOSSED PICTURES, ETC.

10 whole sheets, worth 60 cents at retail, or some other as valuable premium, given to every annual subscriber at 50 cents. Every reader should send 3 cents for specimen copy.

TRIFET'S MONTHLY,

61 Court St., Boston, Mass.

## 59 Years in the Field!

The **Saturday Evening Post**, published in Philadelphia, Pa., is the **OLDEST LITERARY AND FAMILY PAPER** in the United States, now in its **59th YEAR**; its publishers have determined to introduce it into households in every City and Town in the U. S. and Canada. In order to do this we have concluded to present to each lady reader of this magazine **AN ELEGANT AND HIGHLY FINISHED ROLLED GOLD THIMBLE**. The regular retail price for this Thimble is \$5, and you will find by inquiry many jewelers will charge you more for the same goods.

The **Post** is a large 16 page weekly paper, elegantly printed, folded, cut and bound; regular subscription price only \$3 a year. With each Thimble we will mail a copy of the **Post**, and give you our **special club rates, with a chance for other handsome premiums**. We pray all our readers, engrave your name, and securely pack the Thimble in a beautiful, morocco covered, silk velvet lined case. **This is an unprecedented offer, from a responsible paper.** Out out the attached Premium Thimble Coupon, it costs you nothing!

### PREMIUM THIMBLE COUPON.

**Know all Men by these Presents**, that the **Saturday Evening Post** hereby agrees, on receipt of this **Premium Thimble Coupon**, together with **One Dollar**, to pay for case, shipping charges, and engraving name, to forward, all express or mail charges prepaid, and guarantee to reach its destination in **perfect order**, one of our \$5.00 Thimbles with your name elegantly engraved thereon, and securely packed in one of our **morocco covered, silk velvet lined Thimble Cases**. We further agree to send a copy of the **Post** with our **Special Club Rates**. In ordering, give number of Thimble desired, enclose this **Premium Thimble Coupon**, with one dollar, and send to

**SATURDAY EVENING POST,**  
726 Sansom Street, Philadelphia, Pa.

In no case can we send more than one Thimble to any **ONE FAMILY**, as above agreed, or more than one with each **PREMIUM COUPON**, and all orders must be accompanied by the **PREMIUM COUPON**, that we may know you are entitled to the benefit of this offer. We have taken this **NOVEL AND LIBERAL** manner of introducing the **Post** in new homes, expecting to soon increase our circulation **TEN-FOLD**, as already many who have received the Thimble have shown their appreciation of it by **BEAUTIFUL A GIFT** by sending us **LARGE CLUBS FOR THE "POST"**.

As to our reliability, it is sufficient to say that the **Post** has been published for the past **59 YEARS, AND NEVER MISSED AN ISSUE**. When you order, give instructions how you wish your name engraved; we will engrave name in full, initials or Christian name, as desired; also give number of Thimble you want. (Almost all Thimbles are numbered on the side—find one that fits you, and order the same number you find on it). We'll send your name plainly.

**SATURDAY EVENING POST,**  
No. 726 Sansom Street, Philadelphia, Pa.

**Address** **BISSELL MFG CO., 50 Barclay St., New York.**  
(AT ALL TIMES WHEN YOU ORDER OR WRITE MENTION THIS PAPER.)

It is impossible to remain long sick when Hop Bitters are used, so perfect are they in their operation. For weakness and general debility, and as a preventive and cure for fever and ague, nothing equals them.

# USE HOP BITTERS.

Balmy sleep, good digestion, rich blood, and perfect health in Hop Bitters.

A little Hop Bitters saves big doctors' bills and long sickness. Cures drowsiness, listlessness, pains, and aches.

NEW YORK, SEPTEMBER, 1879.

## ILLUSTRATIONS OF THE MONTH.

ON page 129 is an elegant design for a Parlor Bird-cage and Stand of Plants; on page 133 several designs of cottages and villas, of which the cost of construction at the present time will be for the upper design about \$8,000, and the lower design about \$12,000. Upon page 137 is a sketch of a pretty white temple on the shores of a lake in a German park, which indicates beauty of scenery and rustic quietness. On page 141 is a sketch of the wild, rugged mountain scenery of the Sierra Nevadas in California, near the Pacific Coast.

## LETTER FROM A SUBSCRIBER.

I AM delighted with the FLORAL CABINET. Think it the most charming paper I have ever taken, and like it much better than any other of its kind. I have tried some of the experiments on my flowers that have been recommended by it, and have been delighted with my success. Our plants look lovely. We have a Tea-rose in bud, a Bouvardia, Lantanas, Geraniums, Abutilons, Begonias, and Fuchsias, all in bloom. Besides, we have about a dozen Coleuses and Begonias on a shelf in the dining-room, where they do not get a ray of sunshine, and they do splendidly. We have a very pretty bracket in the dining-room that my brother constructed of three cedar boxes, one inside of the other; the top box is six inches square and six inches deep, the others larger, all nailed on a piece of board the size of the largest box, and has supports under it the same as any other bracket, and, having a filigree back, I filled all the boxes with soil and planted vines in them—Tradescantia and other vines. They grow well, and form a

pretty object to relieve the plain wall. I have also a very pretty hanging-basket that I read of in the *Agriculturist*. Make a pan five inches deep, paint inside and out, then make three holes near the top (for the handle to go through); put the holes at equal distances apart, and make two holes in the bottom for drainage; then cover the pan with putty, being careful not to cover the holes; then take peach-pits, split them in two, clean them, and press them evenly into the putty until you have completely covered the pan on the outside; let them dry; give three coats of asphaltum varnish. The effect is very good. Just before Christmas my father brought home from the woods a remarkably handsome circular piece of moss. I determined it must be preserved, so we hunted up an old cracked basin, mended and painted, filled it with rich leaf-mould, and set the moss well upon it so as to completely cover the soil. I then planted it here and there with roots of delicate vines, making small cuts through the moss to plant them, and placed a Coleus in the centre. They flourished well, and in the summer the whole made a lovely ornament for the sitting-room, with cut flowers inserted in the moss.

H. H.

## EFFECTS OF THE PERFUME OF FLOWERS ON HEALTH.

"CONTRARY to a popular belief," says a writer in *Cassell's Magazine*, "it has been found by an Italian professor that fine vegetable perfumes exercise a positively beneficial influence on the atmosphere by converting the oxygen of the air into that powerful oxidizing and, therefore, purifying agent, ozone. The essences found by him to produce the most ozone are precisely those which usage has selected as the most invigorating, such as cherry, laurel, cloves, lavender, juniper, mint, lemon, fennel, and bergamot, several of which are ingredients in the refreshing Eau de Cologne. Anise, nutmeg, thyme, narcissus and hyacinth flowers, mignonette, heliotrope, and lilies of the valley, also develop ozone; in fact, all flowers possessing a perfume appear to do so, whereas those having none do not. This interesting intelligence will be gratifying to all lovers of flowers, and the cultivation of these lovely disinfectants of nature should be promoted in all marshy or foul places."

Every one who has a garden of flowers should endeavor to avail themselves even through the winter months of the benefits mentioned above as well as the luxury of their perfume. All who have not yet done so should be careful now to preserve the petals of the lingering roses as soon as they have passed their perfect maturity. Having done this, have ready a wide-mouthed stone china jar with a close cover. Cover the bottom of the jar thickly with rose-petals, and sprinkle with a layer of fine salt and the addition of a few drops of alcohol. Continue to add fresh layers of salt and rose-leaves alternately until the jar is very tightly packed; lay a circle of writing-paper over the mouth, and press down the cover quite tightly and tie over it a piece of prepared bladder; set it away in a cool place until the snows have buried the rose-bushes out of sight. If

you open it then some winter evening when the storm is beating fiercely outside, you will be surprised beside your glowing grate with an idyl of June.

Other flowers may be added, but it must be the blossoms only; the calyx should be carefully separated. The French mix all kinds of perfumes and add spices, but we think the scent of single flowers the most pleasant.

Heliotrope or mignonette blossoms should be thrown into melted lard, which should be kept milk-warm and closely covered for some weeks. It will then be found impregnated with the odor of the flowers, and can be strained through fine lawn into a small jar or bottle, a little proof alcohol added, and corked tightly. This process will be found worth the trouble.

## IVY IN FERNERIES.

AN English journal remarks: "It is a common thing to see in the houses of persons who do not give their minds to the matter fern-cases without ferns, or with a few deplorable bits that, we are assured, will be very fine some day, but which too evidently will become smaller and soon disappear. That the planting and managing of fern-cases is a very simple matter need not now be insisted on. It is a fact that thousands of persons start fern-cases and aquariums, only to fail in some way or other; and it is more of a moral than a scientific question as to why and how it all happens. I wish to point out to all who possess fern-cases, and can make nothing of them, that they make capital ivy-gardens, and ivies will generally live in them without any management at all, provided they have light always and water occasionally. As a matter of course, the smallest-leaved ivies should be planted, and they should be nicely trained on wires. When a case filled with small-leaved ivies is doing well it is a charming object, and much to be preferred to one occupied by two or three dying ferns."

**Worms on Honeysuckle Vines.**—Try dusting with fresh lime or hellebore powder; otherwise hand-picking is the only remedy.

## PUBLISHER'S ANNOUNCEMENTS.

The Robbins Family Washer and Bleacher, advertised in this issue, is an article of genuine merit, and should be in every household in the land. The Bissell Manufacturing Co., 50 Barclay Street, New York, are the sole manufacturers. They are well known, and our readers can rely upon fair and honest treatment from them.

THE *Saturday Evening Post* of Philadelphia is the oldest literary paper in the United States, now in its fifty-ninth year, and they are making beautiful gifts to the ladies in order to increase their circulation.

SEE page 2 of cover for Premiums to Subscribers and for Clubs. These premiums are the finest of any ever made. You will receive by them not only your paper, but in addition the full worth of the paper in flower-seeds also. Every one should accept the offers.

SUPPORTS FOR PLANTS.

EVERY ONE does not know how to make a plant-stick or how to use it. There is a great difference in the kind of wood which may be chosen. Straight-grained wood must be used. Cedar or redwood is preferable. A very sharp knife is needed. The most suitable stake for ordinary use is tapered towards both ends, but not equally. The largest part should be distant from one end one-fourth or one-fifth of the whole length of the stick. When the stick is thrust into the ground this largest part will be on the surface. In tying the plant to the stick do not pass the string about both at once, but tie it to the stick first, then tie the plant on. This will, to some extent, lessen the motion and wearing of the plant.

To make and nail together light trellises is simple and pleasant work. The possible forms vary so much that one's ingenuity may find endless exercise, and fancy of the constructive sort, which leaves visible tokens everywhere, is a very desirable thing to possess. Long, thin brads are much better than nails, and both plant-sticks and trellises need a coating of paint, which adds to their appearance and makes them last much longer. At one place we lately saw the long sprouts of fruit-trees had been woven into cheap and effective frames to support plants and trellises for vines. This was very much better than nothing.—*Cal. Horticulturist*.

[The above hints are good. Neatness is very de-

sirable, indeed it is essential, in successful gardening, and plants grow generally much better for being properly supported; but in the matter of trellises great taste is needed not to make them obtrusive, as

with the green of the leaves. Such set figures as harps, lyres, etc., made of heavy strips of wood and painted white, are an outrage upon good taste, and when the leaves have fallen their clumsy forms stand bare and staring all winter like the monuments in a country graveyard. A simple ladder trellis or lattice is much more appropriate, though sometimes grace of outline may be attained by an arch or an oval. One of the prettiest garden screens I have ever seen was a latticed one, with oval spaces at intervals the height of a door. It formed the background for a fine display of brilliant flowers, and separated the front yard from the back, being entirely covered with luxuriant climbers, the ovals presenting the appearance of elegant wreaths.

For small climbing plants in a garden bed switches of swamp willow make quite a graceful support, as they can be bent into almost any desired shape. If thrifty wood is selected, and they are well watered, the ends embedded in the earth will soon take root and the switches will sprout freely; in this case the buds must be pinched off as fast as they grow large, and in this way a frame of living green will be had which looks very pretty. It is best used for some light vine like the cypress or the *Lobelia gracilis*.—ED. CABINET.

WATER SCENERY IN GERMAN PARK.

if they were placed for ornament rather than use. To look well they require to be constructed as lightly and simply as possible, and to contrast in color

As a general rule, moisture is death to insects which infest conservatory and window plants.

## The House.

## MOTHER'S ROOM

Was ever a haven of rest and comfort to her children. Her constant effort was to make it cozy, fresh, and bright; feeling amply repaid when she knew that it was the "dearest spot on earth" to us. During the absence of any of us from home, she would take such an interest in having a surprise awaiting us in some new ornament. And what a bustle every one would be in on the day of our return, trying to make home as attractive as possible. And she had her reward; for as long they lived—even after they had pleasant homes of their own—the hearts of my brothers would turn toward home and "mother's room," feeling when they got there perfect content.

Since I had a family of my own my highest aim has been to follow in her footsteps; and I thank you, dear CABINET, and all other papers published for the same purpose, for the good influence you have exerted in helping us to utilize the beautiful things so bountifully scattered around us by a loving Father, in making our homes attractive, and thereby adding to our happiness.

But to my subject. In my efforts to render "my room" attractive to my children I always have used a few flowers; would take such out of my pit as looked prettiest, or were blooming, and set the pots on some shelves I had made across the south windows; but the heated and dry air would injure them so that in a short time they would cease to give pleasure. So a few winters ago I concluded to try the effect of glass doors in shutting them off from such hurtful influences. I set an old bookcase, with the back taken off, against a window; took out some of the shelves, filled the remaining ones with flowers, kept the front doors closed. My plants flourished beautifully, and were such a source of delight to my husband that he declared we must have a permanent arrangement, that we would feel was a part of the room itself. So for my next winter's "Christmas gift" he had the south windows made into inside bay-windows, which was an easy matter, as the chimney is built inside the house, and all that was required was to run a facing or partition across from each side of the chimney to the wall, making a kind of closet furnished with shelves and glass doors. But I assure you no closet ever gave half the pleasure that our "window conservatory" (as we call it) gives us. It had been our habit to have our blinds closed the first thing after supper; both to secure us from prying eyes outside, and because we felt a greater sense of comfort and snugness within. But we soon decided those blinds must not be closed, for we could not bear to miss the dear pleasure and delight of seeing the first morning light shining through the beautiful green, and the flowers, which seem friends and inmates of our home, in their smiling greeting serve to lift our thoughts above the cares of life.

The children hurry to get in early so they can see the beautiful tracery of the vines photographed upon the outside window-panes by the mist or frost, and each new bud is the occasion of a family party being formed to discuss its beauties and wonders. I firmly

believe that my husband, children, and myself would be willing to give up half of the house rather than be without "our windows."

Another expedient for making home attractive is to light up early and well. I do not close my blinds until after dark, and always feel that the bright glow within cheers my husband and boys who are compelled to be out of doors at that hour. An old lady friend, who has no daughters, said to me not long ago, "When dark approaches I always go to the door and look up toward your house; your light looks so bright and cheerful." I felt pleased that I could add some cheer to her heart, let it be ever so little.

## HOUSEHOLD DECORATIONS.

We clip the following suggestions from the pages of the *Art Interchange*, as valuable hints from an authority which cannot be doubted in matters of this nature:

## SILK RAG CURTAINS.

A curtain can be made of scraps of silk which will be very effective if woven in with a proper regard for the color effect. It is necessary to cut the silk into strips about half an inch wide (a little more or less makes no difference), either straight or on the bias. Sew the pieces together strongly, and roll into balls, keeping each color and shade in a ball by itself. Pieces of narrow ribbon, old cravats and sashes, old waists of dresses, in fact, every scrap of silk can be made of use, whether soiled or fresh. After making a number of balls, send them to a rag-carpet weaver, who will weave them for about twenty-five cents a yard. It will take one and a half pounds of silk to make a yard of material three-quarters of a yard wide, which is the width of almost all looms. If the balls of silk are given to the weaver with directions how to place the colors, and the width the stripes are desired, the stuff when finished will have a very handsome effect, and is very heavy and suitable for portières, curtains, rugs, or table-cloths.

## MANTEL LAMBREQUIN.

Indian embroidery may be transferred to a background of deep maroon plush, or sage-green velvet, and embroidered down with point-russe in colored filoselle. A mantel lambrequin, done in this way, makes a superb piece of color in the room, and transforms the commonplace marble chimney-piece into a thing of beauty, especially when shelves of ebonized wood, backed by the same plush, are added to the chimney-breast, and serve to contain all one's choicest bits of Venice glass, Dresden china, miniatures, and old Satsuma.

## CURTAIN BORDERS.

Curtain borders may be worked upon greenish blue serge, with an appliqué vine of oranges and leaves, or sunflowers, and stiff, conventional foliage. The curtains should be of a deeper tone of the same green blue. The patterns used are cut out of mandarin yellow cloth on serge, with two shades of green for the leaves, all buttonholed on with crewels. The stems may be worked with several strands of coarse crewels. Such blooms as poinset-

tias and amaryllis look well adapted to the border of a curtain. Bold designs in outline work are satisfactory for this purpose.

There is no direction in which the active energies of women need guidance and assistance more than in their efforts in decorating their homes. The present wild rage for decorating everything and anything, which has been so keenly satirized in *Scribner's Monthly* in the illustration of the week's wash, geometrically arranged upon the clothes-line, has led to most ludicrous and lamentable results. Flat-irons have been pressed into service as easels, and horse-shoes promoted to ornaments for the drawing-room, while the latest freak has transformed huge dinner-pots, swung upon three poles after the manner of the gipsies, into a lawn vase for rare plants. These frightful affairs are painted bright scarlet, and suggest no other idea than that of boiling the beautiful flowers they contain.

That such things should ever obtain sufficiently to become fashionable, is sad evidence that the zeal exhibited in the cause is not according to knowledge.

The society draws a sharp line of distinction between decorative art and fancy-work, a distinction of which many ladies seem to be wholly ignorant. It is this ignorance which has given rise to so many absurd and useless fancies. The sense of fitness is one of the first elements of beauty, and there is such an apparent incongruity between the associations of such homely things as flat-irons, and dinner-pots, and the ornaments of a boudoir, that it would seem impossible any one should be insensible to it. Decorative art ought to be confined to such articles of use or luxury as are of serviceable character, and can never be worthily bestowed upon what is in its very nature of such fragile texture as must inevitably be speedily destroyed. Nothing which can be done mechanically, without thought or appreciative purpose, comes under the title of art at all. There must be scope for original talent and taste, and to be true art there must be adaptedness to its purpose. Ornament in excess, improperly placed, or of inferior merit is always offensive to good taste, for the reason that it seems an impertinence, it is not necessary, and therefore, as our French cousins would say, no *raison d'être*.

**Hanging-Basket.**—To make a pretty hanging-basket take a wooden bowl, bore it full of half inch holes about two inches apart, fill it with soil, lay a board over it, and turn it upside down. Plant in each hole what is called "old hen and chickens" reverse the bowl, suspend it by three chains, plant German and Kenilworth Ivy with a Geranium for centre. Each old hen will soon be surrounded with little ones till the bowl will be a solid mat, and the vines will do their part, too, if you give it a dip in the rain-barrel every evening. Try it, ladies, and you will be surprised. 'Tis prettier than rustic or moss baskets.

J. MARION S.

**To Destroy the Cabbage-Worm.**—Mix pepper and coal-ashes together, and sprinkle the mixture over the plants in the morning while the dew is on. This has been tried and found very successful.

## Household Decorations.

### FEATHER-WORK.

LADIES who live in the country and raise poultry would find it a source of amusement if they would save the feathers of hens, roosters, peafowls, etc., and form them into feather dusters or flowers for winter bouquets. For the latter, begin by making a card box with many divisions; then with sharp scissors trim away all the superfluous parts, and shape the feather into an oval leaf, leaving only a short stem. Prepare a good many in this way, carefully cutting away a part of the midrib to render it flexible. Have some fine wire cut into short pieces and some strands of floss silk, and taking a piece of wire attach firmly to one end several stiff fibres or a few bits of down; next take one of the leaves and, bending it gently outward, fix it close to the tuft by winding the silk tightly round the wire; repeat until you have six or eight leaves around the stem, and finish your flower by winding the whole stem with green or brown floss. Short goose feathers form lovely white roses by arranging several rows of petals and using yellow centres, while rich green leaves are made from the beautiful tail-feathers of the rooster and the wing of the common duck. The breasts of peafowls give us exquisite blue flowers, and the different shades of gray and wood color found in the plumage of the common hen will surprise those who have not made a study of the art of feather-flower making. For those who can see no beauty in quiet shades there are the "family dyes," which will color feathers prettily, by first wetting well in hot water, then dipping into a solution of red or blue, with the addition of a small bit of alum to set the color.

The plumage of birds of all kinds (and of the wild duck in particular) will vary your collection, and form objects worthy of admiration and study for all.

### TO MAKE A LAMBREQUIN FOR A SHELF.

TAKE a smooth board the exact length and width of your shelf, and make a case for it in manner following. Out of a piece of cloth, of a color to match or contrast with the furniture of your room, cut a strip eight inches longer and four inches wider than the piece of board. Cut a second piece, the same shape and size, out of some kind of lining, and tack the two together. Sew one side with over-and-over stitches, and decorate the other side and the ends in any way you like. The one I first made was of green cloth, worked around the edge with gold-colored fillole, and a tiny vine and leaves of the same color above. After the edge is finished to your liking, cut a slit in the lining of your work large enough to admit the board, and bind this opening with braid. Then slip in the board and lay it flat on the shelf, and if you have followed directions you will have a smoothly-covered shelf, with a drapery four inches in depth in front and at the ends.

### VENETIAN BAR-STITCH.

THIS is simple button-hole stitch worked in lines to form a pattern. It is often used in working the edges of collars, caps, etc., upon muslin or lace, but the handsomest application of it is in embroidery or saddler's silk upon rich material, such as satin, corded silk, or even velvet. The pattern should be entirely in line, of a graceful and intricate pattern, and worked with perfect uniformity of stitch—gold-colored silk upon green, white upon blue, scarlet upon black. The pattern should be marked as for embroidery, in very light lines, and great care should be taken not to let the marking soil the stuff by rubbing.

The effect of a Persian pattern may be given by using a variety of colors intermingled, bright contrasts being harmonized by neutral tints running between. This kind of embroidery is rare, and when done with taste is very beautiful.

### SUGGESTIONS ABOUT SEWING.

Should you have a rent in a dress to repair, use ravelings of the same material; they are easily to be obtained from the top of the skirt, if you have no pieces; but generally some are left by the dress-maker, and should be kept for such accidents.

To remove grease which has come off the sewing-machine from new fabrics, before washing them rub the spots thoroughly with hard soap, dip in cold water, and rub again. If not removed, apply more soap and repeat the operation.

**Imitation Ivory Inlaying.**—We clip the following from an exchange as a suggestion of beautiful work for home decoration. The lines of the pattern can be made with a very sharp steel point, and polished and smoothed with a blunt one of wood.

"A quantity of best plaster of Paris, dried in an oven, should be kept in a well-corked bottle. To fill lines of any pattern, mix up a small quantity of the plaster of Paris with weak, clear glue; fill in, and smooth over. When dry it may be sand-papered down to the level of the surrounding wood. If wanted colored, mix with plaster of Paris any of the powder colors, such as ultramarine, amber, vermilion, or yellow ochre. For cheapness, use the various colored ochres. The chief secret is to have the powders, plaster of Paris, etc., quite dry. In polishing but little extra care is required. Merely take a brush, dip it in the white polish, if for light goods, and brush two or three coats over the plaster—this fills up the pores or grain; then polish in the usual manner. The finished wood is not easily distinguished from ivory inlaying."

We have not seen the work tried, but feel sure that it is capable of being used in the finishing of stands, table-tops, etc., to great advantage. But of course, like all home-work, it is liable to be ill-done for want of proper tools, but still more for want of exact and careful work. The patterns should be well chosen, and the lines filed on both sides and cut clean, the edges showing no roughness or unevenness in the width of the line.

**An Enterprising Woman.**—When I visited an old friend two years before, her great eyesore was a parlor twelve by eighteen feet, without plastering, which had to serve the double purpose of parlor and guest-chamber.

Her economical husband intended to build in three years, and would not expend money to partition or plaster it. But Jennie, determined to remedy it, set her brain to work; a good angel came in the shape of a ten-dollar bill as a present from papa. Jennie was happy, and with the aid of it and a determined will, she went to work.

She took some lath, one by two, and nailed them on the floor where she wanted her partition. She then set some up for studding, and fastened them to the joist above and to the strip below, tacked cheap muslin over it, papered it, and the walls with wall-paper. She ceiled her rooms above with heavy buff paper, (such as architects use for drawing), tacking it to the joist with carpet tacks, she then put a border to make it complete.

**How to Make Tassels.**—Very pretty tassels may be made at home by the following directions, and if the work is carefully done they avoid the irregular, unfinished look that is apt to mark home-made articles:

They are expensive adjuncts to purchase and are easily soiled, particularly on window-shades, so that it is well to know how to replace them. Cover two large button-moulds, after the usual manner, with cloth or silk. Sew on a thick fringe round the edge of one; either yarn may be used or ready-made fringe. Join the upper button-mould to the lower round the edge with a few blind stitches, and sew the cord which is to suspend it in the centre of the top button. If a more elaborate head is desired, insert a twist-spool, or a larger one, covered with silk between the buttons.

To make very large and heavy tassels you can use very large button-moulds and spools; put embroidered ribbon or upholsterer's braid or gimp round the spool, join neatly, and substitute cord for yarn or worsted fringe.

**Pretty Frames.**—A very pretty frame for heavy vines and bushes is made by driving two stakes into the ground and nailing barrel-hoops about six inches apart. Paint any color preferred.

**Algernon** under her window in the cold, white moonlight, with a tender expression, sings:

"Tis the la-hast rose o-hof summer,  
Le-heft bloo-hooming alo-hone;  
All its lo-huv-lee companions  
Ah-ha fa-deh-hed and go-hone—"

Voice of pa from next window, strained and cracked like, as though the old gentleman didn't have time to look for his store teeth: "All right, young man, all right; just pin a newspaper over it and save it from the frost, and we'll take it in with the rest of the plants in the morning."

## Household Elegancies.

## HYACINTHS OF TISSUE-PAPER.

THE materials used are colored tissue-paper, green flower-paper, covered hat-wire. They are unfading flowers when made, equal to the pure originals. The blue, pink, yellow, purple, and white tissue-paper requisite for their construction may be procured in any good stationery store.

In order to make speckled hyacinths pencil and brush must be resorted to.

Cut strips of tissue-paper seven and one-fifth inches long, some one and one-half, some two inches wide, and then cut fringes to a depth of about three-quarters of an inch along one side, after which curl them with scissors or knife. Then lightly roll the strip together, and, pressing together at the bottom, give the calyx a shape as nearly that of the natural hyacinth as possible.

In our model the number of such blossoms for each flower varies from twelve to fifteen.

These blossoms are tied with stout cotton to a stem of covered wire eight and a half inches long, beginning with the smallest blossoms at the top and continuing downwards in transposed rows. The best model for doing this is a natural hyacinth. Care must be taken not to place the blossoms too close to each other, so that each one remains distinct from the other. When the last blossom has been affixed, fasten the threads and cover the stems with a strip of brown tissue-paper. The leaves, six or seven of which enclose each flower, are cut in strips four-fifths of an inch wide and from five and one-half to seven and one-half inches long. They are pinched along the middle and rounded off at the top. Three or four of the smaller ones are first affixed to the bottom of the flower, reaching to its top; then several of the longer ones, which, as may be seen in the engraving, tower over the first.

## PANSY MATS.

THESE mats imitate the shape and brilliant shaded purple and yellow tints of the Pansies, and are really beautiful.

The materials required for a pair of them are—of single zephyr, one-quarter ounce of white, one-quarter ounce of black, half an ounce of the brightest yellow, and one ounce of richly-shaded purple. They are easily made. Commence with the white; make a chain of six, and join it; into that crochet twelve long crochet-stitches, with one chain-stitch between each; fasten it, and make three chain-stitches for the next row. Do this at every row. Third row, make two long crochet-stitches into every loop of the second row. Fourth row, two long crochet-stitches, with one chain between, and alternate with one long, into every loop, not stitch. Fifth row, two long crochet, alternated with two separ-

ate stitches of long crochet, with one chain between each. Sixth row, two long crochet-stitches, with three separate stitches of long crochet-chain between

each. Seventh row, two long crochet-stitches into every loop of the white. Eighth row, commence with the yellow, and crochet two long crochet into every loop of the white. Ninth and last row, commence with the shaded purple, and crochet the same as the last two rows. Thread a long needle with fine black thread, and catch down the fulness, so as to give the effect of Pansies. (See illustration.)

STAND OF PAPER FLOWERS AND HYACINTHS.

PANSY MATS.

## WOODLAND TREASURES.

THIS is a group of leaves and other rough woods material arranged ornamentally.

The basket may be of any desired size and shape, from six to fifteen inches in diameter of the round style, and three by four to seven by eleven inches of the oval Swiss basket.

Make the recess of suitable depth and width, and lined with white eardboard.

Cut the basket in half lengthwise, and, touching the cut edge of body and handle with white glue, fasten it in the centre of the back of recess; below it place a pretty mossy branch imitating a log, selecting one with little branches at one end.

If this should not be sufficiently mossy, fasten pieces upon it with glue. Place a few stones below the log upon a foundation of eard covered with moss; add a few grasses and ferns, grouped among the stones. Fill the basket with grasses, small ferns, berries, sprigs of evergreen, a few small cones and acorns; also clusters of bright-colored flowers and leaves which have been preserved in sand or carefully dried. Secure each piece by touching the stems, etc., with glue, commencing at the back part and placing flat pieces, such as pressed leaves, grasses, etc., against the back; then filling in toward the front, finishing at the front with fine delicate sprays placed in such a manner that they may fall gracefully over the edge, with a long tendril twined around the handle.

The other half of this basket may be made into a suitable companion-piece by placing it in a similar recess, and filling with shells, pebbles, sea-weeds, etc., and placing it upon a single large shell of great beauty, resting it upon a strip of mirror. Finish upon the outer edge with a narrow margin of sand, moss, and tiny shells. Touch all parts of the contents of the basket with white clear mureluge, and dust with diamond-powder. Appropriate frames for these are made of coral.

## TO CLEAN MICA IN STOVES.

LAST winter a lady enquired how to clean mica in stoves, which I never saw answered. Take equal parts of vinegar and water; wash when a little warm; wipe with a dry cloth. It will look as good as new.

L. M. E.

Family Reading.

THE SONG OF THE MYSTIC VALLEY.

FATHER RYAN, the author of this exquisite poem, is styled the Poet Priest of the South, and resided in Mobile, Ala.

I WALK down the Valley of Silence,  
Down the dim voiceless valley alone,  
And I hear not the sound of a footstep  
Around me but God's and my own;  
And the hush of my heart is as holy  
As hovers where angels have flown.

Long ago I was weary of voices  
Whose music my soul could not  
win,  
Long ago was I weary of noises  
That fretted my soul with their din,  
Long ago was I weary of places  
Where I met but the human and  
sin.

I walked in the world with the  
worldly,  
Yet I craved what the world never  
gave;  
And I said, in the world each ideal  
That shines like a star on life's  
wave,  
Is toned on the shores of the real  
And sleeps like a dream in the  
grave.

And still did I pine for the perfect,  
And still found the false with the  
true;

I sought 'mid the human a heaven,  
And I caught a mere glimpse of its  
blue;  
And I sighed when the clouds of the  
mortal  
Veiled even the glimpse from my  
view.

And I toiled on, heart-tired of the  
Human,  
And groaned 'mid the masses of  
men:

Till I knelt long ago at an altar,  
And heard a voice call me; since  
then

I walk down the Valley of Silence  
That lies far beyond human ken.

Do you ask what I found in the Valley?  
'Tis my trysting-place with the Di-  
vine:

And I fell at the feet of the Holy,  
And around me a voice said, "Be mine."  
And then rose from the depths of my soul  
An echo, "My heart shall be thine."

Do you ask how I live in the Valley?  
I weep and I dream and I pray,  
But my tears are as sweet as the dew-drops  
That fall on the roses in May,  
And my prayer, like a perfume from censer,  
Ascendeth to God, night and day.

In the hush of the Valley of Silence  
I hear all the songs that I sing:

And the music floats down the dim Valley  
Till each finds a word for a wing,  
That to men like the doves of the deluge  
The message of peace they may bring.

But far on the deep there are billows  
That never shall break on the beach,  
And I have heard songs in the silence  
That never shall float into speech,  
And I have had dreams in the Valley  
Too lofty for language to reach.

SCENERY OF THE SIERRA NEVADAS.

And angels I've seen in the Valley:  
Ah, me! how my spirit was stirred!  
They wear holy veils on their faces,  
Their footsteps can scarcely be heard;  
They pass down the Valley like virgins,  
Too pure for the touch of a word.

Do you ask me the place of this Valley?  
To hearts that are harrowed by care  
It lieth afar between mountains,  
And God and his angels are there;  
And one is the dark mount of sorrow,  
And one the bright mountain of  
prayer.

THE LITTLE COUNT.

ONE of the most remarkable dwarfs the world ever saw was a nobleman of Polish descent, born in Chailez, A.D. 1739. His name was Joseph Bornwlaski, always known as Count Bornwlaski, and he was aptly termed "a perfect copy of nature's finest works in duodecimo." His intellect was remarkable, and was early developed. He spoke several languages, and spent much time in travel, visiting the different nations of Europe, seeing and being seen in the leading courts of Europe.

He reached Vienna at the age of fifteen, and at that time was but twenty-five inches in height. He was presented to Maria Theresa, who became much attached to him. The great princess was at the time at war with the King of Prussia. The queen asked the dwarf about his opinion of the Prussian monarch.

"Madam," replied he, "I have not the honor to know him; were I in his place, instead of waging a useless war against you, I would come to Vienna to pay my respects, thinking it more honor to gain your esteem than to gain a victory from you."

The queen took him in her lap and kissed him. He laughed. The queen asked him what he was laughing at. His quick reply was—

"To see so small a man on the lap of so great a woman."

This answer procured him fresh caresses. He gazed at a ring on the hand of the queen once when sitting on her lap, and she asked him if he thought it pretty. Bornwlaski replied:

"It is not the ring that I was looking at, but the hand I beseech your majesty's leave to kiss."

This was granted, and the queen took from her daughter a diamond ring and gave it to Bornwlaski.

The young lady from whose finger the ring was taken was the unfortunate Marie Antoinette, afterwards Queen of France.

When in Paris, Count Olinski gave an entertainment to some ladies of high distinction, and to please them he placed Bornwlaski in an urn. The urn was placed on the table, and a funny noise proceeded from it. The count refused to uncover the urn, and the curiosity of the ladies was raised to the highest pitch. At length the cover was removed, and out sprang Bornwlaski, who ran about the table, to the no small astonishment and diversion of the ladies.

He visited various courts of Europe, his reputation preceding him, and everywhere was he caressed by the ladies, who universally took him on their laps and kissed him. He lived to the extreme age of ninety-eight.

## Housekeeping.

## FLOORS AND CARPETS.

THERE is a strong protest offered, in different ways and from various sources, against our long-established practice of making poor floors, with the design of keeping them covered with carpets stretched and fitted to every part and carefully tacked down. Carpets in daily use cannot be kept clean except by very frequent shaking and beating, and they do much toward corrupting the air by retaining impure gases, hiding the finest, most penetrating dust in their meshes and underneath them, and by giving off particles of fine wool into the atmosphere, with other dust, as they are swept or walked upon. There is a demand for better floors, not necessarily inlaid or mosaics of different kinds of precious wood, but made double, of strong seasoned wood, that will not shrink or warp (spruce, however well seasoned, is almost sure to warp), and then carefully finished so as to be durable and easily cleaned. Carpeted floors seem a relief to the housekeeper, when once the carpets are procured and fitted to the rooms and tacked down, because they do not show the dirt as the bare floors do. But oh! when they do get full of dust! And when house-cleaning time comes and they must be taken up and shaken and whipped, as they well deserve! With warmly-made floors and large, warm rugs, couldn't we do without these abominations even in winter. Certainly our rooms would be cooler and sweeter without them in summer. But in that case we must take more pains with our floors, and we must have something better than the common unpainted ones.—*American Agriculturist*.

## PATENT BRILLIANT GELATINE.

AMONG "things not generally known," but that every prudent house-wife ought to know, is how to make good jelly. It is a compound in constant request in the house, as a luxury and necessary, both. No dinner or supper-table is considered complete without the brilliantly transparent lemon or orange jelly, and few sick rooms but—during the tedious days of the invalid's convalescence—are found supplied with the same palatable and nutritious luxury. It is a matter, then, of some consideration to know how to produce these delicious compounds with facility and economy. A preparation known as "Patent Brilliant Gelatine," made by Nelson, Dale & Co., of London, secures both these advantages in the making of jellies, which in regard to purity and nutritious qualities equal those made from calves' feet or the best Russian isinglass. This "Brilliant Gelatine" has been admitted by high scientific authority to be far superior to the best French gelatine, and equal to the finest Russian isinglass in nutritive value, more economical in use, and adapted to every purpose for which isinglass is used. Moreover, it is entirely free from those acids usually found in similar French preparations. One packet of an ounce and a half will make three pints of excellent blanc-mange or jelly, which, flavored

with the juice of three or four lemons, or the same number of oranges, makes a highly nutritious and delicious compound.

## THE VIRTUES OF BORAX.

THE washerwomen of Holland and Belgium, so proverbially clean, and who get up their linen so beautifully white, use refined borax as washing powder instead of soda, in the proportion of one large handful of borax powder to about ten gallons of boiling water; they save in soap nearly half. All of the large washing establishments adopt the same mode. For laces, cambrics, etc., an extra quantity of the powder is used, and for crinolines (requiring to be made stiff), a strong solution is necessary. Borax being a neutral salt, does not in the slightest degree injure the texture of the linen; its effect is to soften the hardest water, and therefore it should be kept on every toilet-table. To the taste it is rather sweet, is used for cleaning the hair, is an excellent dentrifice, and in hot countries is used in combination with tartaric acid and bicarbonate of soda as a cooling beverage. Good tea cannot be made with hard water; all water may be made soft by adding a teaspoonful of borax powder to an ordinary-sized kettle of water, in which it should boil. The saving in the quantity of tea used will be at least one-fifth.

## HINTS FOR THE HOUSEHOLD.

## LEAVES IN COOKERY.

AN English writer, speaking of the culinary uses for leaves, says that one of the most useful and harmless of all leaves for flavoring is that of the common syringa. When cucumbers are scarce these are a perfect substitute in salads where that flavor is desired. Again, the young leaves of the cucumber itself have a wonderful similarity in taste to that fruit. Carrot-tops may be used, and a prodigious waste is suffered in not using the external leaves and blanched footstalks of the celery plant. The young leaves of the gooseberry added to bottled fruit give a fresher flavor and a greener color to pies and tarts. The leaves of the flowering currant give a sort of intermediate flavor between black currants and red. Orange, citron, and lemon leaves impart a flavoring equal to that of the fruit and rind combined, and somewhat different from both. A few leaves added to pies, or boiled in the milk used to bake with rice, or formed into crusts or paste, impart an admirable "bouquet." An infusion can be made of either the green or dry leaves, and a tea or table-spoonful used.

## BEEF-TEA FOR INVALIDS.

Miss Dods, of the Edinburgh school, recommends the following as useful in the treatment of those who are invalids. She seems so well able to take care of the healthy that we have some confidence that her recommendations for those who are not may be of value:

*Quick Beef-Tea.*—Beef taken from the round is best for beef-tea, because it is almost free from fat, and it contains more juice than any other part of the meat. After removing every particle of fat cut the steak into small pieces, across the grain. This breaks the fibre and allows the juice to escape.

Place the heated meat in a dry, closed sauce-pan and sweat for five minutes. Sweating is simply heating the meat, not too hot, and stirring it occasionally to prevent its sticking. At the end of five minutes the pan will be found to contain a gravy, or the essence of the meat, which of itself is good for very feeble patients. At this stage pour over the meat its weight in solid water (the gauge being a pint of water to each pound of meat); stir until the water boils, and then simmer for five minutes. Do not add salt, unless the doctor permits it. In many diseases salt cannot be used without doing much harm. Strain the tea while hot, then skim the fat from the surface, and it is ready for use.

## HOW TO MAKE COLOGNE-WATER.

With no trouble at all (says the *Chemist*) any one can make in her own store-room a better article of cologne than that which is usually bought, by thoroughly dissolving a fluid drachm of the oils of bergamot, orange, and rosemary, each with half a drachm of neroli and a pint of rectified spirits. As good as can be made out of cologne itself, however, is also prepared simply by mixing with one pint of rectified spirits two fluid drachms each of the oils of bergamot and lemon, one of the oil of orange, and half as much as that of rosemary, together with three-quarters of a drachm of neroli and four drops each of the essences of ambergris and musk.

If this is subsequently distilled it makes what may be called a perfect cologne, but it becomes exceedingly fine by being kept tightly stoppered for two or three months to ripen and mellow before use.

## THE LOVE OF FLOWERS.

Of the many touching tributes paid flowers there is one associated with the closing hours of Henry Heine, the poet, which appears to us very beautiful. He was dying in Paris. The doctor was paying his usual visit when Heine pressed his hand and said: "Doctor, you are my friend—I ask a last favor. Tell me the truth—the end is approaching, is it not?"

The doctor was silent.

"Thank you," said Heine calmly.

"Have you any request to make?" asked the doctor, moved to tears.

"Yes," replied the poet; "my wife sleeps—do not disturb her. Take from the table the fragrant flowers she brought me this morning. I love flowers so dearly! Thanks; place them upon my breast." He paused as he inhaled their perfume. His eyes closed, and he murmured: "Flowers, flowers! How beautiful is nature!" These were his last words as his spirit took its flight into eternity.

## ICE IN THE SICK-ROOM.

Mention is made in a foreign paper of a plan pursued by an ingenious physician for ensuring a supply of ice for use in sick-rooms during the hottest nights, and without disturbing the patient. This plan is to cut a piece of flannel about nine inches square, and secure it by a ligature round the mouth of an ordinary tumbler, so as to leave a cup-shaped depression of flannel within the tumbler to about half its depth. In the flannel cup so formed pieces of ice may be preserved many hours—all the longer if a piece of flannel from four to five inches square be used as a loose cover to the ice-cup.

Invented by E. N. Horsford, late Professor in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent stamp to the manufacturers for a sample.

## THE NATURAL EASTER CROSS.

THIS cross is in imitation of rough granite, supposed to be placed in the open ground, which at the Easter season is adorned with those lovely spring blossoms that would naturally be found blooming around and upon it in the early spring, while the ice and snow still cover the earth during some of those cold days which visit us after the early flowers have commenced to bloom. The cross should, if possible, be quite large; eighteen inches high, perhaps, or even larger than that. The form should be what is called square; that is, with the ends of the top and arms forming a perfect square. Instead of steps at the bottom, as in the Latin cross before described, a number of rugged stones are placed around the base, upon which the cross is fastened; or a better way is to make the body of the cross four or five inches longer, and, screwing it firmly to a solid block of wood, arrange the stones around it up to the point where the bottom of the cross should be. The wood is then painted with three coats of granite-colored paint, varnished and heavily sanded, and cut into irregular rough stones. In order to have the stones round the base of the same color as the cross, they are dipped in melted wax, in which paint-powder of the same shade has been mixed; and if stones themselves are considered too heavy, they may be formed of clay, plaster, or some lighter material, and color as described.

The ice and snow are formed of

NATURAL EASTER CROSS.

wax, thus: Take a quantity of cake-wax of the purest white and finest quality, which melt slowly in an earthen vessel, placed in water. When entirely melted, stir into it one table-spoonful of fir-balsam to every tea-cupful of melted wax. Stir this mixture after removing from the stove until it grows just thick enough to barely pour from the spoon. Then with a small dipper take up some of the wax and proceed to imitate the ice, which has frozen upon the cross and dripped down in long pendent icicles; this is done by pouring the wax over the arms and allowing it to drip slowly, one coat upon another, until the proper length and thickness is given to each icicle. The form will be best seen by examining the illustration in Fig. 1. The wax must not become too cool, or it will form in lumps, though in some places the rippled appearance, natural to ice, looks well. A portion is also poured upon the top, and a little upon the stones. When cold, this work is varnished with a very thin coat of Demar, and before this is dry is thickly sprinkled with diamond-powder. A solution of alum is then made, and in it a selection of pretty, graceful grasses are placed, until crystallized; also a few pieces of raw cotton are wet with it and laid before the fire, which will give them when dry the appearance of snow crusted with ice. This work requires great care and neatness, but when well done is truly lovely; and, if successful, a perfect imitation. When this is accomplished

(Continued on page 152.)

## Floral Correspondence.

## A CORRESPONDENT'S EXPERIENCE.

DEAR FLORAL CABINET: I will give you some of my "dear-bought" experience in keeping flowers. When I first began I had only a common sitting-room, with an open-front coal-stove, and a family of twelve. So broken leaves and overturned pots were my daily trials; and then the dust—I must take each one and wash them every week, as no sprinkling would keep them in order, and then they would not bear all the hard usage and look fresh, which was a great disappointment, and I lost some fine plants. But I persevered; trying many ways and searching every book and paper for information in regard to their native habits and the experience of others.

Now my husband has built me a greenery—I call it—or a large bay-window, shut off from our common sitting-room by glass doors. So, of course, I have, and ought to have, a perfect bower of beauty. I have over one hundred varieties, besides what I have in a light, dry cellar for the winter. You may wonder how I find room for so many, and I will tell you of my green trees that came into use in my sitting-room at the first, by my trying every way I could think of to keep my pets from being in the way. I now have two of them, one in each angle of my window, to hold a part, while I have a bench around below the windows for large plants, then some very tall ones sit on the floor, and some that need to be very cool. In this way you can keep your plants in a common room before a common window safely, and vary the temperature to suit each set of plants. Get a stick of timber about three inches through—if from the woods, leave the bark on, this is not bad; but if from the lumber-yard, make it octagonal in shape, the height of your room; make a round tenon on each end by sawing and splitting off so as to leave a shoulder to fit smoothly into an inch piece in the form of a circle of three inches in diameter, so it will turn easily. Set upright and tack the circle pieces to the ceiling and floor, two nails in each, so they can be drawn out if you should wish to take down and lay away when your plants are out for the summer. Get some stiff wire (or nail rods for large pots), cut into lengths of about fourteen inches for the top row; bend in a circle the size of your pot, bend them the shape of the support for a lamp-bracket; bore a hole the size of your wire, slanting inward a little, about eighteen inches from the top of your standard, and insert your wire, bending it so the weight of the pot will hold it firm. In every space put a wire, making eight in the circle of pots; eighteen inches below put another row, making them enough longer to reach outside of the first, so your plants will not be in each other's way or drip on the leaves, and so on, as low down as you wish; from three to four rows is enough. Now remove your curtains, giving them all the light and sun, turning them any time you wish without taking down the pots. Set a large pan or tub on the floor under them, and you can sprinkle them as you turn so as not to wet your carpet. You should put Cacti in the top row, as they like hot air and dry soil; Begonia, hot, but

moist; Wax Plant, Dew and Ice Plant; then Coleus and the Silver and Tricolor Geraniums, Centaureas, Cineraria, Roses, and Abutilons last, as they should be cool. Put a slip of Madeira, Lobelia, Tradescantia, or Moneyworth vines in some of your pots with other plants, and set a pot of Parlor Ivy on the floor each side of your window if you wish. Those in your pots will run up the wires and standard, which should be painted green, all turning together. It will be very little care to tend these, and if you will step outside after your lamps are lit for the evening, when your plants are growing well, you will see a picture of beauty that will greet every one passing.

To protect from dust get a piece of blue fly-screen, make it in two widths, reaching from ceiling to the floor and wide enough to fall easily and completely around outside your plants; fasten to a wire bent in a circle large enough not to have the curtain rest on the plants, and secure the wire to the ceiling with a staple (such as they use on a wire fence) in the centre of the window, and then again opposite beyond the plants. You can draw this from each way around them when sweeping, or in the evening, when by sprinkling or wetting the net you can have a moist atmosphere inside. If you wish to protect from cold at night paste papers together and wrap round the whole, pinning to your curtain. Be sure they come close to the floor, where you should also lay a paper, as paper is the best material to keep out frost.

When not in use draw your curtain towards the window and loop up high; you can have a hanging basket each side of your window to fill up, if you choose. I fear I have made this too long already, and if I have not made it plain I will explain more fully if you will send to "Recluse," Box 251, Morris, Ill.

## FLORAL CORRESPONDENCE.

WILLOW SPRINGS, OREGON.

ENCLOSED please find yellow spotted leaf for name; also large leaf.

ANSWER.—Japanese Honeysuckle. The large leaf belongs to the Maples, but from specimen cannot determine what species.

WHEATON, ILL.

Please tell me the name of enclosed plant. How many kinds of Ivy are there? DORA SPROUT.

ANS.—1. Commonly called Flowering Gooseberry, *ribes grossularia*. 2. There are fifty different species of Ivy; the most easily grown is the Giant or Irish Ivy; but all are thrifty growers.

ONEONTA, N. Y.

Please inform me what is the best scarlet perennial Phlox; whether white Feverfew will bloom in winter. What is a suitable frame for Wax Plant?

MRS. R. WICKSOIRE.

ANS.—1. *P. grandiflora*, scarlet, is the handsomest, but not so free a bloomer as the commoner varieties. 2. It is a summer-blooming plant, but if cut back after blooming early in the summer will bloom in winter. 3. A square or circular frame, light but strong, is best for Wax Plant in winter, as they do not grow at all until near spring, and need only to be wrapped carefully round the frame, taking care

not to entangle the different branches. In the early summer, after all danger of frost is over, the vine may be taken down from the frame and trained over the front of a piazza with fine effect, remaining until it has done blooming. We had one spread out in this way which reached the top of the piazza and extended over a space more than twelve feet long, being covered with blossoms. It was an old and remarkably thrifty vine.

MRS. Q.—How shall I treat my Camellia? It droops its leaves and does not thrive.

ANS.—The Camellia is a difficult plant to cultivate outside the greenhouse. They need light (but not direct sunshine), moisture and warmth, and a steady temperature. They are sensitive, and if left too dry or made too wet they drop their buds, as if in resentment at such mismanagement. In this month the flower-buds should begin to form. Bring the plant into the house, keep in a cool room about 40°, and give an hour or two of fresh air daily. When growing rapidly water freely, but do not shower, and drain well.

MRS. E. A. WARNER.—Please give treatment for Hydrangea.

ANS.—There are several varieties of this plant—some are hardy and others tender. They require partial shade, abundant watering through the growing season, and liquid manure now and then. Hydrangea Panicleata grandiflora is a hardy kind, and the most abundant bloomer of all this beautiful family. It will repay thorough cultivation and rich feeding. Plants sometimes bloom when six inches high. W. C. Hart, of Walden, N. Y., gives in *Vick's Magazine* an account of a plant three years old which bore ninety-two heads of beautiful flowers. When done blooming, or just before frost, remove to the cellar for the winter. It will then require very little water—just enough to sustain life and prevent contraction of the wood.

WAKEFIELD, R. I.

I saw a notice in THE CABINET by W. C. L. Drew on the Amaryllis Johnsonii Lily, and now I wish to know what time of year to procure a dry bulb, and about what price, and where to get it.

MISS C. D.

ANS.—The time of year is not material, as these lovely plants may be made to bloom almost every month in the year. They are invaluable for window culture. They may be planted now for winter bloom. A successful treatment allows two months for growth, two for flowering, two for rest. Prices vary; they may be had at any good florist's. For full instructions for treatment see "Window Gardening," Williams's Household Series.

AKRON, OHIO.

DEAR CABINET: Will you not, when you have time, give a lecture in your paper upon the treatment (heat, moisture, soil, etc.) required by the Cactus? You will confer a favor on, yours, JOHN W.

ANS.—Our correspondent has marked out a wide field for a "lecture," but we adopt his text, and try and give our readers such information as may be useful with regard to this strange and interesting family of plants.

## The Garden.

## BEDDING PLANTS.

THE following methods of arranging bedding and sub-tropical plants are suggested by the *Journal of Horticulture*

"A few simple modes of arrangement may here be noted; for instance, a bed of any shape having yellow *Calceolaria* for a centre surrounded with Scarlet *Geranium* Tom Thumb, and edged with *Cineraria maritima* or *Cerastium*, would look well. As another example take the Scarlet *Geranium* for a centre, and put the *Calceolaria* next, and edge the whole with Purple King *Verbena* or *Lobelia speciosa*. In either of the above, if *Calceolarias* are not grown, the yellow *Tagetes* will answer well. Another arrangement is to plant *Amaranthus melancholicus*, *Coleus Verschaffeltii*, or *Petilla* for a centre, surrounding these with *Geranium Christine* (pink), with an edging of Golden *Pyrethrum*, and there will not be much wrong. Among silver-variegated *Geraniums* we may take *Bijou* or *Flower of Spring* as a type; place either of these in the centre of a bed surrounded by a band of any dark-foliage plant, such as *Perilla* or *Beet*, and then edged with Golden Chain. The above are all contrasting colors, and if the beds are large enough so as to admit of a good quantity of each being planted they will be particularly gay. But it may be that there is not space for these colors; then two must be used, taking care that the bed is properly divided for each color to be shown off to advantage. The centre color ought to occupy fully two-thirds of the bed; arranged thus they would look well: Scarlet *Geranium*, such as *Cybister* or *Stella*, edged with *Calceolaria* or Golden Chain; *Coleus Verschaffeltii*, edged with *Cineraria maritima*; or make *Centaurea candidissima* a centre, and edge with *Mrs. Pollock Geranium*; or take either of the last-named and plant in the centre, and they will be pleasing with an edging of blue *Lobelia*. Again, I admire a bed planted with silver-leaved *Geranium Manglesii* and edged with *Verbena pulchellum*, or yellow *Calceolaria* edged with Purple King *Verbena* or *Viola cornuta*.

"Now, if we come to a more harmonious arrangement we may place a pink in the centre, such as *Christine*, and edge with scarlet; or a pale yellow in the centre, such as *Calceolaria angustifolia*, and edge with the deep yellow *Gazania splendens*; or a blue *Lobelia* edged with the light-flowered *Lobelia Paxtoni*. Such arrangements are very necessary at times in a design to bring out the principal features in an arrangement of a more complicated nature.

"Speaking generally, the plainer the shape of the bed the easier it is to plant, and the better will its arrangement be seen. For my part, though I like strong contrasts which can be seen at once, I have also a special liking for soft combinations of color. There seems to be in these something to study, and which the more one examines the more does their beauty come to light.

"The amateur, who must at times be sorely puzzled to know what is best to grow in his small place, will find some consolation in knowing that there are

now many plants used for bedding of a dwarf habit, such as Golden *Pyrethrum*, Golden Chickweed, *Mesembryanthemums* both variegated and green, Lavender Cotton, the golden and silver variegated Thyme, and several others which occupy but little space during winter, and some of which are comparatively hardy. I ought also to mention *Sedum elegans* and the Variegated Grass, *Dactylis glomerata variegata*.

"Now, if an arrangement totally different from that named above be wanted, by the addition to the above list of *Alternantheras spatulata* and *magnifica*, the amateur may work out almost any design his taste may lead him to in what is called carpet bedding, and thereby add an extra charm to his place, giving also a kind of relief to the blaze of color produced by the ordinary flowering plants."

## A REMARKABLE FLOWER GARDEN.

THE gardens of H. H. Hunnewell, Wellesley, Mass., near Boston, have long been famous, as they are the most costly in New England.

As the visitor enters the ground he passes by a Druidical arch of rude stone with rock-work connected, over which the new vines *Ampelopsis Veitchii* and *Clematis Jackmanii* are profusely creeping, while scattered around are variegated *Hydrangeas*. Not far away is a bed of yellow *Azaleas*, then on the other side are multitudes of the most brilliant and fairy-like *Rhododendrons*. They fill a large area, no less than one hundred and eighty varieties. Near the *Rhododendrons* is the rose garden, a narrow parallelogram three hundred feet long, replete with choice varieties, and surrounded by a solid hedge or wall of *Evergreen Arbor-vitæ* four or five yards high, cut with immaculate precision. Admission is had through a nicely-arched aperture at the end of the central walk dividing the roses.

In the flower garden proper are elegant beds and plants of every clime. On one side of the wide pathway is a long, straight ribbon of broad stripes, with large plants of uniform size, the outer edge being of Golden *Pyrethrum*, and then successive rows of *Coleus Verschaffeltii*, five *Duchess Pelargoniums*, *Iresine Lindenii* and *Centaurea candidissima* for a centre.

Circles and beds of various forms, many feet wide, outside the walk, are planted with a profusion of rich and rare semi-tropical plants. One large bed, circular, surrounded by a perfect border of Earl of Roslyn *Pelargoniums*, was greatly admired. There were *Lantanas* trained on a single stem six feet high, *Abutilons* eight feet high.

The chief attraction and marked feature of the garden, however, was the great bed of *Echeverias* and other succulents, which for richness, novelty, and arrangement have never been equalled. The bed was eight yards long and four yards wide, raised about a foot above the surrounding grass. Its edges were at an angle of forty-five degrees, and framed around by three successive rows of *Echeveria secunda glauca*, touching each other, the largest being the lowest. The four sloping sides thus planted resembled a picture-frame of shells, on a large scale. Back of these, on the level surface, three rows of

*Echeveria metallica glauca*, a stronger and more striking variety, were set. In the centre a large *Agave Americana* presided, surrounded by a patch, eight feet in diameter, of large *Echeveria metallica*, planted on a carpet of *Alternanthera amœna*; the metallic lustre of the *Echeverias* contrasting finely with the bright foliage beneath. A belt of the *Alternanthera*, a yard wide, extended lengthwise through the middle of the bed, and at equal distances therein were two large plants of *Yucca quadricolor*, and two of *Yucca aloefolia*, adding much to the effect. All other spaces were filled with *Echeveria sanguinea*, *E. agavoides*, *Agave filifera*, *A. schidigera*, *A. media-picta*, *A. Mexicana*, and other kinds, in pairs. Two elegant plants of *Aloe arborescens*, three feet high, with their thick drooping leaves overreaching several of the larger *Echeverias*, gave a charm to the whole. It was estimated that more than two thousand succulents rest in this single bed.

## THE GROTTO.

A rustic, vine-clad seat and an elaborate, airy foot-bridge close by, mark the crossing of a small inlet which forms the base of a jagged cavity or dell in the high bank, where ponderous boulder stones are rudely interlocked and heaped upon the sides far up into the wood. These are all moist and mossy from the spray of an artificial jet, and their crevices are filled with hardy ferns, sedums, saxifrages, and Alpine plants; embellished by *Dracenas*, *Marantas*, *Begonias*, *Opuntias*, *Funkias*, *Alocasias*, *Colocasias*, *Callas*, *Cacti*, *Hermerocallis*, *Panicums*, *Mesembryanthemums*, *Sempervivums*, and dwarf *Musas*, promiscuously thrown together, half covering the rocks with their varied flowers and foliage, extending to the water's edge, thus constituting a rockery, fernery, and grotto of wonderful grace and luxuriant growth.

## PLANS FOR FLOWER-BEDS.

At the City Hospital, Boston, a large area, 120 by 180 feet, between some of the buildings was formed into an oval by putting walks around it.

The borders were planted in ribbon fashion with *Lobelias*, Golden *Pyrethrums*, *Carnations*, *Heliotropes*, *Roses*, *Pelargoniums*, *Achyranthus*, and *Colens*—a somewhat peculiar arrangement.

Near the centre of the oval, on either side of the path, a bed was formed, having a centre of *Cannas*, with rings, first of *Ageratums* and *Carnations* mixed, and then successively *Pelargoniums*, *Centaureas*, *Verbenas*, and Golden *Pyrethrum*, the whole making a very neat appearance.

Three other flower-beds were also arranged in the turf near the broad sweep of a drive-way, one being circular, one diamond-form, and the third a small crescent.

The circles were planted with a centre of *Maize*, an outer border of fine *Verbenas*, and rings of *Coleus*, *Centaureas*, and *Palace Gem Geraniums*.

The diamonds had a centre of blue *Salvias*, an outer border of Blue *Verbenas*, and filled in with *Abutilon Thompsonii* and white-edged *Pelargoniums*.

The little crescents were filled with *Ageratum*, *Alternanthera*, variegated Thyme, and *Echeverias*.

## Floral Miscellany.

## VEGETABLE SAP.

THE proper sap of plants undoubtedly corresponds to the blood of animals. By proper sap, however, we are to understand not the ascending but the descending sap—that which after its ascent from the roots has undergone an elaboration in the leaves, so as to be prepared to afford to the several tissues a new supply of their proper substance.

The crude or ascending sap is totally different from the elaborated sap. For example, the crude sap of a plant, when flowing upwards in abundance, may afford a refreshing drink, though after elaboration in the leaves it may become poisonous. The *Euphorbia canariensis* is the plant which affords the resin euphorbium of the shops, once employed as a blistering substance. This plant the inhabitants of the Canary Islands are said to tap and draw off the ascending current for the purpose of refreshment, notwithstanding the acrid character of the sap after elaboration.

What, then, is the foundation of the difference between the elaborated or descending sap and the ascending or crude sap? In the first place, it is evident that crude sap does not contain all the materials which, by a certain transformation, may be converted into the constituents of the perfect sap. Whence, then, are those new materials obtained which, being added to the crude sap, explain the development of the perfect sap? It is plainly the office of the leaves to add those new materials.

Although carbonic acid is continually given off by

source becomes fixed in the plant, while free oxygen is given off. Thus the leaves correspond to the digestive organs in animals, since, though nourishment is derived from other sources, yet a most important part enters by this channel, and it even appears that some other parts of the food of plants enter by the

is no more ornamental plant for the parlor, greenhouse, or conservatory than the fuchsia, and the manner of propagating it should be known to every lover of flowers. A florist writing to the *Cottage Gardener* says the berries should be left on the plant until they are quite black and part readily

ly from it. When gathered, the seeds should be squeezed in a basin of water until they become separated from the pulp. Drain off the water and pulp and set the basin on its side, in a dry place, for the purpose of drying the seeds. When dry, wrap them in paper and keep them until spring. Sow in February or March, in pots or pans, well drained, and filled to within a quarter of an inch of the rim with a compost of two-thirds sandy, fibrous loam, one-third leaf-mould, and about one-sixth of silver sand. The compost should be sifted. Place unsifted compost from the sieve to the depth of an inch over the soil already in the pots, and over this sifted soil. Then press down the bottom of a flower-pot. Scatter the seeds thinly and evenly, and cover them lightly to the depth of about the thickness of the seed. Give a gentle watering, and place the pots in a house where there is a temperature of from 55° to 60° at night, and 70° to 80° by day, keeping the soil moist. When the plants appear give plenty of light and air.—*Exchange.*

FLOWER-POT FRAME FOR VINES.

leaves besides the carbon. The food of plants consists of water, carbonic acid gas, ammonia, and some saline matters, and these enter partly by the spongioles of the radicals, and partly by the leaves. The ascending sap is that derived from the spongioles,

and doubtless contains all the saline and earthy matters, some of the watery part of the ammonia. By additions made to this crude sap it becomes matured and prepared for the general nutrition of the tissues and the supply of the secretions. It comes now to contain fecula, gum, sugar, lignin, and also albumen, fibrine, caseine, etc., or substances readily convertible into these, by which annual additions to the stem are made, the fruit developed, and the several peculiar secretions, such as oil, resin, balsam, camphor, and the like, are supplied. After the sap has served these uses there is a surplus

of nutritive matter left, which is laid up for the supply of the wants of the vegetable economy in the subsequent year.

ing gorgeousness of beauty and color, lending an additional charm to the beautiful landscape of the favored clime of the stately Palm, the grand flowering Magnolia, the Orange, Myrtle, and Jessamine.

## Household Art.

### THE AQUATIC BOUQUET.

THIS recent novelty is an exceedingly pretty and popular elegance, which is specially adapted to table decoration, though it is perhaps equally beautiful for the parlor, and for the sick-room or bed-chamber is very appropriate, inasmuch as, being covered, no odor can escape and render the air of the room unhealthful. Now, any one who imagines that this exquisite floral arrangement is simply what it appears in our illustration, a collection of flowers, leaves, and grasses gracefully grouped under a glass shade, will be wonder-struck upon seeing one for the first time; for instead of this they will see a collection of almost ethereal-looking blossoms, so white and frosty, and altogether fairy-like in appearance, and growing apparently beneath the waters of a miniature crystal lake—that is, held suspended by some hidden hand; producing an effect so singular and wonderfully charming that it appears like some fairy-work.

But to explain this lovely and wonderful-looking bouquet: It consists of flowers, leaves, buds, grasses, moss, or any beauty of the floral world immersed in water; held beneath a glass shade, which it fills by the power of atmospheric pressure, or that scientific problem that two bodies cannot occupy the same place at the same time; and the air being expelled from the shade, the water rushes into and completely fills it; the atmospheric pressure upon the top keeping it constantly in its place. The peculiarly sparkling and frost-like appearance is caused by the water surrounding the flowers: vegetable productions always assuming such peculiar beauty under these circumstances, caused by the refraction of the light and the magnifying power of the globe of water; the glass in this form and the water combined producing the illusive and fairy-like effects. Glass shades of any size, such as are used to cover wax-flowers, clocks, etc., and the aquarium-globes, are the best covers for these bouquets; but for small pieces crystal finger-glasses, bell-glasses, clear-glass gas-globes, or indeed any article of plain glass will answer the purpose, though the shades and globes of which we have spoken are far superior.

In addition to the shade a deep plate or dish is required, that will fit beneath the shade, the base resting in the bowl of the dish, which should be two or three inches deep; soup-plates or a fruit-dish with a broad rim will answer well, and this may be very ornamental, if desired; some persons use silver dishes, others elegant French china beautifully painted; but we prefer a rustic bowl, such as are used for fern cases, or a plain white soup-plate, with rock, shells, coral, moss, etc., arranged on the rim, against the shade.

In the centre of this dish or bowl the flowers, leaves, moss, and sprays are placed, first tying them to a piece of stone to prevent their rising up to the top of the shade; and care must be taken that no leaves or fragments of any kind are left unfastened,

as they will float off into the water and spoil the effect.

In arranging the various flowers taste and skill must be exercised in order so to place each one that, by contrast and pleasing combinations, the most artistic and satisfactory results may be obtained; and the stone holding the bouquet in place must be wholly concealed, as also the stems of the flowers, and the entire pyramid of flowers must appear to rise from a bed of moss with tiny tufts of ferns around it. The manner of tying the stems to the stone is shown in the engraving below.

After tying them thus take some natural green moss, if possible, with little tufts of wild-wood plants here and there among it; wash it perfectly clean, separating all the parts and brushing out any pieces of dirt or soil from the roots; then with green thread, passed down through the leaves, tie it in small pieces around the stone, arranging small fern-fronds, pretty leaves, etc., among the pieces. This part of the arrangement requires great care and taste, for

AQUATIC BOUQUET.

the whole mass of verdure must appear to be growing naturally beneath the water.

This arrangement all completed, a tub full of clear water must be provided, sufficiently large and deep to admit of the dish, shade, etc., being plunged into it. In the bottom of this vessel place the dish with the bouquet all arranged on the bottom, fixing all the parts that may have become disarranged, and so make such slight alterations as will suggest themselves by the effect when seen through the water; and care must be taken that nothing projects so far towards the shade as to touch its sides or top.

Having all arranged in a satisfactory manner, take the glass shade and turn it on the water sidewise, so as to leave no air within it; press it on down until filled with water and the entire shade is under the water, then turn it over carefully on the plate or dish, when it will remain filled with water; for, as there was a vacuum within the shade filled with

water, it will remain there so long as the shade is kept firmly upon the plate; but should any substance become inserted beneath the base of the shade and the surface of the dish, the air will be admitted and the water will at once rush out.

The shade thus fixed in position upon the plate, the whole may be lifted from the tub, leaving the water that is around the shade between it and the sides of the dish undisturbed, as this will have a tendency to keep it perfectly air-tight; and should it dry out by evaporation, it might better be at once refilled. Around this rim of the plate place pretty fragments of rock with *Tradescantia aquatica*, and ferns, mosses, etc., tastefully arranged.

The magnifying powers of the circular shade are so powerful that it will be a matter of surprise how small a number of flowers, etc., it requires to form an aquatic bouquet, a small selection appearing to fill the entire case.

In selecting flowers use those of small dimensions and rather common habit, the *Abronia*, *Verbena*, *Sweet William*, *Scarlet Lichen*, and others of like form appearing the best. For foliage, the leaves of the *Coleus*, *Achyranthus*, variegated *Geraniums*, will present a charming appearance, and should be placed around the stone and stems at the bottom. In winter, the leaves of evergreens appear well; the leaves and scarlet berries of the *Holly*, *Partridge Vine*, etc., present a charming appearance.

The beauty of the water bouquet is not at its height on the first day of its formation; but on the second day when hundreds of minute air-bubbles settle on every leaf, flower, and tiny frond or spear of grass, coating them with starlike incrustations of gems, and edgings of minute sparkling diamonds; they impart a brilliant, frosty appearance, like some fairy-work.

Always, if possible, form these bouquets the day previous to using them, in order to have them thus covered with this frost-work. As a dinner-table arrangement, a large one should be raised upon a platform of some kind, covered with moss, around which may be placed several smaller ones made under finger-glasses or other small vessels. We have seen a pyramid of these, formed with four tiers of glasses, the central one a large shade, about eighteen inches high and twelve inches in diameter, around which were four fish-globes of the one-dollar size, below which was a circle of finger-glasses—eight of them—and around these a circle of beautiful cut-glass tumblers, perfectly plain glass. Each dish—they were all of glass—was covered on the rim with green moss, with shells, stones, and trailing vines. It was constructed during the day previous, and by six o'clock the following evening presented the exquisite frosty appearance we have described.

To say it was greatly admired by all who surrounded the large table it graced is to speak tamely, for it called forth enthusiastic admiration. A more chaste and altogether charming mode of ornamenting a handsome table cannot be conceived.

## Floral Hints.

## LILIES OF JAPAN.

WE condense from the *California Horticulturist* the following list of these popular Lilies, which are constantly found to be more and more desirable as their qualities become better known. *Lilium auratum*, sometimes called Golden Lily, grows wild abundantly on the hillsides, stems averaging from three to twelve feet high, flowers numbering from three to one hundred and seventy-five on a single stem. Stem starts round at the base, and then spreads thin and flat, often being six inches wide at the top, where it flowers.

To preserve the bulbs in good condition, take them up in the fall, place in a flower-pot, and keep in cold place for the winter. The fragrance is like Mignonette, but much stronger.

*Lilium auratum pictum*.—A seedling from the last; has a red band, instead of a yellow, about half-way down the flower.

*Lilium rubro-vittatum*.—Also from *Lilium auratum*; flower as large, and same growth; has glossy red band, sometimes with spots, sometimes not.

*Lilium auratum*, var. *virginale*.—Also a seedling from the same parent. Flowers pure white, with brilliant yellow rays and lemon-colored spots.

*Lilium black*.—Flowers very dark purple with small yellow stamens. Grow in light, peaty mould mixed with a little sand. Do not let them have too much water or they will die.

*Lilium concolor*.—Small, star-shaped flowers, light scarlet, with dark red spots. Two feet high. Erect flowers.

*Lilium coridium*.—Seedling from the last flowers; yellow.

*Lilium cordifolium*, *giganteum* (or *Japonicum*).—Care needed in selecting the bulbs. Plant under shade in a shrubbery. Does not like the sun; grows well in moist, stiff soil. The bulb planted last spring, as soon as the flower-stem was out of the ground, had formed its own roots, and the bulb decayed altogether; and if taken up about the time of flowering new bulbs will be found just forming at the base of the stem. Flower-stems average from five to seven feet. Flower has four petals, and is very long; creamy white, with a dash of purple.

*Lilium Japonicum*.—A distinct variety; foliage thick and stumpy; dark, glossy green flowers, trumpet-shaped, about six inches in length, and creamy white, and sun-painted on the outside of a rich chocolate brown.

*Lilium Krameri*.—A fine variety; flowers delicate pink, some pure white. It thrives in a light, peaty soil, rots easily.

*Lilium Lichtlinii*.—One of the best varieties. Flower golden yellow, dotted with purple. Grows from three to five feet.

*Lilium longiflorum eximium*.—The common long white trumpet-shaped Lily, two to four feet high.

*Lilium longiflorum folius alba marginatis*.—Seedling from the above, precisely like it, except a narrow white border round the leaf.

*Lilium Martagon*.—Leaves and flowers smaller

than any of the others. Yellow, with dark spots. Two to five feet.

*Lilium medeoloides*.—Orange red, with dark spots. Requires careful treatment, as the bulb falls easily to pieces. Grows in light, peaty mould.

*Lilium speciosum rubrum*.—A fine, hardy Lily. Flowers red, with pea-green stripe, spotted with red and a white margin.

*Lilium thunbergianum flore pleno*.—Dwarf, hardy, double. Flowers fiery red, with dark spots. Early. About eighteen inches high.

*Lilium thun. marmoratum*.—A single variety of the above. Flowers deep orange-red, with tawny stains at tips of petals.

*Lilium thun. tatzla*.—Another of the above variety, a little larger in growth. Flowers light yellow tinged with pink.

*Lilium thun. bemy*.—Of the same family as above, but distinct in color and foliage. Flowers erect, dark chocolate.

*Lilium thun. Alici Wilson*.—A new variety of the above. Flowers erect, light orange.

*Lilium tigrinum flore pleno*.—A double variety, very late. Flowers fiery red, marked with purple.

*Lilium splendens*.—A single variety of the above. These two, like *Lilium speciosum rubrum*, throw out small bulblets in the apex of the leaf.

## CALOCHORTUS, OR MARIPOSA TULIP.

THE *California Horticulturist* for August has as its frontispiece an engraving of this handsome flower, which, it remarks, "succeeds admirably in the garden, and deserves the attention of bulb-planters."

This tulip has been generally considered very difficult of growth out of its native habitat. Even so high an authority as *Vick's Monthly* has pronounced it so. Mr. Vick says that he has tried it many times, and has not been successful in raising perfect specimens; but a correspondent of the same journal, E. Huztelen, writing from Le Roy, New York, gives a most encouraging experience, which will surprise those who are acquainted with the previous history of its culture. The plant is a native of California, and grows in dry and stony soil, where it is exposed to excessive heat; but, strange to say, the success noted has been attained in a climate more severe than that where it has very generally failed. We give below an extract from the letter to the magazine:

"I have a fine bed of Calochortus containing all the varieties in *Album von Eeden* excepting one. The soil in which they grow is a coarse quicksand enriched with a very little swamp muck. They are planted six inches deep. I never disturb them nor cover them in winter, and they come thicker every year, most of them growing two feet high and going to seed. They are less trouble than Tulips. Plenty of sand, with a dry bottom and full sunshine for three parts of the day, seems to be all they need. I have also found that manure from the barnyard will do them harm instead of good. With the exception of pulling the weeds, the treatment by which I succeed is to let them alone. E. HUZTELEN."

All admirers of this handsome flower will be glad,

we are sure, to find that it can be cultivated with so little care as this, for it is a plant whose attractions well merit painstaking effort. The *Album von Eeden* is a journal published in Holland. It has lately reported favorably on the possibilities of success with the Calochortus, but we cannot but agree with Mr. Vick that, if the plant would prosper in that country, the thrifty Hollanders would have found it out long before this. No Holland gardener would, we feel sure, fail to secure any specimen of the Tulip family.

The singular form and rare brilliancy of this blossom should induce all lovers of the beautiful to add it to their collection, if possible; and as all Tulips are natives of a warm climate, having been brought originally from Persia, we do not see why this, like the others, should not become acclimated here.

## FLOWERS IN FLORENCE, ITALY.

EVERY morning at breakfast time a wiry little old man with twinkling black eyes came creeping up our staircase with a huge market-basket full of flowers on his arms. It makes me sigh with pleasure now to think of those flowers. They were mostly wild ones, but they did not seem so to us, for they were of the kinds which we had been used to see growing in gardens, Jonquils, Lilies-of-the-Valley, Tulips, Narcissus, Field-Lilies, Ranunculuses, splendid in every shade of yellow and orange and deep red; clusters of roses, torn from the walls where they bloom all winter long; Ivy sprays, Lauristinas, Irises, Myrtle, and that oddly-tinted purple-black Lily which is the emblem of Florence. Later he brought Lilacs, fruit-blossoms, Anemones, purple, pink, and scarlet, long drooping boughs of Wisteria flowers, and the delicious little Banksia rose. All these delightful creatures would be poured out on the table, and then would begin the most comical process of bargaining! The old man would name a price. We would name a price. The old man would shriek, shrug, dance about, and protest that to abate in the least from his price would be equivalent to condemning his wife, children, and aged parents to penury. Then Maria, our maid, would emerge from the kitchen and join the fray, snapping her fingers and crying, "*Che! Che!*" declaring that never was there such a wicked old man, the worst in all Florence, a thief, a veritable robber; never should her ladies pay such unheard-of sums for a few miserable flowers—it was picking their pockets; *Gia! gia!* go along with you. Then suddenly in the midst of a storm a lull would ensue. The old man would change his expression, become all smiles, push the flowers he had chosen towards us with his lean forefinger, seize the sum he had so decreed, bow, and vanish, leaving us with the lovely heap of glad, sweet-swelling things and the comfortable sense that we had made a *buon mercato*. But alas! there would be the giantess down upon us, upbraiding us for always giving iniquitous people their own way; and always there was a glint in the old man's eye; a suppressed frisk and joyfulness, as he turned away, which convinced us that, however little we might have paid, the "bargain" was on the other side, and, as usual, we had been "done in the transaction."—*Sunday Afternoon.*

**NEW PREMIUMS TO SUBSCRIBERS OF**

THE

**Ladies' Floral Cabinet**

For 1879-80.

Every subscriber, whether new or old, remitting hereafter his subscription for  
one year, either singly or in clubs, is entitled to receive as a present from the pub-  
lisher, in addition to the paper, the following premium, free of all charges for post-  
age:

**\$1 00 WORTH OF FLOWER SEEDS FREE!**

This collection consists of the following varieties most popular with flower-lovers. The seeds  
are very choice, grown for us specially this year, carefully selected, and many of them new and  
improved sorts, which would sell for 25 cents each; they are equal to the best sold by any seeds-  
man at 10 to 25 cents per packet:

No. 1. BALSAMS	Packet worth 25c.	No. 7. PETUNIAS	Packet worth 10c
No. 2. CANDYTUFT	" 10c.	No. 8. PALOX DUM-	" 10c.
No. 3. CANNAS	" 10c.	MONDII	" 10c.
No. 4. MIGNONETTE	" 10c.	No. 9. SALVIA SPLEN-	" 10c.
No. 5. DIANTHUS	" 10c.	DENS	" 10c.
No. 6. PANSIES	" 25c.	No. 10. ZINNIAS	" 10c.

Total Worth, \$1 30.

Thus each subscriber receives for \$1 25 or \$1 10 his paper one year and \$1 worth of flower-  
seeds besides.

**For \$1 50.**

**\$1 Worth of Bulbs, New Gladiolus Free!**

This is a new and delightful premium. To every subscriber remitting \$1 50 will be given:  
(1) The Floral Cabinet one year, worth \$1 25; (2) Collection of Flower-Seeds, worth  
\$1; (3) Collection New Gladiolus worth \$1. Total, \$3 25. All will be sent without  
charges for postage. These Gladiolus are new seedling varieties, very beautiful, flowering this  
year and will consist of two bulbs, each worth 50 cents, divided into two packages: (1) One  
Bulb Pure White and One Bulb Pure Yellow, or (2) One Bulb Pink and One  
Bulb Scarlet. The subscriber will name his preference of package.

**For \$2.**

**\$1 Worth of Vegetable Seeds Free!**

Every subscriber remitting \$2 will receive (1) Paper one year, worth \$1 25; (2) Collec-  
tion Flower Seeds free, worth \$1; (3) Collection New Gladiolus free, worth \$1; and in  
addition, (4) Collection Vegetable Seeds worth \$1. Total worth \$4 25.

This collection of vegetable seeds consists of the following varieties, seed carefully selected  
and grown this year:

No. 1. Beets, worth 10c.; No. 2 Cabbage, worth 10c.; No. 3. Lettuce, worth 10c.; No. 4.  
Carrot, worth 10c.; No. 5. Cucumber, worth 10c.; No. 6. Onion, worth 10c.; No. 7. Pars-  
nip, worth 10c.; No. 8. Turnip, worth 10c.; No. 9. Tomato, worth 10c.; No. 10. Radish,  
worth 10c.

This collection is specially adapted to family gardens, and the seeds are as pure, genuine, and  
fresh, and in as large quantity as the seedsmen usually sell for the same money.

The delivery of Seeds and Bulbs will commence January 1, and continue daily till all are sup-  
plied.

N.B.—These offers are made by the publisher to stimulate the taste for flowers, gardening,  
and to introduce the paper into every home. It is a pleasure to publisher to give and subscribers  
to receive such new and beautiful gifts.

Subscription Price, \$1 25 per year, Five Copies, \$6; Ten Copies, \$11.

Each member of club being entitled to receive \$1 collection of flower-seeds without extra charges,  
also paper one year, postage prepaid: also privilege of remitting at same time other sums to  
obtain the other collections of seeds and bulbs. Address

HENRY T. WILLIAMS, Publisher,

**BEAUTIFUL EVER-BLOOMING**  
**CARNATION PINKS!**

In condition to bloom this winter, 20 different varieties,  
clove scented, strong healthy stocky plants, all labeled,  
sent safely by mail to any post-office. 6 plants for 50c.;  
14 for \$1. Extra choice fancy varieties, 4 for 50c.;  
8 for \$1. C. T. STARR, Avondale, Chester Co., Pa.

(Cut is not near full size.)

This is an elegant Pocket-Book of a new design, made of Rus-  
sia leather and handsomely finished with nickel plated mountings  
and clasps. It is arranged with pockets suitable for either silver,  
scrip or bills, and has a beautiful silk handle with tassels attached.  
They are equal to pocket-books sold in the stores for \$1.25 to  
\$1.50, and yet we send one by mail post-paid as a premium to  
any one sending five subscribers to Farm and Fireside at 50 cents  
a year. We are confident that our lady readers will be delighted  
with this new premium, and are sure that a more acceptable  
present could not be found.

**PRICE OF POCKET-BOOK**, post-paid, including one  
year's subscription to Farm and Fireside is \$1.

It is only because they are manufactured in large quanti-  
ties especially for us that we can afford them at such a low price.  
**FARM AND FIRESIDE** is the most popular Agricultural  
and Home Journal in the U. S. It is suited to the house circle in  
city, town or country, and is a welcome visitor in every house-  
hold. Farm and Fireside is published twice a month, it contains  
8 large pages, and the circulation is so large that we can afford  
to publish it at 50 cents a year, although each copy contains as  
much reading matter as most journals costing \$2 to \$4 per year.

**SAMPLE COPIES** of Farm and Fireside and Premium  
List sent to any address for 3-cent stamp.

**ADDRESS ALL LETTERS** plainly to **PUBLISHERS**  
of **FARM AND FIRESIDE**, Springfield, Ohio.

NEW YORK, OCTOBER, 1879.

**Ambrosia.**—Most persons would agree that the rose has enough in its perfume and beauty to sustain its pretensions to be queen of flowers, but it seems that the rose can be made exquisite also to a third sense. Not long ago a confection of rose-petals was served to Emperor William. It was the gift of an English lady, and came from Alexandria, where the rose thus prepared is considered a strengthening as well as a delicate dish; but Egyptian cooks are said to be the only ones who understand the art of preparing it, and the right species of rose for this purpose grows only in that region. A Smyrna house, however, exports jelly of roses. Perhaps research might find a way of converting other flowers besides Eastern roses into delicate food. In that case, cookery and floriculture would strike up a closer alliance than now seems possible for them to have.—*Cal. Horticulturist*.

**The Shades of Color in a Flower** vary remarkably, even in the course of the same day, according as it is lighted by the direct sunshine of midday or by a north light from a bright blue sky, and it is known that flowers themselves seek by preference the warm orange rays of sunlight. M. L. Hugo has been making some experiments at the Horticultural Exhibition on the modifications induced by electric light, the results of which he communicated lately to the Paris Academy of Sciences. He finds that under this influence the *Nidularium* exhibits a beautiful red portion in the centre of its clump of lanceolated foliage, the electric light appearing to him to intensify its red lustre. The *Caladium* exhibits red particles dispersed among the white or green leafage, the brilliancy of this red appearing sensibly "tarnished," and approaching a reddish brown.—*Exchange*.

## A CHAPTER ON HARDY BULBS.

IN purchasing hardy bulbs for spring flowering this query forces itself upon one irresistibly: "How can I make the finest display for the least money?" This is really an important question, and one we have often asked ourself—did not less than an hour ago, as we turned the pages of a catalogue before us and glanced with greedy eyes over the tempting contents. Let us endeavor to frame a reply to this practical question.

In the first place, no one need expect a bed of flowers, no matter how rare, to represent money value. If you expect a visitor to glance at your tulip-bed, for instance, and calmly point out variety after variety, enquiring the name and price, you are greatly mistaken. Named bulbs, in particular, are a snare and a delusion, because they are invariably from three to five times as expensive, and give you not a whit better flowers; while nine times out of ten, those who purchase named sorts do not label them after the first season, and consequently have a lot of unnamed bulbs the next spring after all. Our advice on this score is, candidly, to buy mixed varieties of hardy bulbs, leaving the named sorts to cheapen in the hands of amateurs and professional florists.

Hyacinths are the most expensive bulb we have—that is, the imported. Those grown in our own soils degenerate and do not produce as fine spikes of flowers as those fresh from Holland; but still, for an out-of-door show, these degenerate ones are the best after all. The coloring is brilliant, and the spikes are strong enough to stand erect in spite of the severest storm. Mixed hyacinths can be bought for one dollar and a half per dozen, and will give general satisfaction.

Tulips are showy and cheap. Many named varieties of great beauty can be bought for a nickel each.

## AN EXCELLENT BASKET PLANT.

THE improved kind of tuberous-rooted Begonias, now everywhere so abundant, make excellent basket plants. In this way their large, brilliantly-colored leaves, which are naturally of a drooping character, can be seen to advantage, and if grown in good soil and kept well supplied with water in a moderately cool, dry house, they will produce a charming display for months in succession. On rockwork, too, in any corner of a conservatory or greenhouse, or even out of doors in a warm corner, they grow and flower freely, and are exceedingly effective. To tall, light-leaved, sub-tropical plants, in a warm, sheltered situation, they would add variety of color and be much more satisfactory than plants of other kinds often used for such purposes.

**A Dozen Kinds of Roses on one Bush.**—Flower-growers can have a dozen kinds of roses on one bush, by selecting a plant of the "*Prairie Queen*" or any other strong grower, and budding thereon a dozen different kinds of roses each of a different color. These may be selected to all bloom at the same time, and become a great curiosity and pleasurable display of beauty.

## THE NATURAL EASTER CROSS.

(Continued from page 145.)

ed the flowers must be made or these may be formed first and laid away, secure from the dust, until all are done, and the cross finished. The flowers suitable for this cross are two clumps of Violets, a few Snowdrops, and the ever-lovely trailing Arbutus; which furnish the chief adornment. These may all be made according to directions previously given, and arranged in proper positions about the cross. They must be touched with varnish and dusted with diamond powder. The trailing Arbutus is clustered thickly about the base, peeping out from the snow and ice about the stones, and fastened up round the body with long sprays, falling over the arms in long, graceful garlands.

## THE AMARYLLIS.

AN excellent plant for the house is the Amaryllis; it never fails to send up its flower-stalk crowned with three or four beautiful lily-like blossoms. It requires very little care; give it plenty of water while in bloom, and keep very dry for at least three months after it has done flowering. I would keep the bulb growing for some little time after blooming, to develop it for future flowering, but it should be dried off for some time before blooming. Do not take the bulb out of the pot; simply let the earth get dry.

## PUBLISHER'S ANNOUNCEMENTS.

**Change of Business.**—All correspondence relating to THE LADIES' FLORAL CABINET, and the publication of books heretofore published by me, should hereafter be addressed to

ADAMS & BISHOP,  
Box 2456, New York.

OFFICE, 46 Beekman Street.

Numerous changes in my business which were occasioned by the hard times, and in consequence thereof subjected me to inconveniences and delays which I could not avoid or adequately explain, have made it necessary for me now to retire from my present business. The publishing interests heretofore conducted by me are now in the possession of the above firm of Adams & Bishop, who will conduct the same successfully. Having ample capital, ability, and experience, all subscribers and customers will find abundant satisfaction in dealing with them. And I recommend to every one a liberal patronage of their efforts. With thanks for the kind regards and favors from my subscribers of the past, I am, gratefully,

HENRY T. WILLIAMS.

**Delays Remedied.**—The delays of the past few months, which have been beyond explanation or apology—the business situation being of a peculiar nature—will now be remedied, and subscribers may depend hereafter upon prompt publishing and mailing of papers to them.

ELEGANT FOUNTAIN

## The Household.

## SELECTING PICTURES FOR THE HOME.

THE choice of pictures with which to decorate the walls of a home is a matter of no slight importance, in whatever light we may view the matter, either as one of purely ornamental character or as having a real moral bearing upon the life of the family. No home should be without pictures, if it is possible to procure them without the sacrifice of more important considerations than are usually allowed to exclude them.

Few persons who have not had a thoroughly artistic education are able to judge of the merits of an oil-painting as a work of art, and those who are not conversant with the subject should be extremely cautious in selecting pictures which may, although purchased at heavy cost, give little real or lasting pleasure. In cases where the outlay of large sums of money is intended, it is well to take counsel with artists of repute, whose judgment may be relied upon as to the artistic merit of a picture which may have captivated the fancy by its idea, while the execution is faulty, or even wretched. But while we avoid one danger it is well to beware of running into another—that of selecting a picture because it is well painted, when the subject does not attract. A painting lasts through generations, and if it is worthy its charm increases rather than diminishes by familiarity. It is, then, most desirable that its subject should be one likely at once to interest the mind and charm the eye. In regarding a picture as the decoration of an apartment, its appropriateness to the purpose for which the room is intended should be among the first considerations—one too often, we might almost say generally, forgotten, so that we see the grossest incongruity in this respect extremely common.

Mrs. Brown hangs a Battle Scene in her guest-chamber, where her visitors must needs see it when first awake or when just about going to sleep, and Mr. Brown places a fine engraving of the Martyrdom of St. Cecilia over the mantel of the family dining-room, both with serene unconsciousness of having committed an outrage upon good taste; but the taste which is outraged is sensitive, and the educated eye perceives the want of fitness at a glance.

Good pictures may now be had so cheap that there is no excuse for disfiguring a house with tawdry chromos, meaningless and commonplace engravings, or vast stretches of canvas covered with daubing in oil.

The most beautiful objects in the world may now all be seen in photograph, and one really good photograph of a splendid statue is worth twenty inferior paintings in oil.

Choose, then, pictures good of their kind, and frame them in a manner correspondent to their value and style. Elaborate and costly frames should never enclose simple, inexpensive pictures, and the color and material of the frames should be such as to display the picture to the best advantage by judicious contrast. There is an endless variety in frames, and the scale of prices ranges from twenty-five cents

to hundreds of dollars. The new styles in passe-partout are beautiful for engravings and crayon drawings; simple cross-piece frames suit small photographs; plain bars of gilt moulding should always have colored mats of a tint to harmonize the frame with the picture. This is a great improvement in framing engravings either light or dark, as they appear richer with an intermediate tint between the picture and the gold band. In wood frames the root of the black-walnut is perhaps the handsomest, but they are also costly. Maple is good for some subjects, and for small and highly-colored water-color drawings velvet in dark rich tints looks extremely well. In arranging upon a wall the character of the frames used should harmonize with each other. By this we mean not that they be all of one style, but such as contrast well together.

As to choice of subjects, it must be to a great degree a matter of personal choice, but some general rules may always be applied.

Let those for the bed-chamber be simple, tender, and full of repose. A quiet morning or evening landscape, an interior domestic scene, a Madonna and Child, would be appropriate.

In rooms for the general use of the family there may be wider range in subjects. Flowers, fruit, game, harvest-scenes, in the field, the vineyard, or the orchard, feasting and merry-making, are especially suited to the dining-room, while grave, sombre subjects seem at home in the library, though, of course, here the greatest variety may be admitted, illustrative of history, poetry, and science. Here, too, portraits of distinguished personages are most appropriate.

Family portraits belong to the family living-room, among those who love them, for they cannot be supposed greatly to interest strangers.

In hanging pictures use cords of one color, and nails of a uniform kind. Place the largest pictures about midway between the height of a table and the ceiling, smaller in the centre of the wall-space, with smaller ones at the sides, and the smallest below as pendants. Nearly all pictures look best inclining out at the top from the wall, and paintings require either an upper or side light; it should never come from the directly opposite side of the room. If arranged with taste, a wall may be almost filled with pictures without any appearance of crowding.

If chromos are used they should be selected with great care, for a crude chromo is a disgrace to the name of art; but there are those that are excellent copies of valuable paintings which are far beyond the reach of ordinary purses, and these are most desirable possessions.

Whatever is selected, let it be good of its kind and chosen for its merit as a picture, not as an article of furniture.

## LEAVES FROM MY SCRAP-BOOK.

IN these days which try men's souls, and women's too, every effort to economize should merit applause; and this is why the beautiful CABINET should be welcomed and supported in every refined household. Its lessons of economy are useful, beautiful, and fascinating. So I turn over the leaves of my scrap-

book, and find the following. A very small amount of meat can be made into a rich dish for a large family, if the following directions are observed. Take cheap bits of meat—always perfectly sweet, of course—but that which is not fit to roast or fry will answer perfectly well—neck pieces, trimmings from roast, tough edges unfit for broiling—two pounds, or a little more, at the cost of ten cents or so; cut into small pieces, put into a porcelain-lined kettle, if convenient, or a common stew-pan will do, and place it on the back of the stove to stew slowly for hours or until perfectly tender; and any meat will boil tender if kept covered with water and allowed to cook long enough. Just before your potatoes are ready to be taken up for dinner beat smoothly together two heaping tablespoonfuls of sifted flour in a half-pint of milk with a piece of butter half as large as a hen's egg, and pepper if you like; stir this in with your meat-broth, which should be simmered down to about a pint, and salt to taste. Meat will stew tender in less time if salt is not added until it is nearly done, as salt hardens the meat, and vegetables also, if put in at first. Now stir your thickening, and stew together for two minutes until it is thoroughly cooked, then turn into the tureen. Our folks think nearly as much of this broth as of an oyster-stew.

Still a cheaper relish for your potatoes is to tear up salt fish into small shreds, the smaller the better—dry bits lying around, unfit for hash or hardly anything else, will do. Wash thoroughly, then put it in the stew-pot with a quart of water. Let it freshen thus for fifteen minutes; then pour off this water, and add a pint of fresh hot water, in which the bits of fish must simmer until soft. Prepare a thickening precisely like that for the meat relish, and serve with newly boiled potatoes. Such dishes as these help out the noon-meals wonderfully well when we live some distance from the butcher and the fish-market.

**The Wax-wing (*Ampelis Carolinensis*).**—The wax-wing, cedar-bird, or chatterer, for it is known by all of these names, is found in all parts of America from Canada to Mexico, and is called wax-wing from the curious appendages at the extremities of some of the secondary quills, resembling small pieces of brilliant red sealing-wax. It is a handsome bird, about six inches long, of a soft gray color, with a large dark patch on the throat and a black band upon the head. The back is a dark blue mixed with cinnamon brown. It feeds upon the berries of the red cedar, of which it is excessively fond, and is commonly found in orchards in the month of June, devouring the choicest of the cherries, and chattering with his mates in the most lively manner. It makes its nest of grass, and the eggs, four in number, are of a dingy bluish-white variously spotted with black. When berries are abundant, as in the autumn, he becomes very fat, and is then in considerable esteem for the table. The wax-wings abound in Southern Kentucky, the home of so much beauty in the domain of nature, and where the distinguished Audubon found such rich material for his magnificent work on the birds of America.

## Home Decorations.

## A LABORER'S MODEL HOME.

A COTTAGE in a New England village, standing amid its flowers, vines, fruit-trees, and garden—tasteful and attractive without and within. Though the abode of laboring people, there are many spare moments found in which to make home pleasant.

Health being a paramount consideration, every apartment is light, sunny, and well ventilated. Each room is inviting and homelike, and the family enjoy the freedom of the whole house except in the bitter cold of winter. Our little lady objects even to the name "parlor," and hers is always "our sitting-room," not in name only, but in reality also—a place of cosy comfort and rest.

Window-blinds being only in anticipation for them, the windows have only shades, in order that the room may be partially darkened in the bright summer days. The woodwork is white, the paper a gray. A light, cheerful carpet covers the floor—roses and leaves strewn on a light ground-work of rustic branches. The furniture is not a parlor set, but consists of light, movable articles, selected for comfort and convenience. A walnut book-case is filled almost from floor to ceiling with works of the best authors—poems, histories, books of travel and reference, stories from the pen of Dickens, Irving, Hawthorne, Miss Mulock, Miss Aleott, and many others. On the walls are several fine steel engravings, lithographs, and paintings—pleasant scenes and faces we love to study and remember. The beauties of each are seen, not in contrast with inferior ones beside it, but in harmony with proper surroundings.

The mantel holds a few select articles of decoration, and has a beautiful picture above it. On a walnut bracket is a large bouquet of dried grasses, pressed ferns, and immortelles, renewed every fall. Above the pictures are autumn wreaths in winter, and in summer twining vines of living green. A portfolio contains a collection of chromos and lithographs; while the children are selecting pretty wood cuts to arrange in a similar manner.

In the dining-room is a large base-burner, which heats the adjoining lodging-rooms, and, through a register in the ceiling, a large chamber above. One window of this room is devoted to plants, and is a veritable bit of fairy-land. Here are three hanging-baskets, a four-pot bracket at each side, and below the window-sill a shelf one foot wide, covered with marbled oil-cloth closely tacked to the sill and falling a foot below the shelf in front and at the ends. A piece of oil matting protects the carpet beneath. Then, after placing a shallow tub in front and holding up the ends of the cover, all the plants may be showered and the water let into the tub. This is done every night after sunset, keeping the plants clean and healthy. There are many vines and drooping plants, and by tasteful twining and looping every ray of sunlight is utilized and the window becomes a bower of beauty. None but thrifty specimens are found here; when one grows sickly or obstinate it is removed to the hospital shelf at one of the kitchen windows. The pictures and book-shelves are twined about with vines growing in water.

In the children's room a cabinet contains specimens of minerals, sea-shells and mosses, stuffed birds, butterflies, etc. Many of their toys and keepsakes find a place here instead of occupying the mantels. The children always wash and dress in their own room, take a pride in keeping it tidy, and many are the sacrifices they make to purchase articles of necessity and comfort for their little domain. They are dressed plainly, in warm, durable, sensible garments, and if they ever wish to have nicer or more fashionable clothing, they are sure to change their minds after a pleasant talk with mother, in which their thoughts are gently led to better things. In their school life they have the daily help and encouragement of their parents; are taught that learning should not end with school days, that a hurried acquirement of many branches would result in a mere smattering of each, with, perhaps, loss of health and an early grave; while a thorough knowledge of the common studies will furnish a firm foundation upon which to build in after-life. Not being hurried with their school duties, they have time at home to practise needlework and many housekeeping arts. They love their home and its duties, and if they are sometimes impatient or fractious the discipline they receive is always quiet and secluded. The mother's ready tact prevents the obtrusion of family annoyances upon her visitors, and they are never entertained with cross or unruly children, and made to feel that their coming is untimely by hearing fretful words, witnessing punishments, or listening to a recital of petty trials.

Many little methods of saving work are practised. The food is plain and wholesome, the apparel neat and unpretending, and all practise the rule of leaving things in their proper places, thereby knowing where to find them. The washings are made as small as possible, and many articles, if well aired and folded, need no ironing, such as woollen underwear, colored shirts, brown towels, etc. This saves hours of time for the mother to spend with her children, her books, and her flowers. Time is a blessing we would all do well to economize; all that we spend foolishly is so much lost for ever. "I shall not pass this way again," the Quaker said who did not wish to neglect any kindness to his fellow-men.

Some may wonder how this laborer's family can afford so many comforts. But in economizing time, living simply, and dressing plainly they save money with which to purchase enduring pleasures. These parents began their married life with a very few of the most necessary articles, to which they have added from time to time whenever their means would allow, always suiting their own taste and necessities. In having a certain independence and following their own ideas they have an individual home—one all their own, and not a mere counterpart of their neighbors'.

D. W. M.

## HOME LIFE.

THERE is an increasing love in the hearts of the American people for tasteful homes, not always grand, but made easy and artistic by little rustic adornments and quaint devices. There is certainly something very delightful in building up one's own

home and yearly adding to its beauty and attractiveness. I have in my mind at this moment the home of a young couple who started in life with only a hundred dollars, but with hearts full of love and courage. Do not be shocked when I tell you that they commenced housekeeping with only two chairs, and when a third person was present one gracefully took a seat upon the bed. Yet, with womanly tact, the fair young hostess entertained her visitors in such a way that they departed impressed with the fact that love and happiness may exist in spite of very adverse circumstances. Years have passed, and, with added means and cultivated taste, that home is a paradise of beauty. The yard is tastefully arranged with grass-plats, flower-beds, and ever-blooming Roses of various kinds. Beautiful Japan Honeysuckle, with its white flowers, filled the air with fragrance, and the Jessamine's orange-like blooms peeped in at the windows.

There were shady nooks bright with the upturned faces of Pansies; beds of Verbenas, Geraniums, Abutilons, and Fuchsias with their drooping bells; and over all the humming-birds daintily hovering, made a picture so charming that each little human flower of that household daily felt the refining influence of its beauty. Let us in mid-winter take a peep within. We find the cosy parlor, with its organ; for music is one of the home enjoyments. There are shelves prettily arranged with books; there are shells, vases, and statuary. Upon the walls are paintings in oil and water-colors. But the most charming spot is the family sitting-room; here the children gather and friends love to linger. Shall I describe it? Very little money has been expended; the furniture is plain, and yet the room is wonderfully attractive. It is large, with two south and two west windows. Between the two west windows is a table covered with books and prints. There are also a few plants requiring but little sun, ornamental Begonias and foliage plants, and a silver basket filled with red and golden fruit. Above the table is a small shelf which supports a picture, and from which a coconut-shell is suspended filled with the Dew Plant. On each side of the picture is a vase of Ivy. Over the mantel hangs a rustic cross richly wreathed with Kenilworth Ivy and the delicate Smilax. In one of the south windows is a stand of plants. Above it is suspended a hanging-basket with a handsome Coleus in the centre, Oxans, English and variegated ivies. The other south window delights in a window-garden. It is filled with Roses, Geraniums, Crossula perfoliata, and vines of different kinds. Above is another basket with a coral Begonia, the lovely pink Christine Geranium Vineas, and other suitable plants, all making such a bower of beauty as delights the eye and cheers the heart. Flowers lend a charm to the humblest home. Let us cultivate flowers for a twofold purpose: our own pleasure and recreation, and as part of the training of our children, instilling into their hearts a love for the beautiful. The time will hardly be missed from our more important duties, and great will be the compensation. Above all let us cultivate the sweet flowers of love and gentleness, which will adorn them more than all the appliances of wealth or art.

IVY.

## Art Recreations.

## SWISS HAMLET.

A WINTER scene under glass shade, for bracket. The shade and stand for this can be of home make, or obtained from a fancy store. Those made by hand consist of a square piece of board set on four feet, ornamented around the edge with a wooden beading obtained at a furniture store, of leather leaves, or rustic work, of cones, acorns, and little branches of oak or grape-vine. Pretty feet can be made of spools, with a long screw passed through them and into the stand, then ornamenting with acorns or any other article corresponding with the edging of the stand, or the common curved clothes-hooks make really beautiful feet for these, and various other articles, as they look precisely like the feet upon sofas, bureaus, etc., in miniature. Having finished the stand with a coat of copal varnish, the shade is made of a sash of desired size, filled with four panes of glass for sides, and a square one for top. Pass a piece of chenille around the base after the shade is placed over the picture. In the centre of the base-board place a piece of mirror to imitate a lake; place stones, moss, groups of waving grasses, ferns, etc., around the edge at the sides: on the front, sand and flat pieces of moss to imitate grass. At the back form rocks of stones piled upon each other, with pieces of evergreen cut and formed into little trees; low evergreen bushes upon the summits of the mountains, with a few trees sparsely covered with autumn leaves. All the foliage and grass of this picture should be of the dun and brown colors usual in winter. Make a number of little houses, of the Swiss style, also a little church with spire. The house may be made of card-board, wet with thick glue and sanded, and then marked out in form of stones; or of thin pieces of wood rubbed with brown paint-powders of different hues. Tiny windows and doors, porches, etc., may be formed of stiff card and glued on. Chimneys must be sanded, and smoke formed of white and lead-colored cotton batting. Little figures may be formed by hand or of wax, and dressed in Swiss costume, or purchased at a toy-shop. The beautiful little piano dolls are admirable for this purpose, but care must be taken to have them and all portions of the houses, etc., in perfect proportion. Boys skating upon the lake, and a tiny bridge across the rocks in the distance, will add to the beauty of the scene. Very much depends upon the taste and designing qualifications of the artist. Ice upon the sides of the lake is made by touching with clear mu-

cilage, and putting large pieces of frosting upon it. After all is finished touch various parts with mucilage, and dust with arrow-root mixed with fine frosting.

## SCARF IN KNITTING.

**MATERIALS.**—8-ply Berlin wool or 4-ply fleecy, selecting any two colors that contrast prettily for the ends, the centre being made of one of the colors only; two needles, No. 8 Bell gauge. Cast on with the wool seventy-four stitches—that is, three stitches for each pattern and two over for the edge stitches. First row: Bring the wool in front of the needle in the right hand, then turn the wool quite round the needle, so as to bring it in the front again, and purl two stitches together; \* the wool will now be in the

for about one quarter of a yard; then, working the same stitch but only one of the wools, knit about one yard, and make the other ends to correspond with the beginning. Cast off. The ends are further decorated with a narrow strip of crochet and a fringe. Use wool like that in the centre of the scarf, and a crochet needle of medium size. Crochet on the edge of the knitting a row of 5 chain and 1 plain, then two rows more the same, working the plain stitch in the 5 chain of the preceding row. This, of course, makes three rows of the ordinary looped crochet. For the fringe cut the wool in length of about eight inches, and loop them into the last row of crochet.

**Drying Ferns.**—The dried fronds of ferns are frequently employed in forming screens under blinds, etc., and as they are easily obtainable, collections of ferns being generally grown, some hints as to the preservation of them cannot fail to be acceptable. Get a carpenter to plane two deal boards, about half an inch thick, a foot wide, and a foot and a half long. Between these place one or two quires of common blotting-paper. Round the boards put two narrow but strong leather straps. These must be drawn as tightly as possible and will secure a great amount of pressure on the fronds inside; and the whole may be strapped on the top of a box in travelling, so as not to take up much room. In gathering the ferns cut them as low down in the stem as possible; and in small specimens get up the root, if you can. In putting them to dry in the blotting-paper, have respect to the natural position of the fern, and also to the size of the sheet of paper on which they are to be finally placed. When the fronds are long and the specimens large, they may be bent so as to lie in a smaller space than they otherwise could, and if dried in a certain position will retain the form easily. It is best at first to make the pressure lightly, so as to alter the form of the plant, if needful, before it is completely dried. Then

SWISS HAMLET.

front; turn it round the needle so as to bring it in the front again; pass the needle down the next stitch, and take it off without knitting it; then purl the next two stitches together, and repeat from \* to the end of the row. Second row: Bring the wool in front of the needle and turn round as before, then purl two stitches together; turn the wool round the needle, bringing it in the front; then slip the next stitch thus—; put the needle down at the back of the stitch, and, bringing the needle in the front, take off the front part of the stitch without knitting it—this stitch slipped is a long loop; then purl the next two stitches together, and repeat from \* to the end of the row. All the rows are the same as the second. Knit six rows of each color alternately

increase the pressure day by day until the specimens are ready to remove. Ferns dry quickly and easily, and may without injury be kept in drying paper some time. When, however, they are removed for final use, they should be secured, if necessary, by little strips of gummed paper, which is best prepared beforehand by covering a sheet of note-paper with a strong solution of gum, which, when dry, may be kept for a long time ready for use. The thinner the strips are cut the better, so as to hold the parts of the plant in their right position. This plan is preferable to gumming the whole plant or portions of it, as the little strips can at any time be removed with a penknife, without injuring the paper or book in which they are fixed.—*Exchange.*

## Family Reading.

### SUNBEAM.

THROUGH bending boughs it flickering falls,  
It glinteth on the garden walls ;  
Then through yon green arcade askance  
It darteth with a lightning glance ;  
And then its forked arrows break  
In golden shivers o'er the lake,  
Sending a shower of brightness down  
Amid the elinging weeds and fern.

It tarries not a moment there,  
But o'er the distant meadow fair  
It glides, and tints yon ruined mill  
Under the bosom of the hill,  
Touching the old wheel from its quiver  
Until the waters laugh and shiver.  
O angel with a golden plume,  
Awakening earth to life and bloom,

Thou comest from those  
fields above  
Where God is life, and life  
is love!  
HANS HATHAWAY.

### A GLIMPSE AT JENNY LIND.

AND, before I quit the theme of song and singers, let me mention a glimpse that I caught before leaving London of one of the celebrities of the past. On leaving the home of Mme. Albani, I crossed the street to look at the dwelling of Jenny Lind. The house stands back from the street, and a garden that must in summer be a very bouquet of flowers and verdure extends in front of it. A bust of the great singer, life-size and in marble, stands in the large bay-window that fronts the garden. And beside the bust sat an elderly lady in a white mob-cap and white cashmere shawl, engaged in partaking of the afternoon cup of tea that forms so prominent a feature in English social life. She was talking to some one in the room, and as she turned to the window I saw again the face that I had last looked upon crowned with roses and lighted with inspiration, on the stage of Tripler Hall, twenty-eight long years ago. Under the disfiguring cap the fair hair, now plentifully streaked with gray, was seen rolled back in precisely the same fashion as that which set all the girls in America to twisting back their tresses in those bygone years. In other respects Jenny Lind has greatly changed. Few could have recognized in the pale, worn lineaments of the elderly lady the well-nigh angelic countenance of the greatest singer of our day and generation. I permitted myself but one glance, not wishing to violate, even by

a look, the sanctity of that tranquil home. I am told that Mme. Lind-Goldschmidt, as she styles herself, is very eccentric and peculiar. She still interests herself in music, being the leader of the Bach Choir, a private association, to which some of the first ladies in London belong ; and so severe is she in her requirements, and so strict in demanding their fulfilment, that her high-born pupils are often tempted to rebel.—*Philadelphia Telephone.*

### THE AUTOPHONE.

PROF. GALBY, of New York, has just completed a very curious and wonderful musical invention, which enables those totally unacquainted with music to execute, either on the organ or piano, the most difficult piece with the precision and expression of skillful performers. In this device, called the autophone, the keys of the ordinary organ or piano are furnished with a very sensitive apparatus for moving them by

YOUNG FOLKS' SOCIABLE—PRESENTING FLOWERS.

means of a puff of air furnished by the bellows. The music, instead of being printed in the usual manner, is prepared by puncturing in a strip of paper a series of holes which correspond to the desired notes. This strip of paper is coiled on a roller, placed inside of the instrument, and slowly unwound by clockwork. As long as the paper is unpunctured no sound is heard, but the moment one of the holes makes its appearance it allows a little puff of air to pass through which, striking on the moving apparatus, causes the note to sound. The autophone is said to be especially adapted to the organ, as the paper can be made to work the stops as well as the keys.—*Christian Union.*

**A Good Word for her Last Place.**—Young person (applying for housemaid's help) : "A young lady as lived with yon as cook, mum, told me as you was a very nice woman to get on with."

### THE BUSY BEE.

VERILY the insect deserves the name when we consider how much work it has to do in storing up a pound of honey. Mr. A. S. Wilson, in the *London Chemical News*, gives the following as the amount of sugar in nectar of

Fuchsia per flower,	. . . . .	7.59	milligrams.
Everlasting pea,	. . . . .	.413	"
Red clover per head,	. . . . .	7.93	"
" " floret,	. . . . .	.132	"

Thus 100 heads of clover will yield about 0.8 of a gram of sugar ; 125,000 will yield 1 kilogram, or a trifle over two pounds. As each head contains about 60 florets, 7,500,000 distinct flower-tubes must be sucked to obtain this amount. Honey contains, roughly, 75 per cent. of sugar ; thus we have 1 kilogram of honey equivalent to 5,600,000 flowers, or say 2,500,000 visits for one pound of honey.

### A PRINCE IN THE KITCHEN.

THEY are telling a good story in court circles of Prince Peter of Oldenburg, Chief of the Russian College for Girls. At the Smoling Convent, which is under his jurisdiction, eight hundred girls are educated, and he had received anonymously and otherwise several complaints about the food, which was pronounced execrable. "I will see to this myself," said the prince, and one day, a few minutes before the dinner hour, he presented himself at the end of the passage leading from the kitchen to the dining saloon. Here he

met two soldiers carrying a caldron steaming hot. "Halt !" The men obeyed. "Put down that kettle." The kettle was at once deposited on the floor. "Fetch a spoon." Here Russian discipline wavered. One of the men had the audacity to begin a protest. "S'death !" exclaimed the prince ; "hold your tongue—fetch me a spoon." "But," stammered the soldier. "Another word and I place you under arrest." The spoon was brought. The prince dipped it into the caldron and swallowed a quantity of the liquid. "I thought so," he said. "Do you call this soup ? Why it is dirty water." "It is, your highness," answered the soldier who had been threatened with arrest ; "we have been cleaning out the laundry."

**A Beautiful Custom.**—In Germany there is a beautiful custom, whenever a person is confirmed in his church to present a young tree, and these are planted as memorials. At one service lately over one hundred trees were planted.

## Household Topics.

## PAINTING WALLS—SEASONABLE HINTS.

OF course, says the *American Builder*, everybody knows, or ought to know, that walls and ceilings are finished with plaster. But everybody may not be aware that plaster has the property of absorbing moisture. This, perhaps, will not take place in rooms where a fire is kept steadily; but in rooms left, as is often the case, for weeks without a fire, the walls will take up a considerable quantity of damp. The effect will be injurious to the health of the inmates. There are few persons who have not suffered from a mysterious cold, caught they know not how, though, perhaps, damp in the plaster had something to do with it.

The extent to which damp is absorbed in a plastered wall may be discovered by noticing what so often takes place in rooms where the walls are painted and have become chilled by a season of cold weather. As soon as the temperature becomes warmer the atmosphere is condensed on the walls, and at times in such quantities as to run off in streams. Now, had it not been for the paint, the greater portion of this moisture would have been absorbed by the plastered walls, and as a consequence the quality of the plaster would have been impaired and the room made unwholesome. In view of this defect in plastered walls, it becomes a question well worth considering whether, in finishing a house, the walls should be papered or painted. If paint is decided on, it is highly necessary that the painting be properly done and good materials employed. White lead, which is the chief ingredient of all paint used, is of late years heavily adulterated—a reason why some painters can do work so much cheaper than others. There are also dishonest painters who will lay on nothing but “whiting” and size for the first coat, and finish off with one coat of oil paint. It is not easy to detect the fraud at the time, but as such paint soon wears off the wall, and attaches itself to the garments of those who rub against it, the customer speedily finds out that he has been cheated. It takes three or four coats of good oil paint honestly laid on to make good work of painting plastered walls.

In painting walls there is ample scope for taste, and such colors may be chosen as are most suitable for each apartment and in harmony with the furniture. Apartments lighted from the south and west, particularly in a summer residence, should be cool in their coloring; but the apartments of a town house ought all to approach toward a warm tone. In a drawing-room the coloring should be characterized by vivacity, gayety, and light cheerfulness, by light tints of brilliant colors with a considerable degree of contrast and gilding; the walls being kept in due subordination to the furniture, though partaking of the general liveliness. The characteristic coloring of dining-rooms should be warm, rich, and substantial, without vivid contrasts, and gilding should be avoided, unless in small quantities for the sake of relief. Parlors ought to be in a medium

style, between that of a drawing-room and dining-room. Libraries should be solemn, grave, and quiet in color and finish, while bed-chambers should be light, cleanly, and exceedingly cheerful. A greater degree of contrast between the room and its furniture may be admitted in a bed-chamber than in any other apartment. Stairways, halls, and vestibules should be of a cool tone and simple in their style of coloring, being in that what they are in utility—a link between the exterior simplicity of a house and its interior richness and comfort.

## MY GRANDMOTHER'S KITCHEN.

“THE old kitchen,” she says, “was such a busy work-shop! It was a large room with a huge fireplace on the east end; on one side of it the great oven, on the other a sink. The old-fashioned fireplace—oh! how cheery it did make the old kitchen seem. Great-grandfather and the boys would roll in a great back-log, and first put that in the back of the fireplace. The andirons, or fire-dogs, were placed up against it, then a fore-stick put on them, then other sticks were put on and piled up to make a good business fire. Fastened to the jamb on one side was the crane, which swung out and back. It was a long arm of iron, on which hooks were suspended—often strings of them—on which to hang pots and kettles for domestic use. In front was a hearth of brick or stone to protect the floor from snapping fire or coals. What a sputtering, crackling, roaring noise the fire used to make as it went rollicking up the wide-mouthed chimney, taking with it chains of bright sparks, up and out into the darkness of a cold night in winter! Then the wonderful things we could see in the coals, as we sat and looked at them by their own light or that of a tallow candle—such castles, and ships, and animals, and birds, and things never thought of, would come and go like magic.” “No stoves?” I said. “Why, child,” says grandmother, “such a thing as a cook-stove was never heard of. Great-grandmother had a *foot-stove* made of tin—a little square box of tin full of holes, and a door to it through which to put in a small iron basin of coals, which she took to church Sundays in cold weather for her feet; for churches never had fires in them, you know, then. How did we cook? Well, it did seem as if our brains would get cooked, and we roasted over such hot fires in order to cook the victuals and do the other work! Why, for breakfast we had pork, either fried in an iron spider set on coals, or a frying-pan with a long handle to hold over the fire, with brown bread and sometimes eggs. Tea was rare and seldom used. The Boston tea-party spoiled the use of it for many years after. Sage tea was a common drink for morning meals. Cider for dinner, with boiled victuals—sometimes bean-porridge and brown bread alone for dinner. Baked pork and beans, with bread and milk or mush and milk, for supper. Potatoes were scarce, but were a rare treat roasted in the ashes, of a Sunday eve, to the youngsters, and eaten with salt. When wheat flour came more into use *white bread* with pies and cakes added to the variety of food. Great-grandmother's big bread-tray had white-bread dough set to sponge in one end, and nut-cakes sweetened

with maple sugar set to rise in the other end. These, when light, were cooked in a large iron pot of boiling fat hung over the fire. When she did not want to heat up the big oven an iron bake-kettle was found very convenient, which was round and flat on the bottom, with an iron cover. To bake things it was set on coals on the hearth, and the cover had hot coals placed on it, when almost anything could be had fresh by baking it separately. Short-cakes were baked in the iron spider turned up before the fire. Griddle-cakes were cooked on a round iron griddle, with a bail to hang over the fire on the crane-hook. Spare-ribs, turkeys, and fowls for Thanksgiving were hung up by a cord in front of the fire, and turned and basted often with the drippings, which fell into a spider below. Soda or saleratus were not known in the culinary art.

## MUFF FOR A YOUNG LADY.

HERE is a pretty style of knitting which may be used for a variety of articles, such as hoods, mats, etc. For a nice muff for a little girl use two needles, No. 6, and two kinds of double zephyr wool, say scarlet and chinchilla. The needles must be pointed at both ends. Cast on 35 stitches with the chinchilla, then begin at the last cast-on stitch with the scarlet and work as follows: First row (scarlet): knit the edge stitch plain, but from the back part of the loop; then \* make one, slip one, knit two together; repeat from \*. Slip the last or edge stitch. Second row (chinchilla): purl the first or edge stitch; then \* slip one, purl two; repeat from \*. This slip stitch is a long scarlet one, and must be taken off as in purling; the last or edge stitch must be slipped in the same way. Third row (scarlet): purl the first or edge stitch; then \* slip one (this is a short chinchilla loop), make one, purl two together; repeat from \*. Slip the last stitch, the slip stitches all through the row to be done as in purling. Fourth row (chinchilla): knit the first stitch plain, but from the back part of the loop; then \* knit one (this is a small chinchilla stitch almost covered by a long scarlet one), slip one, knit one; repeat from \*. Slip the last stitch.

These four rows are to be repeated. Work about half a yard in length, cast off, sew or knit the sides together, line with wadding covered with silk, draw in the ends with cords, add tassels, and the muff is complete. The effect of this pattern is to produce an open net-work of scarlet upon a background of chinchilla. Neither of the wools is to be broken off during the progress of the knitting, and the row begins at whichever side of the work the wool to be used happens to be. There is no difficulty in doing this with double-pointed needles.

**Lace Curtains** should never be ironed. Wash and starch them, using in the rinsing-water a tablespoonful of powdered borax. This makes them very stiff. When wet spread on a sheet, either on the floor or bed, and pin down every two or three inches. Let them dry for several days and they will look very nice.

Invented by E. N. Horsford, late Professor in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent stamp to the manufacturers for a sample.

# THE LADIES' FANCY MAGAZINE

By ADAMS & BISHOP.

NEW YORK, NOVEMBER, 1879.

No. 95. PRICE 12 CENTS.

## FLOWER AND AQUARIUM STAND.

THIS elegant stand is suitable for a bay-window, though it is so highly ornamental that it will appear as a rich and beautiful elegance wherever it may be placed. The stand itself may be formed of a table, circular in form, and with top supported on a pedestal; or, if preferred, one may be purchased of any other form desired. Upon the top of this stand is placed a deep wooden bowl, or small tub lined with zinc, and furnished with a drain-hole which will allow any over-abundance of water to be drawn off by removing the stopple each day.

The lambrequins are formed of scarlet or green cloth. If of scarlet, the figures must be cut from gray silk and worked upon the edge with saddler's silk of a gold color; the wheat is worked in half polka-stitch with various-colored silk. If green cloth is preferred, the figures are cut from golden-brown satin, and stitched on with button-hole stitch on the edge. The flowers, wheat-ears, etc., are in chain-stitch, with violet silk, and leaves, stems, tendrils, etc., in green of lighter shades than the ground, with shades of brown in certain parts, such as stems, leaves, and grasses. The edges are pinked out in long scalloped points.

If the appropriate fish-pattern, seen in the illustration, is used, let the cloth be of a fine blue or sea-green; work the fish in shades of gold and brown, the leaves at the top in bright shades of crimson, purple, and green, the holder below of gold thread. Make the tassels between of bright shades of silk or wool. The fish-globe is placed

FLOWER AND AQUARIUM STAND.

on stand cut from walnut and bronzed, and is in shape of a dolphin. A beautiful ornament of this kind may be made by purchasing a pair of the "fish pieces" that are intended to ornament sideboards, etc., in dining rooms, of the "artificial wood-carvings," and fastening them upon each side of a round stem of wood, two inches in diameter, which is to be securely fastened in the centre of the bowl, the fish being upon the upper part above the edge of the bowl, and on it screw a round plate of walnut ornamented with shells of the same—imitations—around the entire edge. Upon this the globe or aquarium is placed. The entire wood-work may be bronzed, if desired. These carvings bronze well. We took this stand for a pattern, and formed a most elegant one by proceeding as described above; the entire cost of stand, ornaments, materials, etc., was less than five dollars. In appearance it was even more ornamental than the pattern of the costly stand shown in the illustration.

**Evergreen Tree Grub.**—A fly deposits its eggs in the main leaders of evergreen trees; grubs are hatched and eat into the heart and live upon the pith—eating upwards. When the leaders wither or look sickly, cut them off and split them up and kill Mr. Grub. It can be seen where such grubs are in the shoots, as there are small holes with cut wood—like sawdust—around them and upon the shoots a great distance off. It is difficult to prevent the attacks of such flies, but watch for their effects and kill them.

## Correspondence.

## FLORAL CORRESPONDENCE.

WILL you please inform me if there is such a tree as the "Weeping-flower Tree" in existence? Is it very fine, hardy, and what is its height and usual price?  
MRS. M. W. YOUNG,  
Dallas, Texas.

ANS.—We know of no tree by this name. It is possible the shrub you mean may be an Abutilon, often called the Flowering Maple. The leaf bears a strong resemblance to the Sugar Maple, and the plant has something the appearance of a dwarf Maple. The flowers are bells, and fall very gracefully.

What size pot, what kind of earth, and what treatment is best to mature the Cactus and produce the largest amount of bloom?  
JAS. E. MASTERS,  
St. John, N. B., July 4, 1879.

ANS.—The number of varieties of Cactus is so great that it is impossible to give anything but general directions. All Cacti are natives of warm climates, and generally require dry and light, sandy soil; they grow rapidly during three months of the year, and then rest entirely. When the buds begin to appear they require frequent watering with warm water, so as to keep the soil moist, but not wet. After they have done blooming they need scarcely any water at all, and will survive without any. Some cultivators mix one part sand and one garden earth to one part brick-dust and debris from the brick-kiln. No Cactus thrives as well in a rich soil as in a poor one.

I would like to ask what is the difference between the Cacti belonging to the Cereus family and the other varieties of Cactus, and how are we to tell which are the Cereus when we meet with the unnamed varieties. I have been a great admirer of the Cactus, but since coming to this country have seen so little of it, and the florists seem to have so few varieties, that I had almost given them up, till of late THE CABINET readers are bringing them to light. I would like to ask if any of the readers have slips of the Cactus that they would like to exchange for wild flowers of Oregon.

M. G., a reader of THE CABINET,  
Salem, Oregon.

ANS.—The genus Cereus has many species; some authors name a hundred. They are distinguished by botanists from all others by several peculiarities, which one must be a botanist to understand; from each other by the number of their angles. The names of the leading species we give below. The most beautiful is C. grandiflora, five or six angles; the largest is C. giganteus, which attains the size of a tree—it presents the strange appearance of a tree with a green succulent trunk, with huge arms, and bearing fruit out of the side of the trunk, but entirely without leaves; the flowers rise from the angles of the trunk—C. genilis, C. flageliformis or creeping Cereus, C. speciosissimus. A genus very

near Cereus is Echino; differs from it in having its sepals and petals distinct from each other, not united into a tube as they are in Cereus. We do not undertake exchanges.

As I read in THE CABINET that all subscribers are entitled to ask questions, and as I much value its instructions, I wish to ask how to cultivate Pelargoniums, when to pot them., etc.

ANN C. TEED,  
Kansas City.

ANS.—Pelargoniums require repotting every spring and autumn. A very rich soil suits them, as they are great feeders. Put old plants in the cellar, if you wish, through the winter, but see that they do not suffer for water; they should have enough to keep them from wilting, though not enough for growth.

I have been for years an ardent friend and reader of the delightful CABINET, and I now take the privilege of asking some help about my roses. Why can I not get them to grow after the slips are nicely rooted? I always have good success with everything else, but almost invariably fail with young rose plants, even when I buy them already started.

MRS. ALICE M. GREGORY,  
Bedford, Ind.

ANS.—It is impossible to say what is the reason of your want of success, as you do not give your method of treatment. Roses are subject to many enemies among insects; perhaps some of these have attacked your plants. The green fly is an insidious and dangerous foe. Constant vigilance is the price of success with roses. Do not let them suffer from sudden changes of temperature. Water regularly with tepid water. Apply liquid manure carefully, not too strong, and now and then dissolve a tablespoonful of soot in two quarts of warm water, and give it as a stimulant. If the plant is weak and slow of growth after this treatment, cut back and let it make a fresh start.

Please tell something of management of Fuchsia.  
E. B. STRATHMEY,  
Ayletes, Va.

ANS.—We refer you to a late number of THE CABINET in which full directions were given.

Will THE CABINET please tell exactly how to make a pit to keep my plants in over winter?—if plants will live in one in this climate over winter?

M. D. MITCHELL,  
Lewisburg, Pa., Sept. 4, 1879.

ANS.—Plants that are not hardy enough to stand out of doors, but not delicate enough for a greenhouse, can be kept in a pit very successfully. A very simple affair will often give great satisfaction, if carefully managed. A correspondent of *Vick's Magazine* gives an experience with one of the simplest construction which is very encouraging indeed. He says: "I dig a pit, say two feet deep, looking well to drainage, so that water will not settle into it during the winter thaws or in spring. In the bottom of this I plant such things as will bear a good deal

of frost, but are not quite able to stand our severe northern winters. As soon as planted I cover the pit with boards loosely, leaving space between each for air; throw over them some straw or corn-stalks, and when there come a few fine days I remove a good part of the covering for the sake of air, always taking advantage of a January thaw for this purpose. If I have an old sash or two I use them instead of boards for the sake of light. I have no trouble in keeping plants in such a pit, and can pick Pansy flowers half the winter, and sometimes Tritoma blossoms."

Of course it would be much better to have a pit properly walled with brick and covered by neatly-fitting sliding sashes. Such a pit, if properly aired and placed in a sheltered southern exposure, will often afford many flowers through the coldest weather, and keep the plants in fine condition. In extreme weather additional protection should be given.

Are Sweet Violets as hardy as Pansies?  
ANSWER.—Yes.

Will Hedera Helix live over winter out of doors in Northern Indiana?  
J. M. SIMON,  
Swan, Ind.

ANSWER.—Yes, in sheltered places, but not entirely without protection. The danger is not so much from extreme cold, but from the sudden changes of temperature. Cover with a little straw about the roots if it is planted in a protected situation, but if in a north exposure it is well to screen it with boards. Hedera Helix is the hardiest variety of Ivy.

## EVERGREENS AND BIRDS.

FEW persons who are not in a position to notice it are aware of what an interesting harbor, for a great many varieties of birds, is a cluster of evergreens near a house. They are objects of interest for several reasons, and are frequented by birds at one time of the year for one purpose, and at another time for another; so that they are visited at all times by a number of different birds. In the winter the thick green boughs of balsam fir, Norway spruce, and pines afford an excellent shelter to such birds as stay with us during that inclement season. Among these are the common sparrow, song sparrow, ground and tree chippers, snowbirds, and sometimes the lesser red-pole of the far North will, during extreme cold, visit us as far south as the northern part of New Jersey, and eat the seeds from the cones of such trees. During the breeding season most birds that build a hanging or bag nest, besides many others, visit those trees to get the gum for sticking the threads of their houses together. While thus engaged gathering the gum they are so busy that they allow one to approach very close to them. The trees are also a great resort for birds that make their domicile in the branches, particularly robins and cat-birds. Such trees are kept clear from insects, and afford a fine shade in summer, and are very beautiful also in snowy weather, affording a pleasing contrast in color to the pure white snow.

## The Garden.

## GARDENING.

THE flowers have almost all gone now, but a few still linger in the garden, and many are to be found in the field and wood, in sheltered situations, and by the banks of lowly brooks where nature teaches beautiful lessons on the harmonies of colors which we would all do well to heed. What purples, what flashes of scarlet and orange relieved with fringes of gold, and gleams of silver white between! Why can we not learn from nature how to garden, and have done with squares and diamonds, and circular ribbon-beds, and learn to dispose of the wealth she gives us with better heed to her own example? I think this was just what Eve did. Paradise was not a wilderness; it was a garden, and the wise gardeners found doubtless abundant employment; but the bower where Eve entertained the angels was lovely with natural, not with artificial, beauty.

Gardening, at its best, is gathering the beauty of flower and tree and green sward into harmonious grouping, so as to produce a picture which shall delight the eye with charming contrasts of form, of color, and of light and shade. It is not to crowd as many kinds of flowers together as can be got into a prescribed space, or to arrange them in spots of color like a patchwork quilt. Nothing but the impossibility of making flowers appear anything but lovely could ever have reconciled people so long to endure geometrically-arranged gardens. It is true that we are now progressing toward a better standard of taste, and have gained much from the introduction of landscape gardening; but there is great danger that when persons of limited means, and having limited space, attempt to imitate the style of scientific landscape gardening, they will err in the matter of being too artificial. Rockeries that are merely a pile of white stones, bridges that cross streams over which one can easily step, grottoes that look like play-houses, are worse, much worse, than octagonal beds and red and blue patches of color. They are pretensions. A row of Hollyhocks and Sunflowers is respectably honest in its ugliness, but a grotto of cement and conch-shells is simply an abomination. Why not follow nature and only seek to serve where she must rule? Here is a little cottage in the midst of a group of fine old apple-trees. It stands on the slope of ground, which falls in front gently toward the road, the lower part of the enclosure being a meadow, through which runs a stream about three feet wide, but clear and bright and rippling over colored pebbles. The lady to whom the place fell determined to make it beautiful by simply improving its natural features. The meadow was mown and cleared of weeds—for the whole had long been neglected—the banks of the little stream were fringed thickly with violets and ferns and cardinal flowers from the woods, and one or two young willows were set upon the edge, and here and there a clump of water-flags made music by impeding the constant flow of the water. The rather steep ascent in front of the house was made easy by three or four steps about seven inches high, and three feet from front to back, cut into the

earth and made firm by bricking the front line of each step, the whole flight being about six feet wide. On each side the bank remained just as nature made it, with the slope unaltered; but it was covered with a tangled mass of low, delicate but brilliant plants—Verbena, dwarf Convolvulus, Sweet Alysium, Petunias, Daisies. A broad gravel-path swept up from the gate to the steps, and crossed a low foot-bridge made of logs and covered deeply with gravel, made picturesque by great clumps of ferns which grew at each side.

The house was draped the first year with garlands of Morning-glories, Cypress Vine, Hyacinth Beans, Madeira Vine, and such ephemeral vines as could be obtained while she waited the slower growth of Roses and Honeysuckle. The same plan was followed with the flower-garden. Annuals made the place glow with color and fragrance long before the richer and more aristocratic shrubs could be brought to bloom. The unsightly fence was covered in the same way, while a hedge of Syringa, Honeysuckle, Roses, Lilacs, and every pretty shrub within her reach was being coaxed into a growth which should prove a permanent delight. In one corner of the meadow was a large rock, and huge fragments which had been broken off lay all around in picturesque confusion. This was her rockery. A large oak spread its arms above it, so there was too much shade for many garden plants; but she did not want these here. Soil was brought from the woods, and vines and flowers that grew there. Blood-root and spring beauties bloomed in great masses among the ferns, and the rock mosses were soon covered with the pretty partridge-berry, while Ground Ivy and wild Convolvulus disputed every inch of space between. A flat stone made a good seat, and the rockery looked as though it might have been there since the Indians held undisputed sway.

If you had visited the place three years after you would hardly have recognized in the beautifully-embowered cottage and blooming grounds the poor, deserted-looking spot it had been when its owner took possession of it. Yet the transformation was effected altogether by taste and labor. No money was expended except for a few seeds. Almost all the work was done by her own hands. The shrubs were slips or small roots, given from neighboring gardens by kind friends, or brought from wood and prairie by herself and her children. The house was a plain low frame without any outward attraction. Yet there was scarcely a stranger passed that road that did not stop to admire that home with its graceful surroundings. Are there not many places which a woman's hands could make equally attractive? The time that wrought this change was taken from the leisure which remained from the care of a large family and a thriving kitchen garden which formed no inconsiderable share of its support. Let no one think such labor could be aught but a pleasure which would bring health to the cheek and joy to the heart. I have preached this little sermon now, because this is the best time for preparing and laying out plans for gardens to be made in the spring. Trees can be transplanted, the ground broken and cleared, many seeds and roots planted, so as to have everything in readiness for the spring.

MRS. C. S. NOURSE.

## IVY-LEAF GERANIUMS.

THE Ivy-leaf Geraniums make very attractive specimens, and, as they do not occasion much difficulty either in the preparation or after management, they well deserve to be grown more generally in this form. My method of procedure is simplicity itself, and any amateur may adopt it. A certain number of pots eight inches in diameter are prepared as follows: A layer of crocks is placed in the bottom, over these a layer of flaky leaf-mould, or the roughest part of the compost. The pots are then filled to within about four inches of the rim with a compost consisting of turfy loam three parts, and well decayed hotbed manure one part. Partly-decayed horse-droppings, or even leaf-mould, may be used instead of hotbed manure if more readily procurable. Then for each pot take three plants in three-inch pots, turn them out of the pots, and arrange them regularly and fill in between the balls of the soil with the compost. Sufficient soil should be put in the larger pots to allow of about an inch of soil being put on the top after the plants are arranged in their proper places. After the potting is complete put a trellis to each, and train the growth regularly over it. A rather small balloon trellis is the best for plants to be kept in the conservatory, but if required for the window-sill a flat trellis will be found the most suitable. Until the trellis is tolerably well covered remove the flower-trusses as fast as they make their appearance, and to assist them to make a vigorous growth, and continue in bloom until the end of the season supply them about twice a week with rather weak liquid manure from the time of their filling the pots with roots. The best varieties of this class for specimens are: Argus, rosy salmon; Favonia, carmine-purple; Elegans, light mauve tinted; Innocence, white; Flower of the Day, salmon. A prettily-variegated variety, L'Elegante, also makes a good specimen, but it does not make such rapid progress as the green-leaved varieties. Only one variety should be put in each pot.—*T. L. in Gardener's Magazine.*

The Flamingo Plant, a plant which is not yet familiar to many of our readers, is called by the name of the Flamingo on account of its picturesque resemblance to that bird, both in color and figure—a resemblance which does not require any great exertion of the imagination to perceive. The plant is a very striking and beautiful one, and though formerly sold for fabulous prices, may be had at quite reasonable rates. It requires the temperature of the hot-house and a moist atmosphere. It is dwarf in habit, and the flowers remain in bloom for months. Nothing could be more desirable for the conservatory. Its botanical name is Anthurium Scherzerianum.

Forcing Lilacs in the Dark.—The florists of Europe, in the autumn, take up roots of Lilacs from the open ground, and remove them to a dark house which is kept very warm, almost up to 100°. In these heated, dark houses flowers are produced from the common pink Lilac of pearly whiteness, and in great abundance.—*Moore's Rural Life.*

## Floral Elegancies.

## SPRUCE-WORK.

BESIDES the beautiful ornamental value of the Norway spruce in the decoration of our yards and lawns, or the grand feeling of admiration with which our minds are filled at their impressive appearance in forest majesty, there are other ways in which they can, in their younger growth, be made to subserve admirable household ornaments, and add to indoor luxuries and comforts. A lady friend, equally in love with both phases of spruce beauty, says, in a pleasant little description of her achievements in household art:

"There are two ways of considering a Norway spruce: One way is to stand off and admire its noble outline, as it rears itself, a pagoda of living green, against the sky, with its story upon story of fringed branches, its beautiful, long, pendent cones and its delicate hue seeming dark because of the rich masses of foliage. The other way is to approach with a knife in one hand, the corners of an upheld apron or the handle of a basket in the other, the head inclined a little on one side, and a resolute, pursed-up, I'm-going-to-cut expression on the face. Alice and I often regard our Norway spruces in this last practical fashion, and when we do so it is because, in our mind's eye, we see something hanging there besides the beautiful long, brown cones. We see lovely easels and picture-frames, and a host of pretty objects which will be just the thing for Christmas presents. So, as resolutely as the sculptor begins to chip from his marble the fragments that are hiding his imprisoned statue, we plunge into the tree, intent upon freeing our brackets, easels, and what-nots from the concealing embrace of its long, sweeping branches."

Fortunately we have several specimens of this noblest of all the firs within a few yards of our door. Some rear their grand old heads (that's a figure of speech, of course, for the top is always the newest part) to a height of one hundred and twenty feet, and some are not much taller than ourselves. Our great care, at the outset, is to cut our wood in such a way as not to injure the tree, but rather to serve the purpose of judicious pruning. The pieces must be from three to twelve or eighteen inches long, and should be taken from the leaders of the branches or their latest growths. By doing this, we induce them to throw out more side-shoots, and so increase the richness of the tree. Of course we often manage to get a few little branches from the hidden recesses of the foliage, giving the preference, when prudence permits, to the shoots which have the finest clusters of wood-buds, for these will aid us very materially in beautifying our work. The wood obtained, we carry our bristling treasure to the house, and pro-

ceed to free it of its leaves—not feathery now, or fringe-like, that was a "general-effect" quality; but each branch a very fretful little porcupine in its own right. The best method is to heat the pieces quickly, a few at a time, so as to dry and loosen the leaves, and then to scrape them with a dull knife in the direction of the foliage, taking care not to destroy the wood-buds. The pretty, rough wood will soon appear with a sort of Chaldaic writing on its surface, which, being interpreted, saith: "Use me at once, or I will grow rigid and unmanageable."\*

Everything is ready. The glue-pot is on the fire. On a tray upon the bared table lie papers of pins (very small ones and others of medium size), a small, flat varnishing brush, a little coil of copper wire, a penknife, a tack-hammer, and scissors which do not shrink from the duty of pin-cutting. There

or its strength will pull the older portion to pieces; for this reason it is better to use material which has been worn than that which is quite new. Again, see that you make the patch large enough, that it covers all the thin part, and will be sewed on to that which is strong, otherwise there will soon be a rent by the side of the seam of the patch. Once more, be very particular that the patch is cut straight and sewed on straight. This should be done by the line of the thread. Nothing offends the eye more than a crooked patch or one crookedly set on; and not only is it an ugly sight, but it fails to do all it was intended to do; for if the threads in the material are not allowed to run straight, but are pulled crooked, this way and that, they will break much sooner than they would were they arranged in the straight lines in which they are

woven. First get the four corners even, and the spaces between will be more readily arranged. In sewing long seams it is best to work from each end to meet in the middle. In this way it does not happen that one end becomes shorter than the other, as is sometimes the case when we go on and on from one end to the other. Patches are always fixed on the right side, and seamed to the material. When this part is done, the old portion which the patch is to replace is cut away; but mind you leave an even piece all around, enough to turn under and sew down.

## DRINKING IMPURE WATER.

SET a pitcher of ice-water in a room inhabited, and in a few hours it will have absorbed from the room much of the respired and perspired gases of the room, the air of which will have become purer, but the water utterly filthy. This depends on the fact that the water has the faculty of condensing and thereby absorbing all the gases, which it does without increasing its own bulk. The colder the water is, the greater its capacity to contain these gases. At ordinary temperature a pint of water will contain a pint of carbonic acid gas and several pints of ammonia. This capacity is nearly doubled by reducing the temperature to that of ice. Hence water kept in the room awhile is always unfit for use, and should be often renewed whether it has become warm or not. And for the same reason the water in a pump-stock should all be pumped out in the morning before any is used. That which has stood in the pitcher over night is not fit for cooking purposes in the morning. Impure water is quite as injurious to the health as impure air, and every person should provide the means of obtaining fresh, pure water for all domestic uses.—*Ex.*

**Bouquets.**—Put scarlet, crimson, and purple in bunches and use white to blend. Yellow should be used sparingly; ferns help in giving lightness and relief to a bouquet.

SPRUCE FRAME.

are also flat, square pieces of soft pine board, on which we may arrange our work and pin it into shape, by gently driving the pin through as we would a tack; also pine bracket-frames, formed like a T, with a shelf-top, made of half a salt-box lid, which we can cover with spruce-sticks, adding a front and back of fanciful lattice-work, meeting in a cluster of wood-buds at the bottom of the T.

## THE SCIENCE OF PATCHING.

THE patch should not be of much stronger substance than the cotton or linen on which it is laid,

\* It is practicable, however, to use spruce-wood that has been scraped and laid by. It should then be steamed slightly, so as to render it pliable.

## Floral Decorations.

### WOOD-MOSSES.

WOOD-MOSSES and lichens can be used to beautiful advantage; and a friend, writing, thus describes some charming and inexpensive ornaments constructed out of the natural moss found in the forest:

"Mosses can be advantageously gathered in the woods at almost any season of the year. I found beautiful specimens the other day deep under the snow, but I generally succeed best in preserving the beauty of those collected in early summer or in November. You scarcely can have too great a variety either of lichens or mosses in this kind of fancy-work. Gather such as are to be found on old rail fences, decaying logs, or the bodies of trees in moist, shady woods and in patches under fallen forest-leaves. Let them dry in a dark, cool place. The body of your frame should be of wood, cut either square or oval, or it may be rectangular at its outer and oval at its inner edge; or, better still, formed as found in our illustration. (About Christmas times I generally have half a dozen at once cut out at the wood-turner's, at an expense of about fifteen cents each.) Next make a paste by stirring flour in cold water and cooking it very slightly, stirring all the time; leave it as thick as it can be to work well; apply it to the frame; select and paste on the moss according to your fancy, gradually covering the entire frame, and taking care not to press the moss down any more than is necessary. In putting on the moss and lichens let them overlap each other as they do when growing, with various shades of green blending together, and cool grays and pearly shell-forms creeping close upon the bright, emerald tips. Use mainly the low, flat varieties, and ornament with little groups of the taller sorts, introducing here and there a fern-like spray with its livelier green. With taste and delicate handling, an exquisite picture-frame may thus be produced at little trouble and almost no expense. For illuminated texts, paintings of flowers or autumnal leaves, these frames are peculiarly effective, though they look well on an engraving, or almost any style of small picture.

### RAG-CARPETS.

NOTICING a short time since the remarks of several housekeepers about rag-carpet as published in the *World*, I thought I would set down my experience upon the subject. All admit that carpets manufactured from cast-off garments are both useful and comfortable. I cannot see much beauty in them myself, but I discovered long ago that comfort is of more importance than beauty. I am always making rag-carpet, and I presume I shall do it as long as life and strength permit. When a garment is laid aside for good, my practice is to rip it to pieces, wash thoroughly, and cut, sew, and wind it into balls. I

have a tight barrel, with a paper spread over the bottom and a sprinkling of fine tobacco scattered over it. I put my balls in the barrel, and every spring cut the rags at my leisure; the children can sew and wind them just as well as any one. I sprinkle fine tobacco over the balls and tuck an old sheet over them; cover the barrel up tight, and it is all right till I get ready to add another contribution. In this way I get my rags ready and keep the house clear from an accumulation of old, dirty garments that are a nuisance any way.

In making carpets I allow a pound and a quarter of rags to fill a yard of cloth; for a room twenty-five feet square I calculate to have about thirty-five or thirty-six pounds of rags. If there are any odds or ends left over they are woven into a rug that can be spread before stoves or doors. I never expend time or labor in coloring my rags. The last carpet I made I had rags enough for seventy-eight yards,

MOSS FRAME.

and I never felt the labor at all; it was done at odd jobs, and I was astonished to find I had such a quantity finished. I generally allow three knots and a half of warp to the yard. The labor of reeling and coloring the warp is the hardest part of the work for me. I know ever so many people who color and pass a whole season over a carpet, but when it is done it is only a rag-carpet. The prettiest one I ever saw was just brown and blue, narrow strips of each, and shaded from dark to light; a little black was woven in to give the dark contrast. One reason why we enjoy rag-carpet is this: We are not afraid to use them, and when one is worn out we can make another just as good. Sweeping carpets wears them out faster than using them by half. A stiff broom should never be used on carpets; picking up shreds and bits is the best way, and brush the dust off with a soft brush.

### BREVITIES.

LYCOPODIUMS are among the prettiest greens for fringing.

The newest baskets for flowers are clover-leaf shape with handles.

A bunch of pretty Pinks and Roman Hyacinths, interlaced with Maiden's-Hair ferns, is a charming combination.

At a New York entertainment there was presented to one of the artists a large three-masted ship laden with Callas and Poinsettias, the rigging of Smilax, and flower flags streaming.

Of new decorations by florists for graves, this is the latest; a monument made of white Immortelles, the relief being represented by purple Immortelles. It can be made to look exactly like marble.

The following floral decorations were at the house of a lady who held a small party recently in this city. The mantel-piece of the drawing-room was a "lace draping" of Smilax. Two large baskets of the choicest blossoms stood thereon.

On a cabinet stood a basket of rare flowers, in the centre of which was a growing Palm. Each of two smaller cabinets was decorated with a round basket built high with flowers. The chandeliers of both front and back drawing-room were festooned with Smilax. Between folding-doors was suspended a crescent of choice white flowers.

On the piano stood a basket of rare blossoms with an Erica in the centre. The dining-room mantel was seven feet long, and was a bank of growing ferns and fresh flowers. Two large hand bouquets of Marshal Niel buds and Violets graced this, as did also a German straw basket exquisitely filled with buds, Pansies, and Carnations.

**Excellent Furniture Polish.**—Take two ounces of beeswax and half a pint of turpentine, which put in a basin, cutting the beeswax into shavings. Set the ingredients on the stove and melt gradually, stirring constantly. On using, apply with a woollen rag and rub well with another.

**Yankee girls** are now cutting and polishing diamonds. The art has been monopolized by Amsterdam experts, who have uniformly refused to teach any apprentices except Dutch boys of their own selection. Henry D. Morse, after employing Dutch diamond-cutters in Boston for many years, learned the secrets of the trade. He opened a shop in Roxbury, and privately taught six or eight young women this mysterious occupation. He finally apprised his Dutch workmen that American boys must be taught by them. They peremptorily refused to instruct the apprentices. He then discharged them, and brought the young women from Roxbury to fill their places.

## Garden Hints.

## ORNAMENTAL CLIMBERS.

WM. C. BARRY, of the Mount Hope Nurseries, has furnished the Rochester *Democrat* with a very full and complete list of ornamental climbers for the embellishment of the house and its surroundings.

Mr. Barry names first the Virginia Creeper, or American Ivy (*Ampelopsis*), as the most valuable climber, all things considered, for this climate, being hardy, growing rapidly, and with a rich green foliage, changing to crimson scarlet in autumn. It is especially suited to covering walls, trunks of trees, and verandas.

*Ampelopsis Veitchii* is newly introduced from Japan. Its leaves are small and overlap, and form a dense sheet of pleasing green. It is slightly tender when young, but afterwards becomes quite hardy. It adheres to walls without fastening. Its fine green color changes to crimson scarlet in autumn.

*Aristolochia* is a fine climber, with broad, heart-shaped leaves, and is a twiner, requiring a support.

*Honeysuckles*.—Among these are the well-known fragrant woodbine. Hall's Japan bears white and yellow flowers from June to November, is a partial evergreen, and is regarded by Mr. Barry as the best Honeysuckle we have, and one of the most valuable in the entire collection. The Monthly Fragrant Honeysuckle has red and yellow flowers; the Scarlet Trumpet has bright scarlet, tubular flowers, and the Japan Golden-leaved has variegated or netted foliage, but it is not entirely hardy, and is best raised in baskets and vases as an in-door climber.

*Bignonia*, or Trumpet Flower, is well known for its large, trumpet-shaped crimson flowers in August. It is valuable for covering stumps, trees, etc. Varieties give different shades of scarlet and crimson.

*Akebia quinata*, introduced some years ago, is light and graceful in growth, has sweet-scented, violet flowers, and is hardy.

*English Ivy*.—This is not hardy enough to endure the severe winters of the North, except on the north and east sides of buildings, and even then it requires some protection. We may add that it forms a fine green cover for ground in the shade of trees where grass will not grow, the warmth from the earth below preventing injury in winter.

*Periploca* is a hardy and vigorous twiner, with glossy leaves, and is quite hardy.

*Menispermum* (Moonseed), a slender climber, with small yellow flowers, has a good effect when trained on arbor-vitæ and other evergreen trees.

*Clematis*.—Under this head Mr. Barry remarks: "Within the last ten years the hardy Clematis has been wonderfully improved, and the newer sorts now in cultivation are justly regarded as the most beautiful and striking ornaments known for garden decoration. Contrary to the general impression, the severest winters do not injure them when slightly protected with straw or leaves. In order to induce a long succession of bloom, liberal culture is absolutely necessary, and a deep, well-drained soil, consisting of loam, rotten manure, and leaf-mould, is the most suitable to plant them in. During the warm, dry

weather in summer liquid manure may be given them advantageously, and every year the surface of the ground around them should be mulched with manure to keep up their strength. The Clematis is a gross feeder, and must be fed well to flower freely. They may be used in many ways, either trained on verandas, walls, or trellis-work, or they make superb single specimens on the lawn, trained to some ornamental support. They may also be employed as permanent bedding plants, and pegged down like the Verbena; or with a wire support of neat design, raised about a foot from the ground, to run on, very pretty beds may be formed. On trees and arbors their showy and handsome flowers are very effective. Some of the choicest varieties are as follows: Jackmanii, violet purple, is the best, all things considered; Miss Bateman, pure white and somewhat fragrant; Lady Londesborough, of a silvery-gray color, with a paler bar on each sepal; Velutina purpurea, blackish mulberry purple, the deepest colored of all the varieties of this type; Viticella venosa, reddish purple veined with crimson; Lady Stratford de Redcliffe, a new variety of a delicate mauve color and the anthers chocolate-red; Otto Froebel, one of the largest, finest varieties yet obtained—flowers grayish white, or French white, and of a thick, fleshy texture; Marie Lefebvre, pale silvery mauve, with a deep mauve-colored bar.

Mr. Barry regards the Chinese Wistaria as unquestionably the most elegant climber we have. In the city of New York it is employed extensively for decorating the fronts of dwellings, and has a fine appearance when climbing over evergreens. Its long, pendulous clusters of pale blue flowers have an admirable effect. There is a white one with double blossoms.—*Country Gentleman*.

## "ON ORCHIDS."

FOR some years past the Orchis tribe has been attracting the attention of American flower-fanciers, but many years before they discovered the peculiar variety and merit of this class of plants England had valued them and recognized their capability of improvement.

Prof. John Lindley, in writing of them, says: "Orchidæ are remarkable for the bizarre figure of their multiform flower, which sometimes represents an insect, sometimes a grinning monkey; and so complicated is their combination that there is scarcely a common reptile or insect to which some of them have not been likened.

"They all, however, will be found to consist of three outer pieces belonging to the calyx, and three inner belonging to the corolla; and all departures from this number, six, depend upon the cohesion of contiguous parts, with one exception of monomeria, in which the lateral petals are entirely abortive."

The perianth of Orchids presents great diversity of form, all, however, belonging to one type peculiar to the family. It is generally irregular, and consists of six pieces in two series.

The three outer ones are known as sepals; of the three inner parts, the two lateral are petals, and the third differs so entirely in form and size that it is known as the *labellum*, or lip. It is this part of the

plant that varies so much in form, size, and color. It is invariably adherent to the ovary, and the posterior part becomes anterior through a half-twist of the ovary, as a general thing.

I have seen it stated that a well-flowered specimen of the orange-scarlet-flowered *Epidendrum Vitellinum majus*, in the Holloway nurseries, bloomed in May, was exhibited at Regent's Park, South Kensington, Manchester, Preston, and other shows, and was still in good condition late in June.

In a short article on American Orchid-growing which appeared not long since in the *Country* it was said that in the collection of Mr. Erasmus Corning, of Kenwood near Albany, New York, on the 4th of June, there were more than one hundred and twenty distinct species and varieties in flower, of which the majority would compare favorably with those in the best English collections.

"Amongst those in flower of special note were the rare *Renanthera matutina*, with its singular blossom and equally strange coloring; the beautiful *Lælia Wolstenholmiae*, *Ærides Schroederi*, *A. Larpentæ*, the curious *Bulbophyllum*, *Henshalli*, *Promenæa stapelioides*, and *Nanodes Medusæ*. Of *Odontoglossums* there were, amongst others, fine plants of *O. vexillarium* and *O. Alexandræ*, some of the latter bearing as many as twenty or thirty flowers on each stem.

"The recent addition of a unique specimen of the beautiful *P. Corningiana*, dedicated to the owner of this noble collection by Prof. Reichenbach, has added greatly to the interest of this collection. *Cypripediums* were represented, including the fine hybrids *C. Crossianum* and *Livianum*, as were also the *Epidendrums*, of which *E. Frederici Guilielmi* and *E. syringothyrsus* were the most noteworthy. The collection is rich in *Masdevallias*, and the curious *M. Nycterina*, *M. elephanticeps*, *M. Bella*, together with the showy kinds, have been long in flower. Another beautiful variety is a rich colored form of *banda tricolor* named *Corningi*, and worthy of its distinctive name."

As the winter-blooming Orchids are now in great demand, it may not be inappropriate to add a list of some which are now attracting attention, for those who are inexperienced in the culture of these peculiarly interesting plants: *Ansella Africana*, *Broughtonia sanguinea*, *Cypripedium Argus*, *Pilumna fragrans*, *Saccolabium violaceum*, *Stenia fimbriata*, *Oncidium pelicanum*. There are many others which might be added to the above list, but as my space is limited I will give only a few.

New York florists have made attractive crosses for churches as follows: Take heavy wreathing of Princess Pine, and carefully select long twigs. At intervals of a few inches throughout these pieces are rosettes of holly-berries in a cluster of holly-leaves. The evergreens are so full and even and dressy as to be really elegant.

A favorite gift to children among rich flower-buyers in this city is a small gilt bedstead made up with flowers. The bed is of white Carnations, the pillows of Violets; a bunch of roses, ferns, and Cyresses is placed on the head and foot boards.

Invented by E. N. Horsford, late Professor in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar, or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

If your grocer has not got it send a 3-cent stamp to the manufacturers for a sample.

The following cut is exact size and represents the **BEST 2 BLADE KNIFE IN THE WORLD.** Every knife is warranted strong and perfect, and is made with round corners at both ends, so as not to wear the pockets. They are made of the finest material, and finished in the very best manner by the most skilled workmen, are regular beauties and favorites with everybody: they give better satisfaction for general purposes than any other knife on the market. These knives are imported from Europe in large quantities, especially for us, and are stronger, handsomer and better made than knives sold in most stores at \$1.50 each. For a short time we will send one of these.

**HANDSOME 2 BLADE KNIVES FREE** by mail, post-paid, as a premium to any one who will send 4 subscribers to Farm and Fireside at 50 cts. a year.  
**PRICE OF IMPORTED 2 BLADE KNIFE,** post-paid, and 1 year's subscription to Farm and Fireside, is One Dollar.  
**AN EXCELLENT 3 BLADE KNIFE** (made in this country) but not quite so large as the cut, will be given as a premium to any one who sends 2 subscribers to Farm and Fireside, at 50 cts. a year.  
**PRICE OF AMERICAN 2 BLADE KNIFE,** post-paid, and 1 year's subscription to Farm and Fireside is 75 cents.

GREAT

BARGAIN.

**FARM and FIRESIDE** is the most popular Agricultural and Home Journal in the U. S. It is suited to the home circle in city, town or country, and is a welcome visitor in every household. Farm and Fireside is published twice a month, it contains 8 large pages, and the circulation is so large that we can afford to publish it at 50 cents a year, although it contains as much reading matter as most \$2 journals.  
SAMPLE COPIES of Farm and Fireside and Premium List sent to any address for 3-cent stamp.

**Invalids, Nursing Mothers,**

and those suffering from *Indigestion* will find on trial that Ridge's Food is all they can desire.

Is the Most Delicious Article for the Table.  
Prepared in a few minutes, with or without milk.  
It is nourishing and satisfying.  
The Cheapest Article of the Kind on the Market.

### Recipe without Milk.

Take 4 tablespoonfuls of Ridge's Food, mix with a little cold water and a little salt, add one pint hot water, boil for 2 minutes, pour into moulds, and place on ice; serve with cream and a little sugar.

### Recipe with Milk.

Take 5 tablespoonfuls of Ridge's Food; first mix the food with a little cold milk and a little salt and two well-beaten eggs, then add one quart of hot (not boiling) milk, then return the whole mixture to the fire and stir briskly till it boils; flavor to suit the taste. Pour into mould, eat cold with sugar and cream.

RIDGE'S FOOD is carefully put up in four sizes. Sold by Druggists at 35 cents and upwards, with "WOOLRICH & CO." on every label.

**AYER & SON'S MANUAL** contains more information of value to advertisers than any other publication. Sent, post-paid, on receipt of 25 cents. Address N. W. AYER & SON, Advertising Agents, Times Building, Philadelphia.

## Geo. P. Rowell & Co.

10 SPRUCE STREET,  
(Printing House Sq., opp. the Tribune Building.)  
**NEWSPAPER ADVERTISING BUREAU.**

NEW YORK AGENTS FOR ALL NEWSPAPERS in the United States and Canada.

ADVERTISEMENTS FORWARDED DAILY (as received) to every section, from Newfoundland to Texas, and from Florida to British Columbia. Also to all New York City Dailies and Weeklies.

Eight Thousand Newspapers kept regularly on file for inspection by advertisers, including all the great dailies from Boston to San Francisco, from Montreal to Galveston.

Publishers of *American Newspaper Directory.*

Opera House, Denver, Col.

## CITY LOTS

25x125 FEET

SITUATED IN NORTH DENVER,

**FREE!**

U. S. Mint, Denver, Col.

EVERY OTHER LOT ABSOLUTELY FREE!

WARRANTEE DEED WITHOUT RESERVE.

Denver now has a population of 40,000. Great cities are the outgrowth of great countries. Twenty years ago Denver was a small trading post on the frontier, now it is a large city, with numerous Churches, Hotels, Theaters, Street-railroads, Gas-works, Water-works, Gold and Silver Smelting and Refining Works, with a United States Mint, and is the great Railroad Center of the West. There are seven First-class Railroads now running and connecting with all the Principal and Branch Railroads from Maine to California. It is the Capital of Colorado, naturally the richest State in the Union, and located in about the geographical center of the United States. The climate is charming, with the best water and purest air in the world, and the scenery is unexcelled for beauty and grandeur. It is surrounded by the richest Gold, Silver, Copper, Iron, Lead, and Coal Mines and Agricultural Lands in America. It is now the headquarters for Colorado, Kansas, Nebraska, New Mexico, Wyoming, Nevada, Arizona, and Northern Texas. The rich mineral and agricultural resources of this vast country will make Denver the largest and wealthiest city in the West.

### WHY LOTS ARE GIVEN AWAY.

As the tide of immigration is now in this direction, it is the Company's interest to have people locate in Denver and on their property. To encourage emigration here, the Company will give to any one sending their name and address a warrantee deed, in fee simple, for one or more lots in North Denver, situated in Weld County, State of Colorado, in immediate view of this beautiful city, the only charge being one dollar to pay the Notary Public fees for acknowledging deed and conveyance. The Company do not give every lot away, but each alternate one, and does not expect that every person who gets a lot in North Denver will come here, but a great many will, and they will induce their friends to follow. The increased population will soon make this property very valuable, and this Company retain each alternate lot, which they hold at prices varying from 25 to \$500, according to location. For this reason the above proposition is made. The deeds are unconditional, not requiring any one to settle or improve, but with full power to transfer and deed to others. The limit to any one person taking advantage of this offer is five lots. This property is **not hill-side, mountain, or swamp, but is level, fertile, and has advantages for building upon too numerous to mention.** Full and satisfactory information, with indorsements from our best citizens, will be furnished.

### CERTIFICATE OF TITLE.

I, W. C. SANDERS, County Clerk and Recorder within and for said County and State, do hereby certify to the above and foregoing to be true, and title complete to the land therein described according to the records in my office. I further certify there are no abstracts or transcripts of judgments, taxes or other liens standing against said land. In testimony whereof I have hereunto set my hand and affixed my official seal this 2d day of August, A. D. 1879.

W. C. SANDERS, County Clerk and Recorder.

[SEAL.] State of Colorado, ss.  
County of Weld.

### INSTRUCTIONS.

This Company will send by return mail, to any one sending within sixty days from the date of this paper their names, P. O. address, County and State, plainly written in full, a clear warrantee deed to a lot 25 feet front by 125 feet deep in North Denver, Colorado, clear of all taxes.

High School, Denver, Col.

Applications for city lots must be accompanied with one dollar for each lot to pay cost of making and acknowledging deed, postage, etc. The lots then can be sold and transferred at your pleasure.

Let all improve this opportunity to secure a home in the richest State in the world. Deeds sent to any part of the U. S. and Canada. Address all letters to

NEW YORK, NOVEMBER, 1879.

## REMARKABLE PLANTS.

SOME of the English papers have recently described a plant of the most novel characteristics, in the possession of a gentleman residing in London, and who is said to have been offered large sums for the rarity. It is about the size of an ordinary gooseberry bush, and, although living and growing, exhibits no semblance of vitality. It has no foliage whatever, but little pellicles of fine flint bud out of the twigs and stems, which latter are likewise encircled with rings of flint at every joint. In some places the flint, which it appears has exuded from the plant itself, cases the stem like a pipe. The plant looks black and dead, but the twigs, instead of being brittle like dead wood, are tough as leather thongs. It seems as though the flint, which forms so large a component of plant life, had, by some freak of nature, been eliminated from the natural vesicles of the plant, and developed outwardly.

One of the most gigantic plants in the vegetable kingdom is found in Nicaragua. It is closely allied to the well-known hedge plant called arums, or lord and ladies, but until the present time has wholly escaped the notice of travelling botanists. It produces but one leaf, which is about fourteen feet in length, supported on a stalk some ten feet long. The stem of the flower is a foot in circumference, and the spathe or flower two feet long, purplish blue in color, with a powerful, carrion-like odor. As this extraordinary plant is quite new to science, it has yet no name.

One of the most curious plants which have recently engaged the attention of those who are interested in floriculture and kindred growths is a specimen known as the lattice plant, of aquatic habits, and

brought from Madagascar as a rare acquisition. Its existence has for a considerable time past been known to botanists through a few dried leaves sent from Madagascar by a traveller, who was unable to transmit living specimens of the curiosity he had discovered; and it was not until a long period thereafter that this desirable object could be attained, when several of the living plants were safely brought from the above-mentioned country by the Rev. Mr. Ellis, the well-known missionary. The interest of this plant lies in the extraordinary structure of the leaves, which, unlike those of any other known plant, are made up of the ribs and cross-veins only; the interstices, which, in other leaves, are filled up with cellular tissue, being in this case left almost entirely open, and thus giving to the leaf the appearance, in every respect perfect and beautiful, of a piece of well-wrought net or lattice-work, from which it derives its name. Another though widely dissimilar growth, peculiar to the above-named land, may be here mentioned, on account of the terrible celebrity it acquired during the religious persecutions carried on under Queen Ranavalona's reign. This is the ordeal poison plant or tree, of great beauty in its appearance, and which was administered to those subjects of the queen who were suspected of being Christians, in the following manner: The fruit of the plant was taken, bruised and boiled whole; a fowl was boiled, and the broth set aside, and three pieces of the skin of the fowl were cut and put into the broth. A cupful of the poison was first given, followed by another of the broth containing the three pieces of skin. If vomiting did not speedily set in, the poison soon killed; but if it did, it was kept up by constant exhibition of the broth and warm water until the three pieces of skin were ejected. Should these obstinately remain, it was held as evidence of guilt, and another dose of poison was administered.

What is believed to be the ugliest-looking plant in existence, as well as structurally the most peculiar ever yet seen, was discovered some time ago beyond the northern limits of Cape Town, Southern Africa. It is a stunted-looking kind of growth, whose summit never reaches more than two feet above the level of the ground, while its short, woody trunk never possesses more than two leaves. These extraordinary leaves are, in point of fact, the expanded seed-lobes, which make their appearance as soon as the young plant rises out of the ground; and, what is still more astonishing, these leaves live, grow, and remain attached to the stumpy trunk during the entire life of the tree, which, it is represented, lives at least one hundred years. It is also stated that these two persistent foliar organs spread out laterally, in some instances attaining each of them a length of nearly six feet.

## MELANGE.

RANAVALONA, Queen of Madagascar, has issued a proclamation to her subjects commanding them to send their children to school, saying that it makes her glad to see her subjects wise. She adds: "And so be all of you diligent, for although you do not now know the sweetness of knowledge and wisdom, you will discover it when they become yours."

MR. FURNESS, the Shakspearean scholar, gave the other day a charming wedding present to the bride of Mr. John Foster Kirk, the historian and editor. It was a bracelet carrying out the idea of the couplet:

A belt of straw and ivy buds  
With coral clasps and amber studs.

It was made of gold, set with ivy leaves and buds in green enamel, little amber bosses studding the centre, and finished with a clasp of carved coral. Inside the bracelet the lines which suggested it were engraved.

THE report of an English Horticultural Society has the following: "A novelty was the 'skeleton of a cucumber' grown by Mr. E. R. Benmore, Chacombe, in 1873; when it was cut it measured 4 ft. 9 in., and as exhibited it presents the appearance of a netted-thread purse, fully 4 ft. 6 in. in length, and of a diameter about sufficient to pass the hand and arm down from end to end."

## WHAT PEOPLE SAY.

THE CABINET came last eve. It grows better and better. We have taken it three years. I received a letter from my brother saying he had subscribed for me. I take a number of floral papers, but this is the best of all. I see you have changed one rule.

J. ANNIE ALLEN.

FARMINGTON, ME.

THE last number of THE LADIES' FLORAL CABINET is rich with fine illustrations, and full of interesting and instructive reading for ladies and florists. It is published at 46 Beekman Street, New York.—*Mirror and Framers*.

THE LADIES' FLORAL CABINET is a very bright and useful paper for those who are interested in the culture of flowers or in household matters. It is full of valuable information and practical advice; is evidently edited with care and *con amore*, and presents a very handsome appearance. It is published at 46 Beekman Street, New York.—*Louisville Courier-Journal*.

## PUBLISHERS' ANNOUNCEMENTS.

**Real Estate in the West.**—The Denver Land Co. offer in another column alternate lots in their addition. These alternate lots are in fact given away, though a nominal charge of one dollar is made for the deed. The Company limit the number purchasable at this price to five lots. Many of the large cities of the West have been started in a similar manner, and those who secured lots then find themselves now in possession of valuable property. The opportunity does not often present itself of making an investment in real estate at such prices. The reliability of the Company and their title to the property being well established, there could be no risk, with a fine prospect for a rapid increase in value. Denver has had such a wonderfully rapid growth, it is probable that the land offered will be speedily taken up.

## Floral Hints.

### HOW TO TREAT PLANTS RECEIVED BY MAIL.

SOME time ago I received a lot of Camellias and Geraniums from a Pennsylvania nursery. Upon opening the package, received by mail, the plants were found to be in a very poor condition, especially the Geraniums. The leaves had all decayed, and the stems had in some places turned black. A lady friend present remarked, "What a pity! They look just like some I received. These are all dead; all mine died except one, and perhaps that one lived only by a chance." Certainly it did live only by a chance, because she put her plants, decaying as they were, directly into her garden, only partly sheltered from wind and sun.

This is the way I treated my plants: After having opened the box, I plunged the plants, moss and all, in tepid water, and after a little while separated them. In a wash-bowl I poured two pints of tepid water and one teaspoonful of pulverized camphor. In this water I submerged the plants for one hour, first taking care to remove all decayed leaves. During this time I spread a layer of wet moss on a newspaper, and sprinkled the moss with two teaspoonfuls of pulverized camphor gum. Upon this stratum of moss I opened the Geraniums evenly, and covered

them afterwards with wet moss, and on the top spread another sheet of paper. In this bed the plants remained over night. The next morning I potted the plants in four-inch pots, and kept them in a western window. For a few days they got no sun at all, but afterwards they were freely exposed to the sun in the evening. I watered the pots very spar-

condition, I noted down my experience in the matter, and hope it will not be without interest.

### LIQUID MANURE FOR FLOWERS.

For the benefit of the lady readers of your paper I send the following recipe for liquid manure for flowers: Place one bushel of the clippings from horses' hoofs in a barrel, and fill it up with water. Let it stand for a week, when it is ready for use. Apply it with a watering-pot. All bedding plants can be watered with this liquid every other day, if they are pot-bound. Newly repotted plants should be watered only once a week, until they have plenty of working roots to take up the manure. Two or three weeks after the plants have been watered with the manure the foliage generally changes from green to a golden yellow, moving from the stem down to the end of the leaf, which, however, lasts only a few weeks, when it changes to a dark, glossy green. Plants given this watering grow very strong, and the flowers are very large and bright in color. This will last about six months.

SOLD OUT.

ingly with camphor-water, and painted the black places on the stems with a thick paste of soot and camphor-water.

It is three weeks since this operation took place, and all the plants are now leaved out. I did not lose one. Thinking perhaps that some of your many readers may some time get plants by mail in bad

**Cuttings with Leaves.**—We have experimented a little upon the new theory of starting cuttings. This is to bury a part of the leaves under the sand of the cutting bench, so as to prevent evaporation from their surface, while still having the benefit of the leaves to assist in the work the cutting has to do. We are favorably impressed with this new idea.

## The Home.

## HOUSEKEEPING.

ONE of the greatest difficulties in housekeeping is the week's wash. All the improvements in science do not seem to meet the needs of the housekeeper in this respect. Washing-machines, notwithstanding their name is legion, have done very little to lighten the burden; the wringer, however, has done much—more, perhaps, than anything else—and is an invaluable addition to the furnishing of the laundry. It requires vastly less labor to accomplish a large wash with it than without it, but it does nothing to lessen the labor of making the clothes clean before they are ready for rinsing. Any suggestions which may throw light on this vexed question are presumably welcome to all housekeepers. The latest reliable opinions are opposed to the time-honored custom of boiling the clothes. There is no necessity for boiling if the clothes are previously properly treated. Cold water should always be used to soak the clothes before washing. The following directions will be found, if carefully followed, to save work and give satisfactory results.

First, for soap, use the following, which whitens without injury to the fabric:

## NEW JERSEY SOAP.

Common hard brown soap, 3 lbs.; refined borax, 4 oz.; fine salt, 2 oz.; soft water, 7 pints. Boil all together until thoroughly dissolved. When cold it will be a light-colored jelly.

Make suds with this soap and cold water; put the clothes in them over night. In the morning wash once in the suds, then put them into other cold suds, and let them scald well, not suffering them to boil. Rinse well and dry in the sun and open air.

Flannels should be sorted over, and all the spots rubbed with a little fine white soap, rubbing them slightly with the hand, never on a board. Afterward wash in tepid water and white castile soap; rinse in blue-water in which a little soap has been dissolved. They should be stretched well and snapped before hanging, and this should be done at once.

## COLORED CLOTHES.

Colored woollen goods should be washed just as flannels. And here let it be said that almost any all-wool material will wash to look well, if carefully done, and the goods ironed, while still wet, upon the wrong side. If pulled so as to straighten the threads well before being put in the wringer, the cloth will be ready to iron when it comes from it. If not ripped the seams should be laid open and carefully pressed after the garment has been ironed. This process will renovate any good quality of cloth. When the material is mixed it is more difficult to make it look well, but it can generally be done. In washing black goods a little beef's gall in the suds prevents the color from running, and spirits of harts-horn in the rinsing water improve the color. To set blue use turpentine; for green and pink, alum.

To take out indelible ink get from the druggist a little iodide of potassium in the lump. Make a weak solution at first, and wet the spots. If not

efficacious after having lain in full sunshine some hours, make the solution a little stronger and repeat. No rule can be given, as the older the stain the more difficult of removal. To remove the stain of mildew tomato-juice will be found effectual, if the fabric be exposed to the sun while wet. It is much quicker than lemon juice and salt. In winter canned tomatoes may be used.

## STARCHING.

Keep a bottle of the best white gum-arabic, dissolved in boiling water, tightly corked and ready. Add a tablespoonful of the liquid to a pint of good clear starch, well boiled, for all goods which require to be stiff. When dry dip in a very thin mixture of cold starch, squeeze well, and roll tightly in a cloth for two or three hours. Iron with a very hot iron, sponging off any specks with a clean white cloth wet in clear water.

For keeping soiled clothes a bag made with divisions is extremely useful. Table linen should always be kept by itself and washed first, that it may not come in contact with soiled clothing. Soiled hose should be put in a bag by themselves.

We clip the following directions from an *Exchange*:

## FOR WASHING SILKS, LACES, ETC., BENZINE.

Take two wash-bowls; put some benzine in each. Wash by kneading and squeezing the goods in one bowl and rinsing in the other. Wipe with a soft, dry cloth, and iron immediately with an iron not very hot. In washing dresses do one breadth at a time, as it dries quickly. All silks, except very dark colors, wash well; also silk laces, kid gloves, etc., that cannot be washed in water. Do not throw away what is left, but let it settle; pour off into a bottle to wash with again, using fresh benzine for rinsing. One gallon of benzine, costing thirty cents, is sufficient to clean two silk dresses. A piece of woollen cloth wet with benzine will permanently remove grease-spots from carpets, etc.

**Canning.**—Canning fruit, which always seems so hard for some people, is very easy for me. Perhaps it is owing somewhat to the fact that, though I filled but two cans previous to my marriage, I had wonderful good luck the first season, not losing a can. The only precaution necessary is to have the fruit well cooked and hot, and the cans sealed tight. To prevent their breaking in receiving the boiling fruit I turn a half-pint of lukewarm water into them, shake thoroughly, and pour out, repeating the process twice, with water each time warmer than the last. The rings should be turned tightly as possible, and, as the cans contract by cooling, should be watched and tightened several times. I find it a good plan to lay a piece of writing-paper, cut to fit the can, on the top of the fruit, and add two or three spoonfuls of juice afterward; when the mould forms, it will be over the paper, and can be easily removed; and, moreover, the fruit is not nearly so apt to be tainted with it.

**Household Industry.**—Rose Terry Cooke, in the current issue of *Sunday Afternoon*, preaches this little lay sermon on household industry that ought to make an impression upon every girl in the

land. She says: "I shall never forget my own childish tears and sulks over my sewing. My mother was a perfect fairy at her needle, and her rule was relentless. Every long stitch was picked out and done over again, and neither tears nor entreaties availed to rid me of my task till it was properly done; every corner of a hem turned by the thread; stitching measured by two threads to a stitch, felling of absolutely regular width, and patching done invisibly; while fine darning was a sort of embroidery. I hated it then, but I have lived to bless that mother's patient persistence; and I am prouder to-day of the six patches in my small girl's dress, which cannot be seen without searching, than of any other handiwork—except, perhaps, my bread."—*Scranton Weekly Republican*.

**A Good Paste.**—J. K. writes: I have charge of a circulating library of over seven thousand, and have great trouble in keeping the paper numbers on the backs of the cloth-backed books. (The leather bindings I have numbered in gold.) Bookbinder's paste does only for a short time, but the labels afterwards get brittle and drop off. Can you give me information regarding a real good substitute for that purpose? It will require to be adhesive and at the same time retain its elasticity. A. Four parts by weight of glue are allowed to soften in fifteen parts of cold water for some hours, and then moderately heated till the solution becomes quite clear. Sixty-five parts of boiling water are now added with stirring. In another vessel thirty parts of starch paste are stirred up with twenty parts of cold water, so that a thin, milky fluid is obtained without lumps. Into this the boiling glue solution is poured, with constant stirring, and the whole is kept at the boiling temperature. After cooling, a few drops of carbolic acid are added to the paste, which must be kept in closed bottles to prevent evaporation of the water, and will, in this way, keep good for years. This paste is of extraordinarily adhesive power, and may be used for leather, paper, or cardboard with great success.

**Leaves in Cookery.**—An English writer, speaking of the culinary uses for leaves, says that one of the most useful and harmless of all leaves for flavoring is that of the common syringa. When cucumbers are scarce these are a perfect substitute in salads where that flavor is desired. Again, the young leaves of the cucumber itself have a wonderful similarity in taste to that fruit. Carrot-tops may be used, and a prodigious waste is suffered in not using the external leaves and blanched footstalks of the celery plant. The young leaves of the gooseberry added to bottled fruit give a fresher flavor and a greener color to pies and tarts. The leaves of the flowering currant give a sort of intermediate flavor between black currants and red. Orange, citron, and lemon leaves impart a flavoring equal to that of the fruit and rind combined, and somewhat different from both. A few leaves added to pies, or boiled in the milk used to bake with rice, or formed into crusts or paste, impart an admirable "bouquet." An infusion can be made of either the green or dry leaves.—*Moore's Rural Life*.

## Hints on Dress.

### CLIPPINGS ABOUT DRESS.

#### FALL BONNETS.

THE small bonnets have scarcely any brim, and seem to consist of a square crown that takes in the back of the head and covers only about half the top. These shapes have been worn during the summer at Newport and Saratoga, and have looked more like caps than dress bonnets, as they are without facetrimmings, plumes, or flowers—being simply trimmed with ribbon loops and bows. Other shapes serve either as a bonnet or round hat.

The regular Scotch cap is shown for very young faces, and there are jaunty Derby hats precisely like those worn by gentlemen.

#### FEATHERS.

Fancy feathers will be the leading feature of the trimmings of winter bonnets. Merchants call these fancy feathers because of the fanciful shapes in which they are mounted, but the feathers themselves are of natural colors—not dyed—and are plucked from rare birds. These feather ornaments combine many rich colors, and are mounted in flat pieces that conform to the shape of the bonnet. Occasionally the whole bird is placed in a natural poise on the front or side of the hat, but far oftener one bird is made to do service for two hats by being split in halves from bill to tail, and having a spirited little top-knot or some tail feathers added. The beautiful Brazilian humming-birds, that glisten like jewels, are more used than the larger birds. Sometimes an ornament consists of five or six of these tiny birds clustered together as if in a nest, their heads and long bills crowded as if pushing each other from the nest, and thus showing their upturned throats with their beautiful plumage. There are coronets with two heads meeting in the centre, a number of tiny wings stuck next in fan shape, and tail feathers at each end; these are to be set between the crown and brim, and will serve to trim the bonnet. The object seems to combine as many brilliant colors as can be massed together in one of these clusters. Sometimes an Alsatian bow is formed of birds, or else of their wings, and there are feather butterflies and foliage similar to those used last year. Golden pheasants' feathers, especially the small "eyes" of the feather, and guinea-hen feathers on borders, are shown for turbans.

#### WOOLLEN DRESSES FOR FALL.

Dark cloth colors in the new shades of amaranth, Rembrandt green, prune, Burgoyne, golden brown, and duck's-breast blues are shown in the new woollen dresses being prepared in the furnishing houses for early fall wear. The materials are camel's-hair cloth, cashmere, and a new fabric called *toile de sanglier*, which is regularly woven, yet has a rough surface, and resembles bunting made sufficiently heavy to serve for warm winter dresses. The trimmings are satin of the same shade, silk plush borders, many rows of machine-stitching, wide woollen braids, and gay contrasting silks in Scotch plaids or

in the most intricate mosaic designs.—*Harper's Bazar*.

#### COLOR.

Dark shades predominate, of course; but there is an almost infinite variety in their gradations, and the narrow stripes and clouded mixtures in the soft woollen textures are exactly suited to serviceable street and house wear.

Very dark, solid colors are, however, undoubtedly the best choice for street wear, and some of the best authorities restrict the design to the simple material, well cut, closely draped, and enriched only with stitching and buttons.

#### BUTTONLESS GLOVES.

A new glove, the "Foster" patent, recently introduced, furnishes very neat and ornamental substitutes for the buttons that are always coming off. The fastening in the new glove is effected by minute gilt hooks, with round tops riveted in, and placed at short intervals on both sides of the wrist. A fine silk cord, with gilt cap attached to the end, winds in and out of these hooks, holding them close, yet without the strain or waste which is necessary in buttoning the ordinary glove over. It is impossible for the fastenings to stir, and they are very pretty and ornamental.

#### DRESS FANS.

The fan has become a very important adjunct of the dress, and must as nearly as possible correspond with it. The most unique fans are undoubtedly those which are painted, or otherwise ornamented in special designs upon satin, silk, crape, or feathers. The sticks are opaline pearl, and some are beautifully carved, inlaid, or ornamented with encrustations of gold. Black satin fans are ornamented with designs in gold leaf, and also with an application of gold-thread embroidery.

#### WOOLLEN SUITS.

In the making of woollen suits the most important recent change has been in the substitution of the trimmed skirt for the overskirt. This renders the dress much more compact, less burdensome, and more susceptible of complete and harmonious design. An outside jacket accompanying a trimmed skirt and basque is a finished dress, simple yet serviceable, and so thoroughly protective that it seems hard to improve upon it.—*Demorest's Monthly*.

#### SCARF IN KNITTING.

**MATERIALS.**—8-ply Berliu wool or 4-ply fleecy, selecting any two colors that contrast prettily for the ends, the centre being made of one of the colors only; two needles, No. 8 Bell gauge. Cast on with the wool seventy-four stitches—that is, three stitches for each pattern and two over for the edge stitches. First row: Bring the wool in front of the needle in the right hand, then turn the wool quite round the needle, so as to bring it in the front again, and purl two stitches together; \* the wool will now be in the front; turn it round the needle so as to bring it in the front again; pass the needle down the next stitch, and take it off without knitting it; then purl the next two stitches together, and repeat from \* to the end of the row. Second row: Bring the wool in

front of the needle and turn round as before, then purl two stitches together; \* turn the wool round the needle, bringing it in the front; then slip the next stitch thus —; put the needle down at the back of the stitch, and, bringing the needle in the front, take off the front part of the stitch without knitting it—this stitch slipped is a long loop; then purl the two next stitches together, and repeat from \* to the end of the row. All the rows are the same as the second. Knit six rows of each color alternately for about one-quarter of a yard; then, working the same stitch but only one of the wools, knit about one yard, and make the other end to correspond with the beginning. Cast off. The ends are further decorated with a narrow strip of crochet and a fringe. Use wool like that in the centre of the scarf, and a crochet needle of medium size. Crochet on the edge of the knitting a row of 5 chain and 1 plain, then 2 rows more the same, working the plain stitch in the 5 chain of the preceding row. This, of course, makes three rows of the ordinary looped crochet. For the fringe cut the wool in lengths of about eight inches, and loop them into the last row of crochet.

**Ice in the Sick-Room.**—Mention is made in a foreign paper of a plan pursued by an ingenious physician for ensuring a supply of ice for use in sick-rooms during the hottest nights, and without disturbing the patient. This plan is to cut a piece of flannel about nine inches square, and secure it by ligature round the mouth of an ordinary tumbler, so as to leave a cup-shaped depression of flannel within the tumbler to about half its depth. In the flannel cup so formed pieces of ice may be preserved many hours—all the longer if a piece of flannel from four to five inches square be used as a loose cover to the ice-cup.

**Pure White Castile** is a little expensive for washing fabrics, but its purity preserves the color of silk handkerchiefs, ribbons, etc., wonderfully. We have seen a very fine damask, white silk neckkerchief, with deep blue border, washed in clear water in which castile soap was lathered, and few people could discover any difference between the laundered kerchief and a perfectly clean one. In this case the kerchief was snapped between the fingers until nearly dry, shaped, folded, and pressed under a weight—not ironed.

**How to Make a Rug.**—A good and quick way to make a mat to cover up some of the shabby places in your carpet, which will wonderfully brighten your room: Take all the bits of woollen cloth that are not large enough for anything else; cut them in rounds, or have them of uniform size; string them on strong wrapping cord, the different colors on separate cords; have ready a square of old rag-carpet, or any bit of carpet, though rag is the best, being heavy; sew your work on this very firmly. Geometrical designs and lines are the best patterns to follow; the floral are usually so unsatisfactory and much harder to do. Work the design first; fill in with gray or black, and if you wish you may ornament the edge with pinked-out scallops of any bright bits of cloth. Trim off all the rough edges nicely.

## Household Art.

## FIRE-BOARDS OR SCREENS.

THE manner of forming these boards is to have a pine frame made that will fit closely into the chimney. Cover this frame tightly with stout cotton cloth; and if the Indian style is to be copied, cover with black glazed muslin or paper. Then procure a number of pictures of decalcomanie, or the German embossed pieces, which come in sheets; the greater the variety the better. Cut these all apart and fasten them carelessly upon the background. When these are all dry varnish with Demar, laying the screen flat and using thin varnish; when the first coat is dry give a second, being careful to keep from dust during the entire operation. Another style is made upon the same kind of frame, but instead of a muslin cover with net or tarlatan, upon which arrange the figures with gold spangles scattered between; fill the chimney with fine white-pine shavings; and place the screen in front. The appearance of the white shavings showing behind the black or colored gauze will be found extremely lovely and refreshing, presenting a pure, cool appearance, exceedingly appropriate during the hot weather.

The frames for the Wedgwood boards are similar to those already described, but are covered with white muslin, over which is pasted very evenly, and with great care, for fear of injuring or marring the delicate surface, satin paper of a Wedgwood blue gray, or a Palissy gray green.

Thirteen sheets of lace note-paper of five different patterns are required, and some white embossed pictures; these are sometimes combined with the lace paper. Those parts of the sheets of embossed and lace paper which are to be used must be carefully and neatly cut out, keeping the parts exceedingly clean. The decorations are then painted upon the wrong side with mucilage, and fastened in position on the board.

## MODERATION IN DECORATION.

"By the way, the works of women are symbolical. We sew, sew, prick our fingers, dull our sight, producing what? A pair of slippers, sir, to put on when you're weary, or a stool to tumble over and vex you—'curse that stool!'—or else at best a cushion, where you lean, and sleep, and dream of something we are not."

In the first place, we believe in fancy-work, and do all of it that is consistent with our other duties, taking pleasure in both the working and the work; but we also believe in temperance in all things, and think a little is needed in this direction as well as some others. Of course those who have experience in the work know how fascinating it is; and as fancy workers are notably industrious, they soon form a habit which is hard to break. When only the best class of articles are

made the evil is not so great; but when *anything* in the shape of fancy-work is eagerly seized on, and experimented with, and henceforth has a place in the house, it is positively alarming. For in this way a house is soon filled with a multitude of articles, many of which are neither useful nor ornamental, but are the cause of much extra work in taking care of them. With some this is carried so far that

FIRE-BOARD.

the house becomes positively hideous in the eyes of those who do not share the passion. We have in mind a house we once visited, which was literally filled to overflowing with all sorts of specimens, and

FIRE-SCREEN.

the greater part of our hostess' entertainment consisted in detailing the different processes of construction, with kind offers of patterns and any help she could give us in making the articles for ourselves.

To give you some idea of the excess to which she carried it, let me tell you that the first thing that greeted our eyes, hung conspicuously in the hall, was a mammoth wreath of worsted flowers, set in a heavy frame of pine cones. On entering the parlor what a bewildering sight met our gaze! In the farther corner hung a large cotton basket, under which stood a what-not which did not belie its name.

On one side of the room were two large pictures in Berlin wool-work, one a large white kitten, the other a fierce-looking dog. Opposite them hung a huge farmer's wreath, made, as I suppose you all know, of various seeds. There was also a bunch of hair flowers framed, a specimen of feather flowers; these, with some portraits hung in shell and cone frames, completed the wall decorations. On a marble-topped table was the inevitable white wax cross covered with flowers. The mantle held the usual number of straw-framed pictures, pansy mats with their accompaniments. And then the tidies of all kinds and descriptions! One we remember in particular, as it seriously disturbed our peace of mind for the time being. It was pinned to the back of a large black hair-cloth rocker opposite us. It was in thread crochet and represented some animal, but which or what animal we could not decide. Was it a wolf, a deer, a dog, or the famous missing link? It still remains a mystery. The windows did not escape, but were decorated (?) with paper crosses, doves of cotton-flannel, and pictures. Besides these, were the mats and rugs, ottoman and sofa-pillow; and when you learn that none of them were masterpieces, and some of them very ordinary, you may be able to imagine the effect.

We believe, however, that fancy-work has its place in the house, and a place which nothing else can fill. There are many ornaments and conveniences which may be made that add much to the appearance and comfort of the house. But how many things are made, and cost both time and money, when for the same amount we could purchase an engraving or really *fine* chromo, which would be much more desirable. For one dollar, or even less, we may procure a delicate bust in Parian ware. Many who think they cannot afford to buy one will spend twice that amount on a piece of fancy-work. And many take time for this work which should be used in improving the mind by reading or the body by exercise. Some take time which should be given to social or even religious duties. Let me say in conclusion that I do not consider this a growing evil by any means, for there seems to be an increasing sentiment in the right direction in this respect, and, moreover, the girls of to-day are not so fond of the needle as their mothers were.

S. E. H.

**Cheap Hanging-Basket.**—Take an old tin pan, punch a hole in the bottom, fill with soil, and encase in a wire frame coated with vermilion and beeswax and filled with moss. A strawberry geranium will look beautiful in it.

## Family Reading.

### "COME UNTO ME."

A SWEETER song than e'er was sung  
By poet, priest, or sages—  
A song which thro' all heaven has rung,  
And down thro' all the ages.  
A precious strain of sweet accord,  
A note of cheer from Christ our Lord :  
List as it vibrates full and free.

Oh! grieving heart, "Come unto Me."

Oh! wise provision, sweet command,  
Vouchsafed the weak and weary ;

A friend to find on either hand,

A night for prospect dreary ;

A friend who knows our bitter need,

Of each endeavor taking heed ;

Who calls to every soul oppressed,

"Come unto Me, I'll give you rest."

"Come unto Me." The way's not long,

His hands are stretched to meet thee :

Now still thy sobbing, list the song

Which everywhere shall greet thee.

Here, at His feet, your burden lay ;

Why 'neath it bend another day,

Since one so loving calls to thee,

"Oh! heavy laden, come to Me"?

A sweeter song than e'er was sung

By poet, priest, or sages—

A song which through all heaven has rung

And down thro' all the ages.

How can we turn from such a strain,

Or longer wait to ease our pain ?

Oh! draw us closer, Lord, that we  
May find our sweetest rest in Thee.

ELEANOR KIRK.

### STORY OF A KIND-HEARTED OLD MAN.

A PIANIST was giving concerts through the provinces of Germany for her support, and to enhance her reputation she advertised herself as a pupil of Liszt. In a little town in the interior of Germany, where

she had announced a concert, she was confounded the day before the concert was to take place by seeing in the list of arrivals and at the very hotel where the concert was to be given, "M. l'Abbé Liszt." Here was a dilemma, and what to do she knew not. Her fraud would be discovered; she would be exposed; she could never give another concert; she was ruined.

Tremblingly she sought the presence of the great maestro, determined to make a clean breast of it and cast herself on his mercy. Coming into his room with downcast eyes, she knelt at the old man's feet

ments and suggestions as she played, and when she had finished he added: "Now, my child, I have given you a lesson; you are a pupil of Liszt." Before she could find words to express her gratitude Liszt asked: "Are your programmes printed?" "No, sir," was the answer, "not yet." "Then say that you will be assisted by your master, and that the last piece on the programme will be played by the Abbé Liszt."—*Springfield Republican*.

**A Robin's Æsthetic Taste.**—Some good ladies, living in a quiet, suburban street, had exposed some lace on the grass to whiten in the sun. On searching for it it was gone, and no diligence could find it. The fickle breeze was accused of the theft, but no corner could reveal the secret. Finally, the search was almost abandoned when a member of the household caught a glimpse of a white shred dangling from the nest which a robin redbreast was building in a neighboring evergreen. Here, with true æsthetic taste and no small sense of physical comfort, the bird had placed the lost lace as a lining for its nest.—*Providence (R. I.) Journal*.

**Cheerfulness in old Age.**—"Isn't Aunt Charity a darling old lady?" said one of Aunt Charity's nieces. She was indeed a sunbeam. The strong, resolute, brave face; the white hair under the plain cap; the sweet, smiling mouth, were all winning. We could depend on the motherly woman who was so jolly, so full of fun and frolic, so ready to join in whatever mirth was afloat. Everybody came to her with their joys and their griefs, sure of sympathy. An hour with her was a tonic.

**A Mother's Devotion.**—Emma, a promising young Indian girl at the school at Red Lake, died on the 22d. A runner was sent to tell her mother, who was making sugar thirty miles away, and she started in the evening on her lonely march to the agency through forests of pine—whose dark tops seemed to chant a requiem to the departed—through swamps, over deep unbridged rivers, in the darkness of night, without food, without sleep or rest, and she reached the agency soon after light.

MAMMA'S PICTURE AND PICTURE-FRAME.

and with many tears told her story: how she had been left an orphan and poor, with only her one gift of music with which to support herself; the difficulties she had encountered, until the fraudulent use of his great name had filled her rooms and her purse. "Well, well," said the great man, gently raising her up, "let us see, my child, what we can do. Perhaps it is not so bad as you thought. There is a piano; let me hear one of the pieces you expect to play to-morrow evening."

Tremblingly she obeyed, the maestro making com-

## The Kitchen.

## MY KITCHEN.

I HAVE read the household experiences of so many that I wish to send my experience in the kitchen to the kind readers of THE CABINET, hoping that my failures may cause young girls to learn to adorn the kitchen as well as the drawing-room, and my successes to encourage young housekeepers who have been so unfortunate as not to learn to cook, to persevere. I was raised in a luxuriant Southern home, and of course never thought of learning to do such arduous labor as cooking. This idea has been quite a mistake in the South. When I was married, Mr. G—— and I began keeping house under the most happy auspices. Everything went on without any trouble until two years after our marriage, when our good old colored cook left us. She must go live with her children. With a good heart I determined to cook dinner; I knew whatever mistake I made my kind husband would forgive. I gathered my vegetables, and was busying myself about the kitchen when Mr. G—— came and delivered the pleasant news of a visitor for dinner. What could I do? I felt I should fail in everything. My vegetables were put on with some ham to boil. The griddle had its place on the stove, and down I put some bread before the griddle was hot, and of course I could not turn it. My bread was ruined; and what is a Southern dinner worth without corn-bread? Well, I next tried a rice-pudding, and thought I would boil enough to have a nice dish of rice for dinner. So I filled my porcelain boiler nearly full of rice, and it began to boil, and I began to dip out, and dipped until I had filled every empty dish in the closet. Over with the rice, I smiled at the dinner-pot, because I felt so sure of some nice cabbage, beans, and ham; but on lifting the lid I found everything burnt brown—another dish spoiled, just because I did not know how much water to put in the pot. Really I was discouraged; but it was growing late and something must be done. I concluded to have a fry dinner, and thought I was doing quite well. Our guest and family were seated at the table, and I was on the point of making known that I had cooked dinner—my first meal—when, tasting the biscuits, I found them without salt. On drinking my coffee it was quite dreggy, so I explained to our guest that we had a new and ignorant cook; gave them some nice sweet milk and cake I had on hand. It is useless to describe how chagrined I was. I was fully determined that such mistakes should not always be made by me.

Mr. G—— was from the North, reared and educated there, so was willing that I should learn to cook. He was going North to spend a part of his summer vacation, and I was to go to my mother's to stay until his return. While there I went to the kitchen every day, notwithstanding my mother's and sister's protestations, and learned, under old Aunt Hannah's superior guidance, to cook. I felt so glad of the knowledge that, with my younger sister, I hurried home to make preparations for my husband's return.

He wrote me when to expect him, and he wrote that his younger brother and wife would accompany

him; they were on a bridal tour through the Southern States. My little sister had become as enthusiastic as I was over the useful art of cooking. So we put everything in readiness in the house; then to the kitchen we hied, and such cakes, pies, custards, and puddings we made, and such baked turkey, smothered chicken, roast beef, and everything nice we could think of! Not one failure did we make. Our company arrived. Among the party was our guest of my first dinner. Mr. G—— very proudly told the joke of the young, ignorant cook, because he appreciated so much the improvement made in the short time, and thinks with me that every housekeeper should know how to cook. MRS. D. G. G.

## A SERMON TO GIRLS ON COOKING.

COOKING-CLASSES have been popular among fashionable young ladies of late years; but there is no cooking-class which quite equals in its opportunity for excellent information that which you may find at home. Presuming that I am talking to a girl who has just left school, I advise you to make use of your leisure in taking lessons from your mother. There is an absolutely splendid feeling of independence in knowing how to make perfectly light, sweet, substantial bread. Then try your hand at biseuits, muffins, corn-bread, toast, and all the different forms into which breadstuffs may be blended. Toast seems a simple thing enough, but is frequently so ill made that it does not deserve the name. Gruel, a necessity of the sick-room, is often a hopeless mystery to women who have no idea of how it is evolved from the raw material. After you have mastered the bread question, try meats and vegetables.

Any bright girl who can comprehend an equation, or formulate a syllogism, can overcome the difficulties which beset her when learning to cook. Lucent syrups, golden cakes, delicately-browned bread, quivering jellies, melting creams, and the whole set of material things glorified, because made for love's sake and for the good of one's dear ones, are fit expressions for any woman. The charm of this accomplishment lies in the fact that it imparts to its owner a gratifying sense of power; it bestows on her, too, the power of blessing and resting those she loves best. Wherever the cook goes she takes her welcome along. One may tire of the sweetest singing, of the loveliest poetry, of the finest painting, and of the most witty conversation, but of cooking never. Yet I would be sorry to have you contented to be only a cook, only a domestic machine. That is not my meaning or intention. Be artist, poet, inventor, and well-bred woman; be the most and the best that you can, and add, as a matter of course, ability to keep house well and to do all that good housekeeping includes.—*S. S. Times.*

## ANCIENT RECIPE FOR PUMPKIN PIE.

THE honor of originating the pumpkin pie, it seems, does not belong to the people of New England. Of this the *Atlantic Monthly* gives the following statements. But even as to things supposed to be peculiarly American there is no little error, as I have heretofore pointed out, and the appearance of

Indian pudding in Mr. Bartlett's dictionary reminds me that one of the things generally supposed to be of American and of peculiarly New England origin is not so; this is nothing less than pumpkin pie. The housewives of New England brought the knowledge of pumpkin pie with them from the old home. Here is a recipe for making it, from a *cook-book* published in London more than two hundred years ago:

"TO MAKE A PUMPKION PYE.—Take about half a pound of Pumpion and slice it, a handful of Time, a little Rosemary, Parsley, and sweet Marjoram slipped off the stalks, and chop them small; then take Cinnamon, Nutmeg, Pepper, and six Cloves, and beat them; take ten Eggs and beat them; then mix them and beat them altogether, and put in as much sugar as you think fit; then fry them like a frois; after it is fried let it stand till it be cold; then fill your pye; take sliced Apples thin round wayes and lay a row of the Froize and layer of Apples with currants betwixt the layer while your pye is fitted, and put in a good deal of sweet butter before you close it; when the pye is baked, take six yolks of Eggs, some white wine or Vergis, and make a Caudle of this, but not too thick; cut up the lid and put it in; stir them well together whilst the Eggs and pumpions be not perceived, and so serve it up."

**A Mustard-Plaster.**—How many people are there who really know how to make a mustard-plaster? Not one in a hundred at the most, perhaps; and yet mustard-plasters are used in every family, and physicians prescribe their application. The ordinary way is to mix the mustard with water, tempering it with a little flour. Such a plaster as this makes is abominable. Before it has half done its work it begins to blister the patient, and leaves him finally with a flayed, painful spot, after producing far less effect in a beneficial way than was intended. Now, a mustard-plaster should never blister at all. If a blister is wanted, there are other plasters far better than mustard-plasters. Then use no water, but mix the mustard with the white of an egg, and the result will be a plaster that will "draw" perfectly, but will not produce a blister on the skin of an infant, no matter how long it is allowed to remain on the part.

**Snow Custard.**—Beat 8 eggs, leaving out the whites of 4; add to them 1 quart of milk and 5 ounces of sugar; have a shallow pan of hot water in the oven, set the dish into it, and bake till the custard is thick; then take it out and set it away to cool; beat the remaining whites very light, add  $\frac{1}{4}$  pound of sugar gradually and a tea-spoonful of lemon-juice. When the custard is cold lay the whites over the top in heaps, but do not let them touch.

**To Pickle Fruit.**—The following excellent mode is practised in many families: To each peck of fruit allow four pounds of sugar, a pint of sharp vinegar, and spice to taste; boil the vinegar and sugar together for a few minutes, then drop in the fruit and boil until moderately soft; when done pour the vinegar over them and let them stand until cold before covering. Plums, peaches, pears, etc., can be done in this way.

# THE Ladies' Floral Cabinet

AND

PICTORIAL HOME COMPANION.

The Handsomest Illustrated Journal of  
Household Art, Flowers, and Home  
Literature in America.

\$1 25 per year, Monthly Edition, with Premium.

## THERE are MARTYRS

To headache who might be cured by using TAR-  
RANT'S SELTZER APERIENT. The stomach,  
overburdened until its recuperative power is  
weakened, revenges itself upon the poor head,  
which it makes to ache and torture the offender.  
The use of this aperient will carry off naturally,  
and almost imperceptibly, the offending cause.  
The disease is removed and the head ceases to  
ache.

SOLD BY ALL DRUGGISTS.

(Cut is not near full size.)

This is an elegant Pocket-Book of a new design, made of Rus-  
sia leather and handsomely finished with nickel plated mountings  
and clasps. It is arranged with pockets suitable for either silver,  
scrip or bills, and has a beautiful silk handle with tassels attached.  
They are equal to pocket-books sold in the stores for \$1.25 to  
\$1.50, and yet we send one by mail post-paid as a premium to  
any one sending five subscribers to Farm and Fireside at 50 cents  
a year. We are confident that our lady readers will be delighted  
with this new premium, and are sure that a more acceptable  
present could not be found.

PRICE OF POCKET-BOOK, post-paid, including one  
year's subscription to Farm and Fireside is \$1.

It is only because they are manufactured in large quanti-  
ties especially for us that we can afford them at such a low price.  
FARM AND FIRESIDE is the most popular Agricultural  
and Home Journal in the U. S. It is suited to the home circle in  
city, town or country, and is a welcome visitor in every house-  
hold. Farm and Fireside is published twice a month, it contains  
8 large pages, and the circulation is so large that we can afford  
to publish it at 50 cents a year, although each copy contains as  
much reading matter as most journals costing \$2 to \$4 per year.

SAMPLE COPIES of Farm and Fireside and Premium  
List sent to any address for 3-cent stamp.  
ADDRESS ALL LETTERS plainly to PUBLISHERS  
of FARM AND FIRESIDE, Springfield, Ohio.

ses, made to order.  
By mail, \$1. Florida Moss—10 ounces by  
mail, 25 cts. M. R. BEAN, Norwalk, Fla.

## The Christmas Cabinet.

FIVE NEW ARTICLES AT ONE-  
HALF THEIR VALUE.

48 cts. Useful, Amusing, 48 cts.  
and Instructive.

No. 1.—Japanese  
Magnetic Fish.—  
Five varieties, complete  
in neat box of Japa-  
nese wood, with jointed  
bamboo rod, silk line,  
and magnetic hook.  
The fish seize the hook,  
and the lucky fisherman  
draws them out of the  
water. A quaint and  
curious toy.

No. 2. Ne Plus  
Ultra Pocket Knife.  
Warranted best qual-  
ity cast steel; the  
spring cannot get clog-  
ged nor wear the pocket,  
being entirely concealed  
within the handle,  
which is one solid piece;  
latest invention in cut-  
lery, elegantly finished,  
first-class every way.

No. 3.—Pocket  
Comb.—Made of finest  
horn, tough and dura-  
ble, in a neat case; cannot soil the  
pocket. Suitable for ladies or gen-  
tlemen. A handy, useful article.

No. 4.—Pinafore Card  
Game.—Two games in one, the  
latest out. Funniest, jolliest, and  
most original ever published. Capable of end-  
less changes, for any number of players; has no  
equal as a social pastime. The 108 cards, includ-  
ing Question, Answer, and Forfeit Cards, will  
keep the duller parties and social gatherings in  
roars of laughter for an entire evening.

No. 5.—Japanese Crepe Pictures.—Re-  
presenting elegantly dressed Japanese ladies,  
beautiful landscapes, and artistically drawn  
figures, transferred in indelible colors to Japanese  
Elastic Crepe of the finest texture. They make  
beautiful and brilliant tidies for backs of chairs  
and lambrequins, centre-pieces for table covers,  
etc.; are very fashionable, and will be admired  
and favorably commented upon by your friends.

Our Illustrations show but four of the ar-  
ticles in Cabinet, and these on a greatly reduced  
scale. (Crepe Pictures not shown, being difficult  
to illustrate.) We furnish the entire lot, of 5  
articles in all, in a strong case by mail, post-paid,  
for only 48 cents, or 16 three-cent postage stamps.  
This offer is made for the purpose of introducing  
our goods in new localities, and to procure new  
names for our Holiday catalogues. We will send  
3 Cabinets for \$1 25. No further reduction.  
Send us clean postage stamps of any denomina-  
tion, as we prefer them to silver. Don't send  
pennies or nickels. Address all orders to

EUREKA TRICK AND NOVELTY CO.,

P. O. Box 4614. 39 Ann Street, New York.

This advertisement will not appear again.

25 CARDS, 25 styles, with name, 10c. Outfit,  
10c. Samples, 2c.  
J. B. HUSTED, Nassau, N. Y.

MANMARIAL BALM restores and  
develops the bust. Warranted sure and  
safe. Price \$1. NEW ENGLAND MEDICAL IN-  
STITUTE, 24 Tremont Row, Boston, Mass.

25 SNOWFLAKE ASSORTED CARDS, with  
name, 10c. Outfit, 10c.  
SEAVY BROS., Northford, Ct.

65 MIXED CARDS, with name, 10c. and 3c.  
stamp. Samples, 6c.  
DOWD & CO., Winsted, Ct.

USE HOP BITTERS.

A little Hop Bitters  
saves big doctors' bills  
and long sickness.  
Cures drowsiness, bil-  
iousness, pains, and  
aches.

# When the Evening Shades are falling.

Words by THEO. D. C. MILLER.

Music by WM. T. KEEFER.

*Andante moderato.*

## CHRISTMAS GREETING.

"A stern discipline pervades all nature which is a little cruel that it may be very kind."

—HERBERT SPENCER.

THE shadows of the closing year are gathering about us. Once more the circle of the months draws to its completeness, and the season of storms heralds its approach by days of gloom and nights of cold. The natural world is wrapped in silent trance, but not in the silence of death. "Nature knows no pause in progress and development," says the great master, who studied well her secrets. The winter storm is as necessary to the strength of the oak as the summer sunshine or the autumn rain, and softly and shelteringly the Christmas snow-

fall covers "the unrisen wheat" and secures the promise of the coming harvest. In every bough lies imprisoned, in "alleries dark," the living sap that with returning spring shall fashion into beauty leaf and bough and fragrant blossom. Mighty sleeping forces, unseen but eternal, remind us of the sublime expres-

sion of the Hebrew prophet, "the hidings of God's power." We are conscious of reserved force, in the cold and silent air. The tempests linger awhile in their northern caves, but we are sure that they remain couchant, ready for a spring. Are they checked by the echoes of seraph music, by the glory

and open wide the gates of gold that never more shall shut.

Where shall be found the heart, in all earth's struggling millions, that shall not beat with gladder throb that it is Christmas? Is there anywhere in any dark mine or cold prison one that shall not

catch a gleam of the holy light, or some distant echo of the angel's song? If there is such a spot, Christian faith and Christian charity should blush that it should be.

In our own land more and more, we are coming to feel the gentle and tender influences that will not suffer any soul to eat the Christmas feast alone. Everywhere gentle charities carry the bread of love to cheerless homes and hungry hearts. At Christmas, if ever, men and women feel that they are all akin, and put away

A CHRISTMAS IN ELFLAND.

of the light from upper skies that floods Judaea plains? Truly December needs not the cheer of summer flowers or autumn splendor; there is a warmth and light throbbing through all the pulses of the world. Hope and love beat back with shining wings the frigid darkness of wrong and woe,

from them "that abomination called condescension." The rich and the poor meet together, with some faint realization that the Lord is the maker of them all. The rich go among the poor with sympathies all awake, remembering the Babe of the manger, "who, though he was rich, for our

sakes became poor"; and the poor grow tenderer toward the rich, as they feel that the icy barrier of pride melts away in the warm rays of divine love.

It is not alone in material things that the world is moving, but in spiritual as well; and in nothing is this more apparent than in the nature of its charities. How absurd would it have appeared a century ago to offer to the destitute poor, the entertainments which are now provided upon Christmas day throughout the length and breadth of our land! the Christmas-tree, loaded with fairy gifts for the waifs of the street, the rich flowers and luscious fruit, carried to the bedsides of the sick in cellars and attics, the feast of dainties provided for criminals within prison walls, and, better still, the words of love and cheer that are as freely given to those who, guilty though they be, are brothers still to the Son of Mary.

How much of the tender character of many of our charities, is owing to the more general observance of Christmas day as a hallowed festival, it might not be possible to estimate, but we are sure that it has not been insignificant. There is a peculiar charm in the observance of the great Christian festival that thrills all hearts. Its merry-making is merrier than that of all the year, for its joy is genuine and pure; its worship rises higher, for it swells the rapture of heaven with the gladness of earth. It is good to observe it outwardly, to do it honor with every tribute we can bring of loving homage, to wreath garlands and make feasts, to give and to receive gifts. Above all it should be marked by gifts of love; and who so poor that he has none to offer, and who is rich that has it not to give?

"Love is a present for a mighty king."

God had no better thing to offer, and he gave it to the world on the first Christmas morning. Like the breath of the south wind it came, and a new spring was born. Cruel faiths and dark superstitions fled before the soft radiance of the Bethlehem Star that gilds our day with beauty and blesses our nights with peace.

In every land we find some gentle thought or tender strain of feeling running like a thread of gold through the Christmas customs. None are more beautiful than the remembrance of the animal creation in the universal rejoicing. In the far North the Norwegian peasant children tie together a sheaf of wheat and other grain, which they place upon a pole planted in the snow as a Christmas-tree for the birds; and in the far South the Italian housewife

makes white cakes for the stalled cattle. Even those superstitions are beautiful that still cling about the day—superstitions which Puritanism condemned so severely, and Romanism exalted so unduly. The old German legends weave it into the warp and woof of their strange stories, like that of our engraving, where the maiden, by the observance of certain rites on Christmas eve, is borne away to Elfland, where children that have been transformed into birds for offence given the fairies, await the coming of

being carried away, but casts her into so deep a sleep that she cannot be awakened to take the offered fruit, and the gnomes are obliged to return her to her home on Christmas morning at the rising of the sun. Like all the rest, the story has its thread of gold, and the tale is not for the Norse folk only, but for us.

Let us make the gold our own. For each of us there is some deed of kindness to perform, some ministry of tender affection, some unkindness to forgive and forget, some bruised heart to bind, some sinful soul to cheer with words of hope.

"Make channels for the streams of love

Where they may broadly run;  
And love has ever-flowing streams  
To fill them every one."

Kindle bright fires, wreath your houses with holly and mistletoe, spread your tables with good things, give to your friends, give to your enemies, give to your beloved ones, make your homes bright and your children happy, give to the poor, but take heed how you give:

"That is no true alms which the hand can hold:  
He gives nothing but worthless gold  
Who gives from a sense of duty;  
But he who gives a slender mite,  
And gives to that which is out of sight,  
That thread of the all-sustaining Beauty  
Which runs through all and doth all unite—  
The hand cannot clasp the whole of his alms;  
The heart outstretches its eager palms,  
For a God goes with it, and makes it store  
To the soul that was starving in darkness before."

Better to warm the heart than the body. Do not offend the one that you may benefit the other. It has often been made harder to the poor man to

accept a benefit than to go without it. Get him work and he can earn coals and blankets, but he can never buy a flower for his wife, though she loves them well; nor a toy for his child, though he looks into the toy-shop windows with longing eyes. Do not forget this when you would make him a present. And, kind readers, we wish you a Merry Christmas and a Happy New Year.

**Christmas Gifts.**—No Christmas gift is more universally acceptable than flowers. They are always elegant, and admit of such range in taste and cost as to satisfy the requirements of the most fastidious.

THE BIRDS' CHRISTMAS-TREE.

some beautiful maiden to restore them to their homes. If the fairies give her fruit, and she eats it, it confers on her the power to release the offenders from the power of the spell, and give them back to their beloved ones. But this is only on condition that the maid be fair, and will consent to remain herself in exile in place of those she releases. Sylva, the beloved of the whole hamlet where she lived, "as the rarer lily blossoms 'mid the green herbs of the field," resolved to adventure the spell for the sake of returning the child of her stepmother, who, by perverseness and cruelty to Sylva, had offended the little people, with whom Sylva is an especial favorite. An earth fairy, who loves her, cannot prevent her

"Glory to God in the highest; on earth peace, good will to men."

AN ANCIENT CHRISTMAS CAROL.

WHEN Christ was born of Mary free  
In Bethlehem, in that fair citie  
Angels sang with mirth and glee:  
In excelsis gloria.

Herdsmen beheld their legions bright  
'To them appearing with great light,  
Who said, God's Son is born this night:  
In excelsis gloria.

This King is come to save mankind,  
As in Scripture text we find,  
Therefore this song have we in mind:  
In excelsis gloria.

## Floral Gossip.

## THE MISTLETOE

THE Mistletoe (*Viscum album*) belongs to the natural order Lorantheæ and Diccia-tetrandia of Linnæus, it is a true parasitical plant, as at no period of its existence does it derive any nourishment from the soil or from decayed bark, like the fungi and allied vegetation. Of this genus there are several species; this is the only one of special interest, and is what is generally known as the English Mistletoe. It is an evergreen, pendent shrub, usually found growing on fruit-trees, but occasionally fixing itself on the thorn, oak, maple, and ash, very rarely on the pine. The stem, when full-grown, is an inch in diameter; it is very much branched or subdivided, forming a head from two to five feet in diameter. The bark is smooth, of a yellowish green color. The leaves are tongue-shaped, entire, in pairs on very short foot-stalks. The flowers are male and female in different plants, axillary, and in short, close spikes. Neither the male, nor female flowers have a corolla; the stamens and pistils spring from the calyx. The fruit is a globular white berry covered with a viscous substance; these berries appear in winter, and are in perfection about Christmas.

The Mistletoe may be made to grow on the apple or other trees, where the climate is not colder than that of England, by cutting a notch in the bark on the under surface of a branch, and carefully inserting the seed therein; the only precaution being necessary is to place the seed in such a position that the embryo shall be directed toward the trunk of the tree, and that the seed shall not be bruised. The growth of the Mistletoe is very slow, rarely more than two or three inches of the shoot and two or three pairs of leaves being produced in a season; the durability of the plant is proportionately great, for when once established on a tree it is seldom known to cease growing until it has exhausted the vitality of the tree, causing its death. Many old orchards in England have been completely destroyed by this beautiful parasite. The death of the trees is not, however, to be greatly regretted, as the Mistletoe brings a high price in the markets, more than the value of the tree. Hundreds of tons of it are sold annually for Christmas decoration; it is now regularly imported into this country for the same purpose. The Mistletoe was a special object of worship with the ancient Britons, and that many important rites were performed with it by the Druids or priests is certain. By them it was held sacred, and many virtues were attached to it. They sent round their attendant youths with this plant to announce the entrance of the New Year; and a somewhat similar custom is still continued in France. The popular custom in England of kissing under a branch of Mistletoe during the Christmas festivities is referred to

the supposition on the part of some that it was the forbidden tree in the garden of Eden. Mr. Loudon supposes this pleasant custom most likely came from our Saxon ancestors, and to have been commemorative of Balder, the son of Odin, who is one of the heroes of Icelandic romance. According to the story, it was prophesied that Balder would die, to avert which fate his mother exacted a vow from all things on earth that they would not injure him. One of his enemies, knowing the Mistletoe had not taken the vow, as it did not grow upon the earth but on trees, made a dart of its wood, and with it killed the hero.

The origin of the modern custom connected with the Mistletoe is not very clear, which is perhaps fortunate. If known, the innocent merriment now associated with the plant would be exchanged for a feeling of stern disappointment, and it would be banished from many firesides, where it is now a great source of joy and pleasure. The Mistletoe of the Southern and Western States is the *Phoradendron*

A CHRISTMAS GAME.

*flavescens*, which grows chiefly upon the branches of elms and hickories; it is a yellowish-green, woody-stemmed parasite, with a jointed stalk having opposite and whorled branches, fleshy, obovate-shaped leaves, small flowers in axillary spikes, which are shorter than the leaves; the fruit, though smaller, resembles that of the English varieties. This species is widely distributed from New Jersey, South and West. This species has none of the poetic associations that distinguish in so marked a degree its English namesake.

## AN ENCLOSED WINDOW-GARDEN.

A LADY correspondent of *Vick's Illustrated Magazine*, at Lynn, Mass., writes as follows:

I have no conservatory, or even a bay-window; only one south window in my sitting-room that I can use for plants. At this window, half way up, is a walnut shelf a foot wide, supported by iron

brackets, and on it is a zinc pan painted drab, with an inch of sand on the bottom to keep the pots moist. My idea was to enclose this window from the room, with the shelf inside, so as to exclude dust and include moist air. I communicated my idea to a carpenter, and his hands completed the practical part, and my window-garden stood completed. I am well pleased with it, and the plants are, judging from the way they grow. Now for details: I had a table made of black walnut, as long as the window is wide, including the easing, two feet wide and six inches deep. It is plain on the sides, has handsomely turned legs finished with casters. There is no top; at the bottom inside is a cleat, on which rest narrow slats of pine, and on this a zinc pan just the depth of the sides. An inch of damp sand supplies the moisture, and the warm air from the furnace comes in contact with the pan underneath and furnishes bottom heat. So much for the table. The sides are of walnut, and reach to the top of the window-easing. The front consists of two glass doors, opening in the centre, each one made of two panes of glass. The top is made of walnut and finished with a handsome moulding similar to a bookcase. The top is fastened to the table with four large screws, and to the top of the window with small brass hooks and screw-eyes. The whole can be removed from the window in a few minutes. An outside window in winter bids defiance to Jack Frost.

At different times I have had Hyacinths, Polyanthus, Narcissus, and Due Von Thol Tulips. I have noticed that the flowers hang on longer than when kept in the dry air of the sitting-room. The plants are not half the trouble they were before, and so I think my window-garden a success. When winter is gone its mission is not ended; while I am writing to-day, with the thermometer among the nineties, my garden is still a pleasure, and gives me a cooling sensation when I look through its glass doors. On a shelf in a large pot is a Japanese climbing fern, *Lygodium scandens*; it is trained on strings and covers the upper half of the window. In the lower part on one side is the Hoya, now full of lovely clusters of bloom; on the opposite side *Cissus discolor*, trained on a trellis like the Hoya. In the centre I have ferns, *Adiantum cuneatum*, in a ten-inch pot; it measures, outside the foliage, thirty inches. Besides this is *Cyrtomium faleatum* and another fern I do not know, and a lot of *Lycopodium Martensii*, green and white; *Begonia rex*, and silver-leaf *Begonia*. At ten o'clock in the morning I close the blind, open the window, and then open the blind when the sun has gone away. The ferns grow beautifully.

The LADIES' FLORAL CABINET for August contains numerous valuable household hints for floral and ornamental adornment of the home. Ladies of taste and those desirous of cultivating a taste for embellishing their home, should subscribe for this handsome monthly.—*The Reporter, Savannah, Mo.*

## Gossip About Flowers.

### AMPELOPSIS VEITCHII.

MR. DONALD G. MITCHELL, in a recent essay on rural adornment, gives very high and just praise to *Ampelopsis Veitchii*, a lovely new vine which has come to us from Japan, and which is by no means so well known yet as its merits deserve. It is smaller and of finer habit than our own Virginia creeper, clinging with much greater tenacity to either wood, brick, or stone, and carrying the greenness of its foliage well into November. Even then it yields to the cold with great reluctance, its leaves changing through a rich brown to a dark maroon, and dropping at last in flakes of deepest crimson. Were it only an evergreen it would, Mr. Mitchell thinks, more than match the ivy. The same vigorous creeper is also prominent in the plant decoration of Wellesley, near Boston. In the latest volume of the Massachusetts Horticultural Society it is said that the unique and picturesque porter's lodge, at the entrance gateway to that magnificent estate, is completely overrun by *Ampelopsis Veitchii*, and the writer declares that "this hardy vine of rapid growth, fine foliage, and wonderfully adhesive power has perhaps no equal." He adds that "on some of the trees it has mounted to the highest branches." It is also used elsewhere on the grounds, and with noteworthy effect, especially in the draping of a Druidical arch of rude stone with rock-work connected.

### RELATIONS OF FLOWERS AND INSECTS.

FOR some years past—since the publication of Darwin's researches—we have been accustomed to look on the forms, colors, perfumes, and nectar-like secretions of flowers as so many adaptations and contrivances to secure the visits of insects, and the consequent fertilization of the flower. Recently, however, an observer has been found who is bold enough to challenge these opinions of Darwin, Delapino, Mueller, Lubbock, and others. M. Gaston Bonnier, after having observed during the last seven years some eight hundred plants in various parts of Europe, comes to the following conclusions, the details upon which he founds them being given in recent numbers of the *Annales des Sciences Naturelles* and of the *Bulletin* of the Botanical Society of France:

1. The development of colors in flowers has no relation to the development of nectar. In closely-allied species of the same genus the most conspicuous flowers are not those which are most visited by insects.

2. In dioecious flowers provided with nectar the insects do not visit first the male and afterwards the female flower.

3. Bees become much accustomed to colors, but as

much so to those which are inconspicuous as to those which are brilliant. For the same weight of honey a green surface is as freely visited as a green surface with a background of red.

4. The development of spots and stripes on the corolla has no relation to the production of nectar.

M. Bonnier, who has studied the anatomy and disposition of the nectar-secreting organs in a great number of plants, points out that these accumulations of saccharine material occur usually in parts of the plant where development is going on actively, as in young leaves or young ovaries. When the

HANGING BASKET OF FERNS.

emission of liquid ceases, the saccharine matters contained in the nectaries return into the plant, and are probably used up by the neighboring parts in the course of this development. In fact, the nectaries, whether floral or extra floral, whether they excrete liquid or not, act as reservoirs of nutriment which is in direct relation to the life of the plant.

### HOW PLANTS DEFEND THEMSELVES.

IN a recent lecture Mr. Francis Darwin gave some curious instances of the way plants are protected

from insects and other dangers. Opium, strychnine, and belladonna, he said, three of the most deadly poisons, were all formed by plants as a means of defence to preserve them from cattle, etc. A curious use was made of this poisonous property, as recorded by Livingstone, who states that at one place in South Africa the natives were in the habit of catching their zebras by mashing up some poison plant in their drinking places. Poppies are protected by poison from the attacks of goats, and probably of other cattle. The strychnine plant was a good example of the way in which poison was limited to the part of the plant where it was needed. Almonds were also protected by poison, cultivators generally sowing the bitter kind, as the sweet kind was eaten by mice. Other plants were protected, not by strong poisons, but by some aromatic substance. The fennel, anise, and caraway seeds were examples of this, which were not eaten by birds on that account. The lime, which was protected by this aroma, was able to grow wild and hold its own anywhere, whereas the orange, the citron, and olive required to be carefully preserved and watched. The mint was another example of a plant protected against cattle by this aromatic principle. Flowers are often

more aromatic than the leaves of the plant on which they grow, and owe to this principle their safety from attack, and caterpillars will starve to death sooner than eat the flower of a plant the leaves of which they readily devour.

Water plants are unprotected, for the reason that water was protection enough. The most peculiar protection, perhaps, was that enjoyed by the common lettuce, which, when pricked, even by an ant's foot, spurted up a sticky juice and enveloped the intruder, who, biting the leaf from vexation, drew down upon himself a fresh shower of cabbage wrath, in which the unfortunate ant was drowned.

### A Botanical Usurper.—

A curious instance of the invasion of a country by a plant of foreign origin is seen in the history of the mango in Jamaica. In 1782 specimens of the cinnamon, jack-fruit, and mango were sent to the Botanic Garden of the island. There the cinnamon was carefully fostered, but proved to be difficult of culture in the island; while the mango, which was neglected, became in eleven years as common as the orange, spreading over lowlands and mountains, from the sea-level to 5,000 feet elevation. On the abolition of slavery, immense tracts of land, especially coffee plantations, relapsed into a state of nature, and the mango being a favorite fruit with the blacks, its stones were flung everywhere, giving rise to groves along the roadside and around the settlements; and the fruit of these again, rolling down hill, gave rise to forests in the valleys. The effect of this spread of the mango has been to cover hundreds of thousands of acres, and to ameliorate the climate of what were dry and barren districts.

## ORCHIDS.

WE well remember, when a little child, the first time we saw a plant growing without earth, in which to fix its roots. It was on a visit to the wife of a naval officer who had been long absent in tropical countries, and had brought home with him the strange root which I saw hanging up in a southern piazza, attached to a block of wood by a little fine wire. When told that in its native land it grew upon the branches of trees, and bore beautiful flowers, I remember feeling a sort of awe creep over me as though the thing were what the Scotch call "uncanny"—much the same feeling as I had when listening to tales of gnomes and fairies in the gloaming. Something of the same feeling clings to me still in studying the strange habits and weird, grotesque aspect of the singular plants called Orchids. Unlike all other plants in their appearance, structure, and modes of growth, they display a delight in contradictions and a prankish caprice in their choice of their abiding-places that would justify the idea that they took delight in surprising the unsuspecting botanist with some anomaly of growth or structure just as he had his ideas all settled, and was quite satisfied that he knew all about them, and prepared to enlighten the world upon their erratic habits. Charles Kingsley says that any one who has read Darwin's book on the fertilization of Orchids will be very wary how he says anything about this mysterious race. The caution is a wise one, any general assertion with regard to them, being liable to be flatly contradicted in some particular instance, often in very many.

They afford a study upon which a life-time might be easily expended without reaching all, or even a large proportion, of the singular facts with regard to their nature, or anything like an accurate knowledge of their various species.

Orchids are generally divided into two classes, the terrestrial and the epiphytal, the former growing in the earth, the latter upon trees.

Like all general statements with regard to them, it has to be qualified, as there are exceptions to the rule. The terrestrial, are found more especially in temperate regions, though they also extend into the tropics. The epiphytes are chiefly confined to the tropics, and to situations where the rain-falls are heavy, and the neighborhood of rivers and waterfalls. Heat and moisture seem to be the almost invariable conditions of flourishing growth. The two classes extend over nearly the whole world, the only places where they are not found being those where heat exists without moisture, or moisture without heat, as in the deserts of Africa and the extreme northern limits of the temperate zone. To give even a glance at the various species would require a volume. Epiphytal Orchids are the true aristocrats of the floral tribes. They resemble an order of Oriental grandees. They know no such motto of Western chivalry as that of the Black Prince, "I serve"; they do not owe any allegiance to utilitarian ideas. Only a single plant of the race may be called actually useful, and to that the appellation applies only by courtesy, since the vanilla is valued for its delicate aroma and rich flavor; both merely luxurious additions to enjoy-

ment rather than the supply of a real need. No, with the Orchids, beauty seems to be its own excuse for being; and certainly, in whatever way we regard them, we must acknowledge that for grace of form, elegance of foliage, and magnificence of coloring, no race of plants can compare with them. The rose is the queen of flowers, but she displays only a limited number of colors; but in the Orchids we find every color of the rainbow. Even blue, the rarest of hues among flowers, is represented, and many individual plants display a number of colors in the most vivid contrast. Some are pure white, like the *Peristeria elater*, the Holy Spirit Plant of Mexico, whose column closely resembles a dove descending with wings outspread; others wear Tyrian dyes, and seem to flash with gold and jewels. The union of their strange forms with color, produces, as every one knows, the most singular simulations of animal life. Some of these are perhaps rather fanciful, but many are real and striking. Among these last, one of the most perfect is *Cynoches ventriosum*, which as its name imports, imitates a swan, the gracefully-arched column forming the head and neck.

In the figure, size, structure, and habits of these plants there is nearly as much variety as in the blossom. Some are Lilliputian, others by their height belong to Brobdingnag. The *Oncidium altissimum* has panicles nine or ten feet in length, and some of the *Deudrobes* grow to equal length, while the *Sobralias* sometimes exceed twenty feet in height. In the accompanying cut, we have endeavored to show something of their various contrasting qualities. On the right hand at the head of the page will be seen the *Oncidium papilio*, or Butterfly Orchid, with spotted leaves. Just below is the drooping, vine-like plant, *Deudrodium macranthum*, whose large panicles of flowers we had no room to figure; near it the blossom of the *Peristeria elater*. Beneath, showing the creeping habit of the root-like stem, from which the pseudo-bulbs are produced, is a *Sophronitis*. On the extreme left at the bottom of the page is the *Orchis aranifera*, or Spider Orchid, which, when seen with the addition of color, is very striking. Next is *Habenaria orbiculata*, with its strangely elongated lip. The central figure is *Cypripedium japonica*, a Japanese plant, easily grown, it is said, in pots. The *Cypripediums* are popularly known as moecasin flowers. Several varieties are native to our Northern woods and Western prairies.

Next is a dwarf specimen of the same genus, *C. Concolor*. Above, is the graceful vine of the *Vanilla aromatica*, trailing among the numerous clusters of pseudo-bulbs of the *Tilandsia*, common as a weed in Mexico and Central America. These singular bodies are really only the enlarged and thickened base of the leaf-stem, and are produced annually with the growth of the leaf; when the leaf withers the bulb still remains; and as the years pass clusters are formed such as are seen in the engraving. The bulbs are regarded by botanists as receptacles where nourishment is stored up for the support of the plant. They are common to very many Orchids.

Orchids, as a rule, are of slow growth and long life. The same plant produces new flower-stems some-

times annually, sometimes at longer intervals, but the plant itself lives to great age; it has been asserted that there is evidence of their living one hundred years. In this long life is found the safety of investing money in their culture, for the continued production of rare flowers will bring to the florist ample remuneration for both the cost of purchase and that of cultivation.

It is impossible to succeed with Orchids without a thorough knowledge of their habits of life at home. An amusing illustration of this fact was given in the case of a gentleman who, having vainly endeavored to grow a species of *Stanhopia*, found one morning, to his astonishment, that it was sending a green stem through the bottom of the pot. Finding from this hint that it preferred to grow upside down, he concluded to let it have its own way, and was rewarded by abundant blooms. The central plant figured in the engraving shows how the epiphyte is cultivated upon wood suspended by wires. Those that need more protection for the roots are placed in baskets, filled with sphagnum moss, placed over potsherds and pieces of charcoal; others are potted. Any one who has a greenhouse can grow some Orchids, but they thrive best in a house by themselves, their aristocratic proclivities demanding select society and luxurious surroundings. It is only necessary for this purpose to divide off a small portion of the greenhouse, where they will condescend to admit a few choice exotic ferns. Stove-heat has been considered hitherto almost indispensable to most epiphytes. Of late, however, new ideas have been introduced with regard to culture which will, if they can be carried out, greatly facilitate Orchid culture. It is claimed that very many of the plants now under cultivation may be grown in a grapery where the temperature never falls below 40° Fahrenheit. This is a contradiction of all received notions, but in a number of cases the experiment has been successfully tried, and it is greatly to be desired that the matter be thoroughly tested; for if it can be proved successful it will greatly reduce the expense of Orchid culture, and encourage many to engage in it that now look upon it as beyond their means.

As the facilities of intercourse with South America become more rapid and frequent, we shall doubtless learn more about these "beautiful things without foundation," as the Spaniards name them, and increase the number which can be successfully grown with care, even without the greenhouse. Already there is a considerable list for parlor culture, so that ladies who love beauty can adorn their rooms with ornaments more elegant than the finest work of art, and enjoy at the same time the delight of studying the curious secrets of plant-life; for it is only to the patient watcher that plants impart their strange confidences.

"Silence is vocal if we listen well,"

and listening is well repaid. Let us learn to listen, and we shall hear strange stories of forest and mountain, of river and vale, where these gipsy creatures have dwelt for centuries, reflecting the splendor of the sunset, and filling the air with rich perfumes, waiting for the acknowledgment and appreciation of man.

C. S. N.

ORCHIDS AT HOME.

NEW YORK, DECEMBER, 1879.

**WILLIAMS' HOUSEHOLD SERIES.**

THE Publishers would call attention to the extremely favorable terms upon which they offer the charming and popular volumes of WILLIAMS' HOUSEHOLD SERIES. These books have met with so favorable a reception hitherto that their merits need hardly be pressed upon the readers of the CABINET, to many of whom they are already familiar. The following premiums are offered upon orders for books:

**PREMIUMS.**

For \$5 order: One year's subscription to CABINET.  
For \$10 " \$4 Periodical.  
For \$15 " \$4 Periodical and others according to price.  
For \$20 " Several Periodicals will be furnished, selected according to the price of the periodicals and the choice of the purchaser.

The Series embraces the following works, all abundantly illustrated:

Household Elegancies.	Beautiful Homes.
Every Woman Her Own Gardener.	Evening Amusements.
Ladies' Guide to Needlework.	Window Gardening.
26 Designs for Fret Saw.	Ladies' Fancy Work.
7 vols. Ornamental Designs for Fret Sawing.	

All of these volumes will be found invaluable in the home. The instructions given are full and clear, and exceedingly practical. The Fret Saw designs are especially useful for making pretty holiday gifts.

**ADAMS & BISHOP, Publishers,**  
46 Beekman Street, New York.

**TO SUBSCRIBERS AND CORRESPONDENTS.**

THE Publishers of the CABINET feel that an apology is due to readers and correspondents of the paper for the neglect and delay which has occurred in the past in answering letters and queries. Under the new arrangements now completed, the editor will give prompt attention to all queries, and publish the replies as rapidly as possible. If the reply does not appear as soon as expected, our correspondents may rest assured that the delay has been unavoidable. Those who send plants for name, will find it much the safest plan to send a small branch or twig, with leaf and flower. Many leaves resemble each other so closely as to render identification impossible. Delicate blossoms may be secured between two cards wrapped in a little raw cotton. In the mail bags specimens are often so crushed as to be unrecognizable. Care in mailing is absolutely indispensable. Ferns are often entirely destroyed when enclosed in an envelope.

**A Beautiful Christmas Present.**—The \$1 Magic Lantern advertised in this issue will make a suitable Christmas present for every boy and girl. Don't fail to read the advertisement.

We willingly recommend to our readers "The Bowker Fertilizer" advertised on another page, as the Company's references and testimonials are all that can be asked.

**Floral Hints.****KEEPING FLOWER-SLIPS.**

By inverting a tumbler or a glass over a slip when first set out, and keeping it over a few days, it will almost surely take root and thrive. If a handful of well-pulverized charcoal is put in the earth when you plant a geranium, it will have a much richer growth and color.

I have kept scarlet Japonicas fresh a very long time by putting their stems in a saucer of white sand; if the flower has its under surface touching the sand, it will keep bright a very long time. By placing the stems of holly berries, or almost any kind of scarlet berries, in the sand a few days, the berries will retain their brilliancy thereafter for months without being shrivelled. Autumn leaves laid in sand and carefully covered over with a layer of sand, for sometimes only four days, will preserve their color perfectly and not have the flat, stiff look of preserved leaves. The scarlet dogwood and the yellow leaves of the birch are beautiful preserved in this way. Lay them in with three or four leaves on a stem, and they will keep their graceful curves and waves as if just gathered; and one, by a little trouble, can have a more beautiful group of leaves to grace a winter bouquet than oil or wax or varnish can make them.

**THE HYACINTH.**

THE Hyacinth is a universal favorite in the most extended application of the word. The number of its varieties is now fully equal to that of any other florist's flower. They are not only desirable for planting in beds in the flower-garden, but for forcing into flower in the dull, cheerless months of winter and early spring, when their bright-colored blossoms and rich fragrance lend a charm not otherwise to be found. For growing in the conservatory or drawing-room the bulbs should be potted, as early as they can be obtained, in small pots of rich, light earth, and placed in a cold-frame, or some protected place in the garden where they may be secure from heavy rains; cover them with at least foot of newly-fallen leaves, and being once well watered soon after being potted, they may remain for a month at least, to form their roots, when they may be uncovered, and the most forward brought out and repotted into larger pots, and placed in a moderately warm room. The size of the pot will depend much upon the size of the bulb; as a rule, the first potting should be in four and the second in six-inch pots. Some care is necessary in the application and increase of heat, or the flowers will be abortive. For the first three weeks it should not be above fifty degrees at any time of the day; after that the heat may be increased to whatever degree is desirable in the room where they are to bloom. Water should be slightly warm when applied, and given in proportion to the development of foliage and flower; in no case should the earth in the pots become dry, neither soddened, an excess of water being as injurious as drought.

Hyacinths succeed best in a humid atmosphere,

which is not easily obtained in the drawing-room; and they are particularly sensitive to cold draughts of air, which may and should be avoided.

Hyacinths in glasses are an elegant and appropriate ornament to the drawing-room, and for this purpose occasion but little trouble. To those contemplating this interesting branch of floriculture we make the following suggestions:

1. If you choose your own bulbs, pay more attention to weight than size, and be sure that the bulb is sound at the base as well as at the top.
2. Use the single kinds only, because they are earlier, more hardy, and as a rule perfect their flowers in water better than the double varieties.
3. Use rain or soft spring water.
4. Set the bulb in the glass so that the lower end is almost but not quite in contact with the water.
5. When the bulb is placed, put the glass in a cool, dark closet, or any convenient place where light is excluded, there to remain for about six weeks, or until the roots fill the glass, which they will do sooner than in the light, as they feed more freely in the dark.
6. Fill up the glasses with water as the level sinks by the feeding of the roots or by evaporation.
7. It is not necessary to change the water if a few pieces of charcoal are placed in the bottom of the glasses.
8. When the roots are freely developed, and the flower-spike is pushing into life, remove by degrees to full light and air.
9. The more light and air given, from the time the flowers show color, the shorter will be the leaves and spike, and the brighter the colors of the flowers.
10. Do not place the glasses where the direct rays of the sun will strike upon them, as that will raise the temperature of the water sufficiently high to cook the bulbs, which is by no means an unfrequent cause of failure.
11. Hyacinth bulbs for forcing either in glasses or in pots should be of the very best quality; common mixtures will do very well for the open border, but named varieties should always be selected for house culture—not that the names are essential, but because all poor and undeveloped bulbs are culled out from named sorts and sold as mixtures.

**CUTTINGS BEFORE PLANTING.**

CUTTINGS of Geraniums and many other plants will be found to start with more certainty if wrapped in slightly damp moss for a few days before inserting in sand. This will allow the cut end to partly heal or become calloused, and thus not be so liable to rot or damp off. The propagator must be the judge as to the time the cutting ought to be so kept. Verbenas and similar woody cuttings can be kept but a day or two, while some hard-wooded cuttings may be kept for two weeks to advantage. Never allow cuttings to become wilted before insertion, and always allow several leaves to remain on each to elaborate the sap and assist in forming roots. Do not crowd your cuttings, as this will often cause them to damp off.

## Correspondence.

### LETTERS FROM CORRESPONDENTS.

MODENA.

EDITOR OF CABINET : I have taken the CABINET for five years and like it extremely, but have never until now ventured on a question. Will you tell me how to treat Ivy Geranium ? I have been very unsuccessful in making them bloom in winter. K. E. GEORGE.

*Answer.*—Perhaps you have not sufficiently considered the preparation the plants need for winter blooming. They should have through the summer abundant sunshine, air, and water. Place them in a rich, loamy soil, and after they are well grown give them a season of rest. Early in September the plants should be taken up, the earth shaken from the roots, and the tops pruned back closely and in such a manner as to give symmetry to the form, and then repotted. The plants should be shaded for a week or so, then water or sunshine may be allowed. Such a course of treatment ought to give you thrifty plants all winter.

NORTH COHOCTON, STEUBEN CO., N. Y.

Does Amaryllis need peculiar treatment to have it bloom ? as I have been much disappointed in mine bearing no flowers. H. M. MOULTON.

*Answer.*—Amaryllis requires careful management. Plant in large pots, in loam mixed with rotted manure. When placed in the earth press the bulb firmly in, so as to settle the earth about its roots, leaving the neck uncovered ; water thoroughly and give moderate heat until it shows signs of growth, which, if the bulb is in good condition, will be very rapid when it commences. Water about once a week with warm water, and give abundant light. Sometimes a single bulb will throw up several spikes, and the time of flowering will last five or six weeks. When done flowering let them rest for a month or two, withholding water ; keep them in a cool place where there is a free circulation of air, but which is secure from frost. A Johnsonii has been known to bloom twice a year.

DANVILLE, MICH.

In reading the pleasant and instructive columns of the CABINET I have seen the questions of other correspondents kindly answered, and would like to ask the following : 1. How old Cinerarias and Gloxinias must be before blooming ; also Amaryllis Johnsonii and Allamandas. SUBSCRIBER.

*Answer.*—1. The two first are propagated from seed sown in the spring ; plants kept in shady situations during the summer should bloom the following winter and spring. 2. We refer you to answer given above. 3. Allamanda is easily grown, if a thorough understanding be had of their needs. They are capable of producing flowers of large size and substance ; for eight months of the year they require a great deal of light, but should be protected from the direct rays of the sun at midday. When done blooming they should rest for about two months. Water should be gradually withheld, and during the rest-period only sufficient given to prevent the leaves from drooping. They do best when well established in large pots. Plant young plants in light turfy, loam with a little sand. Delicate kinds are best grafted on stronger varieties.

### ANSWERS TO CORRESPONDENTS.

*E. W. Hyde.*—"No" to all of your queries. The Rubber Plant is *Ficus elastica*, an evergreen, large-growing tree. *Crassula* is an herbaceous plant, sometimes assuming a shrubby form. The House-leeks belong to the same order. We do not know a plant that has been christened "Roman candle." Feverfew should be planted in the open ground ; it will flower in a pot, but is apt to draw up too long, unless in a large pot, with plenty of light, and in a cool room.

*Mrs. E. A. Warner.*—Your enemy is the scale. Your remedy is to take a smooth stick, dip in strong soapsuds, and scrape the plants until clean, then rinse with clear water. Cacti are liable to attack from insects, particularly scale.

*Amateur.*—The rose vase for the centre of your bed is General Jacqueminot. For the next row, La France or Paul Neron ; for the outer circle, Caroline Manais. The best moss rose is Princesse Adelaide. Mad Falcot, a fine apricot-yellow, orange bud, is nearest to an ever-blooming orange rose of any to be had. Amie Vibert is the best pure white ever-blooming rose. "The Rose," by Parsons, is probably the best book for you.

*Hattie Farrar.*—Hen and chickens is a popular name applied to *Bellis perennis* (Double Daisy) ; also, with as much propriety, to *Sempervivum soboliferum*, the House-leek of the cottage garden.

*Nina Smith.*—The *Justicias* are not hardy ; there are many species and varieties. The greenhouse varieties are best grown from cuttings of young wood ; they will root freely in sand. They will grow in almost any soil or situation, preferring a light, rich loam and a rather high temperature with liberal watering. Old plants do not bloom well ; young ones should be started annually.

*Dora B. Foreman.*—The tuberous rooted *Begonias* require a long period of rest ; the proper time is manifested by their leaves drying up and drooping, which follows immediately after flowering. At that time cease watering and put them away, in the pots, in some dry place entirely free from frost, where they should remain until the first of April, unless they show signs of growth sooner, when they should be repotted in a light, rich soil, and grown in as warm and moist atmosphere as possible. There are so many species of *Ornithogalum* that it is difficult to give cultural instruction without knowing which yours is. They are, as a class, of the easiest culture ; some of them will flower if the bulbs are hung up dry in a warm room. If your bulb is large and healthy, give it a rest by keeping it perfectly dry for a month or two. Many kinds of bulbs are induced to bloom by a period of rest that have been sterile for years.

*O. B.*—Your plant is *Oxalis tetraphylla*, a winter-blooming species. The bulbs should be planted any time from September until January, in rich, fibrous soil ; they will flower during the winter and spring, and require rest during summer. Plant your Lily of the Valley out of doors in partial shade ; it will surely bloom soon as it gets established. It is an early spring flower.

*A. R. R.*—It is a simple affair to make a vaporizer, as H. P. S. says, but more difficult to tell how ; you must be shown instead of being told. A very useful one can be bought for twenty cents, which is the cheaper plan, unless exercise for ingenuity is wanted. We cannot give you the correct name of your Trumpet

*Fuchsia* without a branch in flower. It is a local name given to some plant not at all allied to the *Fuchsia*. It is very interesting floriculture to grow *Coleus* from seed ; if the seed you have saved is from hybrid sorts you will be likely to get some very good ones, and no two alike. Sow the seed in boxes about the first of February. The plant enclosed is *Lamium maculatum*, popularly known as Dead-Nettle.

*An Old Subscriber's* plants came so badly broken that it is impossible to name them correctly. No. 1. is undoubtedly a *Pentstemon*. Var.-leaved *Chrysanthemum* can be had from the leading florists, whose catalogues please consult.

*Mrs. John Willis.*—The plant is *Lychnis coronaria*.

*Mrs. M. C. Allen.*—The plant is *Ponciana Gilliesii*, a native of Mendoza, South America ; it is a very beautiful shrub, highly esteemed for greenhouse culture.

*Mary Weed.*—The leaf and flower sent is from one of the *Morndas* (Horse-balm), probably *M. didyma*. The *Coleus* are all difficult to carry through the winter, especially in an ordinary drawing-room. The only way to treat them properly is to take cuttings in the fall and grown on the young plants. They require the warm, moist air of the greenhouse. "Wandering Jew," is a popular name applied to several plants, most commonly to the several varieties of *Tradescantia*.

*Mrs. Asa Turner.*—The specimen sent is from the *Eleagnus Argenta*, a shrub or low-growing tree, rarely more than fifteen feet high. Its popular names are Pursh or Silver-Berry. It is propagated by seeds or by layering the young shoots in September. The *Cactus* family is so large that it is impossible to give a correct name from your description ; it probably belongs to the section *Cereus*.

*Miss M. C. Blaine.*—The specimen sent is *Lycopodium Carolinianum*.

*E. A. Claypool.*—The specimens sent are so badly bruised that we cannot give the names correctly. Do not know the popular names of either of them. No. 2 is one of the *Solanums* ; cannot say which without the fruit.

*Maria Herbert.*—The name of plant is *Bryophyllum Calycinum*, a native of the East Indies.

### A PLAIN ANSWER.

A GENTLEMAN of large scholarship, and well known for his fine reasoning powers, but of rather rough manners, was inexpressibly bored by an acquaintance, whose intense self-conceit sometimes rendered him intolerable to his friends. One day, after the latter had been displaying his peculiarity in a very provoking manner, our professor turned to him very gravely and said : "Yes ; what you say is true ; in fact, you and I know everything there is to know. You know everything in the universe, except that you are a fool, and I know that."

Did the prophet Isaiah ever eat at a railroad station ? It certainly looks so, for how could he have described it so literally if he had not ? "And they shall snatch on the right hand, and be hungry ; and he shall eat on the left hand, and they shall not be satisfied." —*Congregationalist*.

Vanderbilt controls 3,620 miles of railway and employs 27,706 men.

## New Things in Science and the Arts.

## THE ARTOTYPE.

WE live in an age so full of new thoughts that we have hardly time to draw breath between the announcements of new discoveries in science and art, and few are able to appreciate and understand the rapidity with which the civilized world is moving.

Among the late improvements in what for want of a better term may be called mechanical art, is the Artotype, a recently-introduced combination of photography and lithography, the object being first photographed and afterwards printed upon a printing-press with printer's ink.

During a visit to the establishment of Messrs. Haroun & Bierstadt, 58 Reade Street, we were favored with an opportunity of seeing the pictures printed and examining them in various stages of development, and we have no hesitation in saying that the delicacy and finish, far surpass the finest photograph, while the clearness and permanency of the print equals the best steel engraving.

If the mention of printer's ink suggests the idea of coarseness to the reader, he may be assured that it is an altogether mistaken one. There is a softness of tone, and a gradation in the shadows which persuade one, in spite of evidence, that there must have been touches from the skilful brush of an artist in india-ink.

No better evidence of the refinement and elegant delicacy possible to the process, can be given, than that it has been selected by experienced publishers, to illustrate Ruskin's "Modern Painters." John Wiley & Sons have ventured upon the rather hazardous enterprise, of giving a beautiful edition to the public at one-fifth of the old one. When we say hazardous, we do not mean with regard to the public, but to the distinguished author, whose wrath spares neither friend nor foe in what he believes to be the interest of art.

Certainly the new process answers to one of his favorite axioms, "All true art is delicate."

It is not alone in black and white that the process is available, but in color also; we understood, however, from what was told us, that this part of the work had not yet been entirely perfected, though, if we might judge from what we saw in a certain private drawer into which we were permitted to peep, of a cluster of Eglantine and other wild flowers, that looked as though the dew had hardly dried from off their petals, we should think perfection was not far off.

The advantage is also possessed of being applicable to a great variety of different substances. We saw prints upon white satin, brown leather, and pine shingle, all clear, bright, and perfectly finished. Upon the pure and even surface of white holly the effect is very fine; upon leather it is quaint, and suggests the adaptation to many uses in the industrial arts.

The photograph has always, when good, given an exquisite refinement of shading; but the very tints which give its greatest beauty are the most evanescent, and every one knows how frequently a photograph is marred or ruined by change of color, by fading, and by unsightly spots; but the artotype is sub-

ject to none of these objections. Its exquisite gradations of shadow are entirely permanent, and it is subject to no uncertainty of effect from the varying skill of the manipulation or the changeful quality of chemicals, the process being wholly mechanical.

That its adaptation to the illustration of medical and scientific subjects is especially great, cannot be doubted; for the delicate pencil of the sun can delineate what no mortal hand would dare attempt, and all that can be desired is attained, when the sketch from nature is fixed in enduring tints. When scientific works and valuable books on art, can be illustrated in a style which is equal to the finest steel engraving, at a cost which will place them within the reach of the many, a great advance will be made toward the education of the public taste, and invaluable aid will be afforded to the study of natural science.

## NEW FABRIC.

PATENT rights have recently been secured in this country, says an English journal, for an invention which consists in the creation of a type of novel textile fabrics termed "diamantés." It consists in sprinkling upon any kind of textile fabric glittering or sparkling particles of crystalline or metallic materials, with spaces reserved, if desired, for producing patterns. This process embellishes the fabric, and gives it an appearance which it is proposed to term "diamanté."

But beyond the creation of what may be termed an article of fashion there is in this invention a patentable novelty, which results from the actual process by which this result is attained. It consists in the use of matters designated as crystalline—that is to say, transparent and sparkling. They may be either gelatinous, like purified isinglass, or non-gelatinous, like glass, or metallic, like gold and silver. These matters may be variously colored. The materials pulverized fall upon the fabric, which is stretched and arranged to travel over rollers. A jet of steam is directed upon the fabric, the effect of which is to render the surface of the gelatinous grains or particles moist and sticky, so that the dissolved particles seize the particles of crystalline matter which may be in contact with them, and the passage of the piece upon the hot cylinder then brings about the sticking and drying. The use of steam is important, as steam does not affect the shades of color of the fabric like water, which might otherwise be used to damp the fabric before sprinkling.

## NOVELTIES IN DECORATION.

CUP AND SAUCER.—A cup and saucer (contributor 1601) that has just received the seal of the Society of Decorative Art is decorated with a Japanese design in pale tints of chocolate brown upon an ivory-colored ground. Besides the particularly graceful finish and execution of the work, it has the novel feature of having some of its lines ornamented with small white beads of enamel.

SAUCER.—A curious shape for a saucer has been tried with much success. It is flat, the edge turned up at right angles, to which a corrugated appearance is given, the decoration being in contrasted colors.

## INDUSTRIAL ART IN NEW YORK.

HITHERTO there has been no museum in this city which has given any special attention to the applications of industry to art and art to industry. This want the trustees of the Metropolitan Museum have determined to supply, and have devoted a portion of the new art building, in Central Park, to collections illustrating industrial art. They propose to begin with the applications of metals. Valuable gifts have already been received, others are promised, and more are earnestly solicited. Professor Thomas Egleston, of the School of Mines, Columbia College, has been authorized to receive such donations. Communications relating to the matter may be sent to him or to the Director of the Museum, Gen. Di Cesnola. The department is an important and useful one, and it is to be hoped that contributions will be liberal.

## THE PHONOGRAPHIC PIANO.

THE phonographic piano is among the late applications of the principle of the phonograph. A music-box which may cost a large sum of money and be of the best construction, can only produce a limited number of tunes, but the phonographic piano can play any tune for which the music is furnished. The bars are struck by strikers as in a piano. A strip of prepared paper, upon which the tune is perforated, about ten inches wide, passes through rollers and over the keys, the strikers springing through the perforations in the paper and striking the right note, the operator taking no more part in the production of the music than the organ-grinder in turning the rollers. Of course automatic music can never be more than a body without a soul, any more than a chromo can be a painting, but there are many persons who have a certain fondness for music which never develops into a passion, and often exists without the least musical ability. To such persons the phonographic piano will be a boon, for it will allow them to choose their own tunes, and to execute them in such a manner as will give them great pleasure. It is claimed that the music is really good, and as the price is within the reach of very moderate means, it will, doubtless, be popular.

The Introduction of the Telephone.—The rapidity attending the introduction of the telephone as a means of business communication is shown by the fact that though thirteen months ago the first one was used in Chicago, the American District Telegraph Company now has over fifteen hundred patrons—that is to say, it has put up that number of telephones, with the corresponding number of wires. The carbon telephone constructed by Edison is used. The company has a central office and nine branch-offices, which take in nearly every portion of the city. At its central office and branches the number of messages per day average twenty thousand. The demand for the telephone may be inferred when we say that the company has forty-seven men and five teams constantly employed in putting up new lines and instruments, and twelve others who are constantly engaged in keeping the lines in repair.—*Christian Union*.

WINTER WREATH OF GRASSES AND LEAVES FOR WALL.

**A Gigantic Garden.**—China has the largest population of any country in the world. It has the longest and greatest wall ever built, and it has also the largest and most fertile garden ever cultivated. The Chinamen, who walk over bridges built two thousand years ago, have 50,000 square miles around Shanghai, which area is called the Garden of China. This area is as large as New York and Pennsylvania combined; it is all meadow-land, raised but a few feet above the lakes, rivers, canals—a complete network of water communication—the land under the highest tith; three crops a year harvested; population so dense that wherever you look you see men and women in blue pants and blouse, so numerous that you fancy some fair or coming off.

## General Reading.

## TWO WAYS TO HELP THE POOR.

BY MISS SCHUYLER.

[From a paper read before the State Charities Aid Association Conference on "The Importance of Uniting Individual and Associated Volunteer Effort in Behalf of the Poor." No. 18 of the State Charities Aid Association pamphlets.]

On other occasions I have repeatedly said that three or four poor families were as many as any one visitor might better undertake—a visitor, I mean, having other duties, as most of us have, and able to give comparatively little time to visiting the poor. And why so few? Surely, says some young and generous spirit, longing to give something of the brightness and freshness of youth to gladden the lives of those who have never had any youth, surely I can do more than this. Should my four families live in the same neighborhood, it would take only one hour to visit them all once a week, and I have more time than this to give to the poor. Yes, I answer, fifteen minutes to each family is quite enough, is far too much, if it means that you stop merely to enquire: "How they are getting on?" "Not ill, I hope?" "What! an accident? I am very sorry. Of course not able to work. Nothing to eat? Horrible! Here, take this dollar, and I will look in again next week!" And so, hastily retreating, to escape the thanks which follow, on from one poor family to another, and so home, with a glow of satisfaction that at least those people have a dinner to-day—only "I might just as well have given my whole morning, and have visited a dozen families as those four." And with this the thought is dismissed; and the next day, and the next bring their round of home duties and social engagements, until "my morning for visiting the poor" comes in its turn again, when the visits and the dollars are repeated. What permanent good has been done? If your family are worthless, if the man is shamming illness, they take the gift as the fair spoil of your credulity, and ask themselves what other dopes, be they churches, societies, or soft-hearted individuals, will listen to the same or another story and supply the dollars for the other days, until you come again. All you have done in this case is to have helped to pauperize a family. On the other hand, suppose the story to have been a true one, suppose the man to have been a respectable, hard-working mechanic, temporarily disabled, how much have you helped him? Was it being a friend, was it helping him in time of need, to go off and leave him, without knowing what was to become of him and his family during your absence? And in either case, true or false, has your dollar helped to benefit that family permanently?

My friends, it will take all the time you can spare, all the thought you can give, to understand and to help as you might a very few of the many who need your help so sorely. Suppose you give of your best

thought and best effort to *one* of these poor families, and see what this may mean. Let us take one of the cases usually considered discouraging—a widow with partly grown up children, boys and girls, where not one of the family knows how to do anything towards his own support, where all have lived along in some mysterious way, partly by picking up odd jobs, partly by alms, with no future before them beyond a continuance of this same hand-to-mouth existence. What can be done for these people? I think you must begin by seeing enough of them to know all

and what have you received? God's gifts are many and come to us in various ways, and the word spoken to one differs from that spoken to another. But is there, can there be, anything more satisfactory in our intercourse with the poor than to have those who first came to us as beggars come at last as friends, wanting our sympathy in their joys and sorrows, but not wanting our money?

And your poor mechanic, temporarily disabled? Could you not have seen his doctor, and spoken a good word for him to his employer, and arranged to help him until well again by a loan, for which he would have given security—as such men can—and repaid you later in small instalments? Why break down his honest pride and self-respect by making him, for the first time, a recipient of alms? Why let him toss in fevered anxiety with care for the morrow, when the sleep of to-day is so important for his recovery? Your one dollar given can do but little for him; your one hundred dollars loaned can do much.

A FERNERY FOR WINDOW.

about them, by studying the character and natural abilities of each member of the family, before you can know what you can try to do for each. If they know nothing, this must first be made apparent to them; for it is not in human nature to acknowledge willingly that we cannot do some *one* thing well. All women think they can sew and wash, all men will sooner break our necks than acknowledge they cannot drive, and so our poor woman undertakes washing or sewing, or house-cleaning—knows how to do everything, but can't get any work. Suppose we begin by giving her some of our own clothes to wash, and when she brings them home torn to pieces, instead of being annoyed, ask her, very gently, if she would not like to take a few lessons in washing, offer to arrange to have her taught, and tell her you will give her another trial with your own clothes later, and will try to find work for her. If that woman has a spark of ambition and good feeling she will accept your offer, and the next time your washing will be well done. I think the few dollars spent in replacing what that first lesson cost you will have done better service than if they had been given outright in several of your fifteen-minute visits. And the eldest daughter wishes to learn to work upon the sewing-machine; and the son is willing to take a trade; and the little children might better go to school. You see that they are taught, and at first help to find work for them, and stay by them, and encourage them to let you know of their successes or failures; at last they stand on their own feet and make their own way, and when they come to see you it is to tell you how well they are getting on, or to seek your sympathy when in affliction. But then that family, for the case is not a fictitious one, required more time than fifteen minutes a week; more time, much thought, some effort, more money perhaps that first year. This you have given;

and what have you received? God's gifts are many and come to us in various ways, and the word spoken to one differs from that spoken to another. But is there, can there be, anything more satisfactory in our intercourse with the poor than to have those who first came to us as beggars come at last as friends, wanting our sympathy in their joys and sorrows, but not wanting our money?

## A MINIATURE AQUARIUM.

TAKE with you a small tin pail down to the seaside and fill it full of pure salt-water. Walk along on the sunny side of some creek or inlet until you come to a spot where eel-grass or seaweed is growing luxuriantly. Place your pail of water down beside you, and in it wash carefully a quantity of the eel-grass or seaweed. Repeat this operation several times at different places, being careful not to soil the water with mud. Now put into your pail a pebble, with a choice bit of seaweed attached to it, and you have all the material necessary for your aquarium. Take it home and pour the water into a small glass phial, drop carefully into it the stone with the seaweed growing upon it; then, after covering the mouth of the bottle with muslin to exclude dust, place it in a sunny window, and in a few weeks you will be astonished at the result. The seaweed will have shot out little delicate branches through the water, which will remain perfectly pure and transparent for months, while every drop of it will contain many living objects of different varieties that will increase and multiply to a wonderful extent, and will be ready at all times to be admired under the microscope.

As the water in the phial evaporates it will be necessary to add fresh to it. By adding salt water it is evident the whole would soon become too salt to sustain life.

## SATIN-COVERED FAN.

A FAN that has just received the seal of excellence of the Society of Decorative Art for harmonious coloring and simplicity of arrangement is an ordinary Japanese fan, cut square, and covered with heavy blue and yellow bronze satin, with jessamines painted in water-color on the satin. The handle is gilded with a rich dead gold, and tied round with a large satin bow of the same color as the blue covering.

## Hints to Young Housekeepers.

### HOUSECLEANING.

To clean house properly, begin in the attic, take one room at a time and clean thoroughly; inspect every corner, trunk, box, and drawer, and dispose of all useless rubbish. Bury old shoes around the roots of the grapevines, and they will serve you years longer by retaining moisture, and thereby increasing the fruitfulness of the vines.

Brush the walls, dust carefully, and wash the floors in ammonia-water. See that the stoves used downstairs are well cleaned and carried up to one of the attic spare rooms, and they will be free from rust when wanted in the fall. Oil the pipe with warm linseed oil, and it will retain a good polish.

Proceed with the bedrooms, one only at a time; examine the bedsteads, and, if afraid of bugs, wash them in a solution of corrosive sublimate, and your slumbers will be undisturbed. Wash varnished woodwork with cold tea made from grounds previously used and boiled over. It removes dirt, fly-specks, and leaves a beautiful gloss. Plain painted surfaces require a little ammonia in the water, about a tablespoonful to the gallon; use laundry soap, a sponge; *rinse quickly* with warm water, and wipe dry with a soft muslin cloth. Whiting applied with a cloth dipped in warm water, and carefully rubbed off with a dry cloth, cleanses white paint without injuring it.

To clean the metal plates, key-holes, etc., of doors, also brass stair-rods, use sapolio, or, if brass, rotten-stone.

The semi-annual oiling of furniture tends to give walnut-wood a darker and richer look, and renews its freshness. Any housekeeper who has never tried this simple process is advised to do so, and note how quickly all white spots and blemishes disappear. No matter how old and much abused chairs and tables are, try it upon them. Ten cents' worth of oil, mixed with a little rotten-stone, which may be had at any druggist's, will be sufficient to polish the furniture of a large dwelling. Apply a little at a time with a small flannel cloth and rub until dry, and smooth with a larger piece of flannel, and finish with dry rotten-stone.

To clean marble mantels, take one part of finely-powdered chalk, one part pulverized pumice-stone, and two parts of common soda, mix with water and rub well the whole surface, then wash with soap and water, and you will find every stain has been removed.

The gilded frames of mirrors and pictures are beautifully cleaned by applying the white of eggs with a soft camel's-hair brush. To prevent flies settling upon them, wash in garlic or onion water. Do not fear the odor, as it soon dies away and brightens the gilt. Accidents *will happen* even in the best-regulated households, and oil or grease sometimes gets spilled upon carpets. To clean such spots, use fuller's-earth and water, spread thickly, cover with paper, and let it remain two days; brush off, and if not removed make another application. If haste is required, use refined benzine.

The following are good and tried directions for kalsomining: Clean the walls from dust, fill all crevices and nail-holes with plaster-of-Paris and white sand, and coat the walls with a thin sizing of glue-water. Then mix eight pounds of zinc-white to a thick cream with warm water, and add half a pound of dissolved glue. (Some use common whiting instead of zinc-white; it is cheaper, but not near so good.) Apply with the largest size paint-brush or small whitewash-brush. If the mixture becomes too thick to spread evenly, add warm water. If the kalsomine is wanted tinted, a few cents' worth of dry colors will be sufficient. This is cheaper than paper or paint, and is more quickly put on the walls. A pretty border for a room, in imitation of inlaid-wood, is made by pasting cloth smoothly around the floor the desired width, then over that paste wall-paper of wood colors and geometrical designs. When perfectly dry brush over with thin glue-water, then apply two coats of copal varnish.

Wash the shelves of closets, pantry, and store-room with strong alum-water and they will never be troubled with red or black ants. Put in every mouse-hole little paper parcels of fine corn-meal and arsenic mixed, and the obnoxious little creatures will be effectually exterminated. But this should be done in very cold weather only. Plaster-of-Paris mixed with gall is good to fill mouse-holes.

Experienced housekeepers recommend paper bags for keeping dried small fruit, corn, etc., etc. We have used instead for years the Mason quart and half-gallon self-sealing jars. They are the very thing for dried and soft yeast. The latter should never be put in a jug unless under your own immediate supervision. If the housekeepers throughout our land could only look into these jugs they would either banish or clean them with their own hands.

The color and durability of our kitchen floor is most satisfactory, and the cost was only \$2 50. It was first oiled with boiled linseed-oil, then varnished with shellac varnish, and again oiled. It is kept beautifully clean by merely wiping up with cold water. Three times a year it is given a coat of oil.

We use white oil-cloth, bound with red, for wall-protectors back of the kitchen table, and under the hooks where pans, etc., are hung. It is easily kept fresh by washing in soap and warm water.

SYDNEY A. FAIRFAX.

### ENTREES.

MR. DELMONICO, talking about entrees, says that Americans ought to copy "the French method of utilizing small bits of raw meats and fowls, and of re-cooking all kinds of cold joints and pieces of cooked meats which remain, day after day, from every dinner in almost every family." The success of such dishes depends mainly on the sauce, which is best made from broth. The following is his recipe for a favorite sauce: "Take an ounce of ham or bacon; cut it up in small pieces, and fry it in hot fat. Add an onion and carrot, cut up, thicken with flour, then add a pint or quart of broth, according to the quantity desired, season with pepper and salt, and any spice or herb that is relished (better though without

the spice), and let simmer for an hour, skim carefully and strain. A wineglass of any wine may be added, if liked." Cold roast, or broiled beef or mutton, may be cut into small squares, fried brown in butter, and then gently stewed in the sauce above described. Mr. Delmonico describes croquettes as the attractive French substitute for American hash, and tells how to make them: "Veal, mutton, lamb, sweetbreads, almost any of the lighter meats, besides cold chicken and turkey, can be most judiciously turned into croquettes. Chop the meat very fine. Chop up an onion, fry it in an ounce of butter; add a tablespoonful of flour. Stir well, and then add the chopped meat and a little broth, salt, pepper, little nutmeg. Stir for two or three minutes; then add the yolks of two eggs, and turn the whole mixture into a dish to cool. When cool mix well together again. Divide up into parts for the croquettes; roll into the desired shape in bread crumbs. Dip in beaten eggs, then into bread crumbs again, and fry crisp, a bright golden color. Any of these croquettes may be served plain or with tomato sauce or garniture of vegetables."

### RICE DISHES OF ITALY.

THE rice dishes of Italy are popular and delicious, so unlike our own well-known ones that we urge a trial of their excellence upon our readers. Chief among them rank the *rizotto* of Milan and the cream of rice and chicken. The *rizotto* is made by par-boiling well-washed rice in boiling water for five minutes, draining and drying it on a cloth, frying it light brown with a little chopped onion and butter, and then stewing it until tender in enough highly-seasoned broth to well cover it; it has to be watched closely, and the saucepan shaken as the rice absorbs the broth, so that it shall not burn; when the rice is done it is put into a buttered mould with shreds of cold chicken, tongue, or ham, well shaken down, dusted with grated cheese, and browned in the oven. Slices of mushroom or a little tomato sauce are used as variations from the chicken or tongue.

The cream of rice is made by boiling the breast of a fowl and a cup of rice in chicken broth until soft enough to rub through a fine sieve; the paste thus formed is used to thicken boiling milk, seasoned with salt, pepper, and nutmeg, to the consistency of thick cream; it is one of the most delicious and nutritious of all soups.

*Rizotto* is prepared with sausages in the north of Italy in a very appetizing dish; the sausages are twisted without breaking the skin in inch pieces, and fried brown; the rice is washed, boiled for five minutes in boiling water, drained and dried, and then browned in the sausage-fat with a chopped onion; last of all, these ingredients are stewed in highly-seasoned broth until the rice is tender and has absorbed all the broth, enough being used to well cover it when it is set to stew.

One person abusing another in the presence of Churchill, the poet, said, "He was so extremely stupid, that if you said a good thing he could not understand it." "Pray, sir," said Churchill, "did you ever try him?"

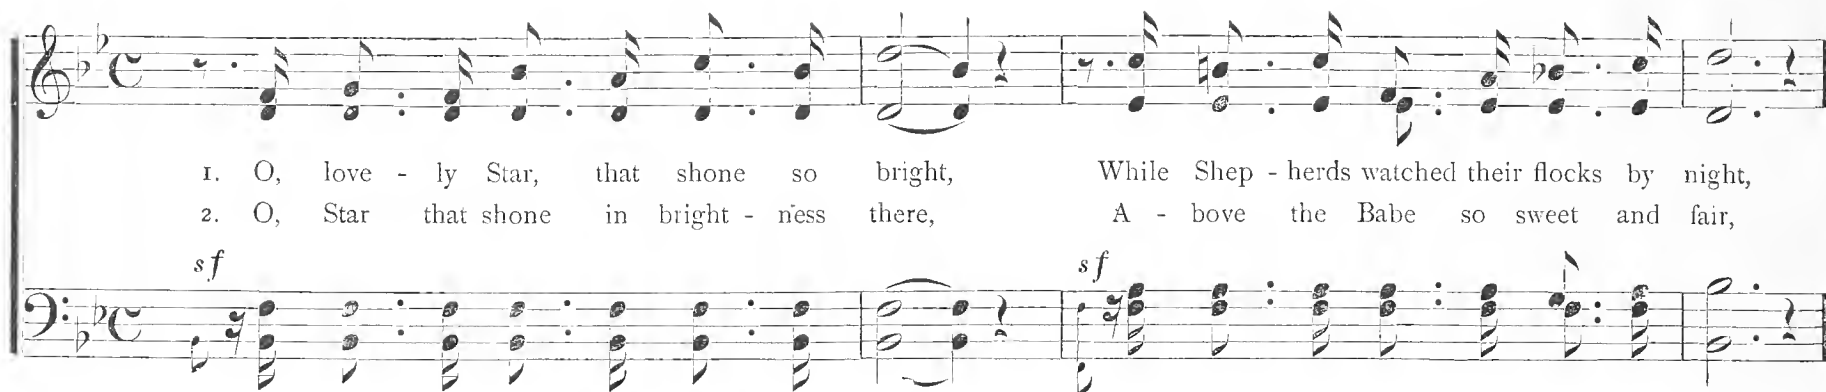

# O, Lovely Star that shone so Bright.

Words by GEO. COOPER.

Music by H. MILLARD.

By permission.

1. O, love - ly Star, that shone so bright, While Shep - herds watched their flocks by night,  
2. O, Star that shone in bright - ness there, A - bove the Babe so sweet and fair,

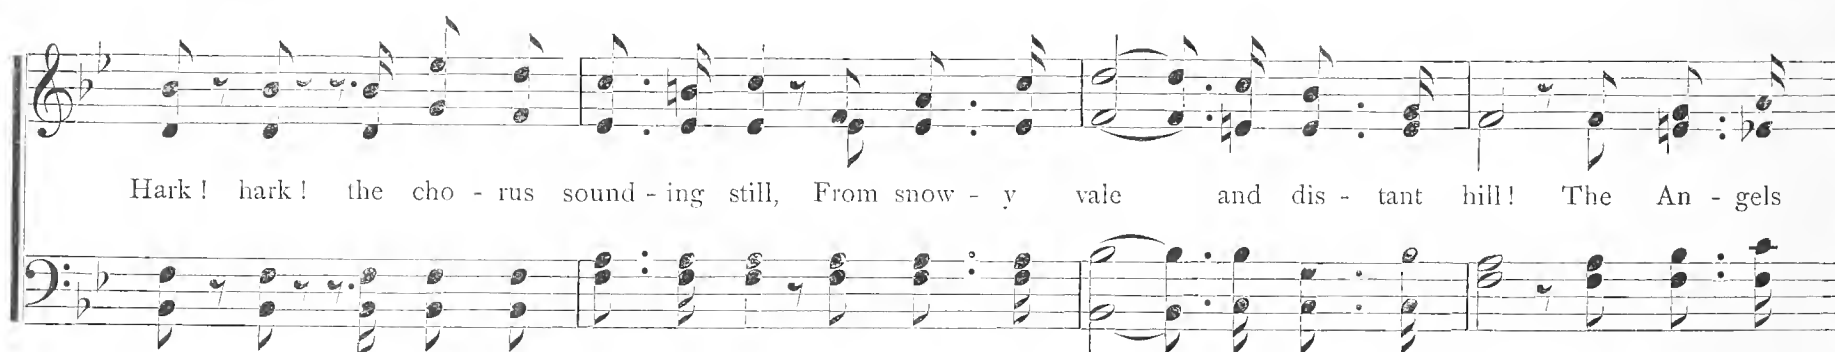

*sf* *sf*

To lead the wise - men on their way, Where Christ our Lord and Sav - iour lay.  
A - gain you beam a - bove the earth, And tell the Sav - iour's end - less worth.

*sf* *sf*

## CHORUS.

Hark! hark! the cho - rus sound - ing still, From snow - y vale and dis - tant hill! The An - gels

breathe to earth a - gain, Peace on earth, good - will to men, Good will to men.

*pp* *ppp* *mf* *pp*

3.

O, Lovely Star, each cloud of gloom  
Thy beaming rays of joy illumine!  
And all our sorrow dies away,  
When thou hast brought our Christmas day!

CHO.—Hark! Hark!

4.

Hosanna! to the Lord our King!  
In cheerful voices we will sing,  
Good Angels answer us again;  
Peace! Peace! on earth, good will to men.

CHO.—Hark! Hark!

# The Home of Washington!!

A SUPERB WORK OF ART!

BEAUTIFUL SCENE OF AMERICAN SOCIETY!

ONE OF THE GRANDEST OF HISTORICAL ENGRAVINGS!

This magnificent Work of Art is a Steel-Plate Engraving of the largest size, nearly three feet by four, and the very choicest production of American Art and Skill. The painting from which it is taken was painted by the celebrated T. P. Rossiter, and obtained a National Reputation. Its value was over \$5,000. The Steel-Plate Engraving made from it cost over \$3,000 to produce.

The Scene depicted in the Engraving is a charming one. It represents the Home of George Washington and his Family at Mount Vernon. Upon the wide, spacious piazza is gathered a group in social conversation. Here are Washington and General Lafayette, who, in his visit to America, hastens to meet him and spend happy days of friendship. Near at hand, on the piazza, is Martha Washington, with a graceful little girl and niece, enjoying the pleasant scene, with their work, and listening to the reading of a letter. Upon the floor of the piazza are strewn the playthings of the little girl, while in front of the porch is a little nephew, with black Nannie, engaged in children's sports.

The grassy lawn spreads smoothly all around the house, and upon it graze a flock of sheep. In most picturesque position, at the farther edge, is a snug little summer-arbor, sheltered amid the trees. From between their leafy canopies is seen the spreading bosom of the broad and placid Potomac, and far down its course are seen many sails and lovely vistas of scenery of the other shore.

The scene is one made memorable by the visit of General Lafayette to America in 1784, when he was the guest of Washington and shared the hospitalities and social enjoyment which have made the home of Washington and Mount Vernon of real delightful reputation.

Here they cemented the friendship which had begun between them, which resulted in such cordial good feeling from France toward America, and made them life-long friends.

This Engraving is one of such splendid Social and Historical character that there is no home but would be proud to possess it. It is rich in its scenery and sentiment. Patriotic, a grand remembrancer of the old social days of our Republic, it will recall to every American with pride the Home Pleasures and Social Days of "The Father of the Republic."

For the parlor no engraving can possibly be more beautiful. Ladies will find it far beyond their expectations, and children will look upon it with delight. The beauty of execution of this Engraving must be seen to be appreciated. Price \$5.

## SPECIAL TERMS TO SUBSCRIBERS.

A copy of this engraving will be either sold for \$5 or presented on the following terms:

1. To any one sending an order for \$5 worth of books, at retail prices, by mail, as described on page 4 of cover, above engraving will be given free.
2. To any one remitting club of 6 subscribers to FLORAL CABINET, at \$1 25 each, this engraving will be presented free. Address

ADAMS &amp; BISHOP, Publishers,

P. O. Box 2456.

46 Beekman St., New York City.

# Two Papers for the Price of One.

## 100 PAPERS AT CLUB RATES.

SEE HOW CHEAP!

**A SPECIAL PREMIUM.—To any one remitting us the publishers' price (first column price) of any journal in the following list we will give either—**

1. Book—LADIES' GUIDE TO NEEDLE-WORK. Price 50 Cents.
2. Book—EVERY WOMAN HER OWN FLOWER-GARDENER. Price 50 Cents.
3. Book—HOUSEHOLD HINTS AND RECIPES. Price 50 Cents.
4. ONE SILK BOOK-MARK. Price 50 to 75 Cents.

By the above offer you may obtain the choice of these four desirable presents, and it will cost you absolutely nothing.

Club Price of THE LADIES' FLORAL CABINET is 32 per cent. less than the regular price.

## LIST OF JOURNALS.

Many publishers have two prices, one for a renewed subscription, and one for a new one, the former being the highest. Please state distinctly whether you are a new subscriber, thus securing promptness in the execution of your order.

## NOTICE TO CORRESPONDENTS.

1. Subscribers desiring any of the above journals, at Club Prices, without premiums, can select such as they choose, and remit adding the usual price for our journals.
2. These prices include postage prepaid for one year.
3. As we remit subscriptions directly to each publisher enquiries for missing copies must be directed to them not to us. The receipt by subscriber of first copy of journal is evidence of receipt of money by the publisher.
4. Allowance of at least two weeks must be made for correspondence and transmission of subscription orders to publishers.
5. By clubbing all your journals together you not only save trouble of remitting to each paper

and all possible loss by mails, but also from 25 to 50 cents in the price of each. You can, therefore, often afford to increase your list, and take some which you have never taken before.

6. Money may be sent safely by Registered Letters (cost 10 cents), a Money Order (10 cents), Bank Draft on New York, or Express. Do not send checks on local banks. All risks of safety are assumed by subscribers, and expenses of sending money prepaid by them.

7. In receiving and forwarding money for club subscriptions to other journals we act only as intermediate agents, not being responsible either for losses of papers, premiums, or failure of other publishers to keep promises. Our responsibility is limited only to faithful distribution of money which actually reaches us. Address

ADAMS &amp; BISHOP, 46 Beekman Street, New York.
